

# Welcome to Herbal Legacy.com

HerbalLegacy.com is sponsored by [Christopher Publications](#). HerbalLegacy.com is **not** sponsored nor endorsed by Dr. Christopher's Original Formulas. We are an **educational** site only.

HerbalLegacy.com was created as a way for people to find out more information on the formulas created by Dr. John R. Christopher, and how they were originally intended for use. One of Dr. John R. Christopher's goals was to have an Herbalist\* in every home, and a Master Herbalist\* in every community. Through HerbalLegacy.com, we hope to further the knowledge of Dr. Christopher by offering detailed information on his formulas, and natural healing programs. We also detail other information that people might find useful, including various healing programs put together by Dr. Christopher.

The name HerbalLegacy was chosen because of the rich legacy passed on by Dr. Christopher. Please see the biography, An [Herbal Legacy of Courage](#), written by his son [David Christopher BA MH AHG](#), to find out more about his legacy.

At HerbalLegacy.com you will find a great deal of information on all of Dr. Christopher's Formulas, Cleansing Programs, Recipes to ensure your good health, and various writings by him. In addition there are testimonials from people who have used these methods successfully. You **will not** be able to purchase any herbal supplements from this site. This site is intended to **educate** people in the correct usage of herbs and nutrition.

**New!!** Sign up for our *free* newsletter! Each month we will be sending out a newsletter with new information on ailments, Dr. Christopher's Formulas, or other health topics. [Sign up now!](#)

Towards the bottom of this page, you will find a section titled "[New Additions](#)". This section contains a list of everything recently added to HerbalLegacy.com. Be sure to [Bookmark Us Now](#) so you can easily return for these new additions.

If there is an ailment you do not find on HerbalLegacy.com, or a section that you feel needs clarification, please e-mail [requests@herballegacy.com](mailto:requests@herballegacy.com). We are **unable to respond to individual questions**, but will continue to add useful information to the site.

\* Want to know how to become an Herbalist or Master Herbalist? Check out [The School of Natural Healing](#).

---

**Herbal Education:** Your source for a Complete Herbal Education. The School of Natural Healing was established by Dr. John Christopher in 1953 and has been dedicated to providing quality herbal education ever since. Learn more today.

**Book Store:** Visit our book store to find various books written by Dr. Christopher and many others that compliment his teachings.

**Ailments:** This portion of the site lists many different health Conditions, Definitions, Symptoms, Causes, and Herbal Aids.

**Formulas:** This section describes the different Formulas created by Dr. Christopher. It covers Usage, Dosage, Ingredients, and Testimonials.

## Welcome to The School of Natural Healing Community

We have built this area for you to meet and converse with other students of The School of Natural Healing and people interested in using Herbs to live better and healthier lives.

### ***PLEASE NOTE:***

The School of Natural Healing is not responsible for any information offered in this community. This is an open forum for discussion and education. Any medical condition should be referred to for guidance from a proper medical practitioner.

We ask that all participants remember that herbalists **do not** diagnose or prescribe and ask that you do the same.

All participants are asked to use appropriate language in all the areas here. If The School receives any complaints regarding inappropriate chat room or message board behavior, your activity will be suspended and blocked.

## Text Chat Room

To enter, simply enter your Name and a little saying in the Profile, then click the button. Once you are in the room, place your cursor into the little box at the bottom of the screen and start typing. Press "Enter" or "Return" on your keyboard when you're done typing.

Chat with other students! Please join your fellow students and graduates of The School of Natural Healing to discuss any herbal questions. Send an e-mail to [chat@snh.cc](mailto:chat@snh.cc) to be put on a notification list for upcoming chat events.

## Bulletin Board Forum

Post your Herbal questions and maybe even help someone else with your insight and knowledge.

[Enter our Bulletin Board Forum](#) *(This will open in a new window)*

Please **do not** use this forum to sell any products, herbal or otherwise. Any links to sites selling herbal products will be removed.

We are currently using a free Bulletin Board that uses pop-up windows. Please be aware that when you enter the forum, a window or 2 may open. This is how the service earns money, the windows are ads. Also, if you don't like the banners blinking or moving, hitting the Esc. key usually stops the movement.

## Welcome to The School of Natural Healing

The School of Natural Healing was founded in 1953 by Dr. John R. Christopher. Since that time, thousands of students have taken classes with us. This site gives information on the various correspondence courses offered by The School of Natural Healing. These courses now include: Herbology, Iridology, Reflexology, and our new Aromatherapy Program. Here at Snh.cc, you will find information on what our courses are all about. We have detailed information about each level, and the materials that come in each program. You can even register for classes via our secure server! Snh.cc is also home of The School of Natural Healing's on-line [Community](#). Students and non-students are encouraged to use our chat room and bulletin board to discuss different health topics. We also have [links](#) to other informational sites to help our students with their studies.

To get a free brochure about The School of Natural Healing, fill out our [brochure request form](#), and don't forget to [Bookmark Us Now](#).

### [Family Herbalist Program](#)

## Herbal Education

### [The School of Natural Healing](#)

The School of Natural Healing is celebrating its *50th Anniversary* this year. Visit [www.snh.cc](http://www.snh.cc) today to learn more. Now is the perfect time to enroll as a student!

Whether your interest is in a particular skill or in certification, the School of Natural Healing has courses to fit your needs.

The School of Natural Healing was founded in 1953 by Dr. John R. Christopher. For 50 years the School of Natural Healing has been the means for thousands of students to begin and further their herbal knowledge and wisdom.

Few things are as rewarding and satisfying as being able to care for your own health and your family's health. And there is no safer avenue than herbal and natural healing. Yet many people become overwhelmed at the prospect of herbal study towards becoming their own healer.

The School of Natural Healing's Master Herbalist Program will show you that you can become your own doctor, and that it is not as difficult as you may think. In as little as an hour a day, you could become a qualified healer and teacher in less than 2 years-all in the comfort of your own home.

Our courses are designed to teach herbalism from the ground up-beginning with foundational understandings of natural methodologies, and progressing through the many aspects of herbal healing, including herb identification, horticulture, medicinal usages, methods of preparation, and more. Students who complete the Master Herbalist program are prepared to take care of both themselves and their families, and to share their knowledge and wisdom in the service of educating others.

Our School curriculum and philosophy is built upon the understanding and practice of four fundamental principles.

1. Preventative Nutrition
2. Eradicating the Cause of Disease
3. Healing the Body through Natural Methods
4. Education

#### **Nutritional Herbologist Program • Levels 100 - 500**

The Nutrition Herbologist Program will instruct you to recognize, understand, and assist the body's inherent healing power. You will learn preventative medicine through the study of basic principles of natural healing. These courses focus on cause of disease, nutrition, elimination therapies, and herbal cleansing for the entire system. Training also includes the proper application of wholesome herbs and simple therapies. Using Dr. Christopher's world-famous herbal combinations and single herbs, you will learn how to cleanse, nourish, and build the body. The Nutritional Herbologist Program begins with the popular Family Herbalist (Level 100) course and continues with a series of dynamic video classes presented by Master Herbalists. Textbooks, study guides and workbooks round out your comprehensive instruction in these first five courses. A Certificate of "Nutritional Herbologist" is awarded upon completion of the first 5 levels of the home study program.

#### **Herbalist Program • Levels 600 -1300**

In the Herbalist Program, you will build upon the Nutritional Herbologist training with in-depth instruction in the use of herbal therapy to remove the cause of disease. Within these courses you help fulfill the School's mission to see a competent natural healer in every home. You will learn

how to use the natural medicines that surround you using regional materials. In this program you will learn herb identification, selection, harvesting, horticulture, usage, herbal formulation and preparation. With enough materials to create your own herbal library, this program includes over 18 hours of herbal therapy instruction from Dr. Christopher himself. A certificate of "Herbalist" is awarded upon completion of the first 13 levels of the home study program.

### **Advanced Herbalist Program • Levels 1400 - 2200**

The final eight courses of the Master Herbalist Program give you the skills to become a qualified teacher of herbology. As more people seek natural health, the need for competent educators increases in a variety of health related areas. The Advanced Herbalist Program provides the training to place you on the highest level of herbal competency. As a Master Herbalist, you can teach others so that they are able to take responsibility for their own health. The course study and preliminary examinations are administered through correspondence and provides instruction from the highest-qualified herbal practitioners and herbal pharmacists in the field. The final examinations are only administered at the Master Herbalist Certification Seminar which is held at our facilities. This seminar gives you the opportunity of fine-tuning your skills with the clinical experience of some of the best herbalists in the country.

### **Help by Phone**

Herbalists and Master Herbalists are available to students for tutorial and study aid by toll-free phone from 10:00 a.m. to 4:00 p.m. Mountain Standard Time Monday through Friday (1-800-372-8255). Between 1:00 p.m. and 2:00 p.m. Monday through Thursday, calls are limited to 3 minutes when David Christopher, M.H., accepts calls from the general public.

### **Other Services**

The School of Natural Healing provides a number of additional education services:

- Iridology Home Study Courses with Dr. David J. Pesek.
- Aromatherapy Home Study Courses.
- Reflexology Home Study Courses.
- SNH instructors and Master Herbalists routinely travel to other locations to present seminars for your group.
- Monthly subscription to A Healthier You audio newsletter.
- Many of the SNH texts are available on CD ROM.

For information on any of these services please call or write.

## History

---

### Dr. John R. Christopher, M.H., N.D.

Once in a great while the earth is blessed with an enlightened soul who is able to raise the consciousness of his fellow man by his love, wisdom and honor. Our founder, Dr. John R. Christopher, M.H., N.D., intended for everyone to have the knowledge to properly care for their own body.

In his youth, Dr. Christopher became interested in natural healing when he saw the results of naturopathic healing in his mother. His enthusiasm increased when he found he was able to cure himself of cancer using natural methods. Throughout extensive legal persecution, personal counseling and rigid lecture schedule, he began formulating what would become his world renowned herbal combinations in 1945. Hailed as America's foremost herbalists, Dr. Christopher developed a training program for herbalists and organized [The School of Natural Healing](#) in 1953.

### David Christopher, BA, MH, AHG

For the last 20 years David Christopher has been a popular world wide speaker. He has generated new ideas on the management of high blood pressure, diabetes and auto-immune diseases, and was one of the first to discourage the use of Prozac in favor of natural methods. Alarmed by the growing use of Ritalin, David developed an alternative program for ADD and ADHD.

In 1974 David Christopher, M.H., took his place by his father's side at [The School of Natural Healing](#). David's book entitled [An Herbal Legacy of Courage](#) is a loving tribute to his father. Today, thousands of individuals practice the art of natural healing thanks to David's continued directorship and teaching. Many more receive herbal instruction from David and his wife, Fawn, through their weekly radio program "[A Healthier You](#)". David lectures internationally and has offered educational counseling by phone for over 16 years. He continues formulating herbal combinations, such as the Herbal Traditions line, the Kid-e-Line, [Vitalerbs](#), and the INSTEAD line including [PreTrac](#) & [MindTrac](#); to assist the natural healing process.

David is a prominent herbalist in the United States and is a founding member of the American Herbalist Guild. He received his Bachelor of Arts from Brigham Young University, and his Master's degree from The School of Natural Healing. David's herbal studies began at the foot of America's foremost herbalist, his father, Dr. John R. Christopher, MH, ND. As the director of The School of Natural Healing he ensures that the School offers the best herbal education in the field. David is also a popular radio talk show host, and his program, [A Healthier You](#), and is

now in its twelfth year. An [\*Herbal Legacy of Courage\*](#), a biography on his father's life, is David's most recent publication.

David's characteristic teaching methods have reached thousands of students through residential classes and home study programs. He has helped countless people through his unique nationwide, toll-free herbal education service. David's 23 years of experience in the field of Natural Healing and his personal approach pervades all lectures and classes, and gives those in attendance the knowledge and confidence to continue in a journey toward wellness.

## Personal Success Stories

---

We love to learn what herbs and natural healing methods have done for you and your loved ones. This area is for just that. These stories are some GREAT examples of what herbs are doing for people everyday.

If you would like to share your success story, please [send it to us](#) so that someone else may benefit from your experience.

Dear Sir or Madam:

I was introduced to herbal medicine, quite by accident...literally.

I was attending a seminar on some health related issue when an elderly woman I knew fell in the parking lot breaking a bone in her shoulder.

She was taken to the emergency room of a local hospital for x-rays which confirmed that the bone was indeed broken. In fact, it was the ball of the bone that fits in the rotator cup of her shoulder that was affected. She had three hair-line fractures that radiated from the center of the ball.

After consulting a highly regarded, local orthopedist, she refused his medical treatment which was to include immediate surgery. When she refused, the MD told her that without his professional help, she would never have full motion of that joint again. He predicted that 10% to 20% motion would be the most she could expect without his help. She thanked him, but told him that it was her body and she wasn't going to allow him to perform any unnecessary surgery on it.

Instead, she asked that I go to a garden where I found fifty large comfrey plants growing. I knew them only because of the excellent directions she gave on how to get to the garden and what the plants looked like.

I quickly gathered a 5 gallon bucket of the leaves and under her direction, used a double boiler to prepare a combination of steamed leaves and a tincture of the herbal active ingredients.

When the leaves were steamed for a few moments, I let them cool, then placed them over her affected shoulder. Over this, I then placed a cotton diaper. Then I poured the rest of the cooled liquid from the double boiler to saturate the diaper. She may even have drunk some of it as tea, but I really don't remember the details. Next, I placed a sheet of flexible plastic over the diaper so that her bedding would not be damaged by the green juices. I then placed a heating pad over these layers ( leaves, saturated diaper and plastic ) and she sat there for probably a good half-hour while her skin slowly absorbed the herbs.

To relieve her pain, I would hold points on her hands and feet as she refused to take any pain medication.

I ended up moving in with her as this treatment took a good two to three weeks to be effective.

However, after new x-ray's were taken three weeks later, no one could find the original fracture lines. To top this success, this elderly woman had retained the full 360 degree motion of her arm.

It's pretty amazing that this "bone knitting" herb discovered by the American Indians had accomplished such wonderful results. It was amazing to me, but apparently not to her. However, she made a believer out of me and I've never looked back.

Alan in Ohio

---

My mother, who has had eyeglasses since before I can remember, began having trouble with inherent macular degeneration a year or two ago. Her father lost his sight to this. I told her to start using the [herbal eyebright](#) eyewash. She was using it only one time a day last summer when I went to visit her. She said it had kept the blind areas from getting any worse, but they had not healed completely. I explained, again, that she needed to go through the procedure at least 3 to 6 times a day with her condition, and to be sure to drink the tea. When we visited together during the recent holiday, she felt that her eyes had not only healed, but that she no longer needed glasses. She said she only kept them because her drivers liscence required them.

Tomorrow is her 69th birthday. She went to renew her drivers liscence and then called to tell me that she no longer needs glasses to drive. She no longer needs glasses at all.

Natalie from Mapleton, UT

---

My sister has had a chronic backache for years. (The original injury began after a minor car accident.) She also has had candida on and off. Recently she began using the Red Clover Combination, NuFem, Grapefruit seed extract, and the Bone, Flesh, & Cartilage (internally and externally). She is now pain free and the candida is also gone.

Lynn from Hughesville, MD

[Athlete's Foot](#)

## Abrasions

### Symptoms

The appearance of these wounds is well-known; however, certain cuts such as those that are deep and wide may require immediate attention by a doctor to prevent scarring. If the bleeding does not stop using the following methods, or if blood gushes in bright spurts, you should seek medical attention immediately.

### Cause

A spot rubbed bare of skin or mucous membrane. These are wounds to the skin common in childhood. A cut severs the skin, such as is inflicted by a sharp object; an abrasion rubs and/or scratches the surface, such as the common scraped knee; and a bruise results from forceful pressure against some object, where the skin is not broken so the blood rushes to the damaged tissue beneath the surface.

### Herbal Aids

[Wheat Grass Chlorophyll](#): It has both healing and antiseptic characteristics. The chlorophyll is applied either directly onto the afflicted surface, or, it is soaked in a cloth and bandaged to the area. At the same time, the chlorophyll should be taken internally.

[Comfrey](#): Most skin sores can be aided by the use of comfrey. Use three parts comfrey with one part lobelia to relieve pain and restore the skin.

[Comfrey](#): If a doctor is not available, apply fresh or dry comfrey root, powder or leaf, powdered, to help stop the bleeding. The comfrey can be put right into the wound; if it is powdered, pour over the area, if fresh, tear up finely and apply. Fresh or dried comfrey can be applied directly over the damaged area--just keep adding additional amounts as needed. Cover with gauze, bandage lightly to hold comfrey in place and so the area can breathe. Comfrey paste can also be applied directly over the damaged area as with burns.

[Healing Ointment](#): Made of comfrey, marshmallow, marigold, beeswax, and oils, this is an antiseptic that has been used historically on lesions, eczema (dry), poison ivy, soothes inflamed surfaces, abrasions, burns, hemorrhoids, for bruises and swellings. May be used whenever needed. Good to have on hand at all times.

[Myrrh](#): One herbalist has a favorite application of Myrrh. He combines equal parts of finely powdered golden seal and powdered Myrrh gum. He mixes a pinch of the combination with a little saliva (or water, he says, if you are squeamish), and applies the paste to cuts, sores, pimples, abrasions--any kind of skin wounds. As this dries, it forms a crusty, protective scab over the wound, just like a real scab, but with the additional antiseptic and healing properties of the herbs. He says that he has been able to wean himself from the constant use of band-aids.

[Plantain](#): (*Plantago major*) This entire plant is solvent in water or can be used directly on the external area in question and is an alterative astringent, diuretic and antiseptic. When applying bruised leaves to the wounded area, it is known to check external bleeding and aid as an anti-infectious aid as well.

[Cayenne Pepper](#): The old herbalists claimed that cayenne pepper (*Capsicum* or red pepper) should be poured directly into a fresh wound, to sterilize and stop the bleeding.

**[Abrasions](#)**

[Abscess](#)

[Acidosis](#)

**[Cayenne](#)**: A wound, external or internal, may stop bleeding if the individual will drink a cup of water (preferably hot) with a teaspoon of cayenne pepper (red pepper) stirred into it. The bleeding may generally stop by the time a person can count up to ten after drinking the cayenne tea. The cayenne equalizes the blood pressure from the top of the head to the feet. This keeps the pressure from the hemorrhage area so it will clot naturally, which it cannot do with heavy blood pressure pumping the blood rapidly at the hemorrhage area.

## Abscess

### Definition

A collection of pus within a body cavity. According to Thomas Dusker, "The brighter the redness, the smaller will be the abscess. The softer the feeling and the darker the appearance the more extensive will be the destruction of the tissue. Thick yellow pus is termed 'healthy', thin watery and greenish pus is always bad, indicating prostration and difficulty in healing."

### Symptoms

In an abscess we distinguish between the body or center and the sides or edges. The secretions are of different kinds, and upon them depend the benign or malignant character of the abscess. The discharge may consist of good or bad, of a thin, watery or thick, slimy, clammy, white, green, yellowish green, yellow or bloody, variegated, foul, offensive matter. Benign abscesses heal when the discharge ceases, the cavity or center and side close, and are covered with new skin, but a scar is generally left. A malignant abscess, on the contrary, gives no sign of healing, but rather inclines to get worse, and, if aggravated, to mortify.

### Cause

An abscess is nature's way of purifying the body, bringing waste materials into a deposit that can be easily drawn out. Pus is formed by the loss of organic sulphur from cells, whereupon the cells decay. Herbs containing organic sulphur such as garlic, are used to rebuild and prevent this deficiency condition.

The causes lie either in local injuries or in a defective blending of blood and (other) juices (liquids). But generally both circumstances unite in the development of an abscess.

The basic cause of all abscesses, tumors, cysts, etc., stems back to an impure bloodstream, with its major cause being improper food intake. This condition causes poor action of liver and bowels, a faulty digestion, or disturbances in the lymphatic glands are generally responsible for the accumulation of impurities in the blood.

### Herbal Aids

Poultices: The use of poultices to bring an abscess to a head and clear it out is the most important method of relief. A poultice of slippery elm, wild sage, and lobelia (equal parts) is good; another poultice that will draw very rapidly and will relieve pain at the same time is mullein (three parts) and lobelia (one part). Others are flaxseed, lobelia, and golden seal; leek boiled in milk; sour dock, hyssop and green fennel; ground ivy and yarrow; carrot; potato. [SNH p.1]

Poultices: Over the abscess area put a poultice of three parts slippery elm bark and one part lobelia herb. A poultice of hops or a poultice of hot onions, hot pumpkins, or hot (not cooked) tomatoes is equally effective. After the abscess has burst, cover it with a poultice or fomentation of comfrey leaves or roots (powdered) for fast healing. [HHH p.25]

Burdock Root: One of the best blood-purifying teas is burdock root (*Arctium lappa*). Others are chaparral (creosote bush) (*Larrea tridentata*), Oregon grape root (*Berberis aquifolium*), and red clover blossoms (*Trifolium pratense*).

Poultices: A poultice of hops or a poultice of hot onions, hot pumpkin or hot (not cooked) tomatoes are equally effective. After the abscess has burst, cover it with a poultice or fomentation

[Bursitis](#)

of comfrey leaves or root (powdered or if fresh finely chopped--trituated--for fast healing). Dosage: Be generous in making poultices, covering the afflicted areas very thickly. An abscess as it ripens will get larger and continue to expand until it bursts open and drains. After the pus and solid matters are nearly drained off, fluid--sometimes bloody--will run from the abscess. This is when you put on the comfrey poultice, or fomentation.

Abscessed Tooth: See your dentist. An old and effective treatment for abscess is tincture of myrrh, applied frequently on the gums. This tincture is also good for mouth irritations generally. Lobelia is also good for abscess.

Abscess, Dental: Cabbage is considered a healing herb in this case. [NL 4-12]

Blue Vervain: Made into a poultice with flaxseed meal, using a strong infusion of Blue Vervain instead of plain hot water, it helps promote the relief of rheumatism, neuralgia, sciatica, etc. (ShoA:276). This poultice helps to draw out boils, abscesses, and is especially useful to reduce swollen glands, a common ailment in these days of pollution and debilitated foods. Use this poultice for earache and ear abscess as well. Apply the tea externally to sores. [NL 5-10]

## Acidosis

### Definition

Acidosis is the reduction of the alkali reserve, due to an excess of acid-forming foods which are incompletely oxidized or poorly eliminated. This leads to the cause of stomach disorders. As Otto Mausert, N.D., states in his book Herbs (Elaine M. Mhur, Eugene, Oregon 97402), the body needs sodium, potassium, calcium, and magnesium. Acidosis is the depletion of these alkali reserves. [HHH p.26]

### Symptoms

Loss of appetite, headaches, sleeplessness, acid urine, acid or strong perspiration, acid mouth, sour stomach, lassitude and vomiting. [HHH p.26]

### Cause

As Otto Mausert states:

"Stomach disorders--There are different diseases caused by acidosis coming under this heading, but the direct cause is the same for almost all of them. Eating fast, improper chewing, overloading, and eating the wrong kinds of food, are generally responsible for the troubles. The bad habits must be abandoned in order to affect a cure, as there is no medicine that can chew the food properly, or stop anybody from overloading, or prevent one from eating things that are hard to digest.

Food that is not properly masticated is retained longer in the stomach than it should be. As a result, it turns sour and ferments, creating an excessive amount of acid and gas. This in turn causes a great deal of irritation and inflammation on the mucous lining of the whole digestive system or tract. A catarrhal condition gradually sets in, and the lining becomes coated with a thick slimy mucus that interferes with the assimilation of the food. Decomposition and decay result. Poisonous matter therefrom is absorbed, which leads to severe disturbances of the stomach and bowels and gradually the whole system. The result of this is far reaching, as it finally leads to many other diseases to which the human race is heir. It is only too true, that most people dig their own graves with their teeth.

Let me therefore repeat, what we might call the Golden Rule of Health: eat slowly, chew food well, and don't overload. Eat only plain food, plenty of fresh vegetable matter, salads, ripe fruits. The richer foods, however, such as meat, eggs, starches, sweets, etc., should be taken more moderately and only in proportion to the amount of work one does. In that way the food can be balanced properly and digested more completely. Failure to live up to these simple natural rules will gradually lead to the operating table--but the operation will not remove the underlying cause, and consequently will not bring the desired relief."

We have another author who is a wise old doctor of the past, who gives his view as follows (Jethro Kloss in Back to Eden, Beneficial Books, Box 404, New York 10016):

"Acidosis Causes--Meats, fish, fowl, tea, coffee, tobacco, alcohol, pepper (cooked), mustard, spices, vinegar, excessive uses of salt, baking powder, soda, jellies, sweet desserts (not the natural sweets), candy, preserves, pancakes, hot breads, pastries, fried foods, irregular eating, eating late at night, excess starch, improperly cooked foods, starchy and poorly baked bread, foods too hot or too cold, and foods cooked in aluminum utensils." [HHH p.26]

### Herbal Aids

[Bad Breath](#)[Bed Wetting](#)[Bee Sting](#)[Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#)[Blood Pressure](#)[Boils](#)[Breast](#)[Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#)[Bursitis](#)

Aids to help soothe and speed up the healing are slippery elm gruel, marshmallow root tea, okra, carrot and spinach juice. Peppermint tea is an excellent beverage for this condition. To assist it in its stimulating effect, add six to ten drops of tincture of lobelia, or antispasmodic tincture to each cup of tea. The use of potassium broth is a great aid; spinach juice, mixed with carrot juice, is also excellent. [HHH p.27]

Use the instructions for [Dr. John R. Christophers "Three Day Cleansing Program"](#) [HHH p.157] and [Dr. John R. Christophers "Mucusless Diet"](#), [HHH p.162]. If severe, follow instructions for the [Incurables](#) [HHH p.85] Avoid Constipation.

The food should be eaten as dry as possible, mixing thoroughly with saliva to a liquid form, not drinking liquids with the meals. The drier the food is eaten, the sooner the acid condition can be overcome. Chew! Chew! Chew! so that your food is liquified before swallowing. Sodium and magnesium foods such as oranges (whole, not the juice), beets, carrots, celery, cucumbers, okra, radishes, apples, cherries, strawberries, coconuts, figs, prunes, string beans, spinach, should be eaten in abundance. [HHH p.27]

Parsley: This is good for acidosis. [NL 1-3]

Juices used for acidosis: Spinach, celery & spinach, celery & beet, carrot, tomato. [NL 3-5]

Green Bell-Shaped Pepper: It is especially good for liver disorders, obesity, constipation, high blood pressure and acidosis. [NL 4-12]

## Acne

### Definition

Acne is a chronic inflammatory condition affecting skin structures usually involving the face, back and chest. It usually affects those between the age of puberty and the twenties. [HHH p.29]

### Symptoms

The primary lesion or blackhead develops into a pinkish pustule or nodule. A teenager, sometime pre-teen, often breaks out with a horrible skin condition in which pustules and their scars may cover the skin, which is often coarse and oily. This causes an inferiority complex and other emotional disruption. At this time they may become irritable, snap and snarl at people. They are impossible to live around--why? They are growing into adulthood so rapidly that they are maturing faster than they are equipped. [HHH p.29]

### Cause

As the teenagers grow up, they, like everybody else today, eat devitalized, dead, "mucus-loaded" junk materials that could only be called "garbage food" or meals without energy and life building materials in them. The rapid change from childhood to adulthood requires foods rich in vitamins, minerals, etc., needed in the healthy body. Processed foods are low or lacking in natural hormone and estrogen materials needed in the growth transition to adulthood. The young person's body realizes the lack and the need, and tries to pull the required materials from the body. If they are not there, the strain of trying to produce them causes irritation, a nasty snarling disposition, and a pimply complexion.

We blame the child for not being cooperative, for craving sweets, excess meats and bakery products. The body is craving vitamins and minerals and basic needs for health, and that "craving" is termed "hidden hunger." To pacify this hungry gnawing feeling, the young person stuffs on junk food, adding insult to injury. From this diet comes acne, boils, irritability, the sick and sad youth. The girls have difficult menstrual periods with cramps, flooding, or off-timed cycles, and the boys have a tendency toward early prostrate trouble and unhealthy sex drive. [HHH p.29]

### Herbal Aids

See formula for acne using burdock root, sarsaparilla, yellow dock, sassafras, dandelion, prickly ash, stillingia and camomile [SNH p.67]

Sun: Helios-therapy on the skin is very important, as the sun is the Great Doctor of all times. But this therapy must always be done with caution because the sun (though being a healer) is like fire, which can either provide gentle warmth or it can burn a city down. The sun may help heal where medicinal aids, herbs and other procedures are slower. In many instances, it may help bring skin cancer to the surface; and various other skin problems (such as acne, eczema, etc.) are beneficially aided by bathing in the sun. The internal use of tea of other herbal aids are often an herbal wash before the sunbathing are congenial and excellent. When there is moisture in the body, the sunbathing is much more beneficial--for instance, burdock seed and burdock root have been historically used internally (which work on the lymphatic and oil glands of the body), while at the same time using sun therapy for the outside. Indiscreet exposure can cause third-degree burns, shock, and death. The light-skinned individual must be most careful, but even a person

[Bad Breath](#)[Bed Wetting](#)[Bee Sting](#)[Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#)[Blood Pressure](#)[Boils](#)[Breast](#)[Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#)[Bursitis](#)

with dark skin can get a very heavy burn. Helios-therapy is used on bright days, but we do advise against sunbathing at midday, between the period 11-1, when sun might be quite toxic to the user. A blonde person who has never done sunbathing before should never be out over one minute on the first day, adding a minute each day. This should be measured by stop watch or clock, and accuracy is important, because the feel of the sun is so luxurious that one will desire to stay in it just a little bit longer, and that can cause serious trouble. This may not sound like very much, but within thirty days a person can be sunning up to an hour total time! Brunettes can often start with two minutes front and two minutes back without any injury at all, and add four minutes a day. A person who has been sunbathing years before and has sunbathed regularly each season may start with a little more, five minutes front and five minutes back for the brunette, and two minutes front and two minutes back for the blonde. If done gradually and judiciously, this can give power to the body. The propaganda in daily newspapers and national publications each year (although promoted often by people with doctoral degrees) stating that "the sun causes cancer" is as ridiculous as saying "the tonsil is poisoning the whole body"--actually it is the putrid condition of the body that is poisoning the tonsil, or the skin! All the sun does is to ripen and bring the cancer that is already there to the surface, wherein the waste matter can slough off, so that the body may heal. This is why we must work inside the body with herbs, as well as outside the body with the sun, which will harmoniously speed the curative process and eliminate the problem so there is no recurrence. [SNH p.502]

Natural Hormones for Puberty: During puberty, and preferably just before that time starts, it would be wise to have the pre-teen boy and girl take a cup or more of red raspberry leaf tea and/or (especially important) blessed (holy) thistle tea each day--six days each week. This tea will assist in supplying natural hormone and estrogen materials to the system. Puberty is also much easier to go through if the tonsils are still intact. [HHH p.30]

Dr. Christopher's [Chickweed Ointment](#): This is made of chickweed herb and bees wax and oils. Excellent for eczema and/or other skin infections, sores, burning, itchy skin or genitals, swollen testes, acne, hives, also for ulceration of mouth and throat. This is a wonderful healing ointment. [HHH p.196]

[Red Clover Combination](#): Dr. Christopher's Blood Purifying Formula: If we are just beginning a cleansing and healing program, we experience problems. Very common is acne, which is most often a manifestation of an unclean bloodstream. Red clover tea is an excellent blood-cleanser, with a very mild taste. Burdock root tea works fast and well to cleanse the bloodstream. Carrot juice, very pleasant to the taste, cleanses and builds good cell structure. Many families drink green drink, consisting of fresh greens, such as comfrey, parsley, mint, lambs quarters, marshmallow (that is, common mallow), your dandelion and other local greens, blended into a base of pineapple juice in a blender. At first you may wish to strain out the pulp, but it is good for you too, and soon you should become accustomed to it. Some people make a green drink by simply blending the wildings into water, straining out the pulp and sweetening a bit with pure maple syrup or honey. This green drink supplies vitamins, minerals, enzymes, and healing factors in a fresh, assimilable form. [EWH p.6]

Soap and Astringents: If you want to treat your acne externally, be aware that it's not an external problem. I would recommend very sparing use of soaps, which is contrary to most advice on acne. Soap removes the protective oil from the skin and upsets the acid-alkaline balance. Only use soap if your skin is really dirty; otherwise, wash with water. Instead of using thick makeup, which must be soaped off, let your natural healthy glow illuminate your skin. There are mineral-based blush powders which have no chemicals in them; they can be used as blush and as eyeshadow; just make sure when you purchase them that they really have no chemicals, as some cosmetic companies are mimicking the idea but including additives.

Some people recommend astringents to control large pores on oily skin. First of all, your skin won't produce excess oil if you follow the mucusless diet. Although you will be taking adequate oils in your diet, they are in a form assimilable by the body. Probably the worst "junk food" anyone can take is hydrogenated oil--margarine, hydrogenated peanut butter, shortening. These oils have undergone a chemical change which makes their structures unusable by the body. They clog up the digestive tract and bloodstream and cause many problems, including that oily skin that troubles you! Eliminate them from your diet, replacing them with natural oils (olive, safflower, almond, sesame--there are many choices). You'll see a real difference in just about a week.

As for the large pores, astringents only help for a little while, as they fill the pores with moisture,

seeming to close them. But after a short time, the pores return to their normal size. A good diet, plenty of steam-distilled water, exercise, and the consistent use of the blood cleansing herbs mentioned above, will help tighten those pores. In the meantime (and perhaps just for fun) you can make some astringent lotions to apply to your face. Rub some strawberries on your skin and splash them away with water! Squeeze the juice from a cucumber and do the same. Tomatoes, raspberries, and zucchini all gently tone the skin. You can make a "green drink" for the complexion, blending comfrey, fennel, geranium, lavender, marigold, nettles, peppermint, sage or yarrow (any one or combination of these) with pineapple juice to make a thick, thick mush. Put them on the face, containing them with a piece of gauze if necessary, and lie down for a half-hour or so. Rinse off and notice a glowing skin.

Good old-fashioned witch hazel (the distilled herb preserved with some alcohol), which you can still purchase at most pharmacies, is known for its skin-toning abilities. You can combine it with fresh or bottled (unsweetened) apple juice, adding a little rubbing alcohol to preserve. This fresh-smelling astringent is cheap enough for everyday use, but nice enough to bottle in a small container and give as a gift. [EWH p.8]

Aloe Vera: This penetrates the skin quickly and deeply. This allows water and other moisturizers to sink deeply into the skin, restoring lost fluids and replacing the fatty layer. It permits the uronic acids, which strip toxic materials of their harmful effects, to penetrate deeply and allows the cleansing astringent qualities of the gel to work better. By increasing the circulation of the blood to an area, Aloe Vera sloughs off dead cells and fosters the growth of new ones. This helps foster the regeneration of scarred or blemished skin tissue and provides a protective coating on the skin to prevent the growth of harmful bacteria. This antiseptic action also stops skin infections (acne) in oil-clogged pores. It heals blemishes with little or no scarring. This accounts for the multitude of cosmetic preparations these days contain Aloe Vera. [UW-Aloe Vera]

Liniment of Peppermint: This was used in the past to reduce varicose veins, and clear up acne, boils, abscesses and eczema. To do so, heat 1 pint of pure olive oil, and add to it 1 dram (teaspoonful) of oil of Peppermint, 1 dram, menthol crystals, and 1 dram of flowers of camphor. Mix in a warm jar or bottle, shaking until dissolved. Let stand until cool, then keep in a cool place. [UW-Peppermint]

Bowel and Blood Purifiers: Dr. Christopher emphasized that we need to know the source of our problems. Perhaps our toxic condition begins with a poorly functioning bowel which should be taken care of with [Fen LB](#): Dr. Christopher's Lower Bowel (Colon) Formula. But suppose a person has a case of boils or acne. The [Red Clover combination](#) should be used about three times a day, six days a week for six weeks. Then you can switch to another blood purifier such as burdock or chaparral or Brigham tea. Then switch back to the [Red Clover combination](#). [UW-Red Clover]

Watercress: This like other plants which have a pungent taste, is celebrated as a blood purifier and has been used in the springtime to eliminate the toxins accumulated in the winter. It increases the appetite, frees up the bowels and causes a freer flow of urine. It is strongly alkaline and therefore treats acidity of the blood and relieves symptoms related to overacidity. It is said to help clear up acne as it cleanses the blood and relieves arthritis and rheumatism. [UW-Watercress]

[Red Clover Combination](#): Dr. Christopher's Blood Purifying Formula: There are various combinations recommended for blood purifiers. You can make the simple infusion, allowing to steep for thirty minutes, or you can combine with equal parts of red clover tops, Brigham tea, burdock and figwort, making 2 quarts of tea and reducing it down to one quart. Combine yellow dock burdock, sarsaparilla and echinacea for an excellent blood cleanser, particularly good in treating post-adolescent skin acne or eruptions related to the menstrual cycle. It will help clear up eruptions on oily skin of the neck and back. [UW-Yellow Dock]

Fruits and Vegetables for Acne: Carrot & spinach, celery & watercress, grapefruit juices are all useful to combat acne. [NL 3-5]

Unwholesome Foods: Acne, a prevalent problem among teen-aged boys would not be possible in our society if our foods were wholesome. A most sad and disgusting sight is the pus-filled pimples due to inner toxicity --- wastes trying desperately to escape through the face. This condition often turns a gentle face in the blossom of youth into a waste dump of pimples, pus

and subsequent pock marks which can be prevented. The tons of acne medications and prescriptions sold annually act only on the effect of the harmful food, and not the cause of the disease, malnutrition. The traditional teenage meal, a grease burger, french fries and a milk shake or cola simply does not provide enough nourishment for anyone, let alone a boy going through puberty to adulthood. Our highly processed foods are devoid of hormones found in fresh fruits, vegetables, grains, nuts and seeds. Blessed thistle tea given to the unfortunate souls three times a day along with a change in diet to the wholesome, mucusless foods will supply necessary hormones for growth and maturity. The aforementioned hormone and estrogen formula [Changease] will also be beneficial. The big task here will be to reeducate the tastebuds of these boys so they can appreciate real food. [NL 3-6]

**Cabbage:** Apply a lotion of freshly prepared cabbage juice preceded, if desired, by the application of leaves. The eating of cabbage leaves or juice is also helpful. [NL 4-12]

**Lemon Juice:** Skin problems such as acne... will often respond to a treatment of lemon juice. For blackheads rub lemon juice over them each night. [NL 5-1]

**Black Walnut:** Externally, Black Walnut is nearly a miracle worker in cases of ...acne, dandruff, boils, itch, shingles, ringworm--we could go on, but you can see that you can use Black Walnut whenever a skin disorder appears! The tincture is an excellent first-aid remedy for wounds. [NL 5-7]

## Addison's Disease

[A - B](#)   [C - E](#)   [F - I](#)
[J - P](#)   [Q - Z](#)

### Definition

When a person's adrenal glands become so exhausted that they simply do not function anymore, the condition is called Addison's disease, which is a terminal disease. [UW-Licorice]

### Symptoms

It is characterized by blotchy pigment appearing suddenly on large parts of the body, intolerance to heat or cold, reduction in capacity for muscular work, weakness, inability to stand any stress or emotional excitement, whether positive or negative, sometimes nervous breakdown or even insanity, complete exhaustion, feeling that one is going to die, inability to digest food, and other similar symptoms. [UW-Licorice]

In 1855, Thomas Addison described a disorder of the suprarenal capsules, or the adrenal glands. He had the dubious honor of having the disease bear his name to this day in history. Herewith shall be presented a capsulation of the symptoms of chronic adrenal deficiency according to Ivor H. Mills, M.A., Ph.D., M.D., and F.R.C.P. and one of Great Britain's experts on adrenal function:

"The adrenal in this disease suffers from destruction by tuberculosis or progressive atrophy or, very rarely, destruction by secondary carcinoma [cancer] ... most common presenting symptom is tiredness. . . "worn out" but healthy people... loss of weight ... slowly and is not usually gross. . . gastrointestinal upset is not uncommon ... severity depends upon the degree of steroid deficiency... may have no such symptoms of gastrointestinal upset until he gets acute infection ... anorexia, vomiting and occasional diarrhoea... vague abdominal pain ... steatorrhoea [increase fecal fat excretion] to the extent of 30 gm. fat per day, without diarrhea...

Pigmentation is a striking feature of the patient with advanced Addison's disease ... widespread on trunk, face, arms, and extends to the creases of the hands and the mucous membranes of the mouth ... tan of a previous summer did not fade during the winter ... even in colored people... palmar pigmentation has increased... tendency for the blood pressure to be low .... vascular reflex responses to the fall in pressure are impaired. The periphery (hands, nose, ears) of such a patient may be warm when the systolic pressure has fallen below 100 mm Hg whereas a person with normal adrenals would usually show peripheral constriction with a fall in arterial pressure .... Hypoglycemia... does occasionally occur... They may suffer hypoglycemic symptoms some hours after a large carbohydrate meal but usually their anorexia prevents them from consuming sufficient carbohydrate to do this ...

In women of child-bearing age, some disturbance of the menstrual rhythm is occasionally seen .... loss of pubic and axillary hair is a very useful physical sign ... Impotence is rare but loss of interest in sexual activity is not uncommon ... Nocturia (night urination) is common in patients with chronic adrenal deficiency, because of the impairment of their handling of a water load .... mild neurotic traits to gross psychosis ... depression, schizophrenia, and hallucinations .... severe headache ... resemble/s/ patients with raised intra cranial pressure, but the blood pressure remains low and the pulse rate does not slow .... An X-Ray of the chest may reveal the small heart frequently seen in chronic adrenal deficiency .... A straight X-ray of the abdomen may reveal calcification above the kidneys if the adrenals have been destroyed by tuberculosis ... sodium and chloride are low or in the lower half of the normal range.... blood urea frequently raised... a low fasting blood sugar.... Low adrenal steroid excretion... [ACTH test is usually used to confirm adrenal deficiency: if no increase of steroid hormone is noted in the urine after two to four days of intravenous administration of ACTH, then adrenal deficiency is suspected rather than other diseases such as Steatorrhoea, Crohn's disease (regional ileitis), Cirrhosis of the liver, Slat losing

renal disease, Leukemia, Anorexia nervosa, and chronic thyrotoxicosis.]" (Mills, 1964, pp. 88-100)

The special requirements of pregnancy, surgery, diabetes, and hypoparathyroidism complicate Addison's disease even more. In addition to Addison's disease there is hypopituitarism which is a deficiency of pituitary thyroid stimulating hormone, and can result in loss of pigmentation, and also in water intoxication because of the prevention of the steady drain of sodium into the urine. This may exhibit itself as confusion and disorientation, epileptic fits, hypothermia, and even coma. There is also depressed thyroid function: sensitivity to cold, slowness in mental and physical activities, loss of sexual libido, absence of menstruation in women and impotence in men. "In children, arrest of growth hormone occurs." (Mills, 1964, p. 133) [NL 2 -3]

### Herbal Aids

[Licorice](#): Licorice has been historically used in this condition, as it contains a cortisone-type substance which will help the body restore itself to the point where it will produce its own cortisone. Its sugar-like substance does not increase the demand for insulin in the body, thus giving strength without bringing on insulin shock. LaDean Griffin explains that she is certain that this works, because at a time when she thought she was making a great deal of personal progress, a sudden shock debilitated her so much that she developed Addison's Disease. She found that two capsules of Licorice each day would give her enough strength to begin healing, and to do the day's work. She needed to continue taking the herb, which is not addictive, she explained, no more than food is. You can stop taking the Licorice root without going into shock as you would if you suddenly stopped taking cortisone, she explained. [UW-Licorice]

## Adenoids - Polyps

### Definition

Adenoiditis is inflammation of the adenoids. The adenoid is a relaxed condition of the mucous membrane, resulting in nasal or laryngeal polyps. There will be problems continually throughout life for the mouth breather, unless this condition is cleared. [HHH p.31]

### Symptoms

The polyps are caused by a toxic and mucus condition in the body, so go back to the basic cause and use the mucusless diet. [HHH p.31]

### Herbal Aids

Bayberry: Snuff or blow powder up the nostrils 3-4 times daily (at first there is pain, then sneezing every 20-30 seconds and continuing for 5-10 minutes); there are copious discharges of thick, viscid and often stringy mucoid matter and the influence of the powder causes the adenoids to dry up--an adenoid being a relaxed condition of the mucous membrane. [SNH p.132]

Bayberry or Oak: To shrink the swellings in the nose and throat areas, many herbalists suggest that we make a tea of bayberry bark or oak bark and snuffle it up the nose. Some children can be taught to "drink it up the nose," using one side at a time. It will also be helpful to drink some of this tea two or three times a day. For some, the easier way is to use an atomizer spray up the nose. Still another procedure is to put a small amount (a pinch) of the oak bark or bayberry bark powder into a plastic, flexible drinking straw, and, very carefully, blow it up the nose (only a very small amount at a time or it will plug up the nose and get into the lungs). [HHH p.31]

Carrots: The regular use of fresh carrot juice is a fine aid to clean up the mucous membrane and reduce the "unnatural swellings" in the body such as adenoids. [HHH p.31]

Figs: Contain an active ingredient called benzaldehyde which has been found to be a very effective carcinostatic agent for reducing certain kinds of tumors found in the neck, throat, and general lymphatic system particularly the adenoids. [NL 5-1]

### Testimonials

Dr. Poskanzer suggested that some infective agent (germ or virus) originating outside the body played a role in the causation of multiple sclerosis. He believed that whatever it is, it may well be active in childhood many years before the development of the disease, and kept in dormancy by the lymphoid system which includes the tonsils, adenoids and appendix. [NL 1-9]

## Adrenals

### Definition

The adrenal glands, seated on top of each kidney, are part of the endocrine system, that is: the internally secreting or ductless glands which release their secretions directly into the blood stream. The adrenals, often referred to as the suprarenal, are the Creator's most intricate chemical factories. "It would take acres of chemical plants" to synthetically manufacture "the 50 odd hormones or hormone-like substances" produced by the adrenal glands. (Ratcliff, 1975, p. 69) Not only do these hormones control all the oxidation processes of the human body through the anterior pituitary body, but they regulate growth, mental balance, sexual development and maintenance, and a host of other phenomena... The adrenals, the pituitary, and the thyroid are functionally united comprising the adrenal system. **THE ADRENALS ARE ABSOLUTELY ESSENTIAL TO LIFE.**

### Symptoms

1. Licorice & the adrenals: Most hypoglycemics have problems feeding themselves, for they crave protein and sugar, yet these substances are wearing on the adrenals, which are often exhausted in hypoglycemics. You need to feed the adrenals with licorice root and hawthorne berries, the latter being said to produce natural adrenalin. You need to take high-quality protein, as in the nuts and seeds and legumes. Sprouted sunflower seeds, sprouted almonds, and chia seeds are all high-quality sources of protein. The other seeds and nuts are good as well. You can soak and low-heat legumes, particularly pinto beans, which are high in potassium and easily digested, for satisfying and long-lasting protein. Be sure that you eat plenty of vegetables, both raw and cooked, in preference to too many fruits, which can overload the system with sugar.

When suffering with hypoglycemia, I devised a power-packed drink which helped every time. In a blender place a handful of soaked or sprouted almonds, a cup or two of water, a banana, some pineapple juice, a tablespoon of brewer's yeast, and a handful of chia seeds. Blend until the seeds thicken the drink. This is mild but very helpful in feeding high-vibration protein to the system.

2. Addison's Disease: When a person's adrenal glands become so exhausted that they simply do not function anymore, the condition is called Addison's disease, which is a terminal disease. It is characterized by blotchy pigment appearing suddenly on large parts of the body, intolerance to heat or cold, reduction in capacity for muscular work, weakness, inability to stand any stress or emotional excitement, whether positive or negative, sometimes nervous breakdown or even insanity, complete exhaustion, feeling that one is going to die, inability to digest food, and other similar symptoms. The synthetic cortisone is given to supply the need of the natural substance, but it produces complications, side effects and eventual disillusionment as it will not in any way heal the adrenals.

3. Sarsaparilla also contains cortin one of the hormones secreted by the adrenal glands. The body will die almost immediately if this hormone is stopped but if there is only a small or insufficient amount the body becomes easily ill and develops nervous depression and general weakness. So many maladies are related to adrenal weakness and exhaustion, including hypoglycemia, so people should take note if they are striving to rebuild their adrenals. Sarsaparilla may be able to help.

[Bad Breath](#)[Bed Wetting](#)[Bee Sting](#)[Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#)[Blood Pressure](#)[Boils](#)[Breast](#)[Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#)[Bursitis](#)

4. Cell Deterioration: Anytime a person has cell-deterioration, be it called by whatever name medical science can come up with, melanoma, carcinoma, malignant or benign, the adrenal function must be investigated...so that if there is some dysfunction, it can be remedied through diet and herbs.

### Herbal Aids

[Dr. Christopher's Adrenals Formula: \(Adrenetone\)](#) Contains mullein, licorice, Siberian ginseng, gotu kola, hawthorne berries, cayenne, and Ginger. As this formula helps promote the correction of any imbalance in the adrenal gland it also compensates for any stress placed on the heart.

[Licorice:](#) The steroidal content has also brought the herb into some prominence for healing and restoring the adrenal glands. About every five hours, the adrenals need some sort of nourishment in order to continue supplying strength to the body. If a meal or some other nourishment is not forthcoming, Licorice can supply the adrenals. The armies of Alexander the Great, mentioned above as carrying Licorice with them on their long marches for allaying thirst, also benefited from this strengthening agent to give them stamina and endurance--a far cry from today's chocolate candy bar, Dr. Christopher noted, which is given to the poor G.I. in the military.

[Panc Tea:](#) Dr. Christopher's Herbal Aid for Pancreas and Companion Glands Formula: Dr. Christopher in speaking of why he developed the Pancreas Formula to help not only the pancreas, but other supporting glands. Hypoglycemia and hyperglycemia involve the breakdown of the adrenal glands as well as the pancreas...As time went on, we found that some of our ailing pancreas patients, though the sugar and insulin problem was adjusted, would have problems with the pituitary, pineal or adrenal glands. We had not, at this time, taken the thought into our mind that the pancreas doesn't work alone, but is assisted by other glands. When the pancreas was healed, toxic burdens centered more, now, into the other glands. This was the time we added additional herbs to take care of these other glands--and since then they all are rejuvenated and healed together. The formula we have used for years, with success in all age groups from children to old aged patients is as follows: Cedar berries sixteen parts and one part of each of the following--golden seal root, uva ursi, cayenne, licorice root and mullein.

[Adrenetone:](#) Dr. Christopher's Adrenals Formula: In our monthly seminars with doctors, we are asked repeatedly - "What can be done for malfunctioning adrenal glands?" A larger and larger number of their patients are suffering from this problem.

Because of so many requests for an aid to the adrenals, we formulated a group of herbs consisting of mullein and lobelia, Siberian Ginseng, Gotu Kola, licorice, Hawthorn berries, cayenne and ginger. ... I wish it noted that two of the important herbs recommended are mullein and lobelia. They are a natural pair to use in repair and rejuvenation of the glandular system. Also, the balance of each additional herb added.

This formula for the adrenal glands has done much good, but it is, as we have explained frequently before, working on the effect. In addition to this, we must go to the cause--watch the diet, the liquid intake, remembering to use deep breathing exercises, and above all, keep a positive and good mental outlook on life.

[CSK:](#) Dr. Christopher's Anti-Obese Herbal Food Combination: Licorice is used here because it decreases the desire to overeat while it gives energy to the body. The licorice root actually feeds the adrenal glands. Every 5 hours or so, the adrenal glands need a "meal", that is, some sort of nourishment. Many people try to fill this need by filling their intestines with empty calories. Licorice root provides this lift for the adrenals and thereby can sustain an individual's stamina without them having to eat a large meal for energy.

[Juices for the Adrenals:](#) Carrot & spinach, pineapple.

### Testimonials

1. LaDean Griffin, in a very interesting article on Licorice, explained the use of Licorice to build the adrenal glands. She noted that we call adrenal exhaustion hypoglycemia in today's modern world. Since we are so stressed at our modern pace of life, the adrenal glands become exhausted

easily and frequently. "In hypoglycemia, where sugar is taken to give a stimulating lift in the hope of overcoming (stress), the problem is compounded as sugar leaches the Vitamin B and calcium, causing more stress, losing more potassium and body tone. The insulin is raised to an unnatural high to take care of the sugar, somehow extending past its needs and afterwards dropping to a new low, causing a low blood sugar called insulin shock (overdose of insulin). Immediately we take sugar to lift us up again and a vicious cycle has begun. Having found the herbs that act like cortisone (cortin hormone), I feel it is important for me to make this known".

2. Poke: Malstrom tells of a young man from Salt Lake County who had been suffering from congestion of the lymphatic system for a period of time. It began from a cold that would not leave and developed into a period of tension in which he slept very little. This caused adrenal exhaustion and swollen lymph nodes over most of the body. He was listless, had no energy and could work only a few hours a day, but only inefficiently. Dr. Malstrom told him to take a mild fast, to use green drinks for a week or so and then only take raw root vegetables with the green drink and some seeds. After a time he could take some fruit. After three months of this strict regimen along with the use of Poke root and other herbs to clear the lymphatics, he got strong again and could live a normal life once more (Mal:196).

## Ague

### Definition

A malarial fever which is attended by paroxysmal and recurrent chills.

### Symptoms

This is a condition of malnutrition and poor blood circulation. [SNH p.2]

### Herbal Aids

Diaphoretics: Moist heat and profuse perspiration or sweating with diaphoretics are needed, (yarrow is one of the best). Tonic or alterative herbs (Brigham tea, burdock, ginseng) must be used to build up the body, with special attention to a proper, healthful diet. [SNH p.2]

Tansy: Take small and frequent dosages of tansy in the form of warm infusions. [SNH p.23]

See formula for ague using bayberry, pinus bark, ginger, cayenne and cloves.

Mullein: Peter Kalm said that the Swedish settlers called it [mullein] wild tobacco and tied the leaves around their feet and arms when they had the ague. [UW-Mullein]

Yarrow: It is made into a decoction, fluid extract, infusion, oil, powder or tincture for use against ague. [NL 1-3]

Southern Man: Massage the oil of Southern Man, Old Man or Lad's Love onto the backbone for fits of ague. (All are the same herb, only different names. Latin for this herb is Artemisia Abrotanum.) [SNH p.304]

Betony: Gerard said that Betony "preserveth the lives and bodies of men from the danger of epidemical diseases. It helpeth those that loathe and cannot digest their food. It is used either dry or green--either the root or the herb--or the flowers, drunk in broth or meat or made into conserve, syrup, water, electuary or powder... mixed with honey is no less available for all sorts of colds or cough, wheezing, shortness of breath and consumption...the decoction made with mead and pennyroyal is good for putrid agues. [UW Wood Betony]

## Alcoholism

### Definition

It is the extreme dependence on alcohol which can lead to mental changes, cirrhosis of the liver, nerve damage and heart problems.

### Herbal Aids

[Bugleweed Combination](#): Natural physicians have used bugleweed successfully in cases of ...the inflammation from alcoholism. [UW-bugleweed]

[Oats](#): In India, oats are described as a perfect food.... The tincture of the green oats is recommended for nervous strain. It is also taken as an antidote for drug addiction and alcoholism. [UW-Oats]

[Skullcap](#): This has been used in weaning people from barbiturate addiction as well as in lessening withdrawals from Valium and meprobamate abuse, avoiding some of the latter state convulsions and frenzies. In combination with white ginseng it is effective in treating delirium tremens of alcoholism. [UW-Skullcap]

[Chaparral](#): This contains a phenolic compound, nordihydroguariaretic acid (known as NDGA for short). It is found on the external surfaces of the leaves and stems in all the species of Larrea... NDGA is used in alcoholism treatment, liver disorders and geriatrics. [NL 3-4]

[Cabbage](#): Eat cabbage, steamed or raw and drink the juice. [NL 4-12]

[Cayenne](#): It is used as an accentuator with other herbs; it increases the value and healing properties of the herbs and carries them to the afflicted part of the body. Indeed, Cayenne affects every portion of the body through its marvelous action in the venous structure... It can help cleanse the system of alcoholism and even reduce the discomfort of a hangover, or worse, the miseries of delirium tremens. [NL 6-3]

[Cleansing the Bowel](#): Alcoholic beverages of all sorts tend to produce constipation, by causing chronic intestinal catarrh, ulcer of the stomach, and paralysis of the sympathetic nerves. We do not recommend laxatives such as purchased from the drug store or herbal laxatives in many cases from health stores that are just a laxative. These become habit forming and this is not the procedure we recommend. We use herbs to feed and rebuild the bowel, to activate the dormant peristaltic muscles and clean off the bowel walls for complete assimilation of foods going through the intestinal tract. (See also Cleansing) [HHH p.146]

[Alfalfa](#): This is used in Europe for many functional type diseases. It is traditional for wasting diseases in traditional European practice. It is recommended for alcoholics and drug addicts who are trying to kick the habit. [UW-Alfalfa]

## Allergies

### Definition

Physical discomfort, irritation or reaction to specific substances which cause no hypersensitivity in the nonsensitive. [HHH p.31]

### Symptoms

The patient may sneeze and cough, suffer from a running nose and excess mucus, and have swollen or irritated eyes. The skin may erupt in rashes, and there may be headache or sore throat as in a common cold. [HHH p.32]

### Cause

When certain foods are eaten, toxins are stirred up in the body which has an excessive retention of waste matter.

Dr. Harold Thomas Hyman, M.D., in his book Handbook of Differential Diagnosis (Philadelphia, London, Montreal: J.B. Lippincott Co.) explains that despite limitations in current understanding of the problem, the state of allergy is described best as "a perversion or perversions of the mechanisms of host-defense." Several pages then continue to explain whether the allergies are histamine versus tuberculin type and the many tests, clinically, to determine the cause. The cause can be pollens, plants, micro-organisms and their products, animal tissues, digestants, cosmetics, drugs, serums, articles of clothing, dyes, industrial products, physical modalities (heat, cold, solar energy, etc.), and psychic tensions. The first step in cleaning up the cause of allergies is to work on rebuilding the bowel area to a "healthy action." [HHH p.32]

### Herbal Aids

General Instructions: Many herbalists have taught us to clean the blood stream with a good herbal tea such as the red clover combination tea, which consists of red clover blossoms, chaparral, licorice root, poke root, peach bark, Oregon grape root, stillingia, prickly ash bark, burdock root, and buckthorn bark.

Other Treatment

Use the three-day cleanse each thirty days, or at least each three months and follow [Dr. John R. Christophers "Mucusless Diet"](#).

Be sure to drink at least one gallon of distilled water per day for an adult of average size. We use one ounce of distilled water to each pound of weight per day--20 ounces for a 20-pound child. One who weighs 130 pounds would use 130 ounces per day, or about one gallon. [HHH p.21]

[Sha Tea](#): Dr. Christopher's Formula for Allergies, Sinus, Hay Fever: This is a formula to help promote the clearing up these malfunctions, a "natural and herbal help" working as a decongestant and natural antihistamine to dry up the sinuses and expel from the head and broncho-pulmonary tubes and passages the offending stoppage and mucus. This formula consists of the following herbs: Brigham tea, marshmallow root, juniper berries, golden seal root, chaparral, burdock root, parsley root and lobelia.

To speed up this cleansing procedure, use the following combination in addition to the above: blend fresh, chopped-up horseradish roots mixed with apple cider vinegar into a thick pulp and

[Bad Breath](#)[Bed Wetting](#)[Bee Sting](#)[Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#)[Blood Pressure](#)[Boils](#)[Breast](#)[Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#)[Bursitis](#)

chew thoroughly before swallowing. Take 1/3 teaspoon three times in a day. Each three days increase this amount from 1/3 teaspoon up to one teaspoon, increasing the amount 1/3 teaspoon each three days. [HHH p.185]

**BPE:** Dr. Christopher's Blood Circulation Combination: This formula is given to assist blood purifying teas to work more efficiently and to also aid the clearing up of allergies, etc. This group of herbs feeds cayenne (a stimulant) and ginger (stimulant) into the circulatory system where the cayenne works from the bloodstream to the heart and arteries, out into the veins. The other herbs in the formula assist these two herbs and work together to equalize the blood pressure (whether high or low) and to bring it to a good systolic over the diastolic reading. Blood flow is life itself. The blood circulatory combination consists of ginger, cayenne, golden seal, ginseng, parsley and garlic. [HHH p.185]

**Colic in Babies:** Most babies stop being colicky after three full months. If yours continues, check more closely into food allergies. [EWH p.99]

**Food Allergies:** Food allergies are another very common cause of headache. The worst culprit is sugar; I have experienced sugar headaches, which are sort of a withdrawal; you eat the sugar, and then as the body is trying to eliminate the toxic substance, your head pounds. Cheese commonly causes headaches, probably the worst of the dairy products for this, although allergies to any of them may cause the pain. Meats and eggs are also common allergens. [EWH p.146]

**Onions:** Onions are eaten to help the symptoms of allergies. [UW-Onion]

**Milk:** Mr. White continues on with a statement or two from Dr. Marion T. Davidson, M.D., in Southern Medical Journal (Richmond, VA).

In my experience of twenty years in treating allergies, milk has always been one of the most frequent reactors on skin testing, only house dust exceeds it in frequency... [NL 1-4]

**A Word About Hay Fever, Pollen and Allergies:** Many folks suffer great discomfort during the pollination season of plants. They attribute their symptoms to the pollen, saying that they are "allergic" to it. What is happening is that the pollen is bringing out of their bodies years of accumulated toxins. These come out in the form of mucus running from the nose, eyes, and lungs. Symptomatic relief can be obtained by using the Hayfever Formula, but again, permanent change can only be had through faithful adherence to the mucusless diet. After one year on the mucusless diet, all allergies should disappear. For an immunity to the local pollen, a tablespoon of local raw honey may be taken daily. It won't do you any good to take honey from Hawaii or Minneapolis if you are sneezing from pollen in you are sneezing from pollen in Copperstown, North Dakota. [NL 3-9]

### Testimonials

Allergies and Milk: Another personal experience relating to the subject of milk: for a time I was a member of the Deseret Gymnasium in Salt Lake City, Utah, where I went regularly to swim, exercise, and generally keep fit. The office manager there who admitted the guests into the facilities was constantly wiping his nose until it was reddened by the irritation. One day I asked him how long he had been suffering from this continual nasal drip, swollen eyes, and stopped-up head. He told me that the condition had been with him for as long as he could remember, ever since childhood. He also told me that he had been using a box of tissue each day for years and that he had been forced to give up linen handkerchiefs. They simply did not remain clean long enough!

I asked the man, first of all, whether or not he was a heavy milk drinker. He said that he was, and that he usually drank a quart or even two per day. I promised him that if he would discontinue drinking milk for a few weeks that he would see an improvement. I also explained to him that within a year his allergies would be gone if he would follow a general mucusless diet routine.

I was so occupied with business matters in the weeks that followed that three months had gone by before I was able to return to the Gymnasium. When I went to check in for re-admission to the

facilities, I met my friend who was at his desk. He grinned from ear to ear, pulled out a folded linen handkerchief, and said, "I keep this in my pocket for days now and do not use it. No more tissues and no more running nose." He had become a happy man simply by following the advice to stop drinking milk. He had sworn up and down that he was hooked on that liquid and that he could not find the self-will to stop drinking it. He had succeeded, however, and found that his health had certainly improved. That incident took place nearly forty-five years ago; and since then we have advised many thousands of patients to follow the example of the animals of the lower kingdom who do not suckle their offspring after weaning. [NL 1-4]

## Alopecia

---

### Definition

A disease in which there are well defined bald spots on the head and other hairy parts of the body.

### Herbal Aids

[Bayberry](#): Use a strong decoction of bayberry and rub in well at night; wash off in the morning, brush the hair thoroughly and apply again (using a few drops of lavender oil with the solution that is rubbed in gives a more effective synergistic action). This will quickly help stop falling hair and remove dandruff. [SNH p.132]

[Juniper](#): Used externally, a tincture of the branches is used as a rub for some skin conditions and to combat alopecia. [UW-Juniper]

[Echinacea](#): Cases of goiter, impetigo contagiosa, local infection, urethral infection, diabetic ulcers, alopecia (baldness), and so on, are reported to have been effectively treated with Echinacea. [NL 6-12]

## Amenorrhea

### Definition

Menstrual obstruction resulting in the absence, delay, retardation, or suppression of menstruation. [SNH p.275]

### Herbal Aids

[Chaparral](#): Use a cup of the tea as an infusion as a douche. [SNH p.71]

[Sassafras](#): Drink 1 teacupful of the infusion of Sassafras without further dilution; heat until blood-warm, then sip slowly 1 mouthful at a time over 1/2 hour, keep the lower area warm by wrapping in a blanket, and place feet in a mustard and water bath during the 1/2 hour period. NEVER TAKE SASSAFRAS WHEN PREGNANT. [SNH p.79]

[Red Raspberry](#): Drink the infusion of the leaves: 1 cupful at mealtime 3 times daily along with an intestinal tonic-laxative for 2-3 months or until the distressing symptoms have disappeared. [SNH p.143]

See formula for amenorrhea using pleurisy root, blue cohosh, wild yam and ginger. [SNH p.224]

See formula for amenorrhea using pennyroyal, motherwort, blue cohosh, life root and thyme. [SNH p.285]

[Squaw Weed](#): Make 1/2 ounce of powder or fluid extract to 1 pint of water, and take 1 wine glassful 4 times daily until the desired effect is obtained. [SNH p.302]

[Black Cohosh and Blue Cohosh](#): Give a warm infusion of equal parts of black cohosh and blue cohosh (*Caulophyllum thalictroides*). [SNH p.399]

[Gravel Root](#): Used as a douche alone or with other herbal astringents, it can help in chronic amenorrhea in a weakened female. [UW-Gravel Root]

[Bayberry](#): A weak tea may be used as a douche for amenorrhea. [NL 5-5]

[Nu Fem](#): Dr. Christopher's Herbal Aid for Female Reproductive Organs: This is an amazing combination of herbs to help promote the rebuilding of a malfunctioning reproductive system (uterus, ovaries, fallopian tubes, etc.). Over the years herbalists and patients have seen painful menstruations, heavy flowing, cramps, irregularity, etc., that have been helped and the patient now has a painless menstrual period, good menstrual timing, and a new outlook on life by using these aids to readjust the malfunctioning areas. The female corrective formula [Nu Fem] consists of golden seal root, blessed thistle, cayenne, cramp bark, false unicorn root, ginger, red raspberry leaves, squaw vine, and uva ursi.

Recommended dosage is one cup or 2 capsules or tablets morning and evening or three times a day if desired, six days a week for as long as required to get results desired. We have seen many severe cases who have had many years of suffering cleared up in ninety to 120 days. Some get relief sooner, some take longer--no two cases are alike. This is a food to rebuild the malfunctioning organs. [HHH p.190]

## Anemia

### Definition

Anemia is a deficiency in the number of red blood cells, hemoglobin or both. [HHH p.33]

### Symptoms

The condition is marked by varying degrees of pallor and palpitation. [HHH p.33]

### Cause

When we have a good bloodstream we have a good, healthy life. It would be wise to take time to learn the principles of building good blood in the body. One of our teachers, Dr. Edward E. Shook at the Los Angeles Herbal Institute (closed at this writing), gives a fine explanation of the cause of anemia as follows:

Carbon dioxide and other waste gases are re-absorbed into the life-giving oxygen. Everyone knows that two atoms of oxygen unite with one atom of carbon to form dioxide. But when there is insufficient oxygen, only one atom unites with carbon, to produce carbon-monoxide, and that is where most of our trouble begins--anemia, low blood pressure, or where there is an abundance of calcium, high blood pressure; because calcium thickens the blood. It requires a great deal more pressure to pump thick blood than it does to pump thin blood; and please make special note, that all this is brought about because there is not sufficient iron in the blood, to carry enough oxygen to the cells, to enable them to breathe, and throw off their waste products. New cells are not produced fast enough to replace the decaying and dead ones. Pus is formed only when cells decay. Therefore, it requires no great stretch of the imagination to see how vitally necessary it is to have enough iron in the blood stream to convey sufficient oxygen to all parts.

Nearly every food we eat, or a large percentage of it, contains iron and oxygen. Wheat and most of the grains and cereals (in their whole state) contain iron in the form of iron phosphate, as do many vegetables, such as beets, turnips, tomatoes, spinach, lettuce, cabbage, celery, carrots, squash, parsley, mustard greens, dandelion leaves, watercress, etc., but our principal source of organic iron and oxygen is the fruit. The apple is loaded with these two elements, particularly the winesap. All berries, plums, prunes, grapes, raisins, dates, figs, cherries, etc., contain organic iron in abundance, and the citrus fruits, such as oranges, lemons, limes, etc., are principally composed of citric acid, which is one third oxygen. [HHH p.33]

### Herbal Aids

See Anemia formula #1 using sarsaparilla, yellow dock, yellow parilla and sassafras: [SNH p.95]

See Anemia formula # 2 using yellow dock, buckbean and comfrey: [SNH p.95]

**Comfrey:** Another great aid in anemia is comfrey. This herb can be used in the form of comfrey tea, tablets, capsules, in salads and in comfrey green drink. Make the green drink by blending into apple juice (or some pleasant-tasting vegetable juice, such as fresh carrot), comfrey, marshmallow root (mallow), parsley, spinach, and other greens. Sweeten with honey and use a cup morning and night (children in proportion). The use of grapes, grape juice and raisins in an abundance is excellent in rebuilding an iron-deficient bloodstream. Each mouthful of the juice should be "chewed" thoroughly (swished in the mouth) and mixed well with saliva before

[Bad Breath](#)

swallowing. [HHH p.34]

See formula for anemia using comfrey and garlic. [SNH p.310]

[Bed Wetting](#)

Barberry Berries: This is one of nature's greatest and most valuable medicinal herbs and is a famous Indian remedy. It is probably unequaled as a corrector of river secretions (causes the bile to flow more freely), and it helps expel and remove morbid, waste matter from the stomach and bowels. It is an excellent tonic for delicate and weakly people (particularly good for delicate and weak children), building from anemia and general malnutrition to complete recovery in just a few weeks. [SNH p.429] See formula for barberry tea. [HHH p.33]

[Bites, Insect Stings](#)

See formula for anemia using European centaury, thyme, horehound and hyssop. [SNH p.449]

[Black Eye](#)

General Instructions: Whenever the child or adult has anemia, which is a deficiency of blood in quantity as well as quality, the overall treatment should be sunshine, fresh air (plus deep breathing), and a well balanced diet including a quantity of fresh, green vegetables and the daily use of good tonics, as listed here. [HHH p.35]

[Bladder Ailments](#)

Pregnancy Anemia: Anemia may be caused by iron deficiency or other problems. Iron supplements are commonly given to expectant mothers, yet these are usually made of ferrous sulphate and cannot be utilized by the body. Being inorganic, they are absorbed but not assimilated and can cause problems in the system. In addition, they destroy vitamin E that may be taken at the same time. You can build up the iron in your system by taking yellow dock or the [Yellow Dock Combination](#). Some midwives say that yellow dock alone doesn't help for very long; its effect sometimes wears off. I have had excellent results combining yellow dock root and dandelion root; dandelion contains an excellent spectrum of minerals that enhance the 40% iron content of the yellow dock. Some good iron-containing foods include apricots, sunflower seeds, black molasses, raisins, prunes, brewer's yeast, kelp, egg yolk, grains, beets and their greens, turnip greens, dulse, and walnuts. If you do not respond to the dietary additions here, suspect folic acid anemia. Many pregnant women are woefully under-supplied with folic acid, and although you can get a prescription for folic acid supplements, this fragmented source may not be well absorbed by your body. Better to obtain this important nutrient in foods; some important sources are whole grains, leafy greens, watercress, parsley, chicory, dandelion, amaranth, and lambs quarters. Some of these can be taken in the green drink; lambs quarters is especially valuable, as it also contains a large amount of vitamin A, which helps prevent infections. [EWH p.40]

[Bleeding](#)

Aloe Vera: Other interesting claims for Aloe Vera include curing anemia. [UW-Aloe Vera]

[Blood Poisoning](#)

Onions: You should be careful about overeating onions, however. Research has shown that anemia can be induced by doing so. A group of volunteer medical students consumed over two pounds of cooked onions every day for five days in addition to their regular diet. At the end of this period all showed symptoms of anemia, which was confirmed by laboratory examination. Within one week after ending this binge, all experimenters successfully recovered. Similar experiments with animals have produced the same results (Luc:45). [UW-Onion]

[Blood Pressure](#)

Juices: Kulvinskis also cites several sources who have had success in reversing pernicious anemia through the use of juices high in chlorophyll. He suggests that vegetarians can more than meet their requirement of B-12 by ingesting several cups of sprouts a day. [NL 2-12]

[Boils](#)

Chaparral for Copper Deficiency: A copper deficiency manifests as general weakness, slow healing, greying hair, loss of hair, low blood pressure, disorders of the liver and gall bladder, splenic weakness, acne, eczema, anemia. Chaparral can help this. [NL 3-4]

[Breast](#)

Juices for Anemia: Carrot & spinach, celery & parsley, beet, fig. [NL 3-5]

[Bright's Disease](#)

See formula for use by pregnant women. [NL 3-8]

[Broken Bones](#)

Cabbage: This has been found to be of infinite value for pregnant women, and for patients with anemia. [NL 4-12] Drink one or two glasses of cabbage juice daily. [NL 4-12]

[Bronchitis](#)

Apricot: The Apricot, perhaps because of its high iron and other mineral content, is helpful in cases of anemia. [NL 5-1]

[Bruises](#)

Dandelion: Kloss claimed that Dandelion is extremely high in nutritive salts which purify the

[Burns & Sunburns](#)[Bursitis](#)

blood and destroy the acids in the blood. He said that "anemia is caused by the deficiency of nutritive salts in the blood and really has nothing to do with the quantity of good blood. Dandelion contains these nutritive salts" (Kloss:237) [NL 6-11]

### **Testimonials**

**Herbal Formulas Aid Health in Family:** I have gotten the Healthview Newsletter, and am amazed at the results that I've gotten from the MP formula, the red raspberry leaves capsules for my 14-year-old grand daughters, and the Yellow Dock root for my daughter's anemia. My husband has been blind for 22 years from the wrong use of medications. We both use the eyebright eyewash daily. I have found that my sinus problems have completely disappeared, my eyes are brighter and have found that night time driving is much easier because of improved vision. [NL 4-12]

## Anthrax

(malignant edema, woolsorters' disease)

### Definition

Anthrax is an acute infectious disease caused by the spore-forming bacterium *Bacillus anthracis*. Anthrax most commonly occurs in warm-blooded animals, but can also infect man. Anthrax spores can be produced in a dry form (*for biological warfare*) which may be stored and ground into particles. When inhaled by humans, these particles cause respiratory failure and death within a week. The disease could be fatal if left untreated.

The disease occurs when spores enter lungs, migrate to the lymph nodes, change to the bacterial form, multiply, and produce toxins. These toxins cause bleeding and destruction of structures in the middle of the chest (medical term: hemorrhagic necrotizing mediastinitis).

### Symptoms

Symptoms of disease vary depending on how the disease was contracted, but symptoms usually occur within seven days.

#### Cutaneous:

Most anthrax infections occur when the bacterium enters a cut or abrasion on the skin, such as when handling contaminated wool, hides, leather or hair products (especially goat hair) of infected animals. Skin infection begins as a raised itchy bump that resembles an insect bite but within 1-2 days develops into a vesicle and then a painless ulcer, usually 1-3 cm in diameter, with a characteristic black necrotic (dying) area in the center. Lymph glands in the adjacent area may swell. About 20% of untreated cases of cutaneous anthrax will result in death. Deaths are rare with appropriate antimicrobial therapy.

#### Inhalation:

Initial symptoms may resemble a common cold (Viral-like aches & pains). After several days, the symptoms may progress to severe breathing problems and shock. Inhalation anthrax usually results in death in 1-2 days after onset of the acute symptoms.

#### Intestinal:

The intestinal disease form of anthrax may follow the consumption of contaminated meat and is characterized by an acute inflammation of the intestinal tract. Initial signs of nausea, loss of appetite, vomiting, fever are followed by abdominal pain, vomiting of blood, and severe diarrhea. Intestinal anthrax results in death in 25% to 60% of cases.

### Treatment

Nosodes are vaccination alternatives that are prepared homeopathically. These nosodes were first designed by Edward Bach (the developer of Bach Flower Remedies.) They are side effect free and safe for children. Newton Labs manufactures Nosodes, contact them at 1-800-448-7256 or [Newton Homeopathics](#). Another source is at [Homeopathy Overnight!](#)

Doctors can prescribe effective antibiotics. Usually penicillin is preferred, but erythromycin, tetracycline, or chloramphenicol can also be used. To be effective, treatment should be initiated early.

## Apoplexy

### Definition

The sudden loss of consciousness, sensation, and voluntary motion, caused by the rupture or obstruction of an artery of the brain, very often resulting in death; also gross hemorrhage into any organ, such as the lungs, spleen, etc. [SNH p.2]

### Symptoms

This is a serious catarrhal condition of the body, wherein the normal excreting channels are blocked and the denser glutinous and fibrinous matters overload the bloodstream. [SNH p.2]

### Herbal Aids

[Cayenne](#): The suddenness with which apoplexy comes necessitates the fastest therapeutic action. Cayenne pepper (one teaspoon to the cup) may be administered quickly; tincture of lobelia (three drops to one-half teaspoon, according to the size and age of the individual) should be given regularly; the antispasmodic tincture is excellent. [SNH p.2]

See formula for apoplexy using black cohosh, wood betony, and cayenne. [SNH p.400]

See formula for apoplexy using cayenne and mustard powder. [SNH p.410]

Vegetarianism: A heavy meat and starch eater will suffer apoplexy and strokes from heat long before the heat even bothers the vegetarian or fruitarian. [SNH p.553]

Cayenne and Ginger: For an excellent bath to be used in cases of aches and pains, influenza, apoplexy, etc., mix ½ teaspoonful each of Cayenne and Ginger and add to a very hot bath. This will cleanse the pores and remove toxins. [NL 6-3]

## Appendicitis

### Definition

Appendicitis is inflammation of the appendix, sometimes resulting in rupture. [HHH p.36]

### Symptoms

The symptoms of appendicitis are an inflamed, painful condition of the appendix and the surrounding portion of the bowels. Other symptoms are nausea, pain and distress around the navel, constipation, quick pulse, and perhaps a rise in temperature to 100° or 102° F. There may be tenderness to the right of the navel and below, which is increased by pressure or movement. The patient frequently flexes the right knee to ease the pain. [HHH p.36]

### Cause

It may be caused by a faulty digestion, intestinal catarrh, fecal concretions and, in comparatively rare cases, by foreign particles being lodged in the appendix. This is the explanation given by Otto Mausert, N.D., Herbs.

Dr. Kloss states:

Constipation is one of the causes of appendicitis to an extent, and of course, wrong diet, which diet would include the use of devitamized foods such as white flour products, cane sugar, and cane sugar products (all refined sugars), greasy and fried foods, tea, coffee, chocolate, and wrong combinations of foods. These must be strictly avoided in appendicitis, as must alcoholic drinks, tobacco, and all stimulating food and drink. [HHH p.36]

### Herbal Aids

Cleansing the Colon: Dr. Kloss recommends: "Cleanse the colon thoroughly with an enema, preferably herb, take as much water as possible, as hot as possible. The treatment is of great value and will often relieve the pain immediately. If using an herb enema, use either spearmint, catnip, white oak bark, bayberry or wild alum root. When herbs are not available, use plain water. If the pain continues after the colon has been cleansed, then use a very warm enema of catnip alone. Then apply hot and cold fomentations to the region of the appendix and the full length of the spine. This will aid in the cleaning process and relieve pain. At night prepare a poultice as follows: Combine a tablespoon of granulated or powdered lobelia with a large handful of granulated or crushed mullein leaves, and sprinkle with ginger. Mix the herbs into a paste by adding powdered slippery elm or corn meal. Apply the poultice as warm as the patient can stand, leave on cool, then repeat. When suffering an attack of appendicitis, go on a liquid diet, drinking alkaline broths, fruit juices, and drink several glasses of slippery elm (or comfrey) every day. Traditional Chinese medicine advocates Chinese Rhubarb (a mild laxative) and lightly stroking the painful area. Alternating hot and cold castor oil fomentations helps bring tremendous relief."

After an individual is over an attack (which is the effect), go immediately onto the mucusless diet as suggested by Dr. Christopher in [Dr. John R. Christophers "Three Day Cleansing Program"](#) and [Dr. John R. Christophers "Mucusless Diet"](#). [HHH p.36]

Constipation: This condition generally could not happen if we were not constipated. Mucus forming foods can also bring it on. Take a hot herb enema of spearmint, catnip, white oak bark, bayberry bark, or wild alum root. Plain water may also be used if necessary. Catnip enemas will relieve the pain. Apply hot and cold fomentations to the appendix area and the full length of the

[Bad Breath](#)[Bed Wetting](#)[Bee Sting](#)[Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#)[Blood Pressure](#)[Boils](#)[Breast](#)[Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#)[Bursitis](#)

spine. At night, apply a poultice of mullein and lobelia, sprinkling with ginger or cayenne. Mix the dried and ground herbs with boiling water to make a paste, thickening with slippery elm or cornmeal. Apply as warm as the patient can stand, leave until cool, then repeat. Go on a liquid diet, using fruit juices, potassium broth, and slippery elm gruel. Watch the symptoms closely. This approach should relieve them, but if not, be sure to see a physician. [EWH p.166]

Appendectomy: From question and answers in Dr. Christopher's Newsletter. Can appendicitis be aided without an operation? Is there any relief and aid for appendicitis?

Answer: Yes, there is. This is an important organ, even though many claim it is a useless leftover. For years doctors have considered the appendix to be a vestigial organ, that is, one used by man in some earlier stage of his history, but no longer of any apparent physiological use. The growing case against unnecessary surgery, particularly the offhand removal of parts of the body thought to be vestigial, was strengthened by a report from the Medical College of Ohio at Toledo. A study involving the case histories of 1,165 patients revealed that almost 67 percent of patients who had developed cancer of the bowel before they reached fifty years of age had their appendices removed.

We have taught for many years another valuable aid, and that is that the appendix exudes a small amount of oil, in its healthy operating state, that aids in lubricating the cecum and the ascending colon. This is the only section, the ascending colon, of the large bowel where the food particles must go uphill, and the small amount of lubrication is definitely an advantage when the fecal matter is heavy and lacking adequate moisture to move easily with peristaltic action.

According to E. H. Ruddock, M.D., Vitalogy, copyright 1931, published by Vitalogy Association, "Appendicitis is a disease of the vermiform appendix commencing as a catarrhal inflammation of the mucous lining.

"Causes-This is usually associated with a condition of chronic inflammation of the intestines caused by improper diet. Nearly one half of the cases occur between twenty and thirty years of age.

"Symptoms-Pain, sometimes acute in character, directly over the abdominal wall; rigidity of the abdominal wall; tenderness, midway between the naval and spine; the tenderness becomes generalized if the appendix is infected; chill, vomiting, constipation, rise of temperature and increase in pulse rate.

"Treatment-Absolute fast with the exception of water. One glass of distilled warm water every hour. Three high enemas per day. Cold water towel applications over the entire abdomen, changed every ten minutes. A glass of flaxseed tea strained and flavored with a little lemon juice to be given occasionally. Absolutely no exercise, emotional strain, worry, or other disturbing influence. Turn the patient to more comfortable side. Knead the muscles of the small of the back.

"After a fast of a few days give a diet of soup made from non-starchy vegetables. Strained.

"Wild yam is the most valuable remedy for this disease. The sharp pain in the lower right side of the abdomen caused by the inflammation and swelling of the vermiform appendix, is speedily relieved by the extract of wild yam. Pour a teaspoon of the extract into a tumbler two-thirds full of water, and take a teaspoonful of the mixture every half hour until relieved, then diminish the dose to one every hour or two until cured. Dr. Hale, of Chicago, says: This is the best remedy that we have for this disease. (The bowels should be kept open with magnesia.) The writer recommends prune juice and/or Dr. Christopher lower bowel formula [Fen LB].)"

Says L. A. Merriam, M.D.: "The fad for operation for what they call appendicitis exists especially in the minds of the profession, but real appendicitis exists not often in the abdomen of the patient. The operation itself is not the harmless procedure it is reported to be.

"Operations lessen the patient's vitality, and often pave the way for more operations, sickness and suffering; while more than 95% of cases so diagnosed can be better handled without using the knife.

"In most cases so diagnosed, the trouble is not in the appendix, but in the colon or large bowel, and needs no operation with the knife. The pathologic prominence given to the appendix is not in harmony with the facts.

"Removal of a healthy appendix (every day so common) does not cure a constipation or catarrhal condition of the colon, any more than the removal of a corn on the toe cures a toothache caused by ulceration."

"Don't let your appendix go if you can help it--it's an active little oil can, a lubricator for the

intestinal canal, and you'd be badly off indeed without it." So says Dr. Arthur Bullard. He declares that the appendix is neither a "chance" nor a "left over" organ, and that inflammation of it can and should be cured in "more than ninety percent" of cases, without recourse to the knife. [NL 1-12]

Juices: For chronic appendicitis are celery, carrot, carrot & cucumber. [NL 3-5]

Echinacea: It has been used in inflammation of the intestinal tract, especially satisfactory in the case of appendicitis, as it quickly overcomes local blood stasis, prevents or cures ulceration and retards pus formation. [NL 6-12]

## Arthritis

### Definition

Inflammation of the joints. Arthritis is an ailment of the body that is an old chronic condition. There are many forms: such as gout or rheumatoid arthritis which are different from the common variety of arthritis. The joints become enlarged and painful, being very tender to any movement or pressure (the pain may be constant or intermittent). Often the hands draw back or to one side, and in chronic conditions, the muscles shrink and will eventually wither away. This affliction may have a decided effect on childbirth, both to the mother and the newborn child. [SNH p.2]

### Cause

Arthritis is caused by acids and waste matter in the body, which eventually become solidified and lock the joint. This condition is caused and aggravated by improper diet. Some of the worst intakes are eggs, bread, milk, meat, salt, sugar, etc., because they cause arthritic calcification. The use of extremely hard water (generally of twelve or more grains in hardness) will often accentuate an arthritic condition where softer water will help relieve it. Sometimes an individual with a good inherent structure can throw off the hardest water without arthritic effect. The weaker person may drink water that is not very hard and absorb from it relatively larger quantities of the inorganic minerals. [SNH p.2]

### Herbal Aids

**Bowels:** For eliminating toxic substances from the bowels, one may use a high enema of slippery elm or white oak bark tea. The system should be cleansed by a daily sweat bath with pleurisy root; massage (except the inflamed joints) with angelica, black cohosh, buckthorn bark, colombo, gentian root, skullcap, or valerian root. One may use poultices such as cayenne, lobelia, mullein, slippery elm for helping to promote the relief of pain of the swollen joints; liniments of oils, such as cayenne, coconut, lobelia, origanum are also good. [SNH p.2]

**Chaparral:** Drink the tea (infusion for 3 weeks, after which the capsules or tablets may be used. [SNH p.71]

See formula for arthritis using sarsaparilla, yellow parilla, distilled water and glycerine. [SNH p.85]

**Arthritis, Painful and Swollen Joints:** Cover a small quantity of mullein with boiling hot vinegar, cover closely and simmer for 20-30 minutes. Strain and add a little tincture of cayenne (powerful stimulant and rubefacient) and a tincture or fluid extract of lobelia (as a relaxant). Foment this on the affected area. [SNH p.317]

**Cayenne:** It is an old standby and is used in modern medicine yet today. It is used in counter-irritant ointments, for sore muscles, arthritis, etc.; in liniments, back plasters and in many other ways. You will see it listed as capsicum in the ingredients. [SNH p.408]

**Apple Cider Vinegar:** A fomentation of apple cider vinegar alone will often take the pains out of arthritis, rheumatism and similar conditions. Soak a Turkish towel or gauze or similar material in hot tea, lightly wring (just enough that the water will not run off the body), and place as hot as possible without causing blistering. Generally keep the fomentation moist and warm by placing plastics, oilcloth, etc. over fomentation. [SNH p.485]

[Bad Breath](#) Eggs: These are one of the main contributors to arthritis. [SNH p.489][Bed Wetting](#) Milk and Milk Products: These are harmful to many people, both adults and infants. Milk is a contributing factor in constipation, chronic fatigue, arthritis. [HHH p.14][Bee Sting](#) [AR-1](#): Dr. Christopher's Arthritis and Rheumatism Formula: This combination consists of hydrangea root, Brigham herb, yucca, chaparral, black walnut, lobelia, burdock root, sarsaparilla, wild lettuce, valerian, wormwood, cayenne, and black cohosh. Here is a combination of herbs that detoxify; act as a solvent for the accepted but not assimilated calcium deposits; herbs that relieve pain; herbs rich in new acceptable organic calcium that can be assimilated and useful; herbs that kill fungus and infection and that have the ability to give wonderful relief. This relief is not immediate because here is a long rebuilding job--gradual relief can come, and full healing, if the program is followed faithfully: a cup two or three times a day (two tablets or capsules in Brigham tea or steam-distilled water). Use as a hot fomentation over extremely painful or crippled areas (in addition to this formula), formula called bone, flesh and cartilage [BF&C]. Even though one uses these aids yet continues on with improper diet, one may get some help, but not so much as going all the way. Remember the teachings for years have been -- "No healing in this condition." We are giving you hope if you will follow through with these formulas and the mucusless diet. [HHH p.194][Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#)[Blood Pressure](#) [Deep Heating Balm](#): This penetrating salve contains olive oil, cayenne, oil of wintergreen, pure distilled mint crystals, and other herb oils, in a beeswax base It is excellent for stiff necks, sore muscles, headaches, pain, stiff joints, arthritis, etc. [HHH p.196][Boils](#)[Breast](#) [Calc Tea](#): Dr. Christopher's Calcium Formula: These are almost always prescribed for muscle cramps and throughout pregnancy generally, yet calcium requires the proper balance of phosphorus, silica and magnesium to be absorbed. Otherwise the free-radical calcium flows through the bloodstream, sometimes depositing in the forms of cysts and calcium deposits. Often people who suffer from arthritis and related problems, arteriosclerosis and calcium deposits, are taking plenty of calcium supplements, but their bodies cannot assimilate the calcium in this form. The best calcium supplement you can take, other than calcium-rich foods, is Dr. Christopher's Calc Tea formula, which contains exactly the right proportion of silica because of the horsetail grass. Carrot juice is a good source of calcium, and green leafy vegetables contain lots of it. The darker the green, the more calcium it contains. Turnip greens and kale--though not everyone's favorite, it is true--contain several times the calcium contained in milk. [EWH p.48][Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#) Alfalfa: Some people wishing to treat arthritis or rheumatism take a tea made of the Alfalfa seeds, but we consider this a waste of the germinating power of the seeds. It is better to sprout them and eat the sprouts. Alfalfa tea made from leaves purchased in the health food stores may have an insipid taste or even taste like nothing at all. If you wish to obtain the best results from Alfalfa leaf tea, you should go and gather your own from the very common plants all around. [UW-Alfalfa][Bursitis](#) Aloe Vera: Interesting claims for Aloe Vera include ...relieving the pain of arthritis. [UW-Aloe Vera] Yucca: Among the Southwestern Indians, Yucca fibers were used to ease many illnesses. A patient with a cold, rheumatism, or a wound would crush Yucca leaves into fibers. Then he would enter the sweathouse where he induced vomiting to expel the poisons by inhaling large quantities of steam and chewing the leaf fibers (Ibid.).

In recent times the Yucca saponin, which is extracted from the root, has been used to treat arthritis. At the National Arthritis Medical Clinic in Desert Hot Springs, California, many patients have found relief from arthritis symptoms by taking the tablets. The doctors made no therapeutic claims in the tests on the herb, only asking patients to test it to see if it would have any beneficial effects along with other treatments including diet and vitamin therapy.

About 20 percent of the patients, chiefly those with joint pains alone or joint pains and minimal swelling and inflammation, showed complete remission of symptoms. About 30 percent showed improvement and relief of some of their joint pain, stiffness and swelling. About 50 percent said they could not detect any change in their arthritic symptoms from taking Yucca extract but this included many who tried it for only two weeks. The patients most helped seemed to be those who had early symptoms of arthritis or rheumatism in their joints, with pain, stiffness and swelling

which had been present for less than one year. Patients with symptoms from one year or longer seemed to have less response. Patients with stiffness alone, enlarged joints and limitation of motion but without much pain and inflammation did not seem to notice any benefit from the product (Let's Live, February, 1975, p.63).

The director of the clinic, Dr. Robert Bingham, said that Yucca works by purifying the intestinal tract, improving the bacterial digestion and absorption of foods with a reduction in the production of inflammatory toxins. These inflammatory toxins from certain types of bacteria are the cause and aggravating agents in certain types of arthritis, particularly those related to and including rheumatoid arthritis. The saponins improve circulation by lubricating the joints, which gives them greater flexibility.

Although the herb has had many industrial uses,...it was first used for health in industrialized society when a few years ago, race-horse owners began using it to limber up their animals before races. Then someone thought if it works on horses, it should also work on humans. Officials of several pharmaceutical companies began using Yucca to treat friends and relatives suffering from arthritis, finding the herb amazingly effective at reducing joint inflammation. Dr. George Michel, a chemist at Truett Laboratories in Azusa, California, says, "We have put a lot of research into Yucca, and have proven that it reduces inflammation, especially that caused by rheumatoid arthritis". But he adds that lack of money is holding back further research and manufacture of Yucca tablets.

Because the extract is classified as only a food supplement by government regulations, it can only be manufactured and distributed by smaller drug companies and sold to health-food stores. If it were reclassified as a drug, doctors would be encouraged to prescribe it. However, because it is not a high-paying drug, the large firms have not been interested in investigating it. [UW-Yucca]

Eliminating Arthritis: This comes from a question and answer section in Dr. Christopher's Newsletters: Can something be done besides just working on the effect of arthritis? Can't something be done to eliminate arthritis instead of just bringing temporary relief of pain?

Answer: Yes. Many people have had permanent relief from arthritis, not just temporary. When we speak of arthritis we speak of a general term. Actually there are over forty different forms of this disease. They all stem back to a toxic condition of the body. The treatment of this condition must be from the point of reversing the cause by rebuilding the entire body to a higher non-toxic condition, as mentioned in the article on rebuilding and cleaning the bowel. It is inevitable that when an arthritic is badly constipated, the stiffness and pain are worse. The procedure is: (1) clean the bowel, and (2) detoxify the body by clearing the blood stream of poor blood, and have a good powerful flow of healthy blood coursing through the body to deliver food to the area and carry off toxic waste. This is done by using a good blood purifying tea, high in organic copper, such as Burdock Root, Ephedra (Brigham Tea), Chaparral, our arthritis formula [AR-1] and our Blood Purifying formula [Red Clover combination]. The tea should be used in proportions of one cup three times in a day, six days a week, week after week as needed to get relief, then continue on until no traces of this condition are evident. (Very important: always make herbal teas with distilled water!) It is best to change the type of tea each six weeks to another kind, then come back to a former one. The effect of this change of type of tea, we have found with patients over the years, has speeded up the process. To each cup of tea it is beneficial to add six to ten drops of tincture of Lobelia.

Cayenne should be used six days a week, each week of program. This herb is, as are the others, a food and not a drug. Work up to a teaspoon of Cayenne three times a day.

Apple cider vinegar and blackstrap molasses are also beneficial. Use a tablespoon of each in a glass of distilled water three times each day. Take a tablespoon or more of wheat germ oil three times a day.

Remember to drink no less than one gallon of pure steam-distilled water for a person 130 lbs. or over, every day (less or more, one ounce of distilled water to each pound the person weighs).

For severe and painful joints or areas, the use of [BF & C](#) is good.... The reaction on arthritis is this: the Oak Bark is an astringent and tones up the area, and it is also high in Potassium Chloride to keep the fibrin in motion and not allow further deposit accumulations. The Mullein and Lobelia work on the glands and lymph system to keep the area clear and ready to carry off unwanted debris; Wormwood relieves pain; the Scullcap keeps the spinal cord alert and working smoothly to assist in body motion; Comfrey Root is a cell proliferant, causing the good cells to grow rapidly and push off the dead cells and unwanted accumulations; Walnut Bark is high in iodide

and is one of the few plants specific in clearing fungus and is extremely high in Potassium Chloride for the blood and lymph, Potassium Sulfate for skin and mucous membrane, and Potassium Phosphate for the brain and nerve food. The Gravel Root is a solvent to leach off the inorganic calcification (from tap water and processed foods, etc.) and make place for the organic calcium derived from the Comfrey, Oak Bark, and some of the other herbs used in this combination.

We use this formula ([BF & C](#)) as a fomentation over the painful areas, and if the case is severe, follow the fomentation procedure mentioned in the [Incurables](#). Some of this tea, a cup or more daily, is taken internally with good results.

To make the fomentation stronger simmer the strained tea down to 1/2 its original amount (called 3 power) or simmer down to 1/4 its original amount (called 7 power). If you wish to drink some of the concentrated tea, dilute it with distilled water. Drink a cup or more of this tea each day.

There are many other aids to help, but space does not allow more to be given to this subject. Never use dry heat for arthritis, always use moist heat such as a hot water bottle wrapped with a damp towel, fomentations, etc. Dry heat solidifies the inorganic minerals into place, while moist heat aids in dispersing them. [NL 1-1]

Cervical Arthritis: From question and answer section of Dr. Christopher's Newsletters: What could be done in a case where cervical arthritis is present, where X-rays show a narrowing of the interspace between C-5, C-6 and C-7, and where anterior and posterior spurs, heading for spondylosis, are present? Is there any way whereby the calcium deposits can be removed, extracted or eliminated to free the body from its painful burden?

Answer: We have seen numerous cases of the condition described in this question in most areas of the spine all the way from the Atlas Axis down to the tail base. After beginning the therapy with cleaning and mucusless dieting, they followed this procedure: make a fomentation of a tea combination which we call "Bone, flesh and cartilage." [BF&C] It is also called "comfrey combination", and consists of six parts oak bark, three parts marshmallow root, three parts mullein herb, two parts wormwood, one part lobelia, one part scullcap, six parts comfrey root, three parts black walnut bark or leaves and three parts gravel root. Soak the combined teas in distilled water at a rate of one pint of distilled water to one ounce of combined herbs. Continue the soaking from four to six hours and then simmer the preparation for thirty minutes followed by a straining. After the straining, simmer the tea down to one half of its volume. If desired, a volume of natural vegetable glycerine equivalent to one fourth the volume of the tea may then be added. For example, if there is a gallon of the tea after the straining, simmer it down to two quarts and add one pint of the vegetable glycerine.

Soak some flannel, cotton or other material except for synthetics which should never be used and wrap the soaked cloth fomentations around the malfunctioning area and then cover with plastic, oil paper or oiled silk. In turn cover the area with toweling and leave on all night. Repeat this for six nights a week until relief is accomplished and the calcified deposits disappear. Also, drink 1/4 cup of the finished tea, with or without the glycerine, but diluted with 3/4 cup of distilled water. This should be done three times a day for six days of each week until relief occurs. [NL 1-3]

Juices: These help arthritis: Celery & cucumber, carrot, endive, apple. [NL 3-5]

### Testimonials

1. Young Man with Arthritis and Polio Out of Wheelchair in One Year: Using the [Incurables](#) program, we are able to relate the following story. In Mesa, Arizona, a young man in his middle twenties was brought into our lecture hall in a wheel chair. He was badly crippled with a combination of polio and arthritis. He was lifted out of his chair and placed on a pile of pillows. I would glance over at times and could see the severe pain he was suffering.

During the lecture we discussed the program we have just outlined. After the lecture he said he would like to try it. A practical nurse from another town offered to take him to her home and help him get well.

They followed the routine accurately and one year later we saw him again. Just before the lecture started, in the same hall as the year before, a young man walked down the aisle to the front of the hall and asked to speak. We granted him the permission. In his short talk he advised the people to listen to the lectures and put them to use. He told how he had listened one year before as he sat on the pillows in the hall and had the desire to start on this natural program. Prior to this night he had

been told he would never be out of the wheelchair, unless it was to be in a hospital bed, the rest of his days.

With the help of the kindly nurse, he was now able to walk so well that he was traveling on foot, house to house, selling, to try and pay off his large hospital and doctor bills. As he walked back to his seat he had tears of gratitude in his eyes.

There are many outstanding cases but these two can give you a picture of what can be done with the good, wholistic program. Use it carefully and accurately for complete, long-lasting health. [HHH p.93]

2. Yucca: The following people took the Yucca saponin mentioned in # 14 above: A forty-six-year-old woman who had had arthritic pain in her hands and knees for several years took two tablets twice a day for two weeks. The pain was relieved after one week, with no side effects. A 57 year old man had had bursitis for six months in both elbows; he was a tennis player and the pain became severe after playing tennis. He took one tablet per day for three weeks, then a half tablet per day for four months, then one tablet per day thereafter. Within three days he had a slight reduction in pain. The pain was completely eliminated after 21 days. The pain returned when the Yucca was discontinued for two days, and left within 24 hours when it was resumed. After five months use was stopped, the symptoms did not return for two weeks. There were no side effects. A female who had had arthritis for nine years, with enlarged joints in her hands, which she couldn't close, had to take aspirin every day for the pain. She was 75 years old. She began to take a half tablet twice a day for 70 days. After 30 days, the pain left, and she was able to close both hands except for one finger. The swelling reduced, and she had no side effects. A 75-year-old male had had arthritis for many years, with pain in the joints of the legs, especially the right knee. He took one tablet twice a day in coffee for one month. There was a slow reduction in pain and stiffness. Both gradually returned when the use of Yucca was stopped. However, some people who had had arthritis for many years took two to four tablets a day for months, and received no effects on the arthritis, though no side effects, either. As Moore says, "Arthritis being such an idiosyncratic disorder no single treatment will help more than a percentage of people, but if Yucca tea is effective, it can relieve pain for several days afterward" (Moore:170). In the research reported above, many more people who took Yucca were helped than those who were not (Let's Live, February 1975, page 64). [UW-Yucca]

3. From a Letter to Dr. Christopher's Newsletter: "We like the herbs very much, the oil of garlic has done wonders for arthritis in the knees." [NL 1-8]

4. From a Letter to Dr. Christopher's Newsletter: "I have a friend who had had eight major surgeries. She lived in constant pain, very seldom was she able to go places and her physician had told her their was nothing more they could do.

"She went on [Dr. John R. Christophers "Three Day Cleansing Program"](#) and [Dr. John R. Christophers "Mucusless Diet"](#). She started on herbs to cleanse the colon, [Fen LB](#) the blood [Red Clover Combination](#), [Cayenne](#), [Calc Tea](#), [AR-1](#), [Herbal Eyebright](#), etc. In a matter of about three weeks, her pain was gone. She was able to start living again. In about 3 or 4 months her arthritis left her. [NL 1-1]

5. From a Letter to Dr. Christopher's Newsletter: "I have tried your comfrey herb combination for dissolving calcified bone spurs (caused by arthritis when a teenager). My metatarsal arch in left foot was in such bad shape, it had become very painful to walk. The herb began bringing results immediately." [NL 3-7]

## Asthma

### Definition

Asthma is a chronic respiratory disease which affects the bronchial tubes. [HHH p. 37]

### Symptoms

In Asthma the system is filled with waste matter and mucus. Asthma is characterized by labored breathing (dyspnea), wheezing with dry and painful coughing which is often due to an extreme irritation of the mucous membranes in the nasal passages or bronchial tubes. The symptoms are accompanied by constriction of the chest (bronchiolar spasm) and expectoration of mucus (mucoïd sputum). Asthma may result in an excessive development (hypertrophy) of the glandular elements. This affliction is commonly believed to be due to hypersensitivity to inhaled or ingested substances such as odors, pollen, dust, smoke, etc. [SNH p.3]

### Cause

Asthma is caused by malnutrition. Only by diligent and consistent effort to change embedded habits will one get permanent relief. The cough is a result of nature's effort to expectorate mucus from the lungs, after which breathing becomes easier. Ofttimes the cause of asthma is basically a nervous condition because the nerves are irritated.[SNH p.3]

### Herbal Aids

Convulsions: When a person is in a convulsion there are certain herbs that will help promote very fast relief. One of these is tincture of lobelia, and a valerian decoction with a little cayenne added to relieve spasms. If such an attack comes after a meal one should use an emetic, such as a large dose of lobelia or use the Yoga finger method. (see # 2 below) [SNH p.2]

Yoga Finger Method: Drink several cups of warm water, then place the middle finger deep down the throat and press the tongue until regurgitation starts. Mustard is also good to clean the stomach and lungs. Prior to the emetic a peppermint or spearmint tea should be used to soothe the area and alleviate the discomfort of continual vomiting. Hot fomentation of castor oil, comfrey, lobelia, mullein, etc., may be placed over the stomach, liver, spleen and lung areas. Frequent hydrotherapy baths or lengthy sweat baths are beneficial, followed by a cold shower or sponging. [SNH p.3]

Vapor Bath: Another helpful method is to take a vapor bath twice a week, inhaling steam from a decoction of cudweed ragwort, wormwood, or a decoction of the following herbs, taken warm, (equal parts) will help prove very beneficial: elecampane root, horehounds, hyssop, skunk cabbage root, vervain, wild cherry bark (and to this preparation add tincture of lobelia or antispasmodic tincture. Clear the bowels with an injection of catnip or barberry bark. This affliction also calls for plenty of outdoor exercise, deep breathing, and good ventilation while sleeping. The whole body system should be built up with tonic herbs such as chickweed, comfrey, marshmallow, mullein, etc. Diet should be mostly fruits and vegetables, avoiding all processed devitalized foods.[SNH p.3]

[Resp-Free](#): Dr. Christopher's Herbal Formula for Lungs and Respiratory Tract: It is wonderful for asthma. This combination of herbs in tea and capsule form is an aid to help relieve irritation in the respiratory tract--lungs and bronchial. This is an aid in Emphysema as well as

[Bad Breath](#)[Bed Wetting](#)[Bee Sting](#)[Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#)[Blood Pressure](#)[Boils](#)[Breast](#)[Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#)[Bursitis](#)

other bronchial and lung congestion such as bronchitis, asthma, tuberculosis, etc. Suggested amount for an adult is a cup two or three times a day, or 2 or 3 capsules two or three times a day with a cup of comfrey tea. For additional help in the program, it is good to add three to six drops of tincture of lobelia to each cup of tea. This formula consists of comfrey root, mullein, chickweed, marshmallow root and lobelia. [HHH p.187]

[Sha Tea](#): Dr. Christopher's Formula for Allergies, Sinus, Hay Fever: It is good for asthma also. This combination is a natural herbal aid working as a decongestant and antihistamine to help dry up sinuses and expel from the head and broncho pulmonary tubes and passages the offending stoppage and mucus. Combine this with the respiratory combination to speed up the process. The wise person will turn to fresh wholesome food and beverages to keep the body in a perfect state. This will guarantee permanent relief, by going to the cause. [HHH p.38]

[Elder](#): The inner bark is used, although it should be aged before used. The fresh bark is violently irritating and poisonous to children. It is specifically used for spasmodic asthma with copious phlegm and stringy mucus. For asthma, take a tablespoonful whenever an attack threatens. Powdered Cloves can alleviate excessive vomiting when using the bark. To avoid bowel cramps, add a tablespoonful of powdered Ginger to the infusion. (ShoA:58). [UW-Elder]

[Lobelia](#): Most people agree that Lobelia is a specific treatment for asthma, as well as other bronchial or spasmodic troubles. Because the herb removes obstructions, giving it when an attack comes on will often cause vomiting; matter will accumulate in the stomach which will cause obstructions. When the person vomits, it removes the intestinal blockage and often removes the mucus accumulations in the bronchial system as well. [UW-Lobelia]

[Lobelia](#): It is one of the best plant expectorants, but as it is a stimulant to the vagus nerve it can easily produce nausea and vomiting when taken in excess. If a teaspoonful of the tincture produces nausea, cut down; it can easily be overdone, says herbalist Moore (Moore:98). The leaves and flowers have strong antispasmodic effects on the bronchials when smoked, and certain individuals with asthma can find it a reliable herb to smoke at the first signs of spasms (Ibid.). [UW-Lobelia]

[Mullein](#): This herb soothes the lungs and helps bring up the phlegm. It can be combined with sage and plantain for use in asthma. Sometimes a vapor treatment of Mullein is good for asthma, which is made by simmering a strong pot of Mullein tea and inhaling the steam with a towel over your head. This is also good for bronchial troubles of various kinds. [UW-Mullein]

[Skunk Cabbage](#): Because of its antispasmodic properties, is well known in many cough problems. Foremost in this use is its application in asthma. It can help control the coughing and sneezing in hayfever. Many claim that it is useful in cases of tuberculosis. For people who have chronic dry coughing spells, skunk cabbage can offer relief. It will also clear up a chronic cold, with a cough which will not leave because of mucus accumulations and bronchial problems of all kinds. [UW-Skunk Cabbage]

[Milk Products](#): One of the best ways to prevent and therefore treat Asthma is not to use milk products. Dr. N. W. Walker, in his book Raw Vegetable Juices (Norwalk Press Publishers), says about cow's milk, "Cow's milk is probably the most mucus-forming food used by human beings. The casein content of cow's milk is exceedingly high, being about 300% more than is contained in mother's milk. [Casein, by the way, is a milk byproduct and is considered to be one of the most tenacious adhesives used for gluing wood together.] This is one of the reasons for the mucus condition of children and adults brought up to drink quantities of such milk and for the resultant colds, running noses, tonsil, adenoid, and bronchial troubles--whereas carrot juice is one of the greatest aids in the elimination of mucus! [NL 1-11]

[General Program for Clearing Up Asthma](#): Hayfever may end in an attack of bronchial asthma, and those two are often associated, as both are based upon a nervous predisposition and an unusual susceptibility to small amounts of albumins. "Home Physician," 1923 edition, page 482

To get to the root of the matter, the system must be cleared of toxins and the nerve energy restored to normal; then the cause does not exist.

The cause starts with the customary unclean bowel, take care of this with the [Dr. John R. Christophers "Three Day Cleansing Program"](#) and using the [Fen LB](#): Dr. Christopher's Lower

Bowel (Colon) Formula, follow the [Dr. John R. Christophers "Mucusless Diet"](#) and use a gallon (for an adult) of steam distilled water daily. For those who do not understand what is meant when the words "mucusless diet" are used should read the booklet "Dr. C's Three Day Cleansing Program and Mucusless Diet" The following is an excerpt from same:

"The [Dr. John R. Christophers "Mucusless Diet"](#). We should not put mucus into the body faster than it can be taken and eliminated. With this preventative diet, not only are the sinuses, the bronchi, and the lungs cleared, but also the constipating mucus (catarrh) in the tissues of the body from the head to the bottom of the feet.

"Harmful or mucus-forming foods. Secondary, denatured, or inorganic food substances are to be eliminated from the patient's diet.

"Salt: For those who are accustomed to large amounts of salt, this may sound difficult, but if you will substitute coarsely ground pepper and savory herbs, adding powdered kelp, you will find that the craving for salt will immediately begin to disappear. The black pepper is a good nutritional herb and helps rebuild the body when used in its natural state. But, when pepper is cooked in food, the molecular structure changes, so it becomes an inorganic irritant (as high heat changes the cayenne, black pepper, and spices from organics to inorganic irritants), and this is the only time when damage results. The use of salts of a vegetable or potassium base (such as Dr. Jensen's, Dr. Bronner's, and other various ones, which in some cases contain some sea salt) is all right, providing it is not overdone.

"Eggs: No eggs should be eaten in any form.

"Sugar and all sugar products: You may use honey, sorghum molasses or blackstrap molasses, but no sugar of any type.

"Meat: Eliminate all red meats from the diet. A little white fish once a week, or a bit of young chicken that has not been fed commercial food or inoculated with formaldehyde and other anti-spoilage serums, would be all right (as these are the higher forms of edible flesh), but do not use them too often.

"Milk: Eliminate all dairy products, which include butter, cheese, cottage cheese, milk, yogurt, etc. These are all mucus-forming substances and, in most cases, are extremely high in cholesterol. As a substitute for butter or margarine (hardening vegetable oils, etc.), you can train your taste buds to enjoy a good, fresh, bland olive oil on vegetables, salads, and other tools and you will discover this is one of the choicest foods there is.

"Flour and flour products: When flour is heated and baked in high temperatures, it changes to a mucus-forming substance. This is no longer a food, which means it has no life remaining therein. All wholesome food is organic, where unwholesome food or dead food is inorganic. This is the key to our whole mucusless program."

Rebuild the nervous system with the [Relax-Eze](#): Dr. Christopher Nerve Herbal Food Combination, consisting of black cohosh, capsicum, hops flowers, lobelia, scullcap, valerian, wood betony and mistletoe. The suggested amount for an adult's use would be one to three cups of the tea, or two or three capsules or tablets three times in a day, taken with a cup of celery juice or steam distilled water. Here is a formula we have used with great success for well over thirty years. It is used to help promote the relief of nervous tension and insomnia; it is mildly stimulating and yet lessens the irritability and excitement of the nervous system and also lessens or reduces pain. This formula contains herbs that help feed and revitalize the motor nerve at the base of the skull (medulla area and upper cervicals) and also rebuilds the frayed nerve sheath, the nerve itself, and its capillaries.

To finish up the package, of getting to the cause we need to add our formula for hayfever, sinus and allergies. This is an aid for clearing up these malfunctions, a "natural and herbal help" working as a decongestant and natural antihistamine to dry up the sinus and expel from the head and broncho- pulmonary tubes and passages the offending stoppage and mucus. This formula consists of the following herbs: Brigham tea, marshmallow root, juniper berries, golden seal root, chaparral, burdock root, parsley root and lobelia.

To speed up this cleansing procedure, use the following combination in addition to the above: Blend fresh, chopped up horseradish roots, mixed with apple cider vinegar, into a thick pulp and chew thoroughly before swallowing. Take 1/3 teaspoon three times in a day. Each three days increase this amount from 1/3 teaspoon up to one teaspoon, increasing the amount 1/3 teaspoon each three days. As with all wholistic procedures follow the program faithfully six days per week--week after week until desired results are obtained. [NL 1-11]

For irritations of the respiratory tract, lungs, and bronchials, the following formula can be used: comfrey root (*Symphytum officinale*), mullein (*Verbascum thapsus*), chickweed (*Stellaria media*), marshmallow root (*Althea officinalis*), and lobelia (*Lobelia inflata*). Emphysema, bronchitis, asthma and tuberculosis sufferers have been helped by using this formula either as a tea (three cups a day), or in capsules (two or three capsules or tablets three times a day with a cup of comfrey tea). Three to six drops of tincture of lobelia may be added to the tea for additional aid. [NL 3-9]

**Dangerous Drugs Prescribed for Asthma:** You should know that the drugs doctors prescribe for the condition can be very dangerous. Theophylline is the standard ingredient for the most anti-asthmatic medicines, and it has a long list of possible side-effects, including nausea, stimulation of the central nervous system, irritability, sleeplessness and over excitement. We do not know what the long-term effects of the drug might be.

More dangerous still are the steroid drugs, such as Vanceril and Prednisone. If taken by children, these drugs can adversely affect growth and sexual maturation. It encourages yeast infections both locally and systemically. Adrenal insufficiency has been traced to this drug, so severe that death could result. Broken bones become more common among recipients of this kind of drug. And when you are ready to get yourself off the drug, you can suffer all kinds of side effects (withdrawal symptoms), such as inability to maintain body warmth, extreme tiredness, faintness, exhaustion, heart palpitations, and so on.

If you are an asthma sufferer, you should examine the natural way very carefully before exposing yourself to these powerful drugs. (Dr. Christopher has an excellent asthma formula). A natural source of ephedrine, which is used for congestion, is Brigham tea. This herb, combined with the peppermint/lobelia treatment and an altered lifestyle (including getting rid of problematic tension, which can sometimes bring on asthma attacks), might bring you relief safely. [EWH p.127]

### Testimonials

1. **Man Who Couldn't Sleep Lying Down for 20 Years Because of Asthma--Cured:** Dr. Christopher used the tincture of Lobelia to clear people of asthma, although they have had it many years. A couple of young fellows brought an old, old man into the Doctor at about two o'clock one morning in Evanston, Wyoming. The old man had had asthma for 26 years. For 20 years of the 26, he had never been able to work. He had never laid in a bed for 20 years. They had to build a special chair so he could sit up at night with his feet stretched out. He had a doctor at the home an average of once a week, either to give him some drug orally to keep him alive, to give a shot, or to administer oxygen. Since the family couldn't locate the doctor that night, they came in desperation to Dr. Christopher. Since the doctors did not want a naturopathic physician in town, most people had never heard of such a thing. The young fellows asked, "Do you treat human beings?" The Doctor said, yes, and to bring him in.

As the man sat down, the Doctor gave him a cup of elderleaf tea to drink gradually. He told him how he had asthma. He had been quite independent, but lately they had had to mortgage their home in order to go on with the doctoring. After he had had the elderberry tea for about ten minutes, the Doctor gave him a teaspoonful of the tincture of Lobelia. He waited ten minutes--being sure to be very accurate about this--and gave him a second teaspoonful of the tincture. After another ten minutes he gave him the third. In forty years of practice, the Doctor commented, he never had to use the tincture of Lobelia more than three teaspoonfuls to a patient. He explained that this was so because each time he was called it was at a crisis, at the climax of the disease, the right time for clearing the disease. They just sat around and chatted. The Doctor had buckets and pans around, and all of a sudden, the man started to heave. This was a little after two o'clock in the morning and he heaved on until five o'clock, for three full hours. At the finish it was dry heaves, but he brought up everything he had eaten for days, plus nearly a cup of phlegm and pus from his lungs and bronchi, from yellow to green. After he was done, the Doctor told his sons to take him home. "Should I bring him back tomorrow", he asked. "No", answered the Doctor, "it's a do-it-yourself-kit; it's all finished".

They took him home and started to walk him to his chair, but the man said, "No, boys, I'm sleeping in the bed tonight". "But, Dad, it'll kill you!" they pleaded. "No, I'm the boss-- take me to bed". They were afraid to stretch him out in case he should choke up and die. This was at five o'clock in the morning. He slept through until five o'clock the next morning--which is twenty-four hours--and slept on past noon--thirty hours he slept! When he woke up, for the first time in over

twenty years he took a deep breath of air. He could take it without choking or coughing, and he said, "I'm healed". The boys were quite pleased about this. Twenty years later, one of them touched Dr. Christopher on the shoulder in Salt Lake City. He said, "My name's Workman; remember me?" Dr. Christopher said, "No". "We brought our pap into you in Evanston, Wyoming at two o'clock one morning." The Doctor then remembered him. He asked, "What happened to your dad?" The young man answered, "He never had an asthma attack from that day to this, and he went to work as a gardener and never missed a day's work since that time. The family thanks you very much". [UW-Lobelia]

2. Choking Phlegm in Pregnant Women Relieved: Dr. Nowell told the story of a woman who at forty years old was pregnant with her first baby. She was suffering terribly with asthmatic spasms, unable to lie in bed, fighting for breath; both she and her husband begged their doctor to stop the cough. They were told that nothing could be done until the child was born.

Dr. Nowell gave them a bottle of tincture of Lobelia, telling her to take a teaspoonful whenever the coughing began. The next morning, the patient told the Doctor that almost immediately after taking the first dose, the patient brought up long, thick masses of phlegm from the lungs the size of a man's fist. No further dose was taken and the patient never had a trace of any chest trouble since and lived a long and fruitful life (Klo:272). [UW-Lobelia]

## Athlete's Foot

---

### Definition

A long term fungal infection of the foot occurring especially between the toes.

### Herbal Aids

[Garlic](#): Wash the parts in hot, soapy water; rinse and dry well; massage in the garlic oil 2-3 times daily. After the affection is cleared, apply once a week to prevent reoccurrence. [SNH p.101]

[Onions](#): For athlete's foot, rub onion juice between the toes two or three times a day until the condition clears. [UW-Onion]

[BF & C](#): From questions and answers to Dr. Christopher in his Newsletter: What do you do herballly for athlete's foot?

Answer 4: This is a toxic condition in the body proper and must initially go back to cleansing the bowels and blood stream, and staying on a mucusless diet. To aid this condition, first always dry between the toes and do not wear nylon or synthetic socks or hosiery. A small piece of dry cotton, with a few drops of lemon juice or apple cider vinegar placed between the toes for ventilation. Do not wear rubber soled shoes, gym shoes, etc., for daily use. Gym shoes for gym, not for street and regular wear. Go barefooted as much as possible (not at social functions, please) and bathe the feet one or more times each day with warm distilled water and apple cider vinegar half and half. Dry the feet well before putting on hosiery and shoes. If the condition is severe, use the bone, flesh and cartilage formula [BF&C] ... Soak a pair of white cotton or wool socks in the bone, flesh and cartilage [BF&C] tea, put on foot before retiring each night (six days a week each week), put a plastic bag over the socks and leave on all night. Continue this each night until healed. [NL 1-6]

[Black Walnut Tincture](#): This is one of the best known remedies for fungus. Use externally and apply frequently. [HHH p.43]

[Tea Tree Oil](#): Externally apply tea tree oil to affected areas with a cotton ball, or find a good quality tea tree oil spray.

## Bad Breath

### Definition

Smelly breath also referred to as halitosis.

### Cause

In speaking of constipation and the need for three bowel movements a day: The wiser way is to work on the cause by unplugging and cleaning out the sewer line so there will be no more backing up of sewage. Within the human body, we find a sewage line that is backed up (constipation) and the horrible odor of halitosis comes out the front door (the mouth) as it is opened. If someone said, "Your breath is horrible," the average person works on the effect, and in order to cover up the bad breath, pops in a mint or runs for the mouth wash. If someone said--"Whew-you need a bath, the smell from your body is awful," you work on the effect again and use underarm deodorant, perfumes, colognes, etc., and never think of cleaning up the cause, and thus having a permanently sweet smelling body and breath. [HHH p.128]

### Herbal Aids

Bad Breath, Indigestion, or Poor Digestion: Carry cloves in pocket and chew on them, but go into the cause to get rid of the bad breath. [SNH p.421]

Myrrh: Take a little myrrh internally. [SNH p.455]

See formula for bad breath using myrrh and golden seal. [SNH p.456]

Cleansing the Bowel: When a person suffers from halitosis or bad breath, this is simply nature's way of saying, "You have a toxic bowel condition [HHH p.132] See Cleansing the bowel. [HHH p.128]

Parsley: The whole herb is effective against bad breath and people who take garlic often take Parsley to avoid offending. [UW-Parsley]

Spearmint: It would serve as a gargle for bad breath and sore gums and mouth. [UW-Spearmint]

Cloves: These are sometimes chewed to temporarily treat bad breath, although their carminative and digestive properties may help to get to the cause. [NL 6-6]

## Bed Wetting

### Definition

Bedwetting is the inability to withhold urine during sleep. [HHH p.40]

### Symptoms

Aside from the obvious difficulty, the child is often nervous and may suffer from digestion troubles. At times it is difficult for children (and adults) to control voiding of urine. They urinate unconsciously, wet the bed, or cannot get to the restroom quickly enough. Ads in the magazines recommend special guards (diapers) to wear during the day for these youths and adults. This is working on the effect! Let's get to the cause. This condition of incontinence or enuresis (involuntary flowing of urine) can be helped by feeding the malfunction organs (kidneys, bladder, urethral tubes, etc.) with herbal foods rich in the elements missing for a good healthy body and organs of elimination. [HHH p.40]

### Cause

The kidney is very sensitive and sometimes acts at the wrong time with fear or panic. Children quite often have problems when their nervous systems are damaged, and I have seen acute kidney problems from other causes. Tommy is a bed-wetter, and his parents bring him to me to see what is the problem. I, in checking the iris of the eye, not only find the invariable severe nerve rings, but in the kidney area we also find scar tissue where the kidney has been bruised. Why? Because he couldn't keep from wetting his bed he got paddled. And instead of on the buttocks, it was just a little higher on the kidney area. We have seen kidneys torn loose from the body and floating because of these severe beatings, which have been called "spankings." Many parents do not realize it, because such is a lack of education, but the greatest part of enuresis trouble is from the nerves. And a lot of it is psychosomatic, so we have given quite a few severe lectures to the parents before we have started working on the child. [SNH p.257]

Bedwetting or incontinence of urine is frequently due to the presence of inorganic oxalic acid crystals in the kidneys or bladder.

This disagreeable trouble is due to an involuntary relaxation and weakness of the muscle that closes the bladder. This is also known as enuresis (kidney and bladder trouble), caused by wrong diet. Weak and undernourished children with a lack of wholesome food are most likely to have this habit. Other causes are late suppers, constipation, worms, gas in bowels, and general nervousness. Do not scold or spank the child for bedwetting, as this causes the child to become more nervous because of the scoldings and punishments. Why not try to kindly remonstrate and then help them as we will explain, by "going to the cause!" This embarrassing habit is one any child dislikes, but needs help from the parents to overcome. [HHH p.40]

### Herbal Aids

Plantain: Drink one teacupful of the tea four to five times daily until relief is obtained. [SNH p.53]

See formula for bedwetting using yarrow, beth root, sumac berries, agrimony and white pond lily. [SNH p.216]

**Bed Wetting**[Bee Sting](#)[Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#)[Blood Pressure](#)[Boils](#)[Breast](#)[Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#)[Bursitis](#)

Uva Ursi: With a child, when you first start them off with uva ursi, don't expect the cure to be instantaneous from one night to the next morning. The problem has been a long time coming on, and this herb will assist with the regulation of the organ. Whenever a child lies sleeping while on the back, pressure irritates the kidneys, and that is when the bed-wetting generally takes place. So we always prescribe that a ball of cotton (or cloth rolled into a ball), large enough to make an uncomfortable protrusion, be taped or fastened to the bed clothes or pajamas right in the small of the back. Then, when the child is asleep and unconsciously rolls from the side onto the back, he will roll back to the side position again. This will keep the child off his back and thereby lessen the irritation and help speed the healing process. [SNH p.259]

See formula for bedwetting using uva ursi, white poplar and marshmallow root. [SNH p.260]

See formula for bedwetting (tea) using uva ursi, white poplar, sumach berries and yarrow. [SNH p.261]

See formula for bedwetting (capsules) using uva ursi, white pond lily, yarrow, sumach berries, white poplar, ginger and golden seal. [SNH p.261]

Liquids: Do not let the child eat late at night or eat any stimulating foods, such as tea, coffee, soft drinks, white flour or white sugar products. It is best to give the child no food or liquids after four or five o'clock. Use a gentle olive oil massage daily over the kidney area. Do not give bed-wetters liquids just before retiring, but have them take the last teas or beverages several hours before going to bed. They can always eat ripe fruit for quenching the thirst and this will often give more satisfaction. [HHH p.41]

**DRI:** Dr. Christopher's Formula for Bedwetting: For more severe cases of incontinence, enuresis (bedwetting, etc.), a formula we have used a long time is as follows: parsley root, juniper berries, marshmallow root, white pond lily, gravel root, uva ursi, lobelia, ginger root and black cohosh root.

This formula is a specific for helping control or overcome bedwetting and to strengthen the entire urethral canal, kidneys, bladder, etc.

Recommended dosage two No. 0 capsules three times a day with a cup of parsley tea. Upon retiring at night fasten about a six or eight inch ball of yarn or string or cloth onto night clothes in the middle of the back. This is for the purpose of preventing the individual from lying on the back, as this is generally the time the valves release to void urine. [HHH p.184]

## Bites, Insect Stings

### Definition

A sharp prick with an acute burning sensation. It is caused by the fine hairs in the stinging nettle; by the tail of the wasp, bee, etc.; from the head of gnats; from the claws of centipedes. Usually the sting causes a local, reversible inflammation. When the sting carries pollen, it may cause violent constitutional reactions in victims who are hypersensitive to that pollen. Death has occurred. [HHH p.97]

### Symptoms

Symptoms are caused by insect stings or bites; a sharp prick with an acute burning sensation. Can be caused by the fine hairs in the stinging nettle; by the tail of the wasp, bee, etc., from the head of gnats; from the claws of centipedes. Usually the sting causes a local reversible inflammation. When the sting carries pollen, it may cause violent constitutional reactions in victims who are hypersensitive to that pollen. Death has occurred in some instances. [NL 3-1]

### Herbal Aids

[Pennyroyal](#): The oil of pennyroyal is a first-rate protection against insect bites (mosquitoes, gnats, and other similar winged pests). It should not be used during pregnancy. [SNH p.283]

[European Pennyroyal](#): This is useful against venomous bites, stings, etc.: Drink internally (especially an alcoholic) daily tincture, and foment on the wound; a poultice of the freshly bruised herb is also highly commended. [SNH p.284]

[Plantain](#): Bruise with a mortar and pestle or juice in a juicer fresh plantain (*Plantago major* or *lanceolata*) and place over the sting or bite. Relief will generally come within a very short time, the pain and itch will stop and the swelling will leave. Rub the bruised leaves or juice over the exposed parts of the body, and it will discourage the insects from annoying you. The juice or crushed leaves of elderberry, walnut, lilac, and hounds tongue will assist in keeping bites and stings to a minimum. [HHH p.97]

[Nervine Tea](#): Drink a nervine tea such as skullcap, black cohosh, wood betony or valerian and/or pennyroyal and parsley, taken with a few drops of tincture of lobelia, as often as needed. [HHH p.97]

[Plantain](#): When using the fresh herb, as an example plantain (*Plantago major*) that grows almost everywhere, take the freshly gathered herb--leaves, root, blossoms, etc., and use a mortar and pestle to bruise and make the herb into a pasty form. If not equipped with mortar and pestle, use a spoon in a bowl, a rolling pin on a board, a hammer on a solid surface. If you have a centrifugal juicer like an Acme, a Champion or a Norwalk with tritcherator and press, use these. Within a few minutes of using the plantain, the pain leaves and the swelling starts to recede. [HHH p.97]

[Crushed Onions](#): Ant bites stop stinging with a poultice of crushed onions. [UW-Onions]

[Pine Gum](#): Indians used the heated resin to bring boils to a head and to treat sores, insect bites, swellings and cuts. [UW-Pine]

[Senna](#): Bark and leaves mixed and rubbed with oil are applied to pustules, ringworm, chilblains, insect bites, facial paralysis and rheumatism. [UW-Senna]

[Bed Wetting](#)[Bee Sting](#)[Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#)[Blood Pressure](#)[Boils](#)[Breast](#)[Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#)[Bursitis](#)

Insect Repellent: Juliette de Bairacli Levy recommends an insect repellent oil consisting of equal parts Wormwood, Rosemary, and Rue. These are infused in olive oil three times and prevent bites even when mosquitos are terrible. She recalls sleeping out of doors without mosquito nets among the tropical groves of Mexico, using only this oil to protect herself and her children, and they rarely got bitten! [UW-Wormwood]

Oil of Anise (*Pimpinella Anisum*) and Oil of Sassafras: Mixed together are effective, as is [Black Walnut Tincture](#) and oil of elderberry. Plantain bruised, or juiced in a juicer, and placed over the sting or bite will generally bring relief within a short time. The pain and itch will cease and the swelling will leave. Rub the bruised leaves or juice over the exposed parts of the body, and it will discourage the insects from annoying you. The juice or crushed leaves of elderberry, walnut lilac (leaf) and hounds tongue will assist in keeping bites and stings to a minimum. [NL 3-1]

Insect Repellents: As we go on our outings and picnics this summer, we dread the thought of insects: their stings, bites, annoyances, and the like. We invest in gallons of insect repellants which are expensive and possibly toxic. It is our purpose here to suggest some natural remedies to the problem of being bugged. Some of the simplest insect repellants can be made from our local herbs. Chamomile and yarrow are two of the best insect repellants in the field. Make a tea of either of these and wash the skin with them and insects will avoid you like the plague. This includes flies, mosquitoes, and their ilk. Because the cosmetic industry uses chaparral as an antiseptic lotion for insect bites, the tea of chaparral may also be tried as a repellent. A member of the family that includes potatoes, cayenne, and eggplant, also includes tobacco, which was used as a successful insect repellent for centuries. In fact, the Indians gave White man tobacco in order to drive them away from the continent. That is why we are taken aback at the reference to Indians smoking a "peace pipe" containing tobacco. [NL 3-6]

Chiggers: These are the scourge of the midwest. To repel them, use the aforementioned herbs. To allay the itch produced by their bites, either chickweed or plantain ointment can be applied. Plantain is an excellent remedy to apply to the site of the bite. It is a blood purifier that will even rally to the occasion of a scorpion bite. It will reduce the red streaks of blood poisoning like no man-made remedy can. [NL 3-6]

Insect Repellent: See "high octane" formula for insect repellent containing rue, rosemary, basil and wormwood. [NL 3-6]

Feverfew: A tincture of the herb, applied locally, is used to relieve pain and swelling caused by bites of insects and vermin. An effective insect repellent is claimed by adding two teaspoonfuls of tincture to one half pint of cold water and then sponging any exposed parts of the body with it. [NL 4-10]

Cabbage Leaves: for insect bites rub a crushed cabbage leaf over the bite. [NL 4-12]

### Testimonials

1. Plantain Leaves and a Sting on the Neck: A 2-year-old was stung on the neck, and the part swelled to enormous size. Again, the remedy was simple, yet wonderfully effective: four plantain leaves were bruised and bound around the neck, and within one hour there was no sign that anything had been wrong with the child. [SNH p.54]

2. Plantain to the Rescue Again: We have gone on a house call where the hand and arm were swollen up and up the enlarged arm was a red streak with a lump under the arm pit. The individual had blacked out with pain from the wasp sting and swelling. It was early spring and the plantain was not up, so I could not use it fresh. I put plantain ointment, about the size of a dollar, over the sting and within a half an hour the pain was gone. This was in the morning, and they reported back later that the swelling and red streak were gone by afternoon and this boy was out playing ball later that day. [HHH p.97]

## Bladder Ailments

### Definition

Bladder trouble, retention of urine (due to bladder weakness), cystitis (inflammation of the bladder), ulcerations (stomach, intestines, bladder, genito-urinary organs, mucous membranes), bladder stones, catarrh of bladder and burning urine.

### Herbal Aids

Bladder Trouble: Drink one teacupful of plantain tea four to five times daily until relief is obtained. [SNH p.53]

Retention of Urine (due to bladder weakness): Apply a garlic poultice on the abdominal and pubic regions. [SNH p.101]

Cystitis (inflammation of the bladder): See formula using wormwood, squaw weed and camomile. [SNH p.108]

Ulcerations (stomach, intestines, bladder, genito-urinary organs, mucous membranes): See formula using cranesbill root, golden seal, echinacea and glycerine. [SNH 155]

Fevers, Irritated Conditions of the Bladder: Infuse sumac(h) berries for 1/2 hour; strain and sweeten to taste; mix with fresh pineapple juice. [SNH p.158]

Inflammation of Bladder: Yarrow makes an excellent douche for this problem (use cool). [SNH p.215]

Bladder: Make at least 2 quarts of the parsley root strong decoction and drink copiously. [SNH p.246]

Bladder Stones: See formula using parsley leaves, cleavers, juniper berries, flaxseed and ginger. [SNH p.247]

Kidney and Bladder: See formula using uva ursi, mountain mahogany, couchgrass, buchu leaves, juniper berries, Prince's pine, shavegrass and celery seeds. [SNH p.260]

Catarrh of Bladder: See formula using uva ursi, white poplar and marshmallow root. [SNH p.260]

Wild Carrot: Highly valuable for gravel, stricture, or any obstruction in the urinary passages or bladder. It will often help aid the body when all other means have failed. [SNH p.263]

Cystitis (inflammation of the bladder): See formula using wild carrot, uva ursi, juniper berries, tansy, licorice root, buchu and cayenne. [SNH p.264]

Buchu: This is effective in helping with chronic irritability of the bladder, when there is a frequent desire to urinate. [SNH p.270]. See formula for gravel, kidney and bladder problems using buchu, uva ursi, parsley root, gravel root and ginger. [SNH p.272]

See formula for catarrh of bladder using slippery elm, horehound, garden thyme, red clover, yerba santa, lobelia, resin weed, cayenne, blackstrap molasses and glycerine. [SNH p.339]

Burning Urine: From questions and answers to Dr. Christopher in his Newsletter: Question: Is there a help for burning urine? Answer: "This is often caused by cystitis, which is an infection of the bladder characterized by inflammation, a burning sensation during and after urination, and

[A - B](#)   [C - E](#)   [F - I](#)[J - P](#)   [Q - Z](#)[Abrasions](#)[Abscess](#)[Acidosis](#)[Acne](#)[Addison's Disease](#)[Adenoids - Polyps](#)[Adrenals](#)[Ague](#)[Alcoholism](#)[Allergies](#)[Alopecia](#)[Amenorrhea](#)[Anemia](#)[Anthrax](#)[Apoplexy](#)[Appendicitis](#)[Arthritis](#)[Asthma](#)[Athlete's Foot](#)[Bad Breath](#)

[Bed Wetting](#)[Bee Sting](#)[Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#)[Blood Pressure](#)[Boils](#)[Breast](#)[Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#)[Bursitis](#)

a need to void frequently. The bladder may have a feeling of being full even when it has just been emptied. When the infection is severe enough to affect the kidneys (which is rare), fever is usually present."

"The urethra is the route by which the infection travels to the bladder. Since the female urethra is only about one and a half inches long and the male urethra is approximately eight and a half inches long, it is much easier for germs to reach the female bladder. So cystitis is more common among females." (The Encyclopedia of Common Diseases, by the staff of Prevention Magazine).

Here is an excellent formula for infection and malfunction in the kidney and bladder area: [White Mallow] It consists of juniper berries, parsley, uva ursi, marshmallow root, lobelia, ginger and golden seal. Suggested use is a cup morning and evening, or two tablets or capsules morning and evening taken with a cup of parsley tea.

The marshmallow root is an emollient and demulcent herb that eases the urine flow and is extremely soothing and healing; golden seal is anti-infectious; juniper berries will aid the condition when a difficulty is found in voiding the urine; uva ursi is a solvent for any inorganic calcified accumulation, such as kidney or bladder stones; parsley is one of the greatest herbs known for rebuilding the urethral area; ginger here is used as a stimulant to accentuate the herbal combination's power; lobelia is the herb acting as an antispasmodic and also as a catalyst. This formula has aided many with burning urine and also those suffering from incontinence (lack of urine control). [NL 1-8]

Bladder Condition: 1/3 oz. powdered oak bark and one teaspoon crushed juniper berries. Simmer for 5 minutes in 1/2 pint of water. Use honey to sweeten. Take 3 tablespoons a.m. and p.m. [NL 2-10]

Juices for Kidney and Bladder Troubles: Cucumber & parsley, dandelion, spinach. [NL 1-8]

Cabbage Leaves: Applied to an infected wound, ulcer, or oozing eczema should be layered like roof shingles, allowing secretions to drain between the layers. When treating lumbago, joint pain, or various afflictions of the nerve or bladder, poultices of cabbage leaves bring rapid relief. A poultice is prepared as follows: Boil for 20 minutes 2 to 4 cabbage leaves and two whole chopped onions with 3 or 4 handfuls of bran and a little water. After evaporation of the water, place the poultice on gauze and apply hot for one or two hours, or even for the whole night. (Never apply heat to a painful abdomen. Only the physician can properly diagnose the cause of abdominal pain, and the application of heat to appendicitis or infection of the ovary may be harmful.). [NL 4-12]

Vegetables to Eat for Bladder Ailments: Cabbage, cauliflower, kale, kohlrabi, mustard greens, spinach, summer squash, turnip greens. [NL 4-12]

In Making Our Food Our Medicine: Remember the usual remedy for kidney, bladder, and edema is to make at least two quarts of a strong parsley tea and drink copiously. If the urine is suppressed drink one half to one teacupful, hot, every hour. [NL 4-12]

### Testimonials

1. **Alfalfa:** Frank Bower conducted many interesting experiments with Alfalfa. Three hundred soldiers at Sawtelle, California, used the Alfalfa tea with remarkable improvement in bladder, prostate and other problems. [UW-Alfalfa]

2. **Juni-Pars:** Dr. Christopher's Kidney Formula: Almost a month ago I was having a problem with my bladder (burning on urination, etc.) In order to avoid spending money on a physician which I didn't have, I went to the health food store and asked what would be good for my ailment. It was suggested that I try KB Combination and garlic capsules. They were out of KB so I bought some garlic capsules. I also took Vitamin C and drank large quantities of water. Unfortunately it must have been too late for these remedies. I was forced to go to a night clinic and they prescribed an antibiotic. I must admit that I didn't take them faithfully, but finally felt that they had cured me. A few weeks later it flared up again. I had had quite a few drinks on a Sunday and the next day at work I began to have severe pains in the region of my bladder. I left work momentarily and walked across the street to the Blue Chip Nutrition Health Food Store. I inquired about the KB Combination and they had it in stock. I started taking two capsules three times a day. My pain was so bad I had to leave work early and go home. I took aspirin, a pain pill, a lot of water and

laid down with a heating pad on my abdomen. I thought I was going to have to go to the hospital the pain was so bad. Anyway, I toughed it out till morning, and much to my amazement, I was miraculously cured. I couldn't believe it. Anyway, I have been taking your formula ever since then and will continue to do so as a preventive measure. I know my problem is not drinking enough water and I also indulge occasionally in too much alcohol.

I just wanted to write to you and let you know what a great product you have (as if you didn't know). Too many people write about bad products but I think more should commend the good.  
[NL 2-3]

## Bleeding

### Definition

The escaping of blood internally or externally. Blood coughed from the lungs is generally of a bright red color and is usually mixed with sputum. The problem is often preceded by nausea and stomach disorder with blood passing through the bowels. [SNH p.5]

### Cause

Bleeding, unless it is by injury, is caused by a calcium deficiency in the body. Bleeding from the nose (epistaxis) is generally caused by the rupture of a small vessel in the nose due to pressure in the head (with a rupture occurring at the weakest point). Diet is very important in this case. [SNH p.5]

### Herbal Aids

[Cayenne](#): This will take care of most bleeding problems, external or internal by the time you can count to ten. For bleeding of the lower bowel (commonly called dysentery) use mullein (preferably in milk). In the urinary tract, marshmallow (preferably in milk) is generally faster. Other excellent herbs; comfrey root, European golden rod, self-heal, shavegrass, shepherd's purse, and wild alum root may be used. In bleeding of the nose, raise the arms above the head and administer cayenne dissolved in hot water, or the extract of witch hazel may be sniffed in the nostrils. A decoction of equal parts of bistort root, cranesbill root, avens or raspberry taken internally works well. [SNH p.5]

Hemorrhage: This throws many people into shock and can bring on death very rapidly. If the wound is small, the blood usually coagulates and the area seals itself, but if the rupture is large, some herbal aid is needed. The first thing one should think about is cayenne as quickly as possible. Using one teaspoon to the cup, as hot as can be taken without scalding. This will stop any hemorrhage, internal or external, by the time a person can count to ten. If the rupture is external and cayenne is not available, comfrey placed over the wound will stop bleeding quickly. [SNH p.30]

Bleeding of Minor Wounds; Cuts, Scratches, Bruises, etc: Apply a poultice of the fresh, bruised or mashed plantain leaves; drink the tea internally. [SNH p.53]

Ulcers, Spongy and Bleeding Gums: Use the decoction of bayberry as a wash. [SNH p.133]

Bleeding (lungs, stomach or bowels): See formula using white oak, tormentil, shavegrass and shepherd's purse. [SNH p.140]

Sore Mouth, Bleeding Gums: Use cranesbill (also known as crowfoot or wild geranium) as a decoction or strong infusion as a mouth rinse. [SNH p.153]

Bleeding (wounds, cuts, tooth extraction): Sprinkle cranesbill powder onto the affected area; rub powder into the tooth cavity. Also as a local styptic, apply the special strong decoction to the affected area on the lint or cotton without dilution. [SNH p.153]

Special Strong Decoction (Hemorrhage of the lungs, internal wounds, excessive menorrhagia): See formula using cranesbill, comfrey and glycerine. [SNH p.153]

Bleeding and Internal Hemorrhoids, Bowel Problems: Inject 3-4 ounces of the undiluted

tormentil decoction and retain as long as possible. [SNH p.168]

Cuts, Wounds: Both the fluid extract and the powder of tormentil applied to bleeding surfaces will serve as powerful styptics. [SNH p.168]

Stomach Bleeding: Witch hazel - Drink the infusion of the dried leaves or chew them when green. [SNH p.171]

Bleeding of the Bowels: Boil 1 ounce of mullein in 1 pint of milk for a few minutes, strain and give in 1/2 cupful doses after each bowel evacuation (and if you don't have a scale or the time to calculate the equivalent measure, just grab some and go to work). [SNH p.317]

Cayenne: In wounds, though the wound is cut and exposed to the bone, that wound may be filled with cayenne pepper (and if cayenne is not available, black pepper) and it will heal beautifully and stop the bleeding. Many people, when they see the skin ruddier by cayenne, believe that the skin is irritated; but cayenne is a counter-irritant; there is no itching involved with it. What cayenne is actually doing is bringing the blood to the surface to take away any toxic poisons, or to start the healing; so the redness comes to the skin from the blood that has rushed to the surface to assist in carrying off wastes. [SNH p.410]

Gums (tender, bleeding, spongy): Apply diluted tincture of myrrh or use as tooth powder. [SNH p.455]

False Unicorn & Lobelia: Dr. Christopher's Anti-Miscarriage Formula: False Unicorn, 3 parts, and Lobelia, one part, constitute this combination. Unless otherwise specified, teas are always made with one teaspoon of herbs to a cup of distilled water (if obtainable). If hemorrhaging starts during pregnancy, stay in bed, use a bed pan when needed, and use 1/2 cup of this tea each 1/2 hour until bleeding stops, then each waking hour for one day, while in bed as much as possible and then three times in a day for three weeks. If bleeding continues instead of decreasing, see a doctor. [SNH p.532]

Nosebleeds: Unless it is from injury, nosebleed results from a calcium deficiency. It is caused by the rupture of a small vessel in the nose due to pressure in the head. There are many causes for nosebleeds, but the weakness stems from calcium deficiency. Of course, it does not matter how much calcium is in the body if one is hit in the nose with a good blow; bleeding will start. A teaspoon of cayenne in a cup of water (hot preferred) taken internally will stop most nosebleeds quickly. In an emergency such as this we use cayenne. As mentioned a teaspoon of cayenne pepper in a glass of water and drunk right down will stop a nosebleed in nearly every instance, by the time you can count to ten. This is not a miracle; it is the principle of the cell stimulant cayenne traveling through the entire blood stream and regulating the pressure so the pressure of the flow is the same in the feet as in the head or any other part of the body. This takes the heavy pressure off the hemorrhaging area and allowing a quick coagulation. One of our very finest herbal foods is our calcium formula [[Calc Tea](#)] of four parts comfrey root, six parts horsetail grass, three parts oat straw and one part lobelia. Make this into a tea, using a cup (one teaspoon of combined herbs to cup of distilled water) morning and one evening or two or three capsules or tablets two or three times in a day. [HHH p.110]

Aloe Vera: Other external uses for the herb include treatment for all kinds of wounds--scrapes, cuts, etc. The gel seems to mildly kill the germs on the surface and promote healing. The herb is high in calcium, which reduces bleeding with its coagulating action, at the same time helping to stimulate circulation of blood in the surrounding areas to bring oxygen to the surface. [UW-Aloe Vera]

Stopping Bleeding: Questions to Dr. Christopher in his Newsletter: What is the fastest method to stop bleeding from wounds? Answer: There are a number of herbal aids to stop the flow of blood from wounds. One of the most efficient procedures is to fill the wound and poultice over with comfrey root or leaf. This may be powdered, cut (in the dried) or whole chopped or bruised in the fresh. Put the comfrey directly onto the wound, then put gauze over the area, and bandage it on. This will stop the bleeding quickly and as the healing proceeds there will often be no scar showing at all. Stories of many hundreds of healings have been related to us, using this amazing comfrey plant. Another life saver is cayenne pepper. This will stop bleeding by applying it directly to the wound, and again--most often--no scar! Another way cayenne will stop bleeding (exception: bleeding from uterus) or a hemorrhage, is to take a teaspoonful of cayenne, put it into

a glass of preferably hot water (or any other temperature will do if hot is not available) and drink it right down. As I have taught for over thirty years, if you will drink a cup of cayenne tea it will stop any unnatural hemorrhage due to injury, etc., by the time you can count to ten. One patient contradicted me on this, laughing as he said it, "You said a cup of cayenne tea will stop a hemorrhage by the time you count to ten--you were wrong. I tried this when I had a "nose bleed" and I started to count, but I only got up to six instead of ten." [NL 1-9]

Ulcers: We need to go to the cause of ulcers and eliminate those but we can begin by relieving the pain and healing the tissues. Cayenne pepper should be taken by the teaspoon (start with 1/4 tsp. three times a day and work up to 1 teaspoonful three times a day). The cayenne pepper will even cauterize a bleeding ulcer. [NL 3-10]

Stinging Nettle: In Russia, it is used as a valued antiseptic and astringent. The pulverized dry herb is sniffed to stop nose bleeding. [NL 4-10]

### Testimonials

1. Cayenne: A person in our audience told how he had cut deeply with a sharp instrument the inside of his hand, fingers and palm. The blood spurted out in streams. He poured a large amount of cayenne pepper into the wound, and within seconds the blood flow slowed down to congealed dripping and the bleeding stopped entirely before many seconds had passed. With a goodly amount of cayenne covering the wound, he then wrapped it. He was so excited about the rapid results he could hardly wait for the regular herb meeting. But, as he said, the "punch line" was lost, because instead of a nasty ragged scar to show how severely he had been hurt, the area was healed and there was no scar. [NL 1-12]

2. Molars: One of our students used a combination of comfrey root powder, oak bark powder, and cayenne to stop hemorrhaging from the mouth in a child who had seven healthy molars pulled out in one day. Her mother was told by the dentist that this was normal procedure before braces. When they arrived home, the mother couldn't stop the bleeding from the child's mouth. 1 1/2 inch gauze pads were dipped in water, folded and then dipped in the combined herbal powders. These were placed between the bleeding gums and held there. They were changed about three times in 20 minutes. Shepherd's purse tea was given through a straw. Healing was rapid. [NL 4-3]

3. Stomach Ulcer: I had symptoms of a stomach ulcer and I drank the Cayenne Pepper and now I have no more symptoms. Thank you again for your information on Cayenne and how it works for bleeding and heart attacks. [NL 4-7]

4. Cayenne and the Gunshot Wound: Once a child was shot in the abdomen; a bullet hit the spine, ricocheted, and made a second wound leaving the body. One of Dr. Christopher's herbal students, living next door, heard the shot and raced over, as she knew that the parents were not home and that the children, ages eight and four, would not be shooting guns. There was the eight-year-old gushing blood out both sides. She ran to the cabinet and mixed a tablespoonful of cayenne in a glass of water; she poured it down the boy and immediately called the ambulance, which was eighteen miles away. The emergency room attendant said that the boy would probably bleed to death, being that the distance was so great. The ambulance arrived and rushed the child (who had been playing "Cops and Robbers" with his father's pistol, which he had found under the pillow of the bed, to the Primary Children's Hospital eighteen miles away. When he arrived, he was the center of attraction, not because his case was so dangerous, but because he was chatting a mile a minute--and there was no bleeding. The bleeding had stopped by the time they arrived at the hospital. The chief doctor said to the parents, "I have seen many accident victims in my life, but this is the first time in such an emergency operation that I have opened an abdomen to find no blood, except for a small amount that was there before the bleeding stopped so quickly. This has saved your boy's life."

In that same year, Dr. Christopher treated four other gunshot victims, and each case responded the same, although sometimes the blood coagulates and comes out in clumps before it stops completely. By the time you count to ten, however, the heavy bleeding should stop completely after administering Cayenne. The Doctor even used tincture of Cayenne on open wounds and, as

he put it, "There may be a bit of muttering about it," referring to the burning feeling of the Cayenne, but the bleeding stops. [NL 6-3]

5. Damaged Eye: A woman fell while descending stairs to the basement and struck her head on the overhang above the staircase. She fell on her elbow and hip as well, but she had hit her eye so badly that it was oozing blood down her face. She found her way upstairs, and "dumped a pile of Cayenne into her hand and pressed it against her wounded eye" (Herbalist:March, 1978:30). She also took Cayenne internally and applied an ice pack. By this time the bleeding had stopped, and she applied Dr. Christopher's Comfrey Poultice, made with wheat-germ oil and honey, to her eye wound and other facial wounds. When she went to the doctor, he cleaned out the wound and told her that she would bruise very badly and that, if she wished, he would recut the wound and stitch it, as she had passed the eight-hour limit for stitches.

She kept taking the Cayenne and rubbing wheat-germ oil and other oils and herbs on the wound. She also applied wet hot packs for the itching associated with healing. After a few days, the marks of the accident were nearly cleared up, although the doctor had predicted many days of discolor and discomfort. This lady--who has teenage grandchildren--credits her quick healing to Cayenne. [NL 6-3]

## Blood Poisoning

### Definition

An infection of the whole body caused by germs spreading from an infected area through the bloodstream.

### Herbal Aids

See formula using bayberry, pinus bark, ginger, cayenne and cloves. [SNH p.133]

Chickweed: Drink the chickweed decoction internally and apply a chickweed poultice externally over the affected part. [SNH p.323]

Lobelia: Tincture of lobelia is also very useful in combating blood poisoning. [SNH p.365]

Lobelia: Dr. Christopher usually used Lobelia in the form of the acid tincture, which is made by soaking the herb or seed of Lobelia in apple-cider vinegar, one ounce of herb to one pint of vinegar. Incidentally, in recent years it has become all but impossible to obtain the seed, so most tinctures are made from the herb. Dr. Christopher was once called out on a case where an old man had a terrible case of lockjaw. The Doctor poured a small amount of the tincture into his mouth through his clenched teeth and within minutes he opened his jaws and was able to thank the Lord for the relief. Lobelia solved the effect; when the man could speak, he described working out on his farm, where he stepped on a rusty spike left out in the field by someone years ago. It had penetrated through his boot and now blood poisoning had set in. Dr. Christopher then went to work on this case. He used plantain ointment to help draw out the poison, and other herbs to cleanse the bowel and the bloodstream of the poison. [UW-Lobelia]

Plantain: Blood poisoning, use the Plantain preferably as a poultice but also possibly as a fomentation, and increase internal dosage as needed. [UW-Plantain]

Plantain, Lily of the Valley or Lilac: When we have a case of blood poisoning in a specific area of the body resulting from the sting of an insect, bee, hornet, or black widow spider, the bite of a "mad" dog, or infection from a cut or sliver, we need a powerful blood purifier that will give immediate relief to that area. Plantain (Plantago Major), Lily of the Valley leaves (Convallaria Majalis), and the common Lilac leaves have this power of purifying the blood stream in such an isolated area. [NL 1-2]

[Red Clover Combination](#): Dr. Christopher's Blood Purifying Formula containing red clover, chaparral, licorice root, poke root, peach bark, Oregon grape root, stillingia, prickly ash bark, burdock root, and buckthorn bark. Over the years we have used a very unusual Alterative -- a combination of herbs that has the ability of aiding many people who have found nothing else to help them in advanced diseases caused by bad blood. We have had hundreds of people express gratitude for the remarkable results they have received from following this program of a mucusless diet and the use of herbal aids...This formula creates, not only a generalized blood purifier, but also includes a group of herbs that aid in building strength and cleaning out the entire body, by helping break loose toxic deposits and flush them out, and also acting as a food for the organs. [NL-1-2]

Lock Jaw: When there is blood poisoning and/or lock jaw, use tincture of lobelia (tincture of lobelia seed is stronger) then after clearing the lock jaw by pouring a few drops on the lips, then go to the cause and clean up the infection that caused the lock jaw to become evident. Use plantain as a poultice (fresh) or plantain ointment. [NL 3-1]

### Testimonials

1. Plantain and Blood Poisoning: We had a man come to us for help who had blood poisoning. Red streaks were running up his arm; he had a large lump under the arm pit, and he was in extreme pain. His fingers were swollen so large that his hands were spread wide. We simply bruised some leaves of the plantain herb, made them into a poultice and applied it over the entire arm. Within twenty-four hours the fingers were normal, the lump was gone, and the tell-tale red line had entirely disappeared. The herb had drawn the poison completely out. [SNH p.54]

2. Poison From a Cut From a Sea Shell: In another case, a girl cut her foot on a poisonous sea shell, and her leg swelled up with the usual red streaks and a knot formed in the groin as large as a baseball. A plantain poultice was put on her leg, and within one hour pain was gone. The poultices were repeatedly applied every hour and she was completely healed in a very short time. [SNH p.54]

3. Woman Doesn't Want to Lose Other Arm: Dr. Shook tells of a woman with only one arm came to me in great distress. She had been stung by a bee on the only hand she had left. Several years previously, she had been similarly stung by a bee. That time she had gone to a Doctor because the whole arm was swollen and she was in grave danger.

The Doctor lanced and drained the pus from the infected hand, but still the arm had continued to swell. Ultimately, the arm was amputated. This lady was in abject despair, believing she would lose her other arm.

Outside my door there was some Plantain (*Plantago Major*) growing. I picked some of the leaves and gave them to the woman, telling her to wash and crush them, make a poultice and apply to the part where she had been stung. Next day this lady returned to thank me and pay for my advice. The hand was entirely well. No sign of poison or inflammation was to be seen, where, but twenty-four hours before there was swelling, inflammation and risk of amputation.

The word "Alterative" is intended to mean that certain herbs gradually alter and correct a bad condition of the blood, without necessarily producing evacuations of the bowels beyond normal evacuation.

They change the process of nutrition and excretion and restore the morbid organs of the system to healthy action. They promote absorption of inflammatory deposits chiefly by stimulating the lymphatic glands, though this is not all. The purification of the entire blood stream, by means of better digestion and regular secretion requires the maintenance of a mild alterative influence to be continued for some time. Therefore, it follows that the term "Alterative" is property applied to those agents, which slowly, moderately and steadily expend their influence upon badly functioning organs, thus bettering the condition of the blood. [NL 1-2]

4. I Have Had a Long History of Poison Oak. I would get it from my children's clothing, our dog, or sitting on a couch the dog managed to get on for a short time. Once it went internal and I was in bed six weeks because I could not take cortisone, being in first six weeks of pregnancy. Once I got it, it just got worse and worse until I took cortisone. The doses became larger and larger. Large doses of Vitamin C and Niacin help a few times, then no longer helped, as did other things I tried. Twice I got blood poisoning in my arm from poison oak. I was desperately searching for a cure when someone led me to herbs and Naturalife. It took me about three years to find the cure but I did. As soon as I realize I have poison oak, I start taking licorice root, which is a natural cortisone and use Dr. Christopher's [CMM Ointment](#). This dries it up in just a few days. I usually take rose hips for good measure. As for the blood poisoning, the first time my poison oak went into blood poisoning, I took penicillin. The second time, my arm was swollen, big red swollen, full of fever and painful. I put chickweed ointment [[Chickweed Ointment](#)] on a bandage, taped it on my arm over the affected area and went to bed. In the morning the swelling was gone, the pain was gone, the fever was gone, and the large red area was gone. This has really been exciting to

me to find natural cures. [NL 1-8]

[Red Clover Combination](#): Dr. Christopher's Blood Purifying Formula

## Blood Pressure

[A - B](#)   [C - E](#)   [F - I](#)

[J - P](#)   [Q - Z](#)

### Definition

The pressure exerted by blood upon the walls of the arteries, depending upon the force of the heart beat, the elasticity of the vessel walls, the resistance of the capillary network and the volume and viscosity of the blood. In Back to Eden, p. 448, we find the following: "Blood pressure shows the contractile powers of the heart and resistance of the blood vessels. The blood pressure increases every two years about one degree. The normal blood pressure is approximately 125 and at sixty it is 140. Persons who are weak physically have a slightly lower pressure. Those who exercise have higher blood pressure" The old accepted routine of taking the blood pressure count has been 100 systolic plus the age, wherein a person of thirty years, it was felt, should have a normal blood pressure of 130, and a person of forty a blood pressure of 140, etc. But this is very erroneous, because at any age heavy meat eaters will have a higher blood pressure than vegetarians. There is actually no hard and fast rule on blood pressure. [SNH p.6]

### Symptoms

Excessive pressure is exerted on the valves and the pumping muscles of the heart. A pressure is also exerted on the functioning lifelines in the body--the arteries, the capillaries, etc. This condition is characterized by a red or flushed complexion, excess weight, discomfort, and sometimes skin pallor. High blood pressure is the result of improper living habits which cause a rundown condition in the body. [SNH p.31]

### Cause

High Blood Pressure: There is a thickening of the blood from catarrhal and excess glutinous and fibrinous matters loading the circulatory system. Generally there is a clogging of the bowel with putrid body waste, making it necessary to cleanse the excretory systems in order to purify the blood. [SNH p.30]

Low blood and high blood pressure are both due to malfunction of the circulatory system. High blood pressure in many cases works just like low blood pressure. Cholesterol must be eliminated from the system in order to get the blood flowing more freely. The condition is brought about by improper diet, insufficient rest and exercise and a lack of vitality within the system. [SNH p.35]

### Herbal Aids

High Blood Pressure: With high blood pressure, cholesterol and mucus form a sludge within the body. Avoid the mucus-forming foods and take herbs that act as a solvent by liquefying impurities such as cayenne, garlic or sassafras. Take cayenne, working up to a teaspoon three times a day. This increases the power of the heart and corrects the circulation problems. Garlic in copious amounts will bring down high blood pressure. Pure tomato juice is very good as a nutritional and a medicinal herb. Wheat germ oil is excellent for feeding the heart and helps cut the cholesterol and smoothens its removal from the area. Avoid the use of liquor and tobacco, do not keep late hours, and avoid over-tiredness and worry. There is an intricate inter-relationship between ones living habits and his body condition. [SNH p.30]

Low Blood Pressure: More oxygen is needed to correct this condition. Garlic is a good oxygen carrier. One of the greatest aids for low or high blood pressure because of oxygen starvation is deep breathing, which serves as a catalyst and helps the herbs react more rapidly. An immediate increase in circulation may be obtained by the use of cayenne and non mucus-forming

[Abrasions](#)[Abscess](#)[Acidosis](#)[Acne](#)[Addison's Disease](#)[Adenoids - Polyps](#)[Adrenals](#)[Ague](#)[Alcoholism](#)[Allergies](#)[Alopecia](#)[Amenorrhea](#)[Anemia](#)[Anthrax](#)[Apoplexy](#)[Appendicitis](#)[Arthritis](#)[Asthma](#)[Athlete's Foot](#)[Bad Breath](#)

foods. Grape juice as well as other juices rebuild and give endurance to the system. [SNH p.35]

Shock: Cayenne should be taken internally to equalize the blood pressure and insure that the internal functions will remain stabilized during the intense systemal distress. [SNH p.44]

Dr. Shook's High Blood Pressure Formula (hardening of the arteries, etc.): See formula using sassafras, European goldenrod, buckbean, black cohosh, poke root, Indian senna, buckthorn and cassia bark. [SNH p.81]

Dr. Shook's High Blood Pressure Compound: See formula using valerian root, licorice root, buckthorn, speedwell, linden flowers, rue and golden rod. [SNH p.379]

**BPE:** Dr. Christopher's Blood Circulation Combination: This formula feeds calcium and ginger into the circulatory system, the cayenne working from the bloodstream to the heart and arteries, out into the veins. The other herbs included are to cleanse, heal and give natural elasticity to the venous structure. It is a group of herbs working together to equalize the blood pressure whether high or low and to bring it to a good systolic over the diastolic reading. Blood flow is life itself. This combination contains: Ginger, Cayenne, Golden Seal, Ginseng, Parsley, Garlic. [SNH p.531]

Vitamin K: The blood clotting properties of Vitamin K, it has been found effective in preventing and curing high blood pressure in test animals, and may turn out to be important for the same use in humans. It is important that in the plant kingdom, only Alfalfa contains a significant amount of Vitamin K; most plants are quite deficient in the vitamin. [UW-Alfalfa]

Kelp: It is an arterial cleansing agent and gives tone to the walls of the blood vessels. It is helpful in some cases of arterial tension (high blood pressure). Practitioners believe that it helps to remove deposits from the walls of the arteries and restore their elasticity, thereby lengthening life (Powell:17). Sufferers from low blood pressure can also have this condition normalized with the use of Kelp. {UW-Kelp]

Shepherd's Purse: Acts to constrict the blood vessels and thus can raise blood pressure but it has also been said to regularize blood pressure and heart action whether the pressure is too high or too low. [UW-Shepherd's Purse]

Valerian: The herb has a beneficial effect on the heart and on blood pressure. One man felt "jittery and woozy" taking his blood pressure medicine and asked an herbal practitioner for something to help him. He didn't say that he was going to stop taking his medicine but a few weeks later, he said that he had been to his doctor, and that his blood pressure was down to normal. He didn't have the nerve to tell the doctor that he had stopped taking the medicine and was drinking a tea composed mostly of Valerian and hawthorne. [UW-Valerian]

Hawthorn Berries: A celebrated cardiac tonic for many centuries. Under conditions of stress, the heart often "works overtime." Hawthorn berries can help in treatment of high or low blood pressure, tachycardia, and arrhythmia. It is also anti-spasmodic, sedative, and soothing to nerves, especially in nervous insomnia. [NL 2-3]

Garlic: Many people have been helped in ridding the body of worms by inserting a peeled button of garlic as high as possible into the rectum. Do this just before retiring at night and it will come out with the first bowel movement in the morning. (This is also a fine aid in adjusting high blood pressure and low blood pressure). [NL 2-9]

Water: It is very beneficial to drink a gallon of "steam distilled water" each day. This will aid to cut down the hardening of the arteries, adjust high and low blood pressure, and retard body dehydration. The amount of water depends on the weight of the individual. Use one ounce of "steam distilled water" to each pound of body weight. i.e. a one hundred and thirty pound individual should drink a gallon of the water (132 oz.) or a twenty pound child, twenty ounces of the water. [NL 2-9]

Juices for High Blood Pressure: Celery-garlic-parsley, celery, dandelion, grapefruit. [NL 3-5]

Juices for Low Blood Pressure: Beet, grape, pomegranate. [NL 3-5]

Ephedra: Excessive amounts of ephedra should not be used by those people who have high blood pressure, but the small amounts in Dr. Christopher's formulas will have no adverse effects.

[Bed Wetting](#)[Bee Sting](#)[Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#) **Blood Pressure**[Boils](#)[Breast](#)[Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#)[Bursitis](#)

Ephedra is great for those suffering from low blood pressure. [NL 4-9]

Vegetables for Blood Pressure: The green bell-shaped pepper is especially good for ... high blood pressure and acidosis. The Sweet Potato used... for problems of low blood pressure and poor circulation. [NL 4-12] Peaches are considered valuable in cases of ...high blood pressure [NL 5-1] Pineapple is considered good for... high blood pressure. [NL 5-1] Strawberry is recommended for ... high blood pressure. [NL 5-1] Ample consumption of tomatoes is considered to improve ... high blood pressure. [NL 5-1]

Pecans: These have been used where there is a problem with low blood pressure...Pinon nuts have saved the life of many an Indian baby when made into a nut soup and used as milk for the baby when the mother had no milk. The nut is considered to be effective where there are problems with the lungs such as tuberculosis, impotence, paralysis, low blood pressure, and emaciation. The Pinon nut is one of the best sources of protein in the nut family. [NL 5-1]

### Testimonials

1. Dr. Christopher Tells the Story: I traveled with a man younger than myself several years ago all over the western part of the United States on business. He marveled at the stamina that an older man could have on long drives without displaying the usual fatigue. Each morning I would get up and have my cayenne and my wheat germ oil (I don't pay attention to anyone else, I just take them, regardless). Finally he got curious and said, "What's that stuff?" So I gave him an illustrative lecture, and he responded, "Well, I have hemorrhoids; my mother died of high blood pressure, and I have high blood pressure; and with the hemorrhoids I have to wear a belt, as you probably noticed, to keep my hemorrhoids up in place. Do you think that (meaning cayenne) will help?" "Not unless you take it," I replied. "Well, I will start taking it." Then I added, "I don't think you're man enough; I don't think you are brave enough," and I turned and walked away. Now, he was well-proportioned and a weight lifter, so after I left, he went over and got into my can and started using the cayenne along with the wheat germ oil, and by spring he did not have to wear a belt any longer as his hemorrhoids were cleared. Then he had an amazing surprise when he went to his doctor for a regular check-up; the doctor took his blood pressure three or four times and said, "This is supposed to be progressively worse. I don't know what has happened; your systolic and diastolic are near perfect. You don't need to come back any longer --I don't know what happened!" Well, he did not have to go back, and today this gentleman who lives in the Salt Lake City area has no high blood pressure, for he kept on taking his cayenne. [SNH p.412]

2. Dr. Christopher's Own Story: Because of my own experiences I must tell you that I am a firm believer in the use of cayenne for the circulatory. I suffered ill health in my youth and from my middle twenties to the middle thirties it was impossible for me to purchase life insurance, even a thousand dollar policy. This was due in part to the hardening of the arteries and a disposition to high blood pressure which I suffered from.

During my middle forties I tried again for a substantially large policy of life insurance. Because of the amount of the insurance I had requested, I was required to see two different doctors, each of whom gave me an examination. After one examination the doctor exclaimed that he was astounded at my blood pressure which resembled that of a healthy teenager though I was forty-five years old. The second doctor measured my blood pressure five times, in each instance shaking his head and repeatedly scrutinizing my case history chart. I was becoming irritated and asked him if his equipment was broken, seeing that he had repeated the reading over and over. He told me that the equipment had been used without trouble for some time, but since my age was forty-five and I had a perfect systolic over diastolic pressure he had to wonder if the reading was correct. I assured him that it was and related what the other doctor had said. I got an O.K. for the policy from both practitioners.

Last year as I neared seventy years of age I told this story to a class I was instructing. One of the pre-medicine students asked if my blood pressure was still as good as it had been then. So I gave him permission to take my blood pressure. Amazingly, the group saw the blood pressure reading of a healthy young man and not the average reading of a seventy-year-old individual. This was very gratifying to me to say the least. The main reason for this good blood pressure of mine, besides my close adherence to the mucusless diet, was the use of cayenne as a food each day. I take one to three teaspoons or more of cayenne every day of my life and the resulting healthy

blood pressure is what I call a good pay-off for a total effort. [NL 1-5]

3. Dr. Christopher's "Hawthorn Berry Syrup has been doing us so much good. It's difficult to find adequate thank you expressions for you. In addition to help for heart problems it has also been stabilizing a high blood pressure problem of long standing which is really worthy of praise. We take it only twice a day, but perhaps if it was taken three times, it would bring the blood pressure to normal ... At least we are not using the drug prescription for some time now." [NL 3-11]

## Boils

### Definition

A pus making skin infection in a gland or hair gland, marked by pain, redness and swelling.

### Cause

When the blood stream is flowing "clean" and doing an efficient job by feeding the system properly and carrying off the wastes, the whole body benefits...When a "good clean blood-purifying program" is being used, we will see that the toxic poisons are being removed and boils, acne and other skin diseases will start clearing up. [NL 1-7]

### Herbal Aids

Boils, Carbuncles, Tumors: Bruise the fresh leaves of plantain and apply to the affected area, cover and keep moist (juice); change poultice before dry. [SNH p.53]

Rashes, Pimples, Boils, Scurvy, Eczema: Use a decoction of equal parts burdock root and yellow dock (*Rumex crispus*) as a wash, and drink the combination as a tea. [SNH p.65]

See formula for boils poultice using burdock root, sarsaparilla, yellow dock and black alder. [SNH p.67]

Boils, Carbuncles: Make an external application of equal parts of echinacea and ground pine or club moss (*Lycopodium clavatum*), while taking the echinacea tea or syrup internally; another effective poultice is to use flaxseed (*Linum usitatissimum*), lobelia (*Lobelia inflata*), slippery elm powder (*Ulmus fulva*), and cayenne (*Capsicum minimum*; *C. fastigiatum*) with echinacea tea and apply fresh 2 times daily for 4 days. [SNH p.89]

Boils, Carbuncles, Gangrenous Sores: Apply the powder of bayberry in a poultice. [SNH p.133]

Boils, Tumors, Scrofulous Ulcers, Ulcers of Mouth and Throat, Inflamed Skin and Mucous Membrane, Infection, Cancer: Apply a poultice of the fresh roots and leaves of white pond lily; also the strong decoction makes an excellent base for mixing other ingredients for application; the powder is often mixed equal parts with crushed flax seed (linseed) or powdered slippery elm. [SNH p.165]

Inflammation, Bruises, Sprains, Swellings, Suppuration of Boils: Apply a fomentation made from the comfrey root or leaves. [SNH p.310]

Boils: Paint the part with pure olive oil to prevent sticking, then saturate a thick layer of cotton with comfrey mucilage and apply to the affected parts. Cover with plastic or waxed paper, bandage, and leave on until nearly dry. Make a fresh application by following the same process. If pus is present, paint the part with oil of garlic instead of olive oil and take 1 teaspoonful of the oil, internally. This will prevent or stop putrefaction and pus formation, which will hasten the healing process. Give fomentation wrung out of a strong decoction. [SNH p.310]

Boils: A comfrey fomentation or fresh poultice is excellent when it is necessary to resort to cutting and draining. This will draw and drain the boil. [SNH p.310]

Drawing and Healing Poultice (inflamed surfaces, ulcers, wounds, burns, boils, skin diseases, purulent ophthalmic, chilblains, etc.): Add water to the powder to make an application of due

[Bed Wetting](#)[Bee Sting](#)[Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#)[Blood Pressure](#) [Boils](#)[Breast](#)[Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#)[Bursitis](#)

consistence (use alone or in combination with other healing agents discussed) and place on the affected part. Stripping the bark straight from the tree and binding the inner side to a bad wound will work. [SNH p.335]

Swellings, Pneumonia, Pleurisy, Boils, etc.: Make a compress or plaster of lobelia, of hops, bran, or lard. [SNH p.363]

See formula for maturation poultice for boils using ginger and flour. [SNH p.415]

[Black Ointment](#): Dr. Christopher's Black Ointment: This is an excellent drawing ointment. For use externally on old ulcers, tumors, boils, warts, skin cancers, hemorrhoids, excellent for burns and as a healing agent. This is made with chaparral, comfrey, red clover blossoms, pine tar, mullein, beeswax, plantain, olive oil, mutton tallow, chickweed, poke root. [HHH p.196]

Gargle for Sore Throat, Swollen Tonsils, Fomentation of Boils of Skin Eruptions. (Also useful for feet with unpleasant odor). 1 oz. powdered oak bark simmered in 3 pints of water for about 30 minutes. Simmer to 2/3 of original volume. [NL 2-10] Staph: From a question to Dr. Christopher's Newsletter: What will, in a natural way, aid to clear up staph?

Staph is an abbreviation for Staphylococcus. The definition for this word is bunch of grapes. A genus of spherical cells arranged in irregular groups and short chains, and very rarely in packets. These are the bacteria most commonly found in boils, abscesses, carbuncles, and similar suppurative processes.

As can be seen here, we do not have a local problem, but an internal one. I have had many cases of long suffered and continual of furuncle (boil) types that have been cleared by cleaning up the blood stream. The initial cause stems from "food" intake.

The first step is to clean out the bowels (using [Fen LB](#): Dr. Christopher's Lower Bowel (Colon) Formula and [Red Clover Combination](#): Dr. Christopher's Blood Purifying Formula.

After getting on the right start, it is also good to stay on the mucusless diet for long range good health and freedom from staph infections.

As an aid to help clear a staph condition as quickly as possible, it is wise to use an abundance of garlic and onions, raw as much as possible, in salads and low heated foods. We have in our aids a formula for infection. [\[INF Combo\]](#) Two or three of these capsules, three or more times a day, will be of great help. To assist this formula add three of six drops of Black Walnut Tincture and three to six drops of Tincture of Lobelia to each cup of steam distilled water being used in drinking down these capsules. [NL 2-10]

Vegetable Juices: Useful for the treatment of boils and carbuncles are carrot & spinach, carrot & cucumber, carrot. [NL 3-5]

Black Walnut: Externally, Black Walnut is nearly a miracle worker in cases of scrofula, eczema, impetigo (as related above), acne, dandruff, boils, itch, shingles, ringworm--we could go on, but you can see that you can use Black Walnut whenever a skin disorder appears! The tincture is an excellent first-aid remedy for wounds. [NL 5-7]

### Testimonials

1. Boils Under Both Arms: While serving in the army during World War II, we had a soldier come to us with a bad case of boils under both arms. We lanced and treated them as usual, but in a week or so he was back with another crop. When questioned about it, he said that he had been plagued with the problem all his life. I asked him if he wanted to rid his body of the boils, and he said he did. So I gave him a prescription, to the mess sergeant (not to the druggist): no fried foods, no milk, no meat, no potatoes, no soft drinks, but all fresh fruits and vegetables. Needless to say, the boils promptly cleared up and he had no recurrence of them. So these types of diseases must be treated by clearing up the blood stream and keeping it clean if healing is to be realized. [SNH p.70]

2. Boils Suffered for Nearly a Year: Dr. Shook also related, at length, the story of a young man who was suffering for nearly a year with boils on different parts of his body, two under one arm and one under the other, several scattered about on his wrists, buttocks, and legs, and nine on his

neck. It was the worst case of Furunculosis (boils caused by blood impurity) that Dr. Shook had ever seen.

He told the man to gather a large sackful of fresh burdock leaves and to dig up the roots of first-year plants. His wife washed and chopped the leaves and made them into a poultice with Oil of Eucalyptus and applied wherever the boils appeared. The roots were cleaned, chopped, and boiled, four ounces to a quart of water, for twenty minutes. This was strained and reduced to one pint and taken in small doses throughout the day till the pint was gone.

In three weeks, the boils were gone, and in one month the young man was completely well, although he had suffered so much for so long. The boils did not recur (ShoA:46-47). [NL 5-12]

## Breast

### Definition

Cancer of the breast, mastitis, breast tumors, breast infection while nursing, sore nipples.

### Herbal Aids

Cancer of the Breast (poultice): See formula using poke root and bayberry. [SNH p.62]

Breast Tumors: Use the expressed juice of cleavers herb mixed with linseed meal, and apply to the breast; take 1 teaspoonful of the juice while fasting in the morning. [SNH p.268]

**Mullein & Lobelia:** Dr. Christopher's Glandular Formula: Through the accumulation of toxic waste in the body from improper diet, poor blood stream and sluggish circulation of the blood system the glands become congested and infected, and swell up to cause much pain and misery. (There are glands that swell on the neck, breast, groin, under arm pits, etc.) Make a tea of three parts mullein and one part lobelia herb and use as a fomentation over swollen or malfunctioning glands. Leave on all night (covering fomentation with plastic), six days a week until relief is obtained. Use a fresh fomentation as warm as possible each night. This can be used as an aid to help relieve mastitis, thyroid malfunction, etc., etc. In addition to the external fomentation, also drink a cup of this tea two or three times in a day or take two of the capsules or tablets with a cup of steam-distilled water. [SNH p.187]

Breast Infection When Nursing: Some women use a hot compress of parsley herb, but this can cut down the supply of milk. A hot compress of comfrey leaves, or of marshmallow roots are excellent; the latter is especially good to draw out poisons and infection. Echinacea and garlic can help up an infection; take these internally. My midwife has suggested that a calcium imbalance in the system can cause breast infection; instead of taking calcium tablets, take Dr. Christopher's Calc formula, which consists of four parts comfrey root, six parts horsetail grass, three parts oat straw and one part of lobelia. This can be taken in tea, tablets, or capsules. Take lots of liquids, take hot baths, and be sure to get plenty of rest. Many breast infections result from an exhausted mother. Vitamin C-rich foods, such as rose hip tea or, my favorite, hot lemon toddy, which you make by squeezing the juice of one lemon into hot water and adding honey to taste, can help heal you up. [EWH p.85]

Sore Nipples When Nursing: If your nipples get sore, you can rub on pure lanolin, available at pharmacies. You can sun your breasts briefly, but be careful, because the tissue is tender and sensitive. Honey, comfrey ointment, wheat germ oil, and aloe vera leaf can all be applied, although you should be careful to wash off the honey, as no infant should take raw honey which causes infant botulism, and to remove the aloe vera, because it is very bitter. [EWH p.85]

Poke: It is a dependable herb to treat breast swelling, from which so many women suffer following childbirth, making nursing impossible. Dr. Kloss described this use. He said to grind fine the fresh root and roll this out into a poultice to cover the breast completely, cutting out a hole for the nipple. Using a piece of cheesecloth or other thin (cotton) material to cover the breast, apply and once daily moisten the poultice with Poke root tea made fresh each time. Do this for three days, each time putting on a fresh poultice. You can continue the treatment for fifteen days which should pull little sores filled with pus. In some weeks, he said, the hardness should leave the breast although we consider that it works much faster in many cases (Klo:298). This same treatment has worked wonders in cases of breast cancer. [UW-Poke]

Calcium for Mastitis: We have also noted, in the problem of mastitis, that a calcium

[Bed Wetting](#)[Bee Sting](#)[Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#)[Blood Pressure](#)[Boils](#)[Breast](#)[Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#)[Bursitis](#)

deficiency in the body is sometimes a cause. A midwife informed us of this and said that if we would saturate the body with a good quality calcium supplement such as the Calc tea or perhaps Dr. Christopher's eggshell formula, using Vitamin C and blood-cleansing herbs to eliminate infection, we would quickly get over any breast infections. Dr. Christopher made his eggshell formula by covering clean eggshells, with their inner lining removed, with apple-cider vinegar allowing this to set for several days. He then strained it and combined it with honey and water for a pleasant source of good calcium. [UW-Poke]

Poke Root: It has been recommended for other women's ailments. Sore nipples and breast tenderness during the menstrual period will be remedied by the use of Poke root. [UW-Poke]

Squaw Vine for Sore Nipples: The berries are highly recommended to treat sore nipples. The crushed berries are added to tincture of myrrh for a highly potent cure (Cly:113). Another method is to make a strong decoction of two ounces of the herb, fresh if possible, with a pint of water, then strain and add as much good cream as there is liquid of the decoction. Boil the whole down to the consistence of a soft salve and when cool, anoint the nipple with it every time the child is removed from the breast (Felk:1274). Olive oil is sometimes substituted for the cream. [UW-Squaw Vine]

Gathering of Breasts, Tumors, Sores (poultice): See formula using ground ivy, camomile flowers and yarrow. [SNH p.161]

Sore Breasts: Apply a comfrey poultice of the fresh, bruised leaves. It relieves pain in an hour. [SNH p.310]

### Testimonials

1. [Mullein & Lobelia](#) for Dr. Christopher's Daughter: Dr. Christopher's daughter, Ruth, told the story of nursing her baby during a hot night, so she left the window open. A cold breeze came in during the night, and since she had not covered up very well, the cold air blowing on her gave her a cold in the breast. It was very hard and sore, to the point that she could hardly nurse the baby. She tried until she felt like screaming. She called her dad, then about eighty miles away, who came with the mullein/lobelia fomentation [Mullein & Lobelia]. She made it up and covered her breast with it, as hot as she could stand it, and put some plastic over it and then a towel. By morning she was nursing the baby again, with no pain and no more hardness. [EWH p.85]

2. To Start Breast Milk for Adoptive Mother: One blizzardy day, this lady came into the office, wearing a purple robe with a white fur collar on it. She shook the snow off and was admitted to Dr. Christopher's office. She threw back the robe, and there she had in her arms, at her breast nursing, a beautiful little Navajo baby. She was so blonde that the contrast was amazing. She said she took the baby and put it to her breast, and it started nursing right off. She had taken the blessed thistle tea a few days before the baby was received. Although she had adopted three other Indian children, she felt very close to this one and felt it was a part of her because it was receiving her own milk. [EWH p.91]

3. Mastitis: A woman in Roy, Utah, had mastitis; she was a nursing mother. Her breast was double its regular size, with red streaks. Anyone experiencing mastitis knows that it is terribly painful, and accompanying symptoms resemble flu. A mastitis fever is really uncomfortable. Her baby had nursed from the other side, but the mother couldn't let it get near the inflamed breast, which sometimes can relieve the pain and swelling if possible. The baby was crying from hunger; the mother was crying from pain; what misery for the two of them! The Doctor made a fomentation of three parts of Mullein and one part of lobelia. Plastic was put over the fomentation, and the mother was told to drink half a cup of the tea each half hour until time to sleep, then a half cup each hour the next day if needed, which the Doctor did not think would be necessary.

The next morning she called Dr. Christopher, happy to tell him that the swelling was all gone, as well as the soreness and flu symptoms, and the baby was nursing happily again on that side. [UW-Mullein]

## Cancer

### Definition

New tissue cells that lack a controlled growth pattern.

### Cause

For many years Dr. Christopher taught that cancer is not an isolated problem in the body. If the cancer breaks out in a place where we have an old injury or a weakened portion in the body it only indicates that the cancer is in the bloodstream. It only accumulates, like a boil or an ulcer, in a weakened area and drains the poisons in the area. The medical profession cuts it out and says, "Well, the cancer's all gone!" The cancer breaks out in another place. The bloodstream must be cleaned. The [Red Clover Combination](#): Dr. Christopher's Blood Purifying Formula or even Red Clover alone has a powerful alterative effect to clean the bloodstream. [UW-Red Clover]

### Herbal Aids

Red Clover: is a very useful and wonderful alterative agent for counteracting scrofulous and skin diseases, as an antidote to cancer, and as an efficient remedy in bronchitis and spasmodic affections. Its healing properties make an excellent addition to alterative compounds. You will find this an effective and reliable remedy in wasting-disease and for weakly and delicate children. The warm infusion is soothing to the nerves. [SNH p.56] Anal: Inject a strong infusion of the tea five or six times daily, and also drink internally. [SNH p.56] Drink four or more times daily on an empty stomach. [SNH p.56] Vaginally: Inject a strong tea with a bulb syringe (holding the vagina closed after insertion to force the tea around the head of the womb), retain several minutes before expelling, five or six times daily. [SNH p.57] Dr. Thomson suggested a cancer plaster which is widely recommended. Cover the Red Clover flowers with water and boil for one hour. Then strain and reduce the liquid until it is the consistency of tar. It can be spread on a clean cloth and applied to external cancers. This is not one hundred percent verified in all cases where it has been tried, but together with the tea administered internally there have been many reports of successful healing with the treatment. If there is a cancer in the rectum you can give an injection (small herbal enema). Bethel says she has seen many cancers disappear with treatment of Red Clover (Beth:136). [UW-Red Clover]

Dr. Thomson's Famous Cancer Plaster: "Take the heads of red clover, and fill a brass kettle, and boil them in water for one hour; then take them out and fill the kettle again with fresh ones, and boil them as before in the same liquor. Strain it off and press the heads to get out all the juice, then simmer it over a low fire, till it is about the consistency of tar, when it will be fit for use. Be careful not to let it burn. When used it should be spread on a piece of bladder, split and made soft. It is good to cure cancers, sore lips and old sores." [SNH p.57]

Anti-Cancer Remedy: See formula using red clover, poke root, licorice root, cascara sagrada, sarsaparilla, prickly ash, burdock, buckthorn, stillingia, Oregon grape root, peach bark and chaparral. [SNH p.57]

Cancer of the Breast (poultice): See formula using poke root and bayberry. [SNH p.62]

Cancerous Sores (ointment): See formula using poke root, yellow dock and blood root. [SNH p.62]

Chaparral or Creosote Bush: It is especially known for specific action in cancer and arthritis. It was considered to be a cure-all by many Indians. It is a potent healer to the urethral tract, and to

[Depression](#)[Diabetes](#)[Diarrhea](#)[Digestion](#)[Diphtheria](#)[Dizziness](#)[Dropsy](#)[Dysentery](#)[Dyspepsia](#)[Dyspnea](#)[Earaches](#)[Eczema](#)[Edema](#)[Enuresis](#)[Epilepsy](#)[Eye Ailments](#)

lymphatics. It tones up the system and rebuilds the tissue. It cleanses the lower bowel and tones peristaltic muscles. It is very bitter, but to the needy and courageous, it works fast for difficult conditions. [SNH p.70] Cancer, arthritis, rheumatism, etc.: Drink the tea (infusion for 3 weeks, after which the capsules or tablets may be used. [SNH p.71]

More on Chaparral: The Kelly Research Foundation in Grapevine, Texas has been active in cancer research. The following is a statement concerning chaparral by Dr. William Kelly:

"I've found that chaparral is very effective in 7% of the cases of malignancy. The action is not as many researchers believe--a specific activity against the cancer cell, but rather an indirect one. In about 7% of the cases of malignancy, the pancreas and the liver as well as other tissue of the body are so congested with poisons such as medications, sprays, drugs, metallic poisons, and pollutants, that these tissues cannot carry on normal activity. This is basically an antagonist to the enzyme and vitamin and mineral metabolism that goes on in the body. In cancer specifically, we find that the pancreatic enzymes are locked with the antagonists and are rendered totally ineffective. By chelating these antagonists from the pancreatic enzymes, we find that normal activity takes place and the person's own cancer defenses take over and destroy the tumor in malignant conditions. It has been found further and should be seriously investigated by the Federal Government that Chaparral works well in chelating the toxins out of the bodies of those who have been drug addicts. We recommend taking two Chaparral tablets before each meal. This seems to be an effective way of chelating antagonists from the body that otherwise could not be accomplished." [NL 2-2]

White Pond Lily: Cancer of the uterus. Drink the decoction and use the decoction as a vaginal injections. [SNH p.165] Boils, tumors, scrofulous ulcers, ulcers of mouth and throat, inflamed skin and mucous membrane, infection, cancer: Apply a poultice of the fresh roots and leaves; also the strong decoction makes an excellent base for mixing other ingredients for application; the powder is often mixed equal parts with crushed flax seed (linseed) or powdered slippery elm. [SNH p.165]

Thyme: May be taken internally or used externally with amazing and beneficial results. Internally: 1 teaspoonful in 1 cupful of water, sweetened with 1 tablespoonful of honey 3-4 times daily; good for infectious bronchitis, diarrhea, cancer. [SNH p.230]

Cleavers: Skin cancer: Apply a poultice of the bruised green herb, and take 2 ounces of the expressed juice 3 times daily. [SNH p.268]

General Nutrient, Emollient, Healing Formula (ulcers, cancer, syphilis, skin diseases): See formula using comfrey, burdock and distilled water. [SNH p.314]

Chickweed: For rectal cancer. Bathe the area 2-3 times daily with the decoction, infusion, or diluted tincture (as warm as possible), then apply [Chickweed Ointment](#) or [CMM](#): Dr. Christopher's Healing Ointment. [SNH p.322]

Cancer Preventative: An example of a common emulsion is: 1 ounce sweet almonds, 1 teaspoon bitter almonds, 2 pints water; blanch almonds (remove skin by scalding) and beat up, adding water little by little to form an emulsion; strain and bottle. This particular formula (using a teaspoon a day, six days a week, over the years) is a wonderful cancer preventative. [SNH p.483]

Helios-Therapy: (Sun) on the skin is very important, as the sun is the Great Doctor of all times. But this therapy must always be done with caution because the sun (though being a healer) is like fire, which can either provide gentle warmth or it can burn a city down. The sun will heal where medicinal aids, herbs and other procedures are slower. In many instances, it will bring skin cancer to the surface... The propaganda in daily newspapers and national publications each year (although promoted often by people with doctoral degrees) stating that "the sun causes cancer" is as ridiculous as saying "the tonsil is poisoning the whole body"--actually it is the putrid condition of the body that is poisoning the tonsil, or the skin! All the sun does is to ripen and bring the cancer that is already there to the surface, wherein the waste matter can slough off, so that the body may heal. This is why we must work inside the body with herbs, as well as outside the body with the sun, which will harmoniously speed the curative process and eliminate the problem so there is no recurrence. [SNH p.502]

Meats and Nuts for Cancer: Dried fruits and nuts are very nourishing and beneficial, and the latter are better (as a whole protein) when used in combination with the garden greens. If a person

has cancer or is inclined towards cancer, do not overdo eating protein (such as nuts). This is one thing that does damage to the pancreas and in these cases, eat nuts only in the morning. Stay away from peanuts and concentrate on almonds. A person with a cancerous condition should use from 8 to 10 almonds in the morning and the same at noon. But do not take any protein from evening time until the next morning, allowing 16 to 18 hours for the pancreas to clear and start to work on enzymes again. All protein should be taken early in the morning. In cancer cases never use any second-hand or secondary protein (such as meats). [SNH p.521]

Potassium: Max Gerson, in his very effective treatment of cancer, found that almost all seriously ill persons were very deficient in potassium. He supplemented his cancer patients' diets with significant amounts of potassium, usually in a liquid concentrate. A cancer patient we know learned that both the seaweeds Kelp and Dulse are the highest in potassium among all foods and herbs. He mixed a brew of Kelp, apple cider vinegar and honey and took a large amount of it in his daily cancer regime, which also utilized raw juices, fruits and vegetables, and herbs. He found that this was a potent--albeit somewhat unpleasant tasting!--source of potassium and other trace minerals. Gerson also employed iodine in his cancer treatment and Kelp is high in this element. We cannot, of course, claim that Kelp is a cancer cure. But it is a powerful source of necessary elements for healing. [UW-Kelp]

Poke: Authorities differ as to its value on cancer. Great relief towards the close of a difficult case of cancer of the uterus was obtained by an external application of 3 ounces of Poke root and one ounce of the tincture in the strength of 1 tablespoon to three pints of tepid water for bathing the part (Gri:649). Hutchens reports that "the juice of the berries dried in the sun until it forms the proper consistency for a plaster, applied twice a day, has cured cancer" [UW-Poke]

Chaparral: From a question to Dr. Christopher in his Newsletter. Does chaparral really cause acceleration in the growth of cancer? Answer: The healing reaction of chaparral is one that causes concern to those watching results if they do not understand the method of progress.

The herb chaparral is a powerful cell proliferant, causing the good cells to grow rapidly. During their fast new growth, the good cells push the dead cells and their waste into a deposit. This growth of waste material has an alarming appearance and frightens the uninformed into believing the cancer is growing rapidly. We have seen this condition a number of times. As it reaches a crisis condition, after the growth loads up with toxic materials it then starts decreasing in size and the healing process takes place. This is a slow procedure in some cases and demands good continued care and understanding. [NL 1-8]

Prostate Cancer: Red clover and dietary changes, plus other formulas. [NL 3-6]

Cancer Surgery: Just a word about cancer. It is a systematic disease. It depends on filth in the bowel and the blood stream. Our understanding of cancer is different from that of the surgeon's. We see the body being able to "clean up its act" and stop recycling the same old toxins around and around in the body. All channels of elimination (including the skin) must be functioning. The food intake must be pure.

Even though a person is operated upon for a cancerous tumor, there is no guarantee that the cancer will not return simply because the cause was not studied.

"Cancer" is a frightening word. The one we use is "cell deterioration." This explains the process in the body more clearly than the word, "cancer."

Sometimes, during an operation for a tumor, blood spills over into the rest of the body. This blood contains some of the tumor cells. The doctors sometimes say, "Oh, the body will take care of those." Mendelsohn suggests that surgery would be unnecessary if the body could take care of the cells by itself.

The medical alternative to cancer surgery, chemotherapy, presents side effects that sound like horrors out of an old Frankenstein movie.

Our program, "The Incurables ([Dr. John R. Christophers "Incurables Program"](#))," is a safe, nontoxic method to restore health and strength. It is not as easy as surgery, however, it involves retraining the little tyrants known as the tastebuds.

Remember the old Biblical statement from the Old Testament, "If the eye offends you, pluck it out!" This phrase seems to be the general rule in most allopathic treatment from tumors to tonsils. We now view the old medical practice of bloodletting (to let out the bad blood) to be primitive.

How much more primitive it is to exclude an entire organ from the body as punishment for its diseased condition. An automobile will not function without a carburetor. A faulty carburetor can be replaced, rebuilt, or cleaned out and the car will run again. The design of the auto makes it necessary for each part of the engine to be integral. Parts cannot expect to be ripped out of the system and still have good driving possibilities. Every human organ is functional and contributes to the smooth operation of the entire organism. It's erroneous to think that removal of an organ is standard procedure. Surgery is no replacement for cleansing and rebuilding the body. We need to work with Nature instead of trying to second guess it. [NL 4-2]

### Testimonials

1. Garden Carrot: Dr. Loretta Foote was one of the sweetest women we ever knew; and all she did was try to help people. She was an herbalist, and when we had our offices on 1st South in Salt Lake City, she was on our staff as the obstetrician. She was a woman that delivered thousands of babies and most of them were delivered in the home; in fact, our five were delivered in our home by natural childbirth, assisted by Dr. Loretta Foote. Dr. Foote had a friend, and a very prominent lady of Salt Lake (most people would know the name were mentioned), who was told by her doctors that she was dying of cancer, and this was before the days of the juicers. Dr. Foote grated carrots for her with the old "knuckle-skinner" (grater) and squeezed out the juice by hand with cloths, until she would get a quart or so every day (and sometimes 2-3 times per day), so you can imagine how much dedicated effort that this took. Dr. Foote fed this to her friend, and she was completely cured, to the astonishment of the doctors. This prominent lady later wrote a booklet on how she was healed of cancer, and we have one of the very, very few of those left in existence. Then this fine lady sponsored Dr. Foote in a health store, the first health store in America, and they went broke! So this appreciative lady said, "They don't want us here; let's go to the coast." Many of you have been to the coast and have seen the many, many juice bars, health stores--well, these two great ladies started the first health store and juice bar on the coast, the first ones that were successful in the United States. And these started to gain in popularity. Later Dr. Foote returned to Salt Lake City and started another health food store, and this time it was a success. Here is a wonderful pioneer lady who did wonders with the juice of our common garden carrot! [SNH p.266]

2. Spider Cancer Drops Out of Woman's Body: Sometimes it takes time and patience for these herbal aids to truly work. For example, a lady who had come to Dr. Christopher began the full routine as described above. A number of months later she began to think, "Look, I have been on that program for months now; I have taken the herbs orally; I've used the vaginal bolus [V.B.], including the yellow dock combination, and I am getting sick of this!" She felt somewhat better but didn't notice much change, so she was going to quit that day. That very morning she made the decision, as she was at home, sitting on the toilet. When she got up, she happened to turn around and glance into the bowl, and there was something about the size of a half dollar, with legs on it, swimming around in the water. This something had dropped out of her! She screamed, and her husband came in. They put it in a bottle and took it right over to the family doctor. He examined it under the microscope, and said he had never seen one of these whole like this, because they have to cut them out of a person. This was a spider cancer. They never give up and leave by themselves; usually they must be cut out. The doctor was amazed that it had come out of her. It had done so because her body was now so healthy that the spider cancer didn't have any waste materials to work on. When she saw that cancer, she vowed to continue the program, even if it took six months or years. Dr. Christopher reminded us that some people heal quickly, but sometimes it takes a long time. If we know we are on the right track, we should just continue. [EWH p.17]

3. One Armed Woman Delivers Own Baby After Being Cured of Cancer: Long before home birth became as accepted as it is today, Dr. Christopher was advocating it; he and his wife had all five of their children at home. A very dramatic example: One lady came to Dr. Christopher's office in Orem with a severe case of cancer. Parts of her body had been cut out; she had lost one arm--her right arm, which was particularly sad because she was an artist. However, she decided that she was going to fight the cancer naturally, and came to Christopher's to learn to be an herbalist. She planned to learn to use her left hand for her art, and she learned iridology and reflexology. She did some art work for Dr. Christopher's charts and books, and was learning to use her left hand very

well. But the doctors had told her that she should never get pregnant, because there was cancer all through her body, which would kill both her and the baby. One day, however, she decided that she wanted another baby; she already had three or four children, but she wanted another. She had been in the cleansing program and mucusless diet for some time, and had become stronger. She conceived, the baby developed, and the herb class watched her with admiration. One day of class, a bad snowstorm came up, and through the swirling snow came this lady. She said that she had to come this morning and show them what she had. She threw back her shawl, showing one of the most beautiful babies Dr. Christopher had seen. She had birthed it the night before. She had delivered the baby herself, with one hand, and didn't bother her husband, although when it came time to tie and cut the cord, she had to wake him for help. Dr. Christopher considered this most unusual, for a woman who had had cancer and suffered all the operations that she had, and yet here she had delivered her own baby at home. [EWH p.52]

4. Woman Cures Her Cancer with Fruits, Vegetables and Nuts: So many people feel that if they have cancer, there is nothing to do but wait and die. Dr. Christopher's program has proved otherwise. I personally have seen cases of diagnosed cancer that have been turned around and the patient become completely well, by faithfully following Dr. Christopher's program.

He had an interesting experience on an airplane. He boarded in Salt Lake City, had buckled up, and was ready to enjoy a little free time on the plane, reading, studying and meditating. A lady sat down beside him. As the plane took off, she began to talk.

"Hello, where are you going?"

To Toronto, Canada," he replied.

"Why?"

"I lecture, and will be lecturing there."

"What do you lecture on?"

Dr Christopher could see that he wouldn't be getting much quiet meditation, and began to feel a little irritated, but he answered that he was an herb doctor, lecturing on healing the body.

"Isn't that interesting?" she responded, and began to tell him her story. She said that two years before she had had pains in her breasts, so bad that she went to the doctor. She had severe cancer of the breast, so the physician took her right to the hospital, and when she came out she had only one breast. They assured her that he had cleaned out the cancer very thoroughly, but six months later her other breast started hurting. It got so severe that she again went to the doctor, who said that he must have missed some of the cancer, so he rushed her to the hospital and they removed her second breast. She went home with the assurance that this would be it, no more problems. But within six months, she was having abdominal pains; in her organs and lower cavities, she was in terrible pain. When she was examined, the doctor told her that she would have to have her reproductive organs removed and part of her bowels, because the cancer had spread throughout her body. She said that she wouldn't let them do any more cutting on her. They suggested chemotherapy, but she wouldn't allow that either. She said that if she was going to die, she didn't want to be in pieces. She would die on her own. She went home, not knowing where to turn, knowing nothing about diet, medicine, or anything. She said she knelt down and prayed, and the answer came to her. Did the Doctor want to know what it was?

By this time, Dr. Christopher was all ears, and yes, of course, he very much wanted to know what it was!

She changed her diet to eat fruits and vegetables, grains and seeds, as much as possible raw. A few months went by and she was feeling better, like a different person entirely. She went back to the doctor, who claimed that she had improved amazingly. There was just a little cancer showing in her pap smear. The doctor said to wait and see what happened. She went back home, and in a few months on this diet of natural foods, she said even the pap smear cleared.

The thought went through Dr. Christopher, "Lord, what kind of a God are you? It takes me forty years, and this woman kneels down and the answer comes immediately to her! This is exactly what I've been teaching all these years, and learning it gradually."

This woman traveled all over the United States, speaking to women's groups, women who fear they might get cancer or women who already have it, telling them to go to live foods and change their diet.

Dr. Christopher felt that their conversation was time well spent! [EWH p.118]

5. Vertebrae Grow Back With [BF & C](#): One lady had bone cancer. Her cancerous condition had gone throughout her whole body, but had settled in the bone, and one-and-a-half vertebrae were completely gone. The bone in her body was disintegrated to a point that she could not sit up or walk around anymore; she had to lie in bed. The X-rays showed that the vertebrae above and below the lumbar area were perforated with cancer, so they couldn't even fuse the missing vertebrae to give her support. She had to lie in bed helpless with her little children running around, and a lady coming in the home to help as much as she could.

This lady also had to manage a china shop in Provo, Utah, so she couldn't spend all of her time helping in that home. She called one day, and told Dr. Christopher about the situation. The woman, she said, was just lying in bed waiting for the rest of her spine to deteriorate. Could the Doctor help at all?

He replied that if this woman would follow instructions, there could be some help. The herbs would do nothing but good, and if the woman followed the program in the right frame of mind, she could be healed.

She was started in the [Incurables program](#). The lady had to clear her bowels with the lower bowel formula [[Fen LB](#)], and take the red clover combination to clean her bloodstream. She had to switch from mucus-forming foods to the mucusless diet, and to go on the three-day cleanse every two weeks, in her case. She had to use a gallon of steam-distilled water each day.

Now that the basic body condition was improving, they concentrated on the spine. Before Dr. Christopher came upon the [BF & C](#) formula, he used comfrey paste for external applications (and this paste, comprised of wheat germ oil and honey in equal parts, blended thoroughly and combined with powdered comfrey root or leaf to make a paste, is still super for use on burns, wounds, etc.). They put this paste down the lady's spine, from the medulla at the base of the skull down to the bottom of the tailbone, about four or five inches wide, with flannel over this and plastic over the flannel to keep it from saturating the bed. This was applied each night, six nights a week, week after week--and it took a lot of patience. Many people have gone through this procedure for curvature of the spine, arthritis of the spine, and various ailments, with great success. This woman followed through, and in under six months the back was feeling so good that she went back to her osteopathic physician for an X-ray. He said that originally where the bone had been eaten away--that was one and-a-half vertebrae--the good Lord had healed her. Cartilage had come in and formed perfect vertebrae and a half to replace the eaten-away ones--not bone, but cartilage. It gave her enough support that she could get up and take care of her family. At the end of the year, the cartilage had turned to bone, and she had a perfect spine from the top to the very bottom. All that had been perforated formed back solid, and the X-ray showed a spine as good as a teenager's. The physician was astounded! This case proved that even cancer of the bone can be healed with the proper program. [EWH p.120]

6. Natural Juices to Prevent Cancer: Although many women feel obliged to check their breasts regularly for lumps, and to have X-rays if they suspect anything might be wrong, this approach sometimes can present more problems than help. During 1977, at least 100 women lost breasts unnecessarily because they had been misdiagnosed for breast cancer. Sometimes a cell may appear cancerous under the microscope but behave like a benign tumor. And women who undergo radical mastectomy do not have a better survival rate from cancer than those who have less than radical surgery.

From a natural point of view, cutting out the cancer does not solve the problem, anyway. Cancer appears because there is something basically wrong in the body. Cutting it out may stop it in that particular area for the time being, but it can and does appear somewhere else.

Far better to follow Dr. Christopher's three-day cleanse, mucusless diet, and herbal formulas, such as his red clover combination. Of particular importance is his liver and gall formula, because a healthy liver plays such an active role in combating cancer.

Incidentally, many assert that prolonged breastfeeding helps prevent breast cancer.

Other herbs used to combat cancer are calendula, red clover, wheat grass juice, soaked figs and fig juice, blue violet, parsley, poke root, buckthorn, yellow dock, soaked and ground apricot pits (with their fruit), flaxseed, garlic, chaparral, burdock root, licorice root, echinacea, pau d'arco.

Many have had excellent results taking regular doses of carrot juice, perhaps mixed with celery

and red beet juice. Exercise is paramount to recovery and swimming is indicated as the best exercise for diminishing cancer in the breast. [EWH p.122]

7. **Man Cures Cancer with Carrot, Celery and Grape Juice:** A man at eighty years old was diagnosed with cancer throughout his body. The family gave him carrot and celery juice along with the blood cleansing formula [[Red Clover Combination](#)] in capsule form. They would alternate the carrot and celery juice with grape juice. In four months' time the doctors could not find any cancer cells. They didn't believe it was the same man. [UW-Red Clover]

8. **[Black Ointment](#):** Dr. Christopher's Black Ointment: From a letter to Dr. Christopher. "We have used your Black Ointment with great results--I had skin cancer on my forehead--in six weeks it healed up Beautifully." [NL 2-12]

9. **Comfrey:** Dr. Charles MacAllister, M.D., was interested in the use of comfrey as a healing agent. He had written a paper in the 1896 edition of the British Surgical Journal, Lancet. In it, he gave his philosophy concerning the bloodstream and irregular cell growth. Dr. MacAllister wanted to look up his paper and noticed an article in the same issue by a Professor William Thompson, President of the Royal College of Surgeons in Ireland. Thompson recorded a case of a man who had been diagnosed as having a malignant tumor on his face. The patient had undergone surgery of the palate in an attempt to remove the cancer.

A month later, the cancer returned. This time it ran rampant throughout the patient's head. They gave up on cutting it out. It had gone too far, and they sent him home. Three months later he returned to Thompson's office and was examined. Thompson noted that the cancer had completely disappeared. The patient told Dr. Thompson that he had been applying comfrey poultices to the swelling and that it had gradually disappeared. The patient had a custom-made palate to fill in the hole left by surgery of the hard palate. Thompson states in the report that although he knows nothing of the use of comfrey, he does not believe that it would remove a sarcomatous tumor. This story goes on in detail about what MacAllister learned about comfrey. [NL 4-3]

10. **[Black Ointment](#):** From a letter to Dr. Christopher: A few years ago, about 2, I wrote to tell you that I used the black ointment for skin cancer and got perfect results. The Hershey Medical Center doctor wanted to refer me to a Skin Cancer Specialist, but I told him I was going to try the home remedy that an Herbalist Doctor recommended. Needless to say, he was persistent, and wanted me to go to the Specialist, but I was also persistent and told him it was my body and I would try the remedy you recommended, first. Praise the Lord-in 6 weeks it was all cleared up and that was over 2 years ago. My husband is presently using the Black Ointment on his nose for Skin Cancer. [NL 4-7]

## Canker Sores

### Definition

Ulceration, chiefly of the mouth and lips; aphthous stomatitis. [HHH p.47]

### Symptoms

Painful sores on cheeks (inner), lips, etc. [HHH p.47]

### Cause

Canker is a condition not only in the mouth, but all through the entire system. This is a toxic condition, and the sooner cleared the better. [HHH p.48]

### Herbal Aids

Dr. Thomason's Canker Remedy: See formula using bayberry, white pond lily and pinus. [SNH p.133]

Canker sores: See formula using red raspberry leaves, shavegrass and agrimony. [SNH p.143]

Relaxed Sore Throat, Canker in Mouth or Throat, Spongy Gums, etc.: See formula using raspberry leaves and bayberry. [SNH p.149]

Sumach: Mouth affections (sores, canker), spongy gums: Use the infusion of berries as a mouth rinse. [SNH p.158]

Children: Keep the child on juices, distilled water and red raspberry-leaf tea for three days (the child will not starve), and you will see the general improvement of the condition. If the child wants more to eat, give him comfrey green drink, slippery elm bark tea, or marshmallow root tea. So there will be no recurrence, keep the child on a mucusless diet and keep the bowels clean and free moving. [HHH p.48]

White Pond Lily: Sore eyes and canker sores have benefited from being bathed frequently in a brew of the herb. Be sure to make it with distilled water for this purpose. [UW-White Pond Lily]

## Chicken Pox

### Definition

Chicken pox is an acute contagious disease of childhood. [HHH p.49]

### Symptoms

Chicken pox is marked by a slight fever, characterized by a superficial eruption of macular transparent vesicles appearing in successive crops on different parts of the body. They rarely become pustular, but dry up, and are only occasionally followed by scars. The duration of the disease is about a week, during which time it usually runs a very mild course. The chicken pox virus propagates in a medium of excess mucus. In the absence of such medium (mucus from excessive starches and sugars, etc.), the virus cannot exist. [HHH p.49]

### Cause

Actually as long as the child has been exposed, the condition is there. A good break-out of chicken pox (as with most childhood diseases) is a blessing. This is the indication that the body has toxic materials in it that must be removed. [HHH p.49]

### Herbal Aids

Tansy: Use the infusion or decoction as a wash, etc. [SNH p.123] Infusion of tansy: See formula using tansy and distilled water. [SNH p.124]

Natural Cleansing of the Body: It is alarming to hear a mother say, "When my child was breaking out with chicken pox (measles, or some other childhood disease), he was given some suppressive medication, and only two or three small spots broke out on his body." Here, unknowingly, the parents have gone against nature's procedure for cleaning out the toxins of the body. They have locked in the harmful condition, which may give the body trouble, perhaps many years later. [HHH p.21]

General Instructions: Give the child a warm catnip tea enema. Herbal teas such as catnip and peppermint, pleurisy root and catnip, red raspberry leaf, and yarrow or pennyroyal, elder flowers and peppermint with vinegar and water will relieve the itching. Also, bathe or sponge skin with tea made of burdock root, golden seal and yellow dock root in case of severe itching. [HHH p.50]

More General Instructions: The proper program is to cleanse the body and to follow the program of moist heat and bring out a good showing of the pox. Use the following instruction for all types of high fever diseases. (See aids to fevers and their causes, Appendix D.) [HHH p.170] If the child is slow in breaking out, give him a good hot (warm) bath. Have him drink lots of liquids throughout the day--fruit and vegetable juices, lemonade sweetened with honey (no sugars), and fruits. If this program is followed, the disease should follow a mild course with little discomfort. [HHH p.50]

Skin Eruptions: When rashes and pus eruptions of disease break out on the body, do not stop them. This is poison in the body that should be released. Keeping the skin from breaking out is again defeating nature's efforts for a complete healing and housecleaning. The larger the breakout of rashes (chicken pox, measles, etc.) the better off the child! If the body is in a fairly clean condition and you follow these suggestions of natural therapy you may see that the rash is not as heavy as you might expect--because there was not that amount of toxic waste to eliminate. In other cases the body can be well covered with the dermal or dermatitis breakout. There is nothing

to fear as long as you are willing to work with nature. [There is much more information about skin eruptions in the appendix on p. 174.] [HHH p.174]

Yarrow: If you give the tea to children during the early stages of eruptive diseases, such as measles, chicken pox, smallpox, etc., the tea will help the disease to break out more quickly and thus shorten the time. Dr. Christopher recommended a mixture of Yarrow, pleurisy root and lady's slipper (or skullcap) for the measles. Anytime there is a fever, no matter what the disease, Yarrow can help break it and bring the disease to a speedier ending. [UW-Yarrow]

Vinegar: A child suffering from the itch of chicken pox or measles can be sponged with a solution of 1/2 apple cider vinegar and 1/2 distilled water. [NL 4-7]

## Cholera Morbus

### Definition

A serious bacterial infection of the small intestine.

### Symptoms

An acute, infectious affliction characterized by profuse, purging evacuations, vomiting, prostrating collapse, muscular cramps and suppression of the urine. Symptoms develop rapidly and become dangerous in six to twelve hours. Children may be restless and go into stupor or have convulsions. [SNH p.9]

### Cause

Cholera is a deficiency condition from improper diet, unsanitary conditions, and often occurs in hot weather. As future foreboding problem conditions continue to afflict our society there will be more epidemics, so we must be prepared to handle cholera. The only way to avoid this deadly killer is to build up the body so that the cholera organisms will not effect the system. [SNH p.9]

### Herbal Aids

Rice Water will check the diarrhea as will peach leaves, raspberry leaves, and sunflower leaves. A warm bayberry and catnip enema is very soothing. Antispasmodic tincture is soothing and relaxing and the slippery elm tea is nutritional and cleansing. [SNH p.9]

Cholera, Fevers: See formula using purple loosestrife and ginger. [SNH p.92]

Tormentil: for cholera give 1 wine glassful every 1/2 hour until the excessive discharges are checked. [SNH p.168]

Peppermint Enema. This form of administration is excellent for cholera, colon problems, and for convulsions and spasms in children. [SNH p.418]

See formula using cloves and milk. [SNH p.421]

See formula using black pepper, sea salt and apple cider vinegar. [SNH p.425]

Lemon-Grass (cymbopogon): Citral is the principle constituent of lemon-grass oil. This substance kills even the most acute influenza viruses and for fever-induced diseases it is unparalleled, and has also become renowned for quickly treating cholera. [NL 5-1]

## Cholesterol

### Definition

A monohydric alcohol found in the body as a glistening white, crystalline substance. It is insoluble in water and found in bile, gall stones, and nerve tissue. [SNH p.9]

### Cause

This is a mucus condition stemming from improper foods. [SNH p.9]

### Herbal Aids

**Diet:** The diet must be changed. Herbs that reduce cholesterol will help but not correct the condition. Apple cider vinegar and honey, cayenne, or any of the cleansing herbs are good. [SNH p.9]

**Wheat Germ Oil:** is excellent for feeding the heart and helps cut the cholesterol and smoothens its removal from the area. [SNH p.31]

**Balm of Gilead:** For cholesterol use the Oleo-resin of balm of Gilead buds: See formula using balm of Gilead buds and olive oil. [SNH p.202]

**[Red Clover Combination](#):** Dr. Christopher's Blood Purifying Formula: This herbal blood rebuilder is made up of herbs that help cleanse the blood, but also herbs that help give astringency, others help aid in removing cholesterol, help kill infection, or help build elasticity in the veins and to strengthen the vein and artery walls. It consists of red clover blossoms, chaparral, licorice root, poke root, peach bark, Oregon grape root, stillingia, prickly ash bark, burdock root, buckthorn bark, cascara sagrada and sarsaparilla. [SNH p.182]

**Lecithin:** helps break down cholesterol, as does natural-source vitamin C. [EWH p.157]

**Alfalfa:** Alfalfa, along with other foods, is known to help remove cholesterol from the system. [UW-Alfalfa]

**Garlic:** It has been known for centuries to function as a natural antibiotic. It destroys the unnecessary and harmful bacteria throughout the human system. It help emulsifies cholesterol and loosens it from arterial walls. [NL 2-9]

**Tomatoes:** contain nicotinic acid which helps reduce cholesterol in the blood. [NL 5-1]

## Colds, Catarrh, Coryza, Influenza

### Definition

A cold is a disorder in the respiratory tract resulting from exposure, with catarrh and invasion of microbial cleansers. [HHH p.53]

### Symptoms

Common cold, coryza, cold in the head, etc., these symptoms are evidenced by an inflammation of the upper respiratory tract, marked by an acute catarrhal condition of the nasal mucous membrane, a slight rise in the temperature, chilly sensations and general indisposition. [HHH p.53]

### Cause

It is caused by viral or bacterial infection feeding on excessive or copious secretions of mucus (waste materials) often due to the body's inability to properly assimilate milk and concentrated starches. When a cold or fever just gets started, it can be cleared up very easily, if the procedures are started early, before it becomes too advanced. [HHH p.53]

### Herbal Aids

[Burdock](#): To help promote perspiration (diaphoresis) in colds and fevers: Double the dose in hot water, adding 1/8 - 1/4 teaspoon of ginger (*Zingiber officinale*) to each teacupful. [SNH p.65]

[Sarsaparilla](#): As a diaphoretic for colds and fevers. Drink the decoction or compound decoction hot. [SNH p.84]

[Garlic](#): At the onset, place a clove of garlic on each side of the mouth between the teeth and cheek. The cold will disappear within a few hours or within a day. [SNH p.100]

[Tansy](#): For low fevers, ague, colds. Take small and frequent dosages of the warm infusion. [SNH p.123]

[Bayberry](#): Colds, flu, fever, etc. Use bayberry in combination with diaphoretics (yarrows, catnip, peppermint, sage, etc.); it is very effective here. [SNH p.132]

See formula for colds using bayberry, pinus bark, ginger, cayenne and cloves. [SNH p.133]

[Diaphoretics](#): The old herbal practitioners were wonderfully successful in their practice because they sought to restore the circulation to its equilibrium. It was they who made the vapor bath famous, for along with herbal diaphoretics there is nothing more effective than the vapor bath in the treatment of fevers, inflammation, colds, congestions, etc. [SNH p.211]

[Yarrow](#): Taken freely in the hot infusion form at the beginning of a cold, alone or preferably in combination with other herbal remedies (such as elder flowers and peppermint), it will help break up a cold overnight or within 24 hours; wrap the patients feet in flannel that has been wrung out in apple cider vinegar, keeping it warm with a hot water bottle. [SNH p.214]

[Camomile](#): Give a warm infusion with a little ginger (*Zingiber officinale*) added. [SNH p.219]

[Boneset](#): Influenza, colds, fevers, etc. Give the patient 1/2-1 teacupful hot, every hour until freely perspiring and the fever begins to subside- then give in smaller dose as a tonic (cold) every

2-3 hours and keep closely-covered in bed 24-48 hours until all signs of the fever are gone. [SNH p.225]

See formula for colds and pneumonia using pennyroyal and elder flowers. [SNH p.285]

Blue Cohosh: Recent colds (children). Give 1 dessert spoonful - 1 tablespoonful of the infusion in 1/2 teacupful of sweetened hot water, while closely covered in bed, if the first dose does not produce free perspiration within an hour, repeat hourly until it is produced. [SNH p.292]

Motherwort: for influenza, severe colds, low fevers: Give 2 tablespoonfuls in 1/2 pint of boiling hot water (or as hot as can be taken), watch for beads of perspiration to appear on the forehead within 1 hour; if they do not, repeat the dose until the patient is perspiring freely (this is a specific and effective cure). [SNH p.299]

See formula for colds using mullein, boneset, pennyroyal, hops, chestnut leaves, catnip, cudweed, wintergreen, peppermint, bloodroot and coltsfoot. [SNH p.319]

Horehound: Children's cough, croup, and chest colds. Make a syrup of the infusion (or concentrate, etc.) and honey (as much as desired) or take the warm infusion freely. [SNH p.347]

[Garlic and Rosehips](#): These capsules are to act as an aid, to assist in relieving colds, etc., or wherever garlic aid in relieving infection can be used as an aid. These are made up of garlic with parsley, watercress, rosemary, and rosehips. The adult amount to be used can vary from one to six or more as needed several times in a day. [SNH p.528]

Dr. Christopher's Program for Colds etc. Especially for Children: One of the most simple remedies is to stop the use of all foods and beverages, take a high herbal enema (catnip is good), and drink only red raspberry leaf tea. Between cups of this tea, distilled water may be used, and, if desired, give the child some good organic (natural) vitamin C. It is possible to use quarts of red raspberry tea during the day and nothing else. For children, use according to age. The runny nose, fever, headache and weariness will leave and you will feel like a new person. Even after feeling greatly improved, continue on with the red raspberry leaf tea all that day and well into the next day. If an adult would stay on the tea for three days it would do a wonderful cleaning job for the body.

To make red raspberry leaf tea use one heaping teaspoonful of cut or granulated (powdered) raspberry leaves into a teacup. Fill the cup with boiling distilled water, cover and let stand in a warm place for five or ten minutes. Strain, and drink it while it is very warm.

Another simple procedure: If you feel a cold or flu coming on in the evening, use boneset tea ). This herb is a nervine stimulant, tonic, diaphoretic, diuretic, and in large doses, emetic, aperient. Here is another wonderful remedy for breaking a chill in intermittent fever (so-called break-bone fever), muscular rheumatism, bronchitis, influenza, dyspepsia, sore throat, etc.

To use boneset tea take one ounce of cut boneset herb and over it pour 1 1/4 pints of boiling distilled water. Cover and set in a hot place to steep (not boil) for thirty minutes.

As one of our favorite teachers, Dr. Shook, expressed it: In our long experience with herbs, we have learned an important fact and that is that if the American Indian approves of an herb, we can be sure that it has outstanding merit. The Indians knew all about influenza, and some of their people were stricken with it long before the great world war. But it was then not called "influenza," but "break-bone fever" because the pain attending it produced the sensation of breaking bones, probably because of the unbearable tension and contraction of ligaments which, when temporarily relaxed in clonic (convulsive) spasms, produced the sensation that the bones were breaking.

We explain this because boneset immediately relieves that clonus and sets and rests the bones. Therefore it is a superb remedy for not only "break-bone fever," but also for every other kind of fever man is subject to. In all cases of influenza, severe colds, chills and fever, the patient must be in bed warmly covered, and hot drinks of the infusion of boneset given in one half teacupful doses every half hour until a copious perspiration sets in. If it produces vomiting at first, so much the better. In that case wait until vomiting has completely subsided, then proceed until free perspiration is produced.

We have never known this herb to fail to overcome influenza and we are of the opinion that there would never be another death from this disease if boneset were at hand and freely used.

Another great flu remedy: For the treatment of fevers of all kinds, colds, and influenza, this

[Depression](#)[Diabetes](#)[Diarrhea](#)[Digestion](#)[Diphtheria](#)[Dizziness](#)[Dropsy](#)[Dysentery](#)[Dyspepsia](#)[Dyspnea](#)[Earaches](#)[Eczema](#)[Edema](#)[Enuresis](#)[Epilepsy](#)[Eye Ailments](#)

remedy of elder flower and peppermint leaves is a safe, sure and speedy remedy. Aside from being anti-febrile, elder is an all around alterative, blood purifier and general systemic cleanser. [HHH p.53]

The great herbalist, Henry Box of Plymouth, England, says: For colds, influenza, fevers, inflammation of the brain, pneumonia (inflammation of the lungs), stomach, bowels or any part, this is a certain cure. I have never known it to fail, even when given up, and at the point of death. It will not only save at the eleventh hour, but at the last minute of that hour. Besides, it is so safe and harmless that you cannot use it amiss. This wonderful, wise old man had been a physician of herbs for over sixty years and was known as one of the great doctors of all times. See preparation of elder and peppermint tea. [HHH p.57]

[Garlic, Rosehips, and Parsley](#): Dr. Christopher's Formula for Colds, Flu and Infections: This combination of garlic, parsley, watercress, rosemary, and rosehips is to act as an aid to help promote the relief of colds, etc., or wherever garlic is needed to help stop infection! The adult amount can vary from one to six or more cups in a day or two or more capsules six or more times per day taken with a cup of steam-distilled water. [HHH p.188]

[Herbal Composition](#): Dr. Christopher's Herbal Composition Power: Herbal composition powder is made of bayberry bark, cloves, ginger root, cayenne and white poplar bark. As Dr. Nowell, our instructor at the Dominion Herbal College, Let. of Vancouver, British Columbia gave in our textbook, quote: "We have made and used composition powder for over forty years. When we state we regularly mixed it in batches of sixty pounds the student will readily see that we have had at least some experience with it. As a remedy in colds, beginning of fevers, flu, hoarseness, sluggish circulation, colic, cramps, etc. We believe it has done more good than any other single preparation ever known to man. If this compound were kept in every home, and used as the occasion arose, there would be far less sickness. Give it freely in your practice and your patient will bless you. Look over the ingredients, and consider how it will clear canker, ease cramps and pains in the stomach and bowels, raise the heat of the body equalizing the circulation, and remove congestions. It is safe. It is effective. We have on numberless occasions given a cup of composition tea every hour as warm as the patient could drink it, until the patient has perspired freely, and after four or five doses have seen our patient in a free perspiration, thereby removing colds and febrile trouble." [HHH p.189]

Juices for Colds: Carrot & garlic, carrot, grapefruit, lemon. [NL 3-7]

Vegetables for Colds: Carrots, broccoli, brussels sprouts, cauliflower, collards, kale, spinach, turnip greens. [NL 4-12]

Apples: Research has proven daily apple-eaters show a reduced incidence of colds and other minor upper respiratory ailments. [NL 5-1]

Grapefruit: Grapefruit rinds can be dried and later used for colds. A tea is made by steeping a teaspoonful of the dried grated rind in a cup of water and drinking a cup each hour until relief is obtained. [NL 5-1]

Ginger: Ginger tea is commonly used for indigestion, cramps, and nausea. One ounce of the fresh root is grated into a pint of boiling water. You can add honey and lemon to this to make quite a nice drink; this also helps break up colds and flu. [NL 7-3]

## Colic

### Definition

(Pertaining to the colon) Acute abdominal pain or gas pains, often due to improper combination of food and retention of waste matter in the system. Enemas will usually give immediate (if temporary) relief! [HHH p.50]

### Symptoms

Paroxysmal abdominal pain due to smooth-muscle spasm, obstruction by calculi, nervous indigestion, or distention or enlargement of any of the hollow viscera. [SNH p.10]

### Cause

In all cases, this is due to improper diet, digestive disorder, and poor elimination. [SNH p.10]

For a more through discussion of colic in very small children see Every Woman's Herbal. [EWH p.99]

### Herbal Aids

**NOTE: THIS IS NOT JUST THE COLIC ASSOCIATED WITH BABIES. MANY OF THE FOLLOWING FORMULAS ARE MEANT FOR ADULTS AND ARE GIVEN IN ADULT DOSES.**

General Instructions: Wild yam, cramp bark, some nervines and antispasmodic tinctures relieve cramping. The bowels should be cleansed with a catnip injection. Hot bran fomentation over the stomach-abdominal area will give ease and comfort. For gassy colic, the following decoction is excellent; dandelion root, fennel seeds, marshmallow root, sweet flag root (with cayenne and ginger added as stimulant carriers). For bilious colic, use a decoction in equal parts of agrimony, barberry bark, centaury, dandelion root, or an infusion of a handful of fresh parsley will decoction in equal parts of agrimony, barberry bark, centaury, dandelion root, or an infusion of a handful of fresh parsley will do the job. [SNH p.10]

See Dr. Coffin's Formula for Colic with Stoppage of the Bowels using raspberry leaf, lobelia, cayenne, myrrh, valerian and sugar. [SNH p.144]

Ground Ivy: Lead-colic (from painting). Drink the infusion of the leaves. [SNH p.160]

See formula for colic using camomile, caraway, valerian and peppermint. [SNH p.220]

Boneset: Bilious colic. Give 1 wine glassful (warm) every 1/2 hour until vomiting results; then, after 1/2 hour give a small dose as a tonic (cold), and every 2-3 hours thereafter. [SNH p.225]

See formula for babies and children for colic (as an injection) using catnip and pleurisy root. [SNH p.237]

See formula for colic flatulence using spearmint and ginger which will intensify and accelerate the action. [SNH p.240]

See formula for a soothing syrup for babies (stomach and bowel pains, aches, cramps, colic, spasms, convulsions, flatulence and common ailments) using parsley seed, caraway seed, rhubarb, cinnamon, sugar, peppermint and water. [SNH p.248]

[Diabetes](#)

See formula for flatulent colic (stomach distension, rumbling bowels, griping pains, and constipation) using marshmallow, sweet flag, fennel, dandelion, cayenne, and ginger. [SNH p.328]

[Diarrhea](#)

See formula for Convulsions, hysteria, colic, cramps, and dysmenorrhea using valerian, wild yam, blue cohosh, anise and ginger. [SNH p.378]

[Digestion](#)

See formula for biliousness, nervous troubles, heartburn, stomach cramps, colic pains using wood betony, rosemary, scullcap and yarrow. [SNH p.390]

[Diphtheria](#)

See formula for colic, convulsions and spasmodic nerve troubles (children's syrup) using black cohosh, water, glycerine and sugar. [SNH p.400]

[Dizziness](#)

See formula for biliousness, colic using wild yam and pleurisy root. [SNH p.404]

[Dropsy](#)

See formula for bilious colic using bayberry, dandelion, agrimony, centaury, composition powder and cayenne. [SNH p.430]

[Dysentery](#)

See formula for colic and flatulence using myrrh, nutmeg, cayenne and brandy. [SNH p.456]

[Dyspepsia](#)

General Instructions for Children: A tea or tincture of catnip and fennel [[Catnip & Fennel Tincture](#)] is especially helpful for infants. As an infusion, a pint of boiling water (distilled preferred) over a handful of fresh parsley is good.

[Dyspnea](#)

A good formula for children's colic is equal parts of wild yam, pleurisy root, cinnamon and anise. Mix and use one teaspoon of the combined herbs to a cup of boiling water, cover and steep twenty minutes, strain and add honey, and give dose of one or two tablespoons of tea each fifteen minutes or as needed.

[Earaches](#)

[Herbal Composition](#): Dr. Christopher's Herbal Composition Power: Dosage: Drink the clear liquid as needed according to age. For example, only part of a teaspoon every hour or two for a very small child.

[Enuresis](#)

In addition to taking teas orally, give a rectal injection of teas, two ounces at a time, of catnip, catnip and pleurisy root, garden sage and catnip, or catnip and peppermint. It is an advantage to add three to ten drops of tincture of lobelia to the teas per cup and one-half teaspoon or more of the tincture of lobelia to the rectal injection. [HHH p.51]

[Epilepsy](#)

[Catnip & Fennel](#): Dr. Christopher's Catnip and Fennel Tincture: A blessing for infants. A fine combination for colic, biliousness, flatulence, spasms, etc. Use a few drops, or as much as needed, when desired. [HHH p.196]

[Eye Ailments](#)

Papaya and Peppermint: As an aid (after resolving to cut down on the wrong types of foods) start using papaya and/or peppermint tea. [Dr. Christopher's] Catnip and fennel tincture is also an emergency aid in colic and stomach upsets. [NL 3-1]

Juices for Colic: Carrot & celery, papaya. [NL 3-5]

Spices for Colic: Anise, caraway, cardamom, ginger, mint, savory and thyme. [NL 4-12]

Brown Rice: This contains an easily digested starch, is beneficial for stomach or intestinal ulcers and for the relief of diarrhea. A poultice of rice flour can be used to relieve skin inflammations of various kinds. We have seen serious cases of diarrhea respond most effectively to rice water made by boiling one ounce of rice to one quart of water for 20 minutes, strained and drunk. This drink is also used in cases of congestion, acute head pain, nausea, fainting, difficult breathing, stomach cramps, colic, worms, and a sedative. [NL 5-1]

Dr. Christopher's Formula called Kid-e-Col combats colic. [NL 7-1]

## Colitis (Colon Trouble)

### Definition

Inflammation of the colon or large intestine, especially its mucous membrane.

### Symptoms

This is characterized either by runny or constipated bowels, mucoid discharge from the bowel, weakness felt in the abdomen, often headache, pain, dizziness, etc. [SNH p.11]

There is often a connection between colitis and stress. We see diarrhea, pain, cramps, and even in the later stages, bleeding and dehydration. Calcium deficiency is common. [NL 4-8]

### Cause

This is caused by faulty diet, too many food mixtures irritating the stomach and bowels, hasty eating (insufficient mastication and saliva), taking liquids while eating, excessive use of cathartics, and foods cooked in aluminum. [SNH p.11]

The infection of the bowel which results from meat-eating also gives rise to colitis and causes a spastic or contracted condition of the descending colon, a condition found in the most obstinate forms of constipation. [HHH p.140]

### Herbal Aids

Garlic Oil for Chronic Colitis, Ulcerated Stomach, etc. Take the garlic oil internally over a period of time, 1 dessert spoonful 3-4 times daily. [SNH p.100]

See formula for cathartic injection for colitis using bayberry, African ginger and pinus. [SNH p.135]

See formula for colitis using white oak, golden seal and myrrh. [SNH p.140]

[CC](#): Dr. Christopher's Colitis Formula: Contains marshmallow, slippery elm, comfrey root, lobelia, ginger, wild yam. This formula helps promote the relief of colitis, and should be used in conjunction with the lower bowel formula [Fen LB] and the mucusless diet. [HHH p.197]

Slippery Elm: Many recommend beating up an egg with a teaspoonful of the powdered bark, pouring boiling milk over it and sweetening it. Taken three times a day this way or in the form of a mucilage it is said to be wonderful in curing gastritis, gastric catarrh, mucous colitis and enteritis. [UW-Slippery Elm]

From Questions to Dr. Christopher's Newsletter. Question: Is there a natural treatment for mucous colitis (spastic colon) where one could not eat raw vegetables or use laxatives? Answer: Colitis is an inflammation of the colon or large intestine and especially of its mucous membrane. This is characterized either by runny or constipated bowels, mucoid discharge from the bowel, weakness in the abdomen, recurrent headache, pain, dizziness, etc. The cause of this condition is a faulty diet, too many food mixtures which irritate the stomach and bowels, hasty eating with insufficient mastication and salivation, consuming excessive liquids with meals, overuse of cathartics and eating food prepared and served in aluminum kitchenware.

The best and quickest way to treat the condition is to reverse the habits listed above: (1) Eat only when hungry and not between times of hunger. (2) Drink no fluids while eating and this includes a period of fifteen to twenty minutes before meals and thirty minutes after eating. We suggest this

[Depression](#)[Diabetes](#)[Diarrhea](#)[Digestion](#)[Diphtheria](#)[Dizziness](#)[Dropsy](#)[Dysentery](#)[Dyspepsia](#)[Dyspnea](#)[Earaches](#)[Eczema](#)[Edema](#)[Enuresis](#)[Epilepsy](#)[Eye Ailments](#)

so that the chewing of food will produce a thin paste of liquid out of the food and natural saliva. The flowing saliva will act as a signal causing the digestive juices to start for better assimilation. (3) Follow the instructions given in The Three Day Cleanse and Mucusless Diet preferably using the carrot or apple juice as the cleansing agent. Chew the juices by swishing them around in the mouth. As suggested in the booklet, use as juice as is desired. (4) Each day have a cup, three times per day, of tea or green drink made up of three parts comfrey root or leaves, slippery elm bark, mullein leaves and one part lobelia. (5) Have a dish or more of gruel made with presoaked, low heated, uncooked grains, singly or grouped. Barley, wheat, rye, millet or buckwheat are all excellent choices. To one of the grains or a mixture of several of them add 1/4 or 1/3 of their volume in flaxseed and/or psyllium seed. When eating this gruel, honey or a fresh, first pressed, mild tasting olive oil may be used. (6) Breath deeply each day for ten minutes or more to aid digesting. (7) Use as much of our lower bowel tonic [Fen LB] as is needed to produce three or more bowel movements per day. Think health and watch the improvement. [NL 1-3]

Juices for Colitis: Carrot, carrot & coconut, pear, fig. [NL 3-5]

Cabbage: Apply 3 or 4 layers of cabbage leaves over the abdomen each evening and secure in place to be left on overnight. Drink also the juice between meals. [NL 4-12]

Vegetables for Colitis: Cabbage, carrots, parsnips, winter squash. [NL 4-12]

### Testimonials

It's been a long time since I have written you and I feel that I must tell you that I have gotten rid of the colitis I had for years and the doctors diagnosed as a nervous stomach and prescribed tranquilizers, which of course I didn't take. At that time I came across an article written by you, entitled, "Does Your Colon Feed or Poison You." I immediately started to take Red Clover Combination plus Naturalax 2 [Fen LB], it took about six months but it finally went. The pain was very bad but all I heard from doctors was "you have a nervous stomach." but I knew it had to be more than that. I thank GOD and you. Dr. Christopher for cure that I have had due to that wonderful pamphlet that came my way, just when I needed it most. [NL 4-11]

## Constipation

### Definition

Over ninety percent of all diseases and malfunctions of children's bodies (as with adults) stem from the unclean intestinal tract, constipation (Latin constipatio meaning crowding together), with infrequent or difficult evacuation of the feces, retention of the feces, and lack of coordination in the nerve and muscle functions of the colon and bowel.

The [mucusless diet](#) will eventually clear the body of old fecal matter that has accumulated and become dehydrated and hard and cause so much trouble. Sometimes the body needs faster help than can be given with diet alone.

The body of man must be kept clean inside and out, to perform his daily tasks efficiently and smoothly. This body is the housing of the spirit and operating force of life. With the spirit commanding a good clean structure, a smother, happier life is evident. The scriptures tell us that God will not dwell in an unclean tabernacle. We have been told that the body is a temple, or tabernacle of God. This structure must be kept in good repair, and clean, to be a comfortable abode. [HHH p.128]

### Symptoms

1. A condition of peristaltic malfunction in the bowels wherein the fecal matter becomes condensed and compressed and the evacuations are infrequent and difficult. This condition is produced by our modern way of life--the eating of highly refined and demineralized foods instead of a plain and coarse diet, the strain and stress of rapid living, hastily eaten meals, and lack of exercise. When toxic waste matter is left to stagnate in the lower bowel tract, the system becomes polluted with poisonous gases which congest and irritate the surrounding organs, causing adhesions, and other ailments. A person should have bowel movements as often as regular meals are eaten. [SNH p.12]
2. Dizziness can be caused by constipation when pressure causes the nerves to become impinged. [SNH p.18]
3. Hives: The bowels must be cleared since the worse cases of hives can come from constipation. [SNH p.31]
4. Bronchitis: Constipation is one of the chief causes of the problem. [HHH p.42]
5. Diarrhea: It is the most severe form of constipation and should be dealt with immediately. [HHH p.63]
6. Headaches: Headaches can stem from several sources. Very common is the constipation headache, where compressed fecal matter presses on the nerves that affect the head. We have seen severe migraine headaches cured by taking a catnip enema. For longer-term relief, the lower bowel formula [Fen LB] can heal the bowel so that there is no constipation. [EWH p.146]

### Cause

1. The impurities accumulate with improper diet and living, and then when nature makes an increased effort to clear that wastage out, the dirty channel holds back the larger materials similar to the overgrowth and trash that can dam an irrigation ditch. [HHH p.131]
2. Meat also causes constipation through the fact that it encourages putrefaction of the colon both by introducing putrefactive organisms in great numbers and also by providing material which is best calculated to encourage the growth of putrefactive organisms in the colon. [HHH p.140]
3. Most persons who suffer from constipation habitually drink too little water. [HHH p.141]

4. Alcoholic beverages of all sorts tend to produce constipation, by causing chronic intestinal catarrh, ulcer of the stomach, and paralysis of the sympathetic nerves. [HHH p.146]

### Herbal Aids

Lower Bowel Tonics: ([Fen LB](#)) You may get quick, temporary relief by using an herbal laxative to clear the lower bowel tract, but only the lower bowel tonics will get at the cause. With the lower bowel tonic, we help feed the eliminative organs and allow them to work on their own and eventually eliminate the use of enemas, colonics, and laxatives. The proper procedure is to build up the body, to cleanse it, and see that the bowels work freely. Often prune juice or fruits will give relief and start the peristaltic motion coming again with ease. The afflicted person can assist in restoring natural bowel action by drinking copious amounts of water between meals (one-half hour before and two hours after eating) and by eating proper foods at regular intervals, especially bulky foods. Avoid any inorganic or concentrated foods. One should be wary of an incorrect use of laxatives and purgatives, because liquefied fecal matter is immediately absorbed by the intestinal villi into the bloodstream, and if there be excess, some of it will be thrown out of the bloodstream into the lungs, skin, kidneys, or other organs, producing a chronic toxemia thus laying the foundation for chronic disease. [SNH p.12]

Chronic Constipation: It is useful here to combine Oregon grape root (2 parts) with cascara sagrada (*Rhamnus purshiana*) (1/2 part). Take in doses of two fluid ounces, but if this relaxes the bowels too much, reduce the dose, but take regularly. [SNH p.73]

See formula for constipation using raspberry leaves, mountain flax and dandelion root. [SNH p.144]

Butternut: For Chronic Constipation use the aqueous extract of Butternut which is free of astringency. Diarrhea, dysentery: The astringent alcoholic extract containing properties is best for these problems; use 1-2 teaspoonfuls. [SNH p.179]

According to Dr. Shook, this formula is especially useful...for constipation of long standing. See formula using turkey rhubarb, myrrh and ginger. [SNH p.186]

See formula for Constipation Capsule # 1 using mandrake, turkey rhubarb, myrrh and cayenne. [SNH p.197]

See formula for Constipation Capsule # 2 using mandrake, socotrine aloes, turkey rhubarb and golden seal. [SNH p.197]

Habitual Constipation: Combine wahoo with butternut bark (*Juglans cinerea*), or use alone. [SNH p.200]

Chickweed: Take 1 cupful of the warm decoction of chickweed (fresh herbs every 3 hours or softer until bowels are regulated. [SNH p.323]

See formula for constipation using marshmallow root, sweet flag, fennel, dandelion, cayenne and ginger. [SNH p.328]

[Cayenne](#): And if you are brave, you can use it as an enema for obstinate constipation. [SNH p.411]

Dr. Christopher's Lower Bowel Formula ([Fen LB](#)) [HHH p.151]

Kelp: So many of our illnesses result from constipation, and such a large portion of our population suffers from this ailment! Poisons accumulate in the large bowel and are absorbed back into the bloodstream, causing a host of disorders which are not specific in themselves but stem back to the toxic colon. Many people subscribe to enemas and colonics to cleanse the colon, and Dr. Christopher agreed that these may have a place in an emergency, but they should absolutely never be relied upon. In addition to his formula for toning the colon, Kelp can take an important place doing this job. Because of its high natural mineral salt content, Kelp builds the walls of the colon and the iodine, being highly antiseptic, deals with the toxic condition. For this reason, Kelp can be used in all cases associated with auto toxemia, especially in pregnancy. All constipated people should take Kelp daily, with the addition of blackstrap molasses if needed. Few people are really free from constipation, so almost everyone could benefit from the addition

of Kelp to the daily diet. [UW-Kelp]

Juices for Constipation: Rhubarb, prune, fig. [NL 3-5]

Vegetables for Constipation: Several glasses a day of cabbage broth. [NL 4-12]

More Vegetables for Constipation: Red Beet, chard, Jerusalem artichoke, green pepper, pumpkin, radishes, summer squash and zucchini. [NL 4-12]

### Testimonials

1. 45 Capsules to Blast Her Loose: One day a lady stomped into Dr. Christopher's office in Evanston, Wyoming. As she came to a screeching halt before his desk, she said she had female problems, and she understood that he had helped other women with female problems. She wanted him to clear her up. She was extremely demanding and abrupt. Because she wore a nurse's uniform from the Evanston General Hospital, he knew she was a registered nurse.

He looked at her and said, "Ma'am, how long since you have had a bowel movement?"

She snapped back at him, "Nine days, so what?"

He apologized about being crude, but he knew that there was something wrong with her. Before they did anything about her female problems, they would have to clear up the bowel area.

She agreed to do anything that he asked her. He told her about the three-day cleanse, mucusless diet, using a gallon of steam-distilled water each day, and to keep her diet as raw as possible. She was also to use the herbal lower bowel formula [[Fen LB](#)]. He didn't want her to come see him again until she was having three or more bowel movements on her own without using enemas or laxatives. He gave her a large packet of the lower bowel tonic [[Fen LB](#)]. The average person uses two capsules three times a day, but he told her to use five or more capsules three times a day, and more if needed. He said to keep using them until she got movements. She agreed and left. This woman had gone from nine to thirteen days between bowel movements for 26 years. That accounted for her being such a nasty individual.

He didn't see her for ten days, and when she came in, instead of stomping in and growling at him, she glided in and said, "Oh, good morning, isn't it a beautiful morning?"

"You must have been using the lower bowel tonic [[Fen LB](#)]."

She said that she had, and that it was working.

"How many did you have to use to get started?"

"I had to use forty to forty-five capsules a day before I broke loose, and now I am down to five or more three times a day."

In a month, she was down to two capsules three times a day. At the end of a year, she was having three or more bowel movements a day without using any bowel tonic at all. The lower bowel tonic [[Fen LB](#)] is not a habit-forming laxative; it is a food. It rebuilds the peristaltic muscle in the bowel, and gets it working again, and also cleans up the liver and gall bladder. It changed her whole life.

At the end of the year, she was moving her bowels regularly and easily, with no aids at all except the foods, which were of a mucusless type. She was a different woman entirely. In fact, she was so changed that other nurses and interns came to get the lower bowel capsules [[Fen LB](#)] from Dr. Christopher, because they said anything that could change that woman's horrible disposition must be a good thing. [EWH p.140]

2. Constipated Child: My friend has a granddaughter about seven years old. Her parents told me she was born with constipation. She had one bowel movement a week, (all of her life). For two days each week before her bowel movements, she could not eat because she was in so much pain. They had spent hundreds of dollars to physicians trying to help her. They were told not to worry. One bowel movement a week was normal for her granddaughter.

They changed the granddaughter's diet and put her on cleansing herbs [[Fen LB](#) and [Red Clover Combination](#)]. In two or three weeks she was having three bowel movements a week. They then added Cascara Sagrada, and in another two weeks, the granddaughter was having three bowel movements a day. [NL 2-1]

3. 30 Years of Constipation: "I'm writing to tell you thank you for my mother and myself. I'm a registered nurse that has tried all the normally prescribed remedies for constipation (chronic) to no avail. More water, exercise, bulk, plenty of fresh fruits, and vegetables, etc., simply did not help.

"In discussing the problems with my friend who works in a health food store, she suggested I try Naturalax 2 [[Fen LB](#)], explaining that it was not primarily a laxative and would help break the cycle of enemas and laxatives to which I'd become dependent--it worked!

"I can't find words to tell you what a miracle it is for me, and my mother who has had the problem 30 years or longer than I, to again have normal bowel function. We are both awed and amazed that a simple herbal remedy could be so miraculous. I had feared all sorts of maladies from aganglionic colon, to cancer. We both consider it an absolute miracle that our bodies are functioning normally for so long. The response was immediate, whereas my friend had said it might take awhile since the problem was long standing. She was drawing on information she had forgotten from a tape of one of your seminars. Needless to say, I am quite impressed. [NL 4-1]

4. Constipation Despite Fiber: I am writing to tell you how much my health has been helped with your Naturalax #2 [[Fen LB](#)]. I ate a good diet full of fiber, but still had constant problems with constipation - I read about you and the products that you had developed in Healthview Newsletter. I thank God for men like you and may he continue to bless people thru you. [NL 4-12]

## Convulsions

### Definition

Violent and involuntary muscular contractions. [SNH p.13]

### Cause

Some irritation of the nervous system, such as afflictions of the spinal cord or brain; head injury; a toxic condition of the blood; teething, worms, hysteria, intense pain, griping of the bowels, fear, etc. [SNH p.13]

### Herbal Aids

Know the Cause Before Administering Any Herbal Remedy. If convulsions are caused by poisons taken into the body through the stomach, then emetics must be used quickly. If they are from fright or fear, an antispasmodic tincture with cayenne will usually stop the attack at once. If the convulsions are caused from an impacted bowel, catnip injection will relieve the constipation and soothe the nervous system. Often the individual is in no condition to take oral aids. In such cases give an enema or an injection of antispasmodic, nervine or catnip, which will ease and soothe the convulsive condition. [SNH p.13]

Soothing Syrup for Babies: See formula using parsley seed, caraway seed, rhubarb, cinnamon, brown sugar, essence of peppermint and water. [SNH p.248]

Baby Convulsions: Place a drop or two of the Antispasmodic tincture on the tip of the finger and thrust it into the baby's mouth. This will stop the problem immediately. [SNH p.362]

Restlessness in Measles and Scarlet Fever, etc. (children, infantile convulsions): Give small doses of Valerian infusion 2 to 3 times daily. A sound sleep will generally result. [SNH p.377]

Antispasmodic Powder (fits, convulsions, hysteria, cramps, etc.): See formula using valerian, scullcap, skunk cabbage, lobelia, cinnamon and cayenne. [SNH p.378]

Convulsions, Hysteria: See formula using valerian, wild yam, blue cohosh, anise seed and ginger. [SNH p.378]

Convulsions and Epileptic Fits: See formula using mistletoe, lady's slipper, valerian, scullcap and horsenettle. [SNH p.389]

Cloves: Infantile convulsions place poultice of cloves on nape of neck. [SNH p.421]

[Antsp](#): Dr. Christopher's Anti-Spasmodic Tincture: To be used in cases of convulsions, fainting, cramps, delirium tremors, hysteria, etc., also good for pyorrhea, mouth sores, coughs, throat infections, tonsillitis, etc. Dose 1/2 to one teaspoon to glass of steam distilled water as a gargle and use until throat clears, also take one teaspoon in steam distilled water morning and evening. [HHH p.195]

## Corns

### Definition

Hardened, mound-shaped areas of increased growth on the skin of the toes. Hard corns occur on the toes, while soft corns arise between the toes.

### Symptoms

Corns on the top and sides of the toes usually appear whitish with a pale yellow build up of hard skin with a darker shaped central cone (nucleus). They are normally hard, dry and round in shape. Pain can be felt when the nucleus presses on the nerve ending.

Soft corns are found between the toes and usually appear white and soft as they are kept moist by perspiration. These are often found in pairs.

The nucleus is shaped like an inverted cone and usually lies in the center of the corn.

The thick nucleus of the corn points downwards onto the nerve endings. This is what causes the intense discomfort and pain associated with corns.

### Cause

Corns are caused by excessive pressure - when the area affected is subject to forces in the same place at intervals over time. This usually comes from wearing shoes that are too tight and irritate the skin.

### Herbal Aids

[BF & C Ointment](#): Rub the ointment on the afflicted area. Put an additional amount of the ointment on a bandage. Wrap the bandage around the toe with the corn. The bandage will need be changed every day or so. You should begin to see results within a couple of days, and the corn should be gone by the end of the week.

### Testimonials

When I realized I had a corn on my foot, I immediately went to see what Dr. Christopher said about corns. I couldn't find anything about corns in his writings, but I thought that if any of his formulas could help, it was the BF & C ointment. I asked his son David Christopher if he thought BF&C would help get rid of corns, and he said "absolutely." So I put some BF&C Ointment on my toe, wrapped it up, and walked funny for the next couple of days. Immediately I felt relief from the pain, and by the end of the week the corn had disappeared!

## Coughs

### Definition

The sudden involuntary and violent expulsion of air after deep respiration due to irritation. [SNH p.13]

### Cause

This is often caused by a stomach disorder that comes from overloading the system with food, wherein fermentation in the stomach causes phlegm. It may also be induced by inflammation in the bronchial tubes due to a neglected cold. Worms may be the cause. Many coughs are from a nervous condition, where coughing may eventually become habitual. Coughs are highly misunderstood. Usually a sore throat and coughing are caused by the sinuses draining the eustachian tubes, which is like pouring acid down the throat. A cough usually comes from a lowered vitality in the system from improper diet, loss of sleep, lack of exercise, and fresh air, improper breathing, poor elimination, or improper night clothing and bedding. [SNH p.13]

### Herbal Aids

General Instructions: Acute coughs can often be relieved with a little honey and onion syrup. When it is the result of an old acute condition, clear out the morbid condition as rapidly as possible without causing irritation. In old cough conditions, comfrey with vervain or mullein are very good. The antispasmodic tincture is also excellent, and it is good to massage the chest area across the back with an antispasmodic tincture during attacks of spasms. Antispasmodic tincture may be used both internally and externally as a liniment on the throat. If this is due to a neglected cold, any of the diaphoretic herbs are excellent. To help relieve the coughing spasms, use horehounds, comfrey, or a small amount of lobelia. High enemas of herbal laxatives will relieve congestion of the bowels, and if the cough is severe (asthma, whooping cough) load the stomach with liquids and induce vomiting. [SNH p.13]

Bronchitis, Bronchial and Spasmodic Coughs, Whooping Cough: Drink the infusion of red raspberry leaf tea freely. [SNH p.56]

Comfrey: Coughs, raw or sore throat, slight hemorrhage. See formula for 1 wine glassful of mucilage of comfrey root every hour until tissues are healed and coughing stops. [SNH p.311]

See formula for coughs, asthma and bronchitis using elecampane, skunk cabbage, aniseed, pleurisy, licorice, lobelia, ginger and cayenne. [SNH p.344]

See formula for coughs, consumption and tuberculosis using cayenne, slippery elm, lemon and honey. [SNH p.410]

## Croup

### Definition

Croup is a childhood disease characterized by laborious and suffocative breathing and a harsh, brassy, crowing cough. Usually occurs at night, during the course of an upper respiratory infection. [HHH p.59]

### Symptoms

When the child takes a breath there is a whistling sound and often it sounds like he is strangling. [HHH p.59]

### Cause

Croup may be caused by the overeating of mucus-forming foods, or in fact by the overeating of any food, with fermentation in the stomach causing phlegm. [SNH p.59]

### Herbal Aids

Croup: See formula using pennyroyal and lobelia. [SNH p.284] Administration of formula: Croup is inflammation of the larynx and windpipe accompanied by spasmodic cough and great difficulty in breathing a loose membrane forms in the windpipe or trachea which can choke the patient, and the attacks are often sudden, with a harsh cough, rapid pulse, impeded breathing, and the face may be flushed with fever; it is caused from wet feet, damp clothes, sudden changes in temperature, etc., where the vitality of the system is greatly lowered and results in inflammatory congestion and obstruction; and the healing effect should be to raise the body heat, relax the spasms, and stimulate the blood through the parts as rapidly as possible. A hot mustard and cayenne foot bath (in a vessel deep enough to get the water up part of the legs), and hot flannel fomentation of cayenne (1 teaspoonful in 2 quarts of water) will be very beneficial. [SNH p.284]

Mullein: Drink the strong decoction of leaves and flowers, or combine with comfrey root and garlic juice. [SNH p.316]

Croup (fomentation): See formula using mullein, lobelia and cayenne. Foment as warm as is convenient over the lungs, or over the affected part. [SNH p.318]

Asthma Syrup (bronchitis, croup, whooping cough, etc.): See formula using slippery elm, boneset, licorice, flaxseed or linseed and blackstrap molasses. [SNH p.337]

General Instructions: Give the child a few drops of tincture of lobelia in catnip and peppermint tea, then a warm bath or hot foot bath, followed by a catnip tea enema. [HHH p.59]

More General Instructions: Follow the bath with a thorough rubdown with olive oil, and apply anti-spasmodic tincture to the chest and back as a liniment. Keep the air moist--a good steam room (vaporizer) is a great help for quick relief. Keep the bowels open with mild laxative herbs (as explained earlier) and give a tea of catnip, cubeb berries, senna and black cohosh with a few drops of tincture of lobelia to help relieve the spasms. Give by the teaspoon or tablespoon according to age every half hour until relief is obtained. The child should be kept on a fruit and fruit juice diet for a few days. An oatmeal and slippery elm gruel is also nourishing and helpful. [HHH p.59]

Oats and Slippery Elm: An oat and slippery elm gruel is sometimes useful in cases of croup,

where overeating or eating of the wrong kinds of foods sometimes brings on the spasms. [UW-Oats]

[Onion](#): We have used a raw onion poultice on a child for a serious case of croup. Rub the chest first with Vaseline ointment so that the onion will not burn the skin. Finely chop, shred or mince the onions and warm them gently. Place them on a clean cotton cloth and bind this onto the chest. Be sure to keep the chest area warm, either with plenty of covers or with a hot water bottle. This will stop the croup and relieve the inflammation. [UW-Onion]

[Onion Syrup](#): Dr. Christopher's onion syrup, described in the introduction, is an excellent syrup for coughs and colds, bronchitis, croup, whooping cough, etc. He recommended adding licorice root powder, horehound and cherry bark to the syrup, and said to add 25% glycerine to the syrup if you plan to keep it. Keep it in a cool place or it will sour. [UW-Onion] Formula for Onion Syrup: Here is the way you make the syrup. Dice up big dried onions, whatever amount you want, and put them into a stainless steel, unchipped enamel, or Pyrex pan. Don't use aluminum. When you have about the amount you want, pour liquid honey over them until they are covered. Add nothing else. The honey extracts the Onion power, which is the greatest antihistamine known. This goes into the honey solution and provides a wonderfully effective cough syrup. [UW-Onion]

[Stillingia](#): For croup, 1 drop of the oil on the tongue three or four times daily has been found successful for severe attacks (Gri:664). This oil is also a good external rub, being very stimulating, but is generally considered too acrid for internal use. [UW-Stillingia]

### Testimonials

1. [Antsp](#): Dr. Christopher's Anti-Spasmodic Tincture: I'm very interested in learning more about herbs and one day studying it so I would feel more confident using them as I do, medicinally. I've used lobelia tincture for my son's teething problems and on insect bites and rubbing on body for fever, etc. I've used antispasmodic tincture for his croup and coughing. It works great!! I wish the medical profession would accept this miracle remedy for croup and get off their high horse! [NL 3-3]

2. Early Childhood Memory of Dr. Christopher (Raymond): One of his favorite memories of old Highland Drive, and the deep snows of that "then country place" was the story his mother told him of one cold winter night when young Raymond was choked up with the croup. A knock came at the door. His father answered it to find, standing in the cold, a bearded man in shirt sleeves (no coat) who announced a young child was ill but was not to die; he had an important mission here. "Now do this and this to cut the phlegm", he said. They turned to do his bidding, then turned back again to thank him and invite him in, but he had gone--no footprints were found in the deep snow. [NL 4-4]

## Cuts

### Definition

These are wounds to the skin common especially in childhood. A cut severs the skin, such as is inflicted by a sharp object; an abrasion rubs and/or scratches the surface, such as the common scraped knee; and a bruise results from forceful pressure against some object, where the skin is not broken so the blood rushes to the damaged tissue beneath the surface. [HHH p.61]

### Symptoms

The appearance of these wounds is well-known; however, certain cuts such as those that are deep and wide may require immediate attention by a doctor to prevent scarring. If the bleeding does not stop using the following methods, or if blood gushes in bright spurts, you should seek medical attention immediately. [HHH p.61]

### Herbal Aids

General Instructions: The old herbalists claimed that cayenne pepper (Capsicum or red pepper) should be poured directly into a fresh wound, to sterilize and stop the bleeding. Also, if a doctor is not available, apply fresh or dry comfrey root, powder or leaf, powdered, to help stop the bleeding. The comfrey can be put right into the wound; if it is powdered, pour over the area, if fresh, tear up finely and apply. Fresh or dried comfrey can be applied directly over the damaged area--just keep adding additional amounts as needed. Cover with gauze, bandage lightly to hold comfrey in place and so the area can breathe. Comfrey paste ...can also be applied directly over the damaged area as with burns.

A wound, external or internal, will stop bleeding if the individual will drink a cup of water (preferably hot) with a teaspoon of cayenne pepper (red pepper) stirred into it. The bleeding will stop generally by the time a person can count up to ten after drinking the cayenne tea. The cayenne helps equalize the blood pressure from the top of the head to the feet. This keeps the pressure from the hemorrhage area so it will clot naturally, which it cannot do with heavy blood pressure pumping the blood rapidly at the hemorrhage area. The leaves, moistened chewing tobacco, shave grass, shepherds's purse, wild alum root, yellow loosestrife will all aid in stopping bleeding and assist in healing, but comfrey is one of our favorites and should be in everybody's yard or in a flower pot in the apartment or house, or keep a good supply of the powdered leaf and root on hand. Bruises respond equally well to a pack of fresh, crushed comfrey, or the powdered leaves or roots made into a paste with water. [HHH p.61]

Plantain: Apply a poultice of the fresh, bruised or mashed leaves; drink the tea internally. [SNH p.53]

Chaparral: Use the infusion as a wash. [SNH p.71]

Cranesbill: Use the decoction as a wash, or apply the bruised leaves directly on the affected part. [SNH p.153]

Cranesbill: Bleeding (wounds, cuts, tooth extraction): Sprinkle powder onto the affected area; rub powder into the tooth cavity. Also as a local styptic, apply the special strong decoction to the affected area on the lint or cotton without dilution. [SNH p.153] Special strong decoction: See formula using cranesbill root, comfrey root and glycerine. [SNH p.153]

Bistort: Apply the powdered root directly to the injured part. [SNH p.162]

[Depression](#) [White Pond Lily](#): The bruised leaves applied directly are very healing. [SNH p.166][Diabetes](#) [Tormentil](#): Both the fluid extract and the powder applied to bleeding surfaces will serve as powerful styptics. [SNH p.168][Diarrhea](#) [Hyssop](#): Bruise the green herb or leaves and apply to the affected area as a poultice. [SNH p.232][Digestion](#) [Fresh Cuts](#): See formula using myrrh tincture, cayenne tincture and echinacea tincture. [SNH p.456][Diphtheria](#) [Burn Ointment](#): Cleanse the wound and use Dr. Christopher's burn ointment, which is made by blending equal parts of wheat germ oil and honey in a blender, and adding comfrey leaves, fresh or dried, until the mixture becomes thick. I sometimes add a little slippery elm. This mixture is fantastic. [EWH p.160][Dizziness](#)[Dropsy](#) [Aloe Vera](#): Other external uses for the herb include treatment for all kinds of wounds--scrapes, cuts, etc. The gel seems to mildly kill the germs on the surface and promote healing. The herb is high in calcium, which reduces bleeding with its coagulating action, at the same time helping to stimulate circulation of blood in the surrounding areas to bring oxygen to the surface. [UW-Aloe Vera][Dysentery](#)[Dyspepsia](#) [Myrrh](#): One herbalist has a favorite application of Myrrh. He combines equal parts of finely powdered golden seal and powdered Myrrh gum. He mixes a pinch of the combination with a little saliva (or water, he says, if you are squeamish), and applies the paste to cuts, sores, pimples, abrasions--any kind of skin wounds. As this dries, it forms a crusty, protective scab over the wound, just like a real scab, but with the additional antiseptic and healing properties of the herbs. He says that he has been able to wean himself from the constant use of band-aids (Neb:118)! [UW-Myrrh][Dyspnea](#)[Earaches](#)[Eczema](#) [BF & C](#): Dr. Christopher's Bone, Flesh and Cartilage Formula: The paste can be used for cuts, abrasions, burns, bruises, sprains, and an external aid to spread the healing up of broken bones.[Edema](#)

If kept in a wide-mouth closed jar the paste will keep in a ready-to-use condition for many months. This is one of the fine emergency first aid helps you can have on hand. It is good to have some in your cars and in various places in the home or where you work, in case of an accident. [NL 1-8]

[Enuresis](#)[Epilepsy](#) [Cayenne](#): Many of the old herbalists claim that in cases of severe cuts, gunshot wounds, etc., cayenne can be taken internally as a tea and the bleeding will stop by the time, in most cases, you can count to ten. Cayenne goes immediately into the blood stream and adjusts the blood pressure from the top of the head, to the bottom of the feet, equalizing pressure over the whole body. This takes the high pressure, which causes rapid bleeding, away from the wound and clotting starts immediately. Cayenne has been accepted by some of the orthodox medical profession, as mentioned in Merck Index, Materia Medica and Pharmacology and other standard volumes. [NL 1-12][Eye Ailments](#) [X-Ceptic](#): Dr. Christopher's Antiseptic Tincture: A few drops of the liquid antiseptic formula, consisting of oak bark, golden seal, capsicum, comfrey, garlic, and myrrh, can be dropped into the throat. This is one of our most wonderful formulas used on cuts and wounds. [NL 4-1] [Lemon](#): Some of the many medicinal problems treated with the lemon are as follows: Cuts or other areas of infection are helped when lemon juice, a natural antiseptic, is applied. [NL 5-1] [Black Walnut](#): the iodine found in Black Walnut is organic, much more antiseptic and healing than the usual poisonous iodine so commonly used for infections, cuts, etc. [NL 5-7]**See Also** [BF & C](#): Dr. Christopher's Bone, Flesh and Cartilage Formula [Black Walnut Tincture](#): Dr. Christopher's Black Walnut Tincture

## Cysts

### Definition

A pouch or sac without an opening, having a distinct membrane enclosure, and containing fluid or semi-fluid morbid matter. This usually develops within an organ or a body cavity. [SNH p.14]

### Cause

Calcium tablets are almost always prescribed for muscle cramps and throughout pregnancy generally, yet calcium requires the proper balance of phosphorus, silica and magnesium to be absorbed. Otherwise the free-radical calcium flows through the bloodstream, sometimes depositing in the forms of cysts and calcium deposits. [EWH p.48]

The body needs plenty of potassium chloride to keep the fibrin in solution and build muscles and tissue where needed instead of coagulating and forming fibrin cysts or tumors under the skin, in various organs, or in other words where we don't want them. [NL 1-1]

### Herbal Aids

[Black Walnut Tincture](#): Dr. Christopher's Black Walnut Tincture: In breaking up a cyst, the use of walnut herbs (leaves, bark, or the green hull or dried pulp around the shell of the nut) are excellent. The use of chaparral may be used internally or externally. [SNH p.14]

Useful herbs: Apple cider vinegar, Brigham tea, burdock root, cayenne, chaparral, honey, mullein, plantain, sarsaparilla, yellow dock (ovarian or genital areas). [SNH p.14]

[V.B.](#): Dr. Christopher's Vaginal and Rectal Herbal Bolus: One of the valuable procedures in the healing program for a woman is the vaginal bolus. The bolus is inserted into the rectal area. There are two types of bolus: one that dissolves at body temperature and the other acts as a poultice. The poultice-type is made with healing herbs to help draw the poisons and toxins; and to help break loose cysts, tumors, and cancerous conditions even as far up as the abdominal area as the bolus has a widespread influence, effecting not only the vagina, but also other organs, such as the bowel and the urinary tract. This drawing-type bolus generally consists of a group of herbs. [SNH p.503]

[Dr. John R. Christophers "Extended Herbal Cleanse" Routine](#): This cleansing program is for the purpose of helping to purify the human body for healing. ...Clean the mucus out of the body, which is the problem source that develops polyps, tumors, cysts, etc. This is an entire program. More can be read at the source. [SNH p.514]

Castor Oil Fomentation: In order to get rid of hardened mucus in the body, which may appear as cysts, tumors or polyps, the following fomentation is to be used. [SNH p.525]

[V.B.](#): Dr. Christopher's Vaginal and Rectal Herbal Bolus: Here is another excellent aid for the woman (or rectal bolus for the man) who have problems in the reproductive areas. Boluses are made with healing herbs that help (1) draw out the toxins and poisons, (2) aid (with herbal foods) in making the malfunctioning area healthy, so that cysts, tumors, and cancerous conditions will not have waste material to survive on or live in, because they are all scavengers. Herbalists have found that they will release and will be dispersed. Herbalists have found that some will come out through the orifices and others disperse into the blood stream and will be eliminated if the program is followed faithfully. (3) The bolus spreads its herbal influences widely from the vagina or bowel through the entire urinary and genital organs. The formula consists of one part each:

[Depression](#)[Diabetes](#)[Diarrhea](#)[Digestion](#)[Diphtheria](#)[Dizziness](#)[Dropsy](#)[Dysentery](#)[Dyspepsia](#)[Dyspnea](#)[Earaches](#)[Eczema](#)[Edema](#)[Enuresis](#)[Epilepsy](#)[Eye Ailments](#)

squaw vine herbs, slippery elm bark, yellow dock root, comfrey root, marshmallow root, chickweed herb, golden seal root, mullein leaves. These herbs are all in powder form. Coconut butter should be melted down so that it will mix well with the herb powder. Mix a small quantity of this powder, and wet to pie dough consistency with coconut butter (which can be purchased from the drug store, health food store, or herb shop). Next, roll this mass between hands until you have a pencil-like bolus approximately the size of the middle finger and about inch-long pieces. Harden in a refrigerator. Then these are to be inserted into the vagina much the same as suppositories would be. It will be necessary to wear a sanitary napkin in order to hold the bolus up in the vagina (or rectum). Insert upon retiring and leave in all night, six nights a week. The coconut butter melts at body temperature, leaving only the herbs, and these are easy to douche out. [HHH p.191] The following morning use the Dr. Christopher Slant Board Combination: ([Yellow Dock Combination](#)) As an aid in prolapsed uterus, bowel, or other organs, to assist in giving relief, make concentrated tea (simmer down to half its amount) of six parts oak bark, three parts mullein herb, four parts yellow dock root, three parts walnut bark or leaves, six parts comfrey root, one part lobelia, three parts marshmallow root. Inject with a syringe (while head down on slant board) into vagina, 1/4 to 1/2 cup or more; or rectum, one cup or more; for prolapsus or hemorrhoid problems and leave in as long as is possible before voiding. Dose suggested is one fourth to one cup, one or more times in a day, and drink one fourth cup in three fourths cup of distilled water three times a day. When the tea is injected into the abdominal area and while on the slant board, knead and massage the pelvic and abdominal area to exercise the muscles, so the herbal tea (food) will be assimilated into the organs. [HHH p.192]

Potassium Deficiency: Hundreds of women have wondered why they have tumors and cysts in their bodies. The cause, according to Dr. Christopher, is potassium deficiency. When a patient takes plenty of potassium foods (not supplements) you can remove the cause of the cysts and tumors. Other foods, which are lower in potassium, must not be increased when you are trying to increase the potassium in the system. When patients go on the three-day cleanse and mucusless diet and take the female corrective formulas [Nu Fem], they receive nourishment which is high in potassium. Miraculous things happen to them. For even faster results, you can add to each cup of herb tea six to ten drops of elderberry tincture or six to ten drops of black walnut tincture, both of which are extremely high in potassium. Cysts and tumors are like leeches, but they stay in places where there is a body deficiency. As soon as the body is balanced and well, the cysts and tumors have to go, because the material is too healthy for them to live on.

This is why so many patients brought Dr. Christopher cysts and tumors in various sizes that they had expelled from their bodies. There is not enough food, in the form of dying or deficient body materials, so they just decide to leave.

There are several ways to receive your potassium. Dr. Bernard Jensen sells a potassium broth made from dehydrated vegetables. Dr. Bronner makes a similar, excellent product. You can also make your own potassium broth by simmering equal parts of red potatoes, celery, carrots, onions, and herbs to taste. Raw vegetable and fruit juices also flood the system with potassium.

When cysts or tumors grow in places where they can be seen outside the body, often we react by having them cut out. This defeats healing by working on the effect instead of the cause. You can cut cysts out, tumors off, and burn warts off (which are also a potassium deficiency), or get rid of as many moles as you wish, but unless you go to the cause, they will grow back again, and you may end up with as many or more cysts, tumors, moles as before. Different signs of potassium deficiency will keep popping out on the body because the condition that needs correcting is on the inside. You have to go into the cause, Dr. Christopher always insisted, which is the way we have been eating. Other herbs used for cysts are corn silk, apple cider vinegar, wormwood, cramp bark, camomile, gravel root, slippery elm, wild carrot, and garlic. [EWH p.125]

Cleaning the Blood Stream: The blood of each individual is as different from that of another individual as is the iris of the eye or the fingerprint. As we build our lives for better or worse, so do we change and build our blood stream.

For many years we have taught that all disease stems from the blood stream. ...The impurities and poisonous waste accumulations in a boil are brought to that point by a blood stream loaded with waste and mucus materials, and to work only on lancing the boil is a case of "working on the effect", when one should clean up the blood stream, i.e., "work on the cause".

The same principle applies with tumors, cysts, dermatitis, cancer and most other isolated malfunctions. The weakened or injured areas accumulate toxic waste, because there is not enough

vitality to discard this low vibrating material, and here we have evidence of "disease".

Instead of using just an external application, we have recommended to our patients that they also do the most important part of the entire program - that of going into the cause by cleaning up the bowels, the blood stream, and keeping this "cleaning condition" permanent. This is done by following the mucusless diet, as we explain it in "[Dr. John R. Christophers "Three Day Cleansing Program"](#)" and [Dr. John R. Christophers "Mucusless Diet"](#)" booklet, using the three day cleanse each month, or more often, and by strictly following the recommended "fast" each seventh day. (Of course, on the fast, use only steam distilled water in abundance.) [This information goes on extensively. Go to the source for more detail.] [NL 1-2]

[Dr. John R. Christophers "Three Day Cleansing Program"](#) with Dr. Christopher's Slant Board Routine ([V.B.](#): Dr. Christopher's Vaginal and Rectal Herbal Bolus and [Yellow Dock Combination](#): Dr. Christopher's Yellow Dock Combination): With severe gynecological problems involving infection, cysts, tumors, the herpes simplex, prolapsed transverse colon, tipped uterus, swollen glands under arms and on breast, yeast infection, etc., the vaginal and rectal bolus may be employed. We suggest using the slant board routine as explained in the booklet Three Day Cleanse and Mucusless Diet. [NL 1-3]

**Malnutrition:** We have on file hundreds of letters from women who have received relief by this simple procedure of feeding the areas of the body suffering malnutrition.

By having a weakened reproductive system many things can happen to the body in retaliation. This is caused from weakened tissue inviting disease, cysts, tumors, etc., into the body. These are scavengers and must have toxic, low type cells and tissue, weak and dying organs to feed on. All this is the result of malnutrition! We must reverse the condition, strengthen the cells and tissues, making them so healthy they are to "rich" for scavenger diseases to live on. Herpes simplex, yeast infection, leucorrhea, flooding, cramps, swollen and painful breasts, miscarriages, inability to conceive, etc., etc., stem from the reproductive organs or systems being in an unhealthy condition. [NL 1-7]

[Red Clover Combination](#): Dr. Christopher's Blood Purifying Formula and [Mullein & Lobelia](#): Dr. Christopher's Glandular Formula: When there is any problem with the breast, and this should be noticed early, we use the fomentation of 3 parts mullein and one part lobelia over the affected area. It may be taken internally as well. Many Indian tribes have historically used a fomentation of poke root externally to help draw out the cancer. As with all cancers, they begin in the blood stream and radiate out to other parts of the body where they are manifested. The Red Clover Combination can be used to purify the bloodstream, the nutrient transport system of the body. Cysts and tumors will not grow in an atmosphere where there is enough potassium. Elderberry tincture can be taken for potassium increase along with foods that are high in potassium. [NL 4-2]

### Testimonies

**Woman Heals Tumors and Cysts:** When Dr. Christopher was traveling, using chiropractic offices and naturopath's offices, diagnosing, reading eyes, and helping with herbs, [a] lady ... came to see him. In addition to the prolapsed transverse colon infecting the entire reproductive system, it had impinged on the bladder, so that whenever she laughed, sneezed, or coughed, she would void her urine, a very embarrassing problem. In addition, one of her breasts was so infected that the doctors were urging her to have it removed.

Dr. Christopher told her he could give her advice as to what to do, but that he was traveling and wouldn't be able to guide her or see her for several months. She agreed to follow his instructions, and asked to see him when he returned.

He put her on the full program. She was to clear the bowel with the lower bowel formula [[Fen LB](#)], to clean the bloodstream using the red clover combination, and to rebuild the reproductive organs with the female corrective [Nu Fem] and the hormone-estrogen formula. [[Changease](#)] She was to continue the whole program, six days a week.

When he returned to that city six months later, she had called and prearranged an appointment. She bounced in, looking years younger, all smiles. She said her urine loss was under control now, with no unwanted voiding. She had no pains in the ovaries; in fact, she had dropped some stones from the three-day cleanse. She had also passed some tumors, one almost the size of a grapefruit,

and cysts as well. When she went to the family doctor for an examination, he was astounded, because her body was rebuilding itself. The breast they were going to cut off had healed itself, with no more infection. She felt that it was a new world, and that life was worth living again. Although she healed rapidly and consistently, Dr. Christopher pointed out that herbs don't work all at once, but you have to apply yourself and be patient to wait for the results of your hard work. [EWH p.113]

## Dandruff

### Definition

Dead skin (scaly material) shed from the scalp.

### Cause

Inorganic soaps are very damaging to the skin and obstruct the pores. A little dandruff scraped off the scalp, for example, and placed into distilled water (which is zero grain hardness) will often shake into a heavy foamy lather or suds, showing that the major part of dandruff is composed of soap that has not been washed out. There are very few rinses that can thoroughly cleanse the soap out, and the best cleansing agent of this type is biodegradable type, such as Dr. Shaklee's Basic-H Bestline products, Amway, etc., all of which are made of soluble vegetable bases. But the inorganic, commercial-type soaps will often cause rashes and do considerable damage to the skin tissue and the body itself (through epidermal absorption). If biodegradable soaps are unavailable, then lemon juice, vinegar, and wild sage are very effective. The commercial soaps give the appearance of beauty by cleaning and perfuming the surface, while the pores remain dirty, still, from toxic matter. [SNH p.501]

### Herbal Aids

Bayberry: Use a strong decoction of bayberry and rub in well at night; wash off in the morning, brush the hair thoroughly and apply again (using a few drops of lavender oil with the solution that is rubbed in gives a more effective synergistic action). This will quickly stop falling hair and remove dandruff. [SNH p.132]

See formula using balm of Gilead, castor oil, eucalyptol and anhydrous lanolin. [SNH p.202]

General Instructions: From a question and answer in Dr. Christopher's Newsletter. This is a disease more commonly affecting people than one would think. Dr. Lubowe in his book *The Modern Guide to Skin Care and Beauty* (E.P. Dutton and Co., 1973) says: "The body malfunctions related to dandruff are similar to those related to acne." However, while one might expect that they would occur simultaneously, they don't. Dandruff usually begins to show at about age 20, when acne has become a painful memory, and it is not seen much after the age of 40. That does not mean that you can't have dandruff after 40. If you do, Dr. Lubowe noted, it is not necessarily evidence of prolonged youth. However, within the ages of 20 to 40, dandruff affects 80% of the population.

Dandruff itself is not a disease, but only a symptom of one that is less visible. Far more serious than the snowflakes on your shoulders is the fact that dandruff can lead to hair loss and even to baldness. But there are steps that you can take at your very next meal that will help you overcome your dandruff problem and, at the same time, overcome some other problems. One of the most important is to reduce your consumption of starchy foods and also reduce, or better still, eliminate sugar completely. Sugar and starch are two of the dietary excesses which Dr. Lubowe scores as triggers of the internal difficulties which can lead to dandruff. An increased volume and activity of the bacteria and fungi normally residing on a human scalp is another cause. But sugar particularly, could well be the substance that triggers the condition that causes dandruff.

For keeping the scalp clean and the pores free from dirt and substances that plug up the hair gland openings, use a good biodegradable shampoo and rinse with a diluted lemon juice or apple cider vinegar rinse. A final rinse of sagebrush, chaparral, and yarrow (in equal parts) tea is a healthy food for the hair and scalp. Massage this rinse in well to the hair and scalp and leave on the head.

It is good also to drink some of this tea, (a half cup, more or less) night and morning. [NL 1-9]

[Lemon Juice](#): Dandruff has been helped by applying lemon juice to the scalp and afterwards shampooing. After the shampoo, wash again and apply lemon juice to remove soap from the hair and scalp. [NL 5-1]

[Black Walnut](#): Externally, Black Walnut is nearly a miracle worker in cases of scrofula, eczema, impetigo (as related above), acne, dandruff, boils, itch, shingles, ringworm--we could go on, but you can see that you can use Black Walnut whenever a skin disorder appears! [NL 5-7]

[Dr. Christopher's Hair Conditioner Formula and Procedure: \(Desert Herb Combination\)](#) Each day, as an aid to restimulating the hair growth, for two days massage scalp deeply with warm castor oil, apply hot wet toweling over head thirty minutes or more.

Leave oil on all night. Next morning wash hair with Packer's tar soap or a good biodegradable soap and rinse. Repeat second wash, rinse with tea made of sagebrush, chaparral and yarrow. Do not rinse again but leave tea in hair and scalp (massage in well). The next two nights use same procedure but use olive oil, and the next two nights use wheat germ oil. Rest one night and repeat six days a week as needed. Use shoulder stands. Drink one or two tablespoons of wheat germ oil morning and night, and also drink 1/4 cup of this tea made with distilled water, two times a day.

## Deafness

### Definition

Inability to hear clearly.

### Cause

1. It has been proven that certain types of drugs, including aspirin, can cause hearing loss. Antibiotics such as kanamycin, dihydrostreptomycin, and gentamycin can contribute to deafness. The side and after effects of inorganic drugs take their toll on the body. This is why we prefer to work with herbs and foods which operate synergistically (in harmony) with the body. [NL 4-6]
2. When a child cannot hear well, it may be from several causes, i.e., injury and concussion, nerve-loss, ears plugged with wax and/or debris. [HHH p.82]

### Herbal Aids

**B & B Tincture:** Dr. Christopher's Nervous System Formula with Black Cohosh and General Program for Deafness: In many cases, a person can help have his or her hearing enhanced by following Dr. Christopher's program. One patient had lost her hearing, and could only hear if someone screamed at her when she had her hearing aids turned up full. She couldn't use the phone anymore, and felt discouraged with life in general.

She decided to use the B & B tincture and garlic oil routine. With an eyedropper, you insert into each ear at night four to six drops of oil of garlic and four to six drops of B & B tincture, plugging ears overnight with cotton, six days a week, resting on the seventh day. This can continue for four to six months, or as needed. On the seventh day, flush the ears with a small ear syringe using warm apple cider vinegar and distilled water half and half.

Dr. Christopher commented that many cases where the person was considered legally deaf, by using this program they were able to hear again. Hundreds of people have thrown their hearing aids away after rebuilding their hearing with this simple program.

This same program is used for earaches and roaring in the head, ringing in the ears, etc. Dr. Christopher originally got this formula when he was working with an epileptic. He was searching for something that could really help the case, and received the formula by inspiration, as if a voice were saying it to him. An old gentleman thought that it might help his hearing, so he put it in his ears, too. In that same household, one of the little children had a terrible earache one night. The mother used this combination in the ears, and the pain stopped and the infection cleared up. Many children have been relieved from this simple program of garlic oil and B & B tincture. [EWH p.137] With some folks we have seen the hearing restored and hearing aids discarded in just a few months. In other cases, this program must be followed for far longer periods of time before results are noticed. No two people heal alike, so be patient and follow instructions, then see what happens! [NL 1-6]

**Marjoram:** The juice of Marjoram, both wild and cultivated, dropped into the ears helped deafness, pain, noise, and ringing. [NL 4-6]

**Mullein:** The oil is often used in the ears to relieve earache. The ointment, which is made from the oil, is used in the same way. We have had earaches in our family which resulted from congested lymph glands and colds. Although we treated the problem with garlic oil and B & B tincture, the problem did not clear up. By inserting oil of Mullein into the ear, however, we were able to stop the irritation in the ear as well as in the accompanying glands. The oil can be inserted

into the ears to soften hard ear wax, or to moisten the area where the ear wax is insufficient; hearing losses due to ear wax have sometimes been thus alleviated. [UW-Mullein]

**Ear Candles:** The cautious use of "ear candles" can help clear the wax. Ear candles are an old invention. A pointed dowel rod is wrapped with a cotton or linen strip of cloth which has been dipped in melted paraffin wax. The rod should be about 8 inches long and about 3/4ths of an inch thick. When the paraffin hardens, a long, thin, cone-shaped form will result and the dowel rod can be removed. The pointed end of the linen cone is put into the ear canal and the other end is lit. The person should be sitting upright so the wax doesn't drip into the ear. To avoid injury, be sure to put the fire out before the burning candle reaches the head. When the ear candle is removed and unwrapped, it is usually filled with ear wax. The Amish people use these candles and it is a tradition with them. [NL 4-6]

### Testimonials

1. **Hearing Program:** I have four other patients on the program for hearing loss and all are making fine progress. One, however, is really amazing.

This patient has been getting a new pair of hearing aids every year for the last twelve years, they're always giving her a stronger pair. The right one she has full blast and hears nothing--she has been diagnosed as nerve deafness.

After only five days she has turned this right hearing aid almost completely off and can hear the radio. She is the happiest woman I have ever seen. by the way, she drives to my office in Chicago twice a week nearly fifty miles each way, even in blizzards and could hardly hear the horns blow on the other cars. She is an amazed woman today." [NL 2-8]

2. **Hearing Restored After 39 Years:** A good many years ago- probably about 1940 my husband was struck by lightening which left him very hard of hearing. We tried several times to have him fitted with hearing aids, but no one seemed to think these would help his problem. Then in about 1973 Bell Tone fitted him, which helped some. In March 1979 we tried the herbal tincture as per your instructions: 6 days, 5 drops oil of garlic, then 5 drops herbal tincture; then the 7th day the cider vinegar and distilled water. Immediately he said to me, "Why! The clock is ticking!" From that day on he has not needed his hearing aids (over \$1,100)! We did continue the procedure for another week. We need to know should we continue, and if so, for how long do you suggest? We continue to Praise God and give Him our thanks for this healing blessing. We want to thank you also, for our publication, and the research you have done, that has been such a blessing to us. [NL 1-10]

3. **Hearing and Tic Improves with B & B Tincture:** At the time of this writing, there is no surgical cure for nerve hearing loss. The causes are fetal damage, trauma at birth, infections, drugs, thyroid disease, diabetes, injuries, noise exposure, or nerve deterioration from age or malnutrition. Just last month, a woman said to us, "I wish they (medical science) would hurry and find a cure for nerve deterioration." We said, "For the nerves in the body?" She said, "No. For the nerves of the ear! I'm having a terrible time with hearing loss and it's getting worse. It's driving me crazy!" We told her that if she didn't have eardrum breakage, there were some herbal nervines that could be used directly in the ear as ear drops. She agreed to try the B & B tincture. As she spoke, her face exhibited a spastic dance of small nervous tics. A month later, on the B & B tincture, her hearing began to gain momentum while the nervous tics faded into the background. [NL 4-6]

4. **Deaf Since 1 Year Old:** Thanks to your formulas, I was able to cure several persons known to me. Also, my son, deaf since 1 year old, now 30 years old, has improved his hearing thanks to B & B Tincture. [NL 4-10]

## Debility

### Definition

Weakness, absence or loss of strength (asthenia), loss of vital strength or muscular power (adynamia). [SNH p.15]

### Cause

In debility, the condition is generally caused by a rundown body as a result of an improper diet. Do not overfeed since the body is already overworked and the heart is already overburdened, and the organs are tired from trying to digest heavy foods. The kind "angels of mercy" that bring in cakes, pies, and the little "goodies" to the invalid and say "Now you must eat to get your strength you must eat to get your strength build up," are not really "angels of mercy" since they only aggravate the problem. [SNH p.15]

### Herbal Aids

General Instructions: In some cases the whole digestion must be rebuilt. A speedy recovery may be had with juice therapy alone or with slippery elm gruel. Other nutritional herbs such as Irish moss or comfrey may be used successfully. [SNH p.16]

Wormwood: Take 2 fluid ounces of the infusion 3-4 times daily. [SNH p.108]

Bitter Root: Take 5 grains of powder 3 times daily; it has also been used successfully in combination with yellow parilla (*Menispermum canadense*). [SNH p.208]

Rue: for systemal debility. (Never take if you are pregnant) Take small doses of the infusion at least 1 hour before meals. [SNH p.295]

See formula using comfrey root, elecampane, horehound and beth root. Strain, sweeten, bottle and keep in a cool place. The mixture may be preserved with glycerine or with 1 pint of honey. [SNH p.312]

See formula using scullcap, camomile and gravel root. [SNH p.372]

See formula using white poplar bark, barberry bark, balmony bark, golden seal, cloves, cayenne and loaf sugar. [SNH p.447]

Dr. Coffin's Bitters: See formula using white poplar bark, balmony, bayberry, ginger, cayenne and cloves. [SNH p.448]

Prickly Ash: The herb is a valuable herb nerve stimulant and may be used for a long period of time without ill effects. It is valued in all cases of nervous prostration or debility after illness or whenever the vital forces of the body have for some reason been depressed. [UW-Prickly Ash]

Skullcap: It is called a food for the nerves, strengthening and supporting them as it gives immediate relief of all chronic and acute diseases stemming from nervous affections and debility (Tie:115). It is high in calcium, potassium and magnesium, which may account for its remarkable effect on the nervous system. [UW-Skullcap]

Skullcap: Lucas reports the case of a gentleman who was otherwise in good health but was continually suffering nervous debility and insomnia. Treatment by other doctors had not helped him at all. He was encouraged to try natural medicine and was given a combination of an ounce of Skullcap, an ounce of hops, and a half ounce of gentian root. He took this as an infusion and

within a week he was sleeping well. At the end of two months he was fully recovered. Lucas mentions that Skullcap, catnip and peppermint work the same way for many people (Luc:Herbal:25). It is said to give natural sleep to morphine addicts, especially when combined with catnip, lime blossom and hops (Lev:Common:134). [UW-Skullcap]

Gentian (*Gentiana Lutea*) is considered one of the most useful tonics in cases of exhaustion from chronic disease and in all cases of general debility, weakness of the digestive organs and want of appetite. The herb has been used in both England and Europe for treatments to humans as well as in veterinary practice. [NL 4-10]

Echinacea: Prof. Webster, an early practitioner who used it in these cases, asserted that as a stimulant to the capillary circulation, no remedy is comparable with it, and it endows the vessels with a recuperative power or formative force, so as to enable them to successfully resist local inflammatory processes due to debility and blood depravation (Ibid), which we think is extremely interesting in view of the toxic conditions caused by pollution and low-quality food in today's world. [NL 6-12]

## Depression

### Definition

An emotional state where there are extreme feelings of rejection, emptiness, sadness and lack of self worth.

### Herbal Aids

**Julep:** This is a stimulating drink-type preparation flavored with aromatic herbs (but this is not the alcoholic drink referred to by the same term), and could be defined as "a large draft." An example of a julep would be: Four ounces (eight tablespoonfuls) cinnamon water, two ounces (four tablespoonfuls) Jamaica cayenne, two drams (one-fourth ounce or one dessert spoonful) compound spirit of lavender, one ounce (two tablespoonfuls syrup of orange peel, mixed; (this is for general weakness and depression).

Dosage: Wineglass to one-half glass at a time. [SNH p.486]

**Motherwort:** Motherwort tea will eliminate the swelling (it is also good for nervousness and depression). [EWH p.44]

**Brigham Tea:** In modern usage, the prized constituents, ephedrine and pseudoephedrine, are extracted from the plants for medicinal use....The pharmacological action of ephedrine is similar to adrenalin. Its pressor and vaso-constrictor activity is slower and less than adrenalin, but it lasts longer. Unlike adrenalin, it can be given orally. It stimulates the respiration, increasing the depth of respiration, reinforces heart action and dilates the bronchi, especially during spasms, hence its use in bronchial asthma. It contracts the uterus and dilates the pupils. It also helps stimulate the central nervous system, this attribute being the basis for its use in the treatment of depression and for the relief of narcolepsy. It is used in vasomotor rhinitis, coryza, congestion of the mucous membranes, acute sinusitis, and hay fever. It has a slight local anesthetic action. [UW-Brigham Tea]

**Gotu Kola:** It can treat depression and mental weaknesses; many claim that it is a marvelous memory herb. If you take too much of the herb, you will experience headache and stupor; thus, you must regulate your personal dosage. [UW-Gotu Kola]

**Lemon Balm:** Others assert that the herb can truly alleviate depression, helping us accept difficult situations. [UW-Lemon Balm]

**Lady's Slipper:** It has been found to be very efficient in cases of hypochondria and mental depression which often accompanies digestive trouble, especially among women. Whenever a person feels like he cannot settle down, cannot sleep, cannot think properly, feels depressed, often from sexual overindulgence, Lady's Slipper can be a calming and balancing influence. [UW-Lady's Slipper]

**Red Rose Petals** are official in nearly all Pharmacopeias, often in syrup or honey form. They were formerly employed as an astringent and tonic, but are mainly used now as a pleasant odifereant to other pharmaceutical preparations. However, the acid infusion is used to treat night sweats resulting from depression (Gri:688). [UW-Rose]

**Sage:** Another British herbalist claimed that Sage "will retard that rapid progress of decay that treads upon our heels so fast in the latter years of life, will preserve the faculties and memory, more valuable to the rational mind than life itself without them; and will relieve under that

**Depression**[Diabetes](#)[Diarrhea](#)[Digestion](#)[Diphtheria](#)[Dizziness](#)[Dropsy](#)[Dysentery](#)[Dyspepsia](#)[Dyspnea](#)[Earaches](#)[Eczema](#)[Edema](#)[Enuresis](#)[Epilepsy](#)[Eye Ailments](#)

faintness, strengthen under that weakness and prevent absolutely that sad depression of spirits, which age often feels and always fears, which will long prevent the hands from trembling and the eyes from dimness and make the lamp of life, so long as nature lets it burn, burn brightly" (Hyl:560). [UW-Sage]

Sarsaparilla also contains cortin one of the hormones secreted by the adrenal glands. The body will die almost immediately if this hormone is stopped but if there is only a small or insufficient amount the body becomes easily ill and develops nervous depression and general weakness. So many maladies are related to adrenal weakness and exhaustion, including hypoglycemia, so people should take note if they are striving to rebuild their adrenals. Sarsaparilla may be able to help. [UW-Sarsaparilla]

Bach Remedies: Dr. Bach left his lucrative medical practice and retreated to the Welch countryside where he began to observe human nature full time. He experienced a wide range of negative states of mind himself which were relieved by the administration of his especially prepared flower tinctures. At first Bach discovered twelve basic tinctures to alleviate depression, anger, worry, self-distrust and the like. He called them the twelve healers and wrote a short paragraph on each of them. The non-toxic flower remedies were tried on his patients who responded beautifully to treatment. The twelve remedies were finally expanded to 38. They were designed to be used and administered by even the simplest folk. Bach continued to successfully treat diseased conditions with these remedies until his death at 50 years of age.

Bach's legacy has been a blessing to many people. Although he had great results with the flower remedies, his new remedies were not accepted by the orthodox medical men of his day who once held the doctor in high esteem. Perhaps the simplicity of the Bach Flower Remedies was too great to bridge the credibility gap between medic and mystic.

Healers throughout the world benefited from Bach's discoveries. Heretofore incurable cases have been won over to the side of health.

Dr. Bach's work is now being carried on at his humble home near London, England. Mr. John Ramsell and his sister who had apprenticed themselves to Dr. Bach's assistant, Nora Weeks, create the remedies from English countryside flowers according to the instructions left by the good doctor. Bach Flower Remedies are shipped all over the world. From the stock bottles of 38 remedies an individual may have a custom-made remedy which suits his individual emotional needs. [NL 4-7]

Vegetables for Mental Depression: Broccoli, cabbage, collard greens, corn, kale, peas, potatoes, turnip greens. [NL 4-12]

Depression After Giving Birth: For the depression that sometimes occurs after birth, Black Cohosh seems to be an almost miraculous specific - perhaps because of its hormonal content. An English doctor in the late 1800's Sir James Y. Simpson, related that a mother of several children suffered the most severe depression and despondency about a month after giving birth to perfect children. She tried the tincture of cimicifuga, and after eight or ten days, her condition had completely changed; she had energy, good spirits, zest for life. She continued taking it for six or eight weeks, and prescribed it to other depressed new mothers, with equal success (BC:AGT:2 1). [NL 5-6]

[Cayenne](#) and Lobelia: Cayenne will increase a person's feeling of vitality and activity--as it is a stimulant--without any bad after-effects, such as do other stimulants. Combined with Lobelia, it is wonderful in cases of depression or low spirits. [NL 6-3]

## Diabetes

### Definition

The origin of this disease, as is known so far, can be traced back to derangement of the functions of the pancreas gland. Contributing factors, however, are undoubtedly severe nervous disturbances, or improper function of stomach, liver and bowels. The patient feels tired and weak. Usually complains about pains in the limbs, feeling depressed and down-hearted, and an abnormal thirst is often experienced. Dizziness and headaches are common. The skin is dry and often itchy. The digestion is often upset, due to the unusually abnormal increased appetite. The eyesight may be impaired or weak. The urine is generally very pale and plentiful. Sugar is present in the urine in more or less quantities. [HHH p.62]

Today diabetes is said to be one of the top killers in the world. It is supposedly one of the incurable diseases, but it can be definitely cleared if one approaches it properly. Diabetes stems from a disorder in the pancreas, so you shouldn't just treat it by giving insulin, which is working on the effect; you should instead go to the cause of the disease. Pancreatic malfunction can manifest in one of two ways: diabetes, which is high blood sugar, or hypoglycemia, which is low blood sugar. Though they are completely different, they both stem from the same cause, a malfunction of the pancreas, which is what we have to treat. [EWH p.133]

### Symptoms

This is a constitutional disease where carbohydrates are not used properly due to failure in the pancreas to secrete sufficient insulin. The body tissue cannot oxidize carbohydrates at a normal rate. This is characterized by excessive discharge of urine, sugar in the urine, excessive thirst and hunger, and progressive emaciation. [SNH p.16]

### Cause

Malnutrition and malfunction in connection with a bad pancreatic condition cause diabetes. Stay away from sugars and starches which will go into diabetes very quickly due to a weakened pancreas. Baking soda and aluminum cookware greatly aggravate diabetes. [SNH p.16]

### Herbal Aids

General Program: Diabetes is a forerunner for Bright's disease. Heavy users of insulin have been able to cut their intake rapidly by a number of herbal remedies such as verde cactus and ginger, and chaparral. Clean the colon area with a high enema of burdock root, yellow dock root, or bayberry bark. Assist nature in its elimination of sugars and body poisons through the skin by taking long hot baths and soaking in the bathtub. Accompany the baths by taking internally diaphoretic teas. Finish off with a cold shower or by sponging with cold water and vinegar. Use the lower bowel tonic herbs [[Fen LB](#)] to help promote regular elimination. Hot fomentation of castor oil, etc., may be used on the spine, stomach, and pancreas areas to obtain relief. The patient should avoid all processed denatured foods and "secondary" foods such as animal by-products--meat, milk, eggs, fish, etc. Herbs such as Irish moss and slippery elm are nutritive mucilages that soothe while they feed the irritated digestive areas. In general, the diet for diabetes should consist of the fresh fruits and tender greens and vegetables "in the season thereof" from the garden, preferably raw or cooked at low heat. Deep breathing and plenty of vigorous outdoor exercise are also vital. [SNH p.16]

See formula using raspberry leaves, myrrh and cayenne. [SNH p.144]

**Diabetes**[Diarrhea](#)[Digestion](#)[Diphtheria](#)[Dizziness](#)[Dropsy](#)[Dysentery](#)[Dyspepsia](#)[Dyspnea](#)[Earaches](#)[Eczema](#)[Edema](#)[Enuresis](#)[Epilepsy](#)[Eye Ailments](#)

**Sumach Berries:** Diabetes, bowel complaints, catarrhal affections of the stomach, fevers. Drink the infusion of the sumac berries alone. [SNH p.158]

**Panc Tea:** Dr. Christopher's Herbal Aid for Pancreas and Companion Glands Formula: An aid to help promote the normal function of the pancreas and other affiliated glands that through malfunction cause high or low blood sugar (namely diabetes or hypoglycemia). This combination has assisted many that have had hypoglycemia after six months or more of using two to three capsules three times a day six days a week (all herbal aids give faster results in six days a week instead of seven) using the same day of each week for rest. They have had a glucose tolerance test with a clean bill of health on the pancreas area. Many reports came in of heavy insulin users who continue using the insulin but by watching litmus paper or other types of diabetic checking, have gradually tapered down on the insulin and many, within a year of using two to three or more three times a day, six days a week of this combination, have reported to have found complete relief. Of course, the closer a person stays on the mucusless diet and eliminates the sugars (unnatural), soft drinks, candies, pastries, bread, etc., the quicker the results. The herbal formula is golden seal, uva ursi, cayenne, cedar berries, licorice root and mullein. [HHH p.95]

**Water:** Persons suffering from obesity or diabetes are sometimes restricted in the drinking of water, with the result that constipation is produced, if this condition does not already exist. This should never be done. [HHH p.141]

**Juices that Help Diabetes:** Carrots & spinach, dandelion, cabbage. [NL 3-5]

**Testimonials**

1. Diabetes and Hypoglycemia Both Cured by [Panc Tea](#): Dr. Christopher's Herbal Aid for Pancreas and Companion Glands Formula One day a man and his sister, both middle-aged adults, came into Dr. Christopher's office. She had severe diabetes, and his hypoglycemia was so bad that doctors' tests indicated that he could not get any worse, without offering any hope to help him. They both were told to use the mucusless diet and to take the pancreas formula, although they took the lower bowel formula [\[Fen LB\]](#) and blood cleansing formula [\[Red Clover Combination\]](#) before they began on the pancreas formula.

The woman was using around 80 to 85 units of insulin a day, being a severe case. Despite her initial condition, within a year her pancreas was furnishing its own insulin, and she tapered off gradually until she didn't need it at all. Her brother took a glucose tolerance test in six months and received a clean bill of health; his hypoglycemia was completely cleared.

Despite the fact that they had opposite diseases, diabetes and hypoglycemia, both were cleared because each had a family weakness in the pancreas. When their pancreas was cleared, the diseases were removed. [EWH p.134]

2. Parsley and Juniper Berries: One gentleman in his sixties was in great distress because he was unable to urinate. The doctor catheterized him several times and told him that he would have to undergo an operation. It was then discovered that the man had sugar in his urine and the operation was deemed too dangerous until the diabetes was under control. The patient's osteopath finally prescribed Parsley tea. The results were astonishing. Not only was he able to urinate freely but every trace of sugar disappeared from his urine. After first drinking the tea a lot of offensive substance came away in his urine. But it soon became normal and the patient was soon playing his normal rounds of golf with enjoyment and with no further thoughts of an operation (Luc:84). To void urine Dr. Christopher specifically recommended combining the Parsley with Juniper berries. [UW-Parsley]

3. Dr. Christopher Discovers Cedar Berries Will Help Cure Diabetes: I had been concerned for years about how to get to the cause, in this condition, and get the pancreas, and other assisting glands, to become healthy and again make its own insulin and control the high or low blood sugar on its own, or as was originally intended.

The breakthrough came a number of years ago by accident (divine providence, I believe). A patient came to me with the problem of "having trouble in voiding his urine." This was years ago when I would mix my formulas, as needed, in my own herb laboratory. As I was in a hurry that

day and did not have time to mix up a regular diuretic formula for him, I told him to use some juniper berries, and, if they were fresh to chew them, or make them into a tea. His response was that he had some growing in his own backyard and would use them.

Weeks later he returned and said the juniper berries were not giving him much help in voiding his urine. Knowing how efficient they really were in doing this, I asked him to let me see the juniper berries he was using. He took some from his pocket (as he carried them around, chewing on them during each day) and showed them to me. I laughed and said those are not what I meant. The true juniper berry I had recommended to him would have five or seven small stones in each berry, but the ones he had been using had only one. It was actually of the juniper family but was a "Utah monostone" cedar berry (*Juniperus monosperma*). It grows in the West such as in Arizona, Nevada, Utah, Texas, and in the national cedar forests but entirely different from our regular juniper berry (*Juniperus communis*; Pinaceae).

When I told him about the "mistake," I gave him some juniper berries which eventually worked and did the job. I was astounded about his reply because after thanking me, he stated he would continue using the cedar berries anyhow. When I asked him why, he said, "Well, since using what you call cedar berries, I have been able to cut down on my insulin as I am a diabetic. I wasn't sure I heard him right (after looking for something like this for years) and asked him to repeat what he had said. Upon his verification of what I hoped he had said, I was very excited and asked him to increase the amount he was using and keep in touch. He did so, and in a few months his pancreas, which had found the right food (cedar berries), was healed and producing its own insulin.

I then tried it on a number of my patients, who were diabetic, with great results! One of them was a lady using about eighty-five units of insulin a day. She was put on the mucusless diet, given the lower bowel formula [Fen LB], and told to use at least six cedar berries three or more times a day. She was instructed to continue on using her insulin but to watch the litmus paper carefully and taper her insulin intake gradually as the litmus paper would act as a gauge. So she had gradually tapered off her insulin and by the end of the year was not using any more. Her own body (pancreas) was supplying it as she required its use. She had no reoccurrence, but of course she stayed on the mucusless diet, because a faulty diet is the cause of pancreas malfunction. We have had remarkable success over the years with diabetes, using this system.

As time went on, we found that some of our ailing pancreas patients, though the sugar and insulin problem was adjusted, would have problems with the pituitary, pineal or adrenal glands. We had not, at this time, taken the thought into our mind that the pancreas doesn't work alone, but is assisted by other glands. When the pancreas was healed, toxic burdens centered more, now, into the other glands. This was the time we added additional herbs to take care of these other glands--and since then they all are rejuvenated and healed together. The formula we have used for years, with success in all age groups from children to old aged patients is as follows: Cedar berries sixteen parts and one part of each of the following--golden seal root, uva ursi, cayenne, licorice root and mullein. [NL 1-6]

4. PC formula and Diabetes: (Panc Tea) In 1979 I discovered I had diabetes. I was in the hospital for a broken leg so they put me on insulin, 45 units each morning. I had heard your cassette tapes and decided that when I got home, I'd try herbs. I use the P.C. formula [[Panc Tea](#)] for diabetes, CA-T [[Calc Tea](#)] and BF&C to strengthen my bones, Naturalax No. 1 and 2 [[Fen LB](#)], and EZ [[Relax-Eze](#)] for my nerves.

In April, 1980, I had gotten so I didn't need insulin anymore. I just kept taking P.C. [Panc Tea] and testing and reducing the units of insulin gradually. Now I don't even need to take P.C. Once in a while I feel the need for EZ [[Relax-Eze](#)] when I've had a busy day. But otherwise, I feel great. I have your large herb book and through it, and the cassette tapes, I am able to help others. [NL 4-7]

## Diarrhea

### Definition

Diarrhea is the abnormal frequency and liquidity of fecal discharges. [HHH p.63]

### Symptoms

A common symptom of gastrointestinal affliction, either from acute infection, inflammation of the mucous membrane, or psychogenic causes. It is characterized by frequent, morbid and profuse bowel evacuations. [SNH p.17]

### Cause

1. Diarrhea is the most severe form of constipation caused by a complete blockage in the lower intestine. Liquids only will come through while solids are retained. The body must be cleansed as quickly as possible or diarrhea will go into dysentery. [SNH p.17]
2. Diarrhea has a number of causes: too much fruit, digestive upset, stressful emotion. It may be the body ridding itself of toxins. It is the most severe form of constipation and should be dealt with immediately. [HHH p.63]
3. Caffeine intoxication, or caffeinism, has symptoms which include among others diarrhea. [NL 4-1]

### Herbal Aids

- Rice Water: Rice water will check the diarrhea as will peach leaves, raspberry leaves, and sunflower leaves. [SNH p.9]
- Peach Leaf Tea or Ripe Peaches: The use of peach leaf tea or ripe peaches themselves will often help stop common diarrhea. Sunflower leaf tea is one of the most potent but must be used in very small amounts. [SNH p.17]
- Plantain: Use a strong tea (steep one ounce of the granulated herb for twenty to thirty minutes in one pint water), inject one tablespoonful three or four times daily (or more frequently in bad cases), and especially after each bowel movement. [SNH p.53]
- See formula for diarrhea using plantain, silver weck and knotgrass. [SNH p.54]
- See formula for diarrhea using bayberry, African ginger and pinus. [SNH p.135]
- See formula for diarrhea using white oak, raspberry and cinnamon. [SNH p.162]
- Infant Syrup for Diarrhea: See formula using bistort, marshmallow, cloves, angelica and ginger. [SNH p.163]
- Witch Hazel: Give a rectal injection of the fluid extract (distilled aqueous extract) or decoction; take internally. [SNH p.171]
- Acute Diarrhea: Give the syrup of Turkey rhubarb according to the dosage specified. See formula for syrup of Turkey rhubarb using turkey rhubarb, sugar and glycerine. [SNH p.185]
- Mucilage of Comfrey: Diarrhea, dysentery, and cough [delicate children]. Give the mucilage sweetened with honey in teaspoonful doses frequently (it helps strengthen, nourish, sooth and heal). See formula doe mucilage using comfrey root, water, honey and glycerine. [SNH p.310]

[Diabetes](#)[Diarrhea](#)[Digestion](#)[Diphtheria](#)[Dizziness](#)[Dropsy](#)[Dysentery](#)[Dyspepsia](#)[Dyspnea](#)[Earaches](#)[Eczema](#)[Edema](#)[Enuresis](#)[Epilepsy](#)[Eye Ailments](#)

Mullein: for diarrhea, dysentery, and bleeding of the bowels. Boil 1 ounce of mullein in 1 pint of milk for a few minutes, strain and give in 1/2 cupful doses after each bowel evacuation (and if you don't have a scale or the time to calculate the equivalent measure, just grab some and go to work). [SNH p.317]

Wild and Domestic Sunflower Leaf: An excellent and easy-to-find herb for diarrhea is the common wild and domestic sunflower leaf. Make up a tea of this, and start giving a teaspoon of the tea at a time. Increase the amount gradually if needed, but not too fast, as it will cause constipation if too much is taken. This is children dosages. [HHH p.64]

Oak Bark Tea: A real life saver is a rectal injection of oak bark tea, also drinking this same type of tea. This works in the most severe cases. We must always go back to the cause, after relieving the effect, by checking the diet. [HHH p.64]

Serious Diarrhea in Children: Should the diarrhea be a more serious nature, keep the child on nothing but teas for six, twelve or twenty-four hours or more, depending on the age of the child. The following herbs are suitable for this purpose: red raspberry, yarrow, oak bark, bayberry bark, sage (garden), mullein, marshmallow, nettle, slippery elm, strawberry leaves, ginger, plantain. [HHH p.64]

Cleansing the Bowels: See the entire appendix in Herbal Home Health Care p.128. [HHH p.128]

Schizophrenia in Children is often characterized by diarrhea. See Dr. Christopher's answer to this in his newsletter. [NL 1-3]

Juices for Diarrhea: Carrot, cranberry. [NL 3-5]

[Colitis](#): This is often accompanied by diarrhea. [NL 4-8]

Vegetables for Diarrhea: Apply cabbage leaves to the abdominal region during the day and a fresh application for overnight and drink a cabbage broth. [NL 4-12]

Vegetables for Diarrhea: Sweet potatoe [NL 4-12] , winter squash [NL 4-12] , and ginger [NL 4-12]

Brown Rice: We have seen serious cases of diarrhea respond most effectively to rice water made by boiling one ounce of rice to one quart of water for 20 minutes, strained and drunk. [NL 5-1]

Fruits for Diarrhea: Apricot, blackberry, blueberry and apple. [NL 5-1]

### Testimonials

Dr. Daniel B. Mowrey, a research psychologist from the NMC Behavior Research and Development Labs, has discovered a formula including Ginger which seems to work extremely well in the treatment of flu. Although he is hesitant to proclaim it as a cure-all, he presents the history of finding this remedy as very interesting. He was not too sure that herbs could break up quite a siege of flu, and spent a few days reading about herbs for the ailment and making up experimental mixtures. He never took any of them, recovering in bed instead. However, his wife caught the bug, and she reported that their herbal mixtures she took seemed to have little effect. The afternoon of the first day of the flu, though she reported a remarkable relief of the symptoms. She took more of the combination and felt even better. She got out of bed and stayed out, taking more of the herbs anytime she began to experience diarrhea and nausea. He was impressed, and tested his formula on sixteen flu-stricken subjects with 100% remission of symptoms. Still, Dr. Mowrey doesn't claim that this combination will work for everyone, but he is very excited about the possibilities. The combination includes Ginger, cayenne, golden seal, and licorice. [NL 7-3]

## Diphtheria

### Definition

A serious contagious disease that produces a poison throughout the body and a false membrane lining of the throat.

### Symptoms

An acute febrile and contagious affliction common with children, characterized by the formation of a fibrous, inflammatory membrane (yellowish or greenish) on the mucous membrane of the air passages, usually the pharynx, larynx, and trachea. The tonsils become inflamed and are dark red, but the uneven swelling gives the appearance of white patches. This is further characterized by pain, swelling and obstruction, fever, prostration, and often cardiac damage, which sometimes results in paralysis and death. [SNH p.18]

### Cause

Diphtheria is caused by impure blood, improper diet or contaminated foods, and unsanitary conditions. A deficiency of organic calcium and vitamin C is the basis for diseases of this type. [SNH p.18]

### Herbal Aids

General Instructions: With diphtheria the throat area should be cleared of the false mucous membrane. Historically speaking, many herbalists have used the following: bayberry and raspberry combination, garlic, or a purified type of turpentine as a fomentation. Take a few drops in a tea. Quick relief is given through antispasmodic and cayenne fomentation on the chest and the lung area. Antispasmodic tincture and cayenne can be taken internally (this will also ward off the danger of paralysis). One should always give an emetic before allowing the patient to go to sleep, and the bowels should be cleaned of the poisons with high enemas accompanied with stimulant herbs. Any of the following may be used as enemas: bayberry bark, raspberry leaves, catnip, chickweed, white oak bark, shepherd's purse, wild alum root, echinacea, strawberry leaves, raspberry leaves. A hot vapor bath is beneficial as is a hot foot bath of mustard and water. Also apply fomentation of mullein and ragwort to the throat. Decoctions of raspberry leaves, mullein, agrimony, bayberry bark or lemon juice will relieve the soreness in the throat. Ample fresh pineapple juice is also very good. [SNH p.18]

Oak Bark: Where one suspects a light attack, a gargle with oak bark, with a little cayenne or composition powder added may arrest further development. [SNH p.139]

See formula using white oak bark, persimmon bark and mullein leaves. [SNH p.140]

Sumac Berries: Infuse the berries for 1/2 hour in a quantity of water, strain and sweeten to taste with honey; mix with fresh pineapple juice; use as a gargle. [SNH p.155]

See formula for fomentation using mullein, cudweed and ragwort. [SNH p.319]

See decoction using mullein, raspberry leaves, agrimony, bayberry, cayenne and myrrh. [SNH p.320]

Cayenne: Apply tincture of cayenne around the neck, then cover with a flannel fomentation of cayenne infusion, and drink cayenne internally. [SNH p.409]

## Dizziness

### Definition

A swimming or swirling sensation of the head; a sensation of lack of equilibrium. [SNH p.18]

### Cause

Dizziness can be caused by constipation when pressure causes the nerves to become impinged. There are many other reasons for dizziness such as the menstrual period, an injury or a fall on the head, compacted sinuses, or blood pressure problems. [SNH p.18]

One vulnerable area in the human body for this "hardening of the arteries" is found in the brain. Regardless of how intelligent an individual has been in the past, when the arteries in the brain area become hardened there is a resulting slowness in thinking, loss of memory, headaches, dizziness, dimming eyesight, paralysis, and one of the saddest conditions of all - senility. [NL 2-1]

### Herbal Aids

[Cayenne](#): Cayenne help promote relief. [SNH p.19]

European Pennyroyal: Apply the tincture preparation with apple cider vinegar to the nostrils. [SNH p.284]

Rue: Chew 1-2 freshly-picked leaves. [SNH p.295]

See formula using valerian, tansy, caraway and rue. [SNH p.378]

Mistletoe: Historically speaking, mistletoe is said to cure stubborn headache, even migraine. The extract is also used in headaches which are accompanied by dizziness, in spells of vertigo when there is a tendency to fall backwards, in people whose gait is wavering, who are afraid of open places, get attacks of "pins and needles" in the limbs and suffer from cold feet (Ibid.). [UW-Mistletoe]

Vertigo: Question to Dr. Christopher in his newsletter. Is there any help for vertigo?

His answer: Yes, it can be helped. This condition of vertigo is, to most people, a frightening condition. As is explained in The American Illustrated Medical Dictionary (Dorland, copyright 1947), vertigo is a sensation as if the external world were revolving around the patient (objective vertigo) or as if he himself were revolving in space (subjective vertigo). The term is sometimes erroneously used as a synonym for dizziness. Vertigo may result from disease of the middle ear (Menere's disease), from cardiac, gastric, or ocular disorders, from some peripheral irritations (as laryngeal vertigo) as a precursor on an epileptic fit, in hysteria, from toxemia (as Bright's disease), from an organic brain disease, and from unrecognized causes (essential vertigo).

Use [B & B Tincture](#) as follows: place four to six drops of oil of garlic in the ear with our eyedropper and follow this with four to six drops of B & B in ear, then plug ear with cotton. Turn the other ear up and do the same as with first ear-plug this one also and leave in all night, or night and day if desired, and flush ears on the seventh day. This is done by using a small ear syringe and flush with warm apple cider vinegar and distilled water (half and half) then continue on. Apply garlic oil and B & B tincture this same way week after week until desired effects are acquired.

Have the patient drink six to ten drops of the B & B tincture three or more times a day. (This could be done each hour in severe cases.) Massage B & B tincture on the cords back of the ears

down the neck area and on the base of the skull (medulla area) several times a day.

The program as given above has aided many having problems with their equilibrium and locomotion. When more severe, in addition use the "bone, flesh and cartilage" formula over the skull area above eyes and ears area soaking and sponging out a cap made of flannel, cotton or wool and leave on the head area overnight, as before, six days a week, week after week until results are received. This fomentation should not only cover the skull area front and sides but also down the back to cover the medulla and down over the upper cervicals to cover the motor nerve area.

This type of a patient with vertigo should also use the nerve herbal food combination [Relax-Eze]. [NL 1-12]

## Dropsy

### Definition

Abnormal and excessive accumulation or infiltration of diluted lymph serum in the interfibrillar spaces of the subcutaneous connective tissue or in the serious (peritoneal or pleural) cavities of the body which do not drain. [SNH p.19]

### Symptoms

This condition is accompanied by swelling, scanty urine, poor appetite, sluggishness, and debility. The swelling usually begins in the feet and ankles and proceeds up the legs towards the abdomen. [SNH p.19]

### Cause

Heavy salt users often have dropsy as do diabetics. We do not pinpoint the symptoms as to locality (hydrocephalus, hydrothorax, ascites, etc.), as does orthodox medicine, but the general problem is that fluid does not eliminate properly through the kidneys and skin. Dr. Edward Shook had the following to say about dropsy: "When sulfuric acid is generated within the organism, it immediately unites with water and swells up. This action produces heat, which expands the capillaries. The osmotic pressure forces the serum through the walls of the blood vessels, producing inflammation and dropsy. Hence the using of inorganic matter is always poisonous to the human organism in spite of all the apparent evidence to the contrary." (Advanced Treatise on Herbs, p.132) [SNH p.19]

### Herbal Aids

General Instructions: Exceptional results have been attained with dropsy by the use of parsley, parsley root, juniper berries, verde cactus, ginger, and chaparral. Diet is the key to eliminating the cause. Meats, pastries, salt, etc., should be avoided. Eat fruits (grapes and coconut especially), sprouts, leafy and green vegetables, (do not mix fruits and vegetables). Use vapor baths and diaphoretics to open the pores, stimulants to increase and regulate circulation, diuretics for kidneys, and be sure to treat the whole digestive system with tonics. Also rub the body with vinegar and cold water and be sure to keep the bowels cleaned. [SNH p.19]

Plantain: Drink the tea from the seeds. [SNH p.53]

Dropsy, Heart Disease: See formula using parsley seeds, lily of the valley root, garlic, sugar and glycerine. [SNH p.102]

Bitter Root: Cardiac dropsy. Give 5-15 grains of powder 3 times daily. [SNH p.209]

Parsley: Make at least 2 quarts of the parsley root strong decoction and drink copiously. [SNH p.246]

Parsley: Mix equal parts of parsley root tea, and glycerine, saturate cloths and apply to swollen areas; keep patient warmly-covered in bed with tepid air circulation (this brings water through the skin and helps relieve the burden on the kidneys). At the same time, give the parsley root tea without the glycerine as a drink, 1/2 cupful each hour. [SNH p.246]

See formula using juniper berries, parsley seed and distilled water. [SNH p.252] For renal dropsy, avoid taking too large doses [of juniper berries], as the stimulating effect may irritate the urinary passages; usually administered in combination with demulcent agents. [SNH p.250]

See formula using wild carrot, haircap moss and watermelon seeds. [SNH p.264]

Dropsy (adult): See formula using cleavers, raspberry leaves, agrimony, juniper berries, wild carrot, barberry and cayenne. [SNH p.269]

Dropsy (child): See formula using cleavers, juniper berries, centaury, raspberry leaves, senna and ginger. [SNH p.269]

Note: ...With dropsy, the kidneys must be watched, but also the digestive system strengthened; also sponging the body with cold water and apple cider vinegar is an excellent skin tonic. [SNH p.269]

[Digestion](#)[Diphtheria](#)[Dizziness](#)[Dropsy](#)[Dysentery](#)[Dyspepsia](#)[Dyspnea](#)[Earaches](#)[Eczema](#)[Edema](#)[Enuresis](#)[Epilepsy](#)[Eye Ailments](#)

See formula using buchu leaves, hydrangea, broom tops, couchgrass, uva ursi and saw palmetto berries. [SNH p.272]

Blue Cohosh: Drink the warm decoction. [SNH p.292]

See formula for the fomentation using mullein, lobelia and cayenne. Foment as warm as is convenient over the lungs, or over the affected part. [SNH p.318]

Dropsy # 1: See formula using horseradish root and apple cider vinegar. [SNH p.424]

Dropsy # 2: See formula using horseradish and crushed mustard seed. [SNH p.424]

Alfalfa: It's no wonder that so many interesting cures are attributed to Alfalfa. It has been acclaimed as a diuretic. In fact, one woman who was suffering extremely from dropsy began to take the tea faithfully, and with no other remedy was relieved of the problem. [UW-Alfalfa]

Elder: The inner bark is also used, although it should be aged before used. The fresh bark is violently irritating and poisonous to children. It is specifically used for cardiac and renal dropsy, as an emetic in biliary disorders, and for spasmodic asthma with copious phlegm and stringy mucus. It is also used for epilepsy. The infusion is used, one wineglassful every three hours until the bowels move or, in the case of severe dropsy, until urine is voided. If emesis is desired to cleanse the stomach, increase the dose until this effect is produced. After evacuation and urination begin, reduce the dose to continue treatment as watery stools are not desired where there is no dropsy. [UW-Elder]

Juniper: The tea has been given to dropsical patients, often combined with parsley seeds, as a sure and safe way to effect water release through the urine and through the skin. In England, patients are often prescribed Hollands Gin, which is flavored with Juniper berries and which retains some of the medicinal properties to help dropsy and similar ailments. It is said to be particularly useful in dropsy when it is caused by heart, liver or kidney disease. [UW-Juniper]

Parsley: Dr. Shook reminded us that Parsley is one of those herbs that have to be taken abundantly to be of any permanent benefit. That is all right because it is such a pleasant herb! He mentioned that when there is suppression of the urine and dropsy a treatment similar to the one described in the introduction as employed by Dr. Christopher could be used but he also said that after applying the fomentation to cover it with a sheet of plastic and a towel, and then with an electric hot pad, leaving this on for twenty or thirty minutes. After removing the hot application, he said, apply a cold but not iced towel for just one minute. He said that this application was very important and not to omit it although Dr. Christopher's treatment got very good results without it (Hei:60). [UW-Parsley]

Rosemary: Father Kneipp, who is known as a water healer but also endorsed other important healing methods, considered Rosemary an important remedy for the heart and stomach. He wrote, "Prepared as a tea, it cleanses the stomach from phlegm, gives a good appetite and good digestion. Whoever likes to see the medicine glass, this comforter in illness, shining on his table, let him fill it with Rosemary tea and take from two to four tablespoonfuls morning and evening. The stomach will soon become sensible, that is, will not stick fast much longer in phlegm...Rosemary wine, taken in small doses, has also proved an excellent remedy against heart infections. It operates in a sedative manner and in cases of heart dropsy it works strongly on removal through the urine...The preparation of this wine is exceedingly simple. A handful of Rosemary is cut up as small as possible, put into a bottle and good, well kept wine poured upon it. White wine is preferable. Even after a half a day's standing it may be used as Rosemary wine" (Luc:109). [UW-Rosemary]

What Can be Done for Dropsy? This was a question put to Dr. Christopher in his newsletter. His answer: For mild or beginning forms of dropsy caused by urinary malfunction, we have the following:

For a severe case let us cite a good case of how it can be handled in most cases.

A lady came into our weekly Tuesday night lecture a little late, after we had barely started. She asked if she could interrupt and tell something that had happened to her since the last lecture, a week ago. We said we'd be happy to hear her story, so she told us the reason she was a little late was because of a long distance phone call she had just received.

Just after the last lecture, the Tuesday before, she received a call from her brother-in-law in Chicago. He told her that if she wanted to see her twin sister alive she had better fly back there immediately because the doctors had said she had only a day or two to live.

Our student took a few days off from work and arrived in Chicago on the following Friday. She went in to see her sister and would not have recognized her if she hadn't been told who it was. Her sister was so badly swollen from edema (dropsy) that she seemed to be only a bloated, unrecognizable mass of flesh. She had been under doctors' care for a number of months, and they had been unable to give her anything but temporary aid from the water accumulation. Now they were utterly baffled and had, at the family's request, sent her home from the hospital to die (being given a day or two or slightly more grace).

The sick and suffering twin was in a coma, not recognizing anyone, and our student cried when she saw her favorite sister lying there helpless, with little school children needing their mother so much, so she asked the

husband if he would allow her to use an herbal routine she had heard about at a lecture recently. He said the family's doctor was just waiting for her to die anyway, so go ahead!

Our lady found a little health food store nearby and bought some parsley root and glycerine (this was animal glycerine, we now use vegetable glycerine which is superior).

When she got back she made up parsley root tea (one teaspoon of herb to a cup of water, or one ounce of herb to the pint of water), making up about one gallon of the tea. (Steam distilled water is 30% more efficient than tap water and is our choice.)

One quart of the tea was used straight to give to this patient orally, and three quarts of the parsley root tea was mixed with equal parts of glycerine (making six quarts of the mixture) for fomentations.

They would give a cup of parsley tea each one half hour to the patient to drink, and the heated combination (of parsley and glycerine) was used as a fomentation over the badly swollen legs, arms and abdomen. This was done by soaking white flannel cloths and laying them over the areas. (Use cotton or wool, never use synthetic cloth.)

As the patient lay there so helpless, her sister remembered instructions given to follow the progress of the treatment. She was to lift the corner of the cloth, after the fomentation had been on for a short time, and watch to see if the pores were starting to take the water from swollen areas. She said that as she looked it was like seeing hundreds of little springs coming from the body. She had made this trip and was walking by faith, using a formula she did not know about or had ever used before. She had just heard of it at our lecture that previous Tuesday. She had to fly back to work on Monday, so she left all the instructions with the husband to continue on with the program that had been started.

After work Tuesday she rushed home to get ready for the regular Tuesday night herb lecture and the phone rang. It was her brother-in-law from Chicago. He said, "There is someone here who would like to talk to you." He put his wife on the phone. Even though she had laid helpless for months and part of the time in a semi-conscious condition, she was on the phone now, so happy she was crying. The swelling had gone down, and she was recovering rapidly--in fact she said she got the children's breakfast and fixed their school lunches that day and was so grateful "to be a mother again"--not a dying patient. There were not many dry eyes in the lecture room that Tuesday night when she finished her story.

Yes, parsley tea is a blessing to people who have dropsy. [NL 1-12]

Dropsy with Heart Involvement: Boil 8 ounces lily of the valley root (cut) (*Convallaria majalis*) in 3 pints of distilled water for 20 minutes. Strain then boil slowly till reduced to 1 pint. Set aside to cool, and while still warm, add 8 ounces of expressed garlic juice, 8 ounces of brown cane sugar, and 1 pint of glycerine. When cold, bottle and keep in a cool place.

This is one of the most potent remedies for dropsy and heart disease ever devised.

Dose: 1 teaspoonful to a dessertspoonful in water, as required. The dose should be regulated and given every 3 hours to bring about diuresis. Also, a slowing of the heart action, and an increase in the tone of its contraction. After this effect has been produced, administer 1 teaspoonful in water 3 or 4 times a day. [NL 2-9]

Juices: Celery, dandelion, carrot & spinach, onion & milk. [NL 3-5]

Lobelia: The relaxant or releasing quality of Lobelia is related in a case handled by an associate, Richard Schultz M.H., N.D., when a three-year-old child was brought to him, after receiving no help from medical doctors. The little girl was swollen so badly with edema that a person could not see her eyes through the puffiness. Schultz administered previously successful herbal diuretics to no avail. Knowing that she must release these fluids, he administered Lobelia seed tea, one teaspoon three times per day, which gave some immediate pain relief and reduced the swelling gradually, clearing the condition completely within two weeks. [NL 6-9&10]

### Testimonials

1. A New Life Through Proper Diet and Herbs: Not long ago, we had an experience that we will not forget for a long time. A gentleman came to visit us on his way through the area with his wife, and when we saw him the previous year on a business deal, he was so bad that rigor mortis had almost set in. In fact, the medical doctors had refused to give him any more medication. He had a heart condition that had gone into dropsy, and his blood pressure was so high that he was just tottering around. There was so much mucus in his body that the tissue was completely loaded to suffocation. At the time, knowing of my profession, he asked what could be done. We started him off with a very simple procedure: We put him on nutritional herbs (fruits and vegetables--our Regenerative Diet) and on Medicinal herbs. Now, a year later, the man had just finished 8,000 miles of touring! He had the finest skin-color you ever saw, and it was a thrill to see a man so full of pep and energy. Tears dropped from his eyes in our meeting, because he was so happy to be alive. These are times that make it worth all of the trouble we have suffered to assure others (seeking vibrant life today or in the future) and to have the legal right to use and obtain healing with medicinal herbs. And here is a living example of our chief message that health begins in the bowel, for when the colon is clean, when we are free from the morbid matter that is toxifying and defiling the system there, then the system can be fed properly, and we begin to live! [SNH p.177]

2. [Hawthorn Berry Syrup](#): Dr. Christopher's Hawthorn Berry Syrup: Hawthorn is also known for its specific action on edema. During one of Dr. Christopher's lectures, a young man asked if he could relate an experience of his mother's. He said that his mother had had such edema in the ankles that they were so swollen you couldn't even see the bones. Many remedies prescribed by various doctors had made no difference at all. The young man asked his mother to come up to the front of the lecture hall and stand on a chair so the audience could see her feet. She now had well-defined ankle bones after less than a week of using the syrup. [UW-Hawthorn]

3. From the Writings of Priddy Meeks about Lobelia: "Brother Nobles' wife was in about one month of her expected sickness and had the dropsy so bad she thought she could not live till that month was out, so that she could be doctored without injury to her offspring. The doctors in the valley held a consultation over her case and President (Brigham) Young with them. They could devise no means to save the woman without destroying the infant, and she could not live but a few days without help, but they would not make a move until they sent for me. When I come, they told me they could not see how the woman could be saved without destroying the child. I told them there would be no difficulty in bringing about that object. They wanted to know if I thought that I could take the water out of that woman and save both alive. I said, 'Yes, certainly I can. And Lobelia is the thing that will do it'. I just give her the Thomsonian Courses of medicine, and soon had all the water out and in due time she had a fine boy, to the joy of all who was watching to see what the result would be. I do not think the medicine is yet found and probably never will be that will act in accordance with the laws of life and the intentions of nature like Lobelia. No difference what the matter is nor where the obstructions are, Lobelia will find it and remove the obstruction and create a healthy action... [UW-Lobelia]

4. Parsley Saves Sister: A lady came into the weekly herb lecture late, just a few minutes after they had gotten started. She asked if she could interrupt and tell something that had just happened to her. Dr. Christopher invited her to tell her story. Just after the last week's lecture she received a call from her brother-in-law in Chicago. He told her that if she wanted to see her twin sister alive she must fly back there immediately because the doctors had given her only a day or two to live. The student took a few days off from work and arrived in Chicago on the following Friday. She went in to see the sister and would not have recognized her if she hadn't been told who it was. Her sister was so badly swollen from edema (dropsy) that she seemed to be only a bloated, unrecognizable mass of flesh. She had been under doctor's care for several months and they had been unable to give her anything but temporary aid from the water accumulation. Now they were utterly baffled and had, at the family's request, sent her from the hospital to die in a day or two.

The sick twin was in a coma, not recognizing anyone. The herb student wept to see her favorite sister lying there so helpless. With little school children needing their mother so much she asked the husband if he would allow her to use an herbal routine she had heard about at a lecture recently. He said the doctor was just waiting for the sister to die so to go ahead!

The herb student found a little health food store nearby and bought some parsley root and glycerine. At that time she was only able to get animal glycerine but now the herbalists use vegetable glycerine which is superior. When she got back she made up Parsley root tea, one teaspoon of herb to a cup of water (or one ounce of the herb to the pint of water), making up about one gallon of the tea. One quart of the tea was used straight to give the patient orally and three quarts of the tea were mixed with equal parts of glycerine, making six quarts total of the combination, for fomentations.

They would give a cup of Parsley tea each half hour to the patient to drink and the heated combination of glycerine and tea was used as a fomentation to the badly swollen legs, arms and abdomen. This was done by soaking white flannel cloths and laying them over the area, not allowing them to become cold, but replacing whenever they cooled down. One can also use a hot water bottle over fomentations if they are not over a large area.

As the patient lay there so helpless her sister remembered how to check the progress of the treatment. She was to lift the corner of the cloth, after the fomentation had been on for a short time, and watch to see if the pores were starting to take the water from the swollen areas. She said that as she looked it was like seeing hundreds of little springs coming from the body. She had never used this routine before and was walking by faith and it was a miracle to see it working. She had to fly back to work on Monday so she left all the instructions with the husband to continue on with the program that had been started.

After work Tuesday she rushed home to get ready for the regular Tuesday night lecture. The phone rang. It was her brother-in-law from Chicago who said, "There is someone here who would like to talk with you." He put his wife on the phone! She was so happy that she was crying. The swelling had gone down and she was recovering rapidly. In fact she said she had got the children's breakfast and fixed their school lunches that day. She was so grateful to be a mother again and not a dying patient. There were not many dry eyes in the lecture room when the student finished the story and it is a great routine to remember. One should store Parsley root or grow plenty of it so as to have it available in an emergency. Vegetable glycerine is also available and should be stored. [UW-Parsley]

## Dysentery

### Definition

An affliction characterized by inflammation of the large intestine or colon.[SNH p.20]

### Symptoms

The symptoms are griping pains, constant strain to evacuate the bowels (tenesmus), intense diarrhea, and frequent discharge of mucus and blood. These are symptoms of impure blood, fever, sleeplessness, lack of appetite, and sometimes a swollen abdomen. In advanced cases, there is pallidness, rapid breathing, slow pulse, and hot urine. [SNH p.20]

### Cause

The cause is improper diet, liquids with meals, overeating, wrong food combinations, impure water, use of liquor, tobacco, coffee, tea, eating fruits or vegetables that have begun to decompose or chronic constipation. [SNH p.20]

### Herbal Aids

**General Instructions:** Bleeding from the bowels is quickly healed by mullein in milk. Give a warm, very high enema with an astringent such as white oak bark, bayberry bark, wild alum root, etc. Use fomentation of lobelia, castor oil, etc., placed on the abdomen and spine, followed by a liniment application of wormwood oil. The patient should be nurtured with a diet of light alkaline foods and mucilage herbs, such as slippery elm and Irish moss, barley or oatmeal water. [SNH p.20]

**Cayenne:** Cayenne will take care of most bleeding problems, external or internal by the time you can count to ten. For bleeding of the lower bowel (commonly called dysentery) use mullein (preferably in milk). [SNH p.5]

**Stems from Constipation:** Diarrhea is the most severe form of constipation caused by a complete blockage in the lower intestine. Liquids only will come through while solids are retained. The body must be cleansed as quickly as possible or diarrhea will go into dysentery. [SNH p.17]

**Sassafras:** Give the mucilage of sassafras pith. [SNH p.79] Mucilage of sassafras pith: See formula using sassafras pith, powdered and distilled water. [SNH p.80]

**Purple Loosestrife:** Give 2 fluid ounce doses as required. [SNH p.91]

**Dysentery (cathartic injection - anal):** See formula using bayberry root bark, African ginger and pinus. Have the patient lie on the right side so that the liquid may readily fill the colon; where the patient has a weak rectum and cannot hold the water, have him take the inclined position with the head lower than the hips; females with a retroverted condition of the uterus may take the knee-chest position, which will help throw the uterus right over and allow the liquid to enter. [SNH p.135]

**Red Oak:** Use the injection in small and frequent doses. [SNH p.139]

**Cranesbill and Golden Seal:** Combine equal parts of cranesbill and golden seal (*Hydrastis canadensis*) and inject a small amount of a strong infusion into the rectum. Diarrhea, dysentery, cholera infantum: Use the injection as required. [SNH p.152]

[Diabetes](#)[Diarrhea](#)[Digestion](#)[Diphtheria](#)[Dizziness](#)[Dropsy](#) **Dysentery**[Dyspepsia](#)[Dyspnea](#)[Earaches](#)[Eczema](#)[Edema](#)[Enuresis](#)[Epilepsy](#)[Eye Ailments](#) White Pond Lily: Use the decoction without sweetening as a cool injection (anal). [SNH p.165] Tormentil: Give 1 wine glassful every 1/2 hour until the excessive discharges are checked. [SNH p.168] Butternut: The astringent alcoholic extract containing properties is best for these problems; use 1-2 teaspoonfuls. [SNH p.177] Thyme: May be taken internally or used externally with amazing and beneficial results. Internally: 1 teaspoonful in 1 cupful of water, sweetened with 1 tablespoonful of honey 3-4 times daily; good for ...dysentery. [SNH p.230] Squaw Vine: Use the infusion or decoction as an anal injection. [SNH p.279] Comfrey: Give the mucilage sweetened with honey in teaspoonful doses frequently (it strengthens, nourishes, soothes and heals). [SNH p.309] Mucilage of comfrey root: See formula using comfrey root, distilled water, honey and glycerine. [SNH p.310] Mullein: Boil 1 ounce of mullein in 1 pint of milk for a few minutes, strain and give in 1/2 cupful doses after each bowel evacuation (and if you don't have a scale or the time to calculate the equivalent measure, just grab some and go to work). [SNH p.317] Marshmallow: Boil the powdered root in milk and drink freely. [SNH p.326] [Fen LB](#): Dr. Christopher's Lower Bowel (Colon) Formula: The injection and enema are useful for helping conditions such as piles, hemorrhoids, colitis, etc., and for cleaning putrid congestions from the intestinal tract as in diarrhea and dysentery. Suppose you have a case of diarrhea--the majority of people want a remedy that will stop it right away. But diarrhea is simply a bad condition in the intestinal tract, where it is so badly clogged that the fecal solids are being held back and only the eliminative liquids are getting through. Would you believe it possible for people to have filth in them four, five, and ten or more years? It is a fact that we have seen with our own eyes. Read much more about cleansing the bowel. [HHH p.131] Juices: Blackberry, cranberry. [NL 3-5] Chill Pepper and "Montezuma's Revenge": In Mexico today, Chilis of various kinds supplement the daily diet and, in addition to providing spice and essential nutrients to an otherwise bland and repetitious diet of tortillas, beans, squash, pumpkins, potatoes and the like, they perform important medicinal functions. Visitors to Mexico often suffer from "Montezuma's Revenge," a particularly devastating kind of amoebic dysentery. However, if they will eat hot chill with their meals the way the native Mexicans do, they will not suffer this disease. Juliette de Bairacli Levy, when living in Mexico with her small children, did not hesitate to let them drink raw milk--a practice frowned upon by most because of the certainty of dysenteric infection. She spiked the milk with a generous dose of Cayenne and the children were never infected. She noted, too, that eventually the children came to relish the hot-tasting milk. It is reported that the Mexicans, who ingest such quantities of Chili that their bodies are infused with it, are not attacked by predatory birds, if they happen to perish by accident in the deserts; vultures won't touch the Chili-laden body. ## Dyspepsia

### Definition

Disturbed or deranged digestion, sour stomach, acid stomach, indigestion, poor assimilation. [SNH p.21]

### Cause

Dyspepsia is a hyperacidity condition in the body, where certain cooked and secondary substances cannot be digested. The problem may also be with the liver, or the gall bladder. This is caused by eating processed and devitalized foods. [SNH p.22]

### Herbal Aids

General Instructions: Instead of using those aids which are highly advertised and are high in aluminum, which cause aluminum poisoning, use the herbs for the nerves, stomach and bowels. Carminatives will assist the stomach herbs to improve elimination. Alternatives will cleanse the blood and tone up other excretory organs. Stimulant-diuretics will help eliminate waste matter that may be causing the problem. Demulcents or emollients will soothe the irritated stomach lining. [SNH p.22]

See formula using wormwood, shavegrass, aniseed and thyme. [SNH p.109]

See formula for decoction using cascara sagrada and water. [SNH p.176]

See formula for compound using mandrake root, ginger root and glycerine. [SNH p.196]

Elecampane: Give in small and repeated doses. See information about this herb. [SNH p.342]

See formula using lobelia, cayenne, acacia vera and anise seed. [SNH p.364]

See formula using American Colombo, golden seal and leptandra. [SNH p.436]

Golden Seal: 10 grains of the powdered root; or a tablespoonful of decoction 3 times daily; or 1-2 teaspoonfuls of tincture 3 times daily. [SNH p.438]

Juices: Carrot & celery, papaya, pineapple. [NL 3-5]

Vegetables: Jerusalem Artichoke, cabbage, celery, potato, radish, squash. [NL 4-12]

Spices: Caraway and cloves. [NL 4-12]

Echinacea: Echinacea is a good herbal aid for fermentative dyspepsia. It helps remove the gastric pains and allay the offensive breath due to this condition. It is also good for offensive gas. [NL 6-12]

Papaya: Papain can digest about 35 times its weight of lean meat and 300 times its weight in egg albumin. This is considered important because these heavy proteins as well as those in beans, peas, nuts, and lentils are often difficult to digest and putrefy more quickly in the digestive tract causing gas, foul mouth taste, foul breath, constipation, sour stomach, and heartburn. [UW-Papaya]

1. Kelp: Dr. Powell also had a woman come to him with a severe case of dyspepsia which would not respond to the usual treatment. Kelp proved to be an efficacious remedy in this case.

[UW-Kelp]

2. Kelp for Digestion: Another lady had suffered from digestive trouble for many years, suffering pain from even the smallest meal, vomiting frequently. She had spasm of the pylorus as soon as food entered her stomach. After prolonged treatment and constant failure with various remedies, the doctor tried Kelp. She experienced gradual relief and is now in a fair state of health.

[UW-Kelp]

3. Lobelia, Cayenne and Ginger: "One widow woman who had the dyspepsia was so bad that she was given up to die by the doctor who had attended her for near a year, and said she could not be cured. She sent for me to come to see her, which I did. She told me to try and cure her if possible. To do my best anyway and if I killed her it would only be death anyhow, for she knew she could not live long if she did not get help. So I went home to prepare for doctoring her, and Doctor Vendeenter, who had given her out, hearing I was going to undertake her case, come to see me. 'Mr. Meeks', says he, 'you had better not undertake that woman's case. That complaint cannot be cured, and you will fail and you will lose practice by it. The remedy for that complaint is not known. Search has been made for it as far as ships have sailed on the ocean, and human feet have trod the soil, and the remedy is not found yet'. I paid the woman five visits and made a sound woman of her. And what did I do? Nothing more or less than gave her a thorough course of Thomsonian Medicines each time. I know no other way to doctor at that time but to follow the letter of directions. I had nothing but kayenne pepper and ginger for my composition powder and Lobelia, and as I went along, gathered green Sumac leaves off the bush, which answered well for kanker medicine and to make a tea to put the medicine in for her to drink...This circumstance being noised abroad brought me as much business with the sick as I could attend to.

[UW-Lobelia]

4. Papaya: One herbalist, whenever he "pigs out on eggs or meat", brews a cup of Papaya leaf tea mixed with spearmint and camomile or if he's in a hurry (which, he mentions, is the worst cause of indigestion), he takes a Papaya-papain enzyme tablet. This removes the indigestion well.

## Dyspnea

### Definition

Shortness of breath or a difficulty in breathing.

### Symptoms

Difficult breathing. [SNH p.22]

### Cause

This usually arises from mucus in the air passages in the trachea, the nostrils, lungs, etc. [SNH p.22]

### Herbal Aids

General Instructions: Take a cup of cayenne tea and antispasmodic tincture internally and massaged on the chest area. With a breast-fed baby, the mother should take a tea of balm, hyssop, or pennyroyal. For the baby, where the problem is largely in the nose (sometimes referred to as snuffles), a mixture of milk and olive oil in the nose is good. The bowels may need to be relieved with a small injection of lobelia. [SNH p.22]

See formula for garlic syrup using garlic, apple cider vinegar and sugar. [SNH p.101] See dosages. [SNH p.100] See more dosages for dyspnea using garlic syrup. [SNH p.100]

## Earaches

### Definition

Pain or aching in the ear. [HHH p.64]

### Symptoms

This can be a painful condition for all ages. Little babies rubbing and pulling on their ears are not able to tell you, orally, what is wrong. Children and adults also suffer from the same condition. [HHH p.64]

### Cause

Sometimes earaches are caused by infection, cold in the head, a blow to the side of the head, and many other causes. [HHH p.64]

### Herbal Aids

**Garlic:** Earache, inflammation of the middle ear, ear disease: Pack a small clove of garlic in gauze and place into the external ear passage; or drop 4-5 drops of [Oil of Garlic](#) into the ear channel, cover with flannel, and keep warm. [SNH p.100]

**Rue:** Warm and place several drops of compound oil into the ear. [SNH p.296]

**Mullein:** Use warm mullein oil, 2-3 drops in the ear 2-3 times daily. Apple cider vinegar is also a healing agent. [SNH p.317]

**Hops:** Apply a flannel bag of hops, and moist heat over the affected area. [SNH p.396]

**Treat Both Ears:** The simple, old-fashioned aids are sometimes very fast in giving relief. Always treat both ears, even if only one aches. [HHH p.64]

**Onion:** Lightly bake a large onion, cut it in half and while warm (not hot enough to irritate the area), bind one half of the onion over each ear. Bandage in place and hold bandage on with a nightcap, white skullcap, etc., and leave on all night. [HHH p.64]

**Camomile:** Use a fomentation over both ears of three parts of camomile and one part of lobelia. Take two ounces orally (a wineglass full) each two waking hours. Leave the fomentation on the ears all night. (Cover fomentation with plastic or oiled silk, etc.). [HHH p.64]

**Mullein:** Use three to six drops of mullein oil in both ears several times each day. Insert it upon retiring for the night, and, as before, plug the ears with cotton. Place a fomentation over the ears all night of three parts mullein and one part lobelia. [HHH p.64]

**B & B Tincture:** Dr. Christopher's Nervous System Formula with Black Cohosh: When this procedure is used as explained here, it can be helpful in promoting an improvement of poor equilibrium, failure of hearing, aiding the motor nerve, etc. With an eye dropper insert into each ear at night four to six drops of oil of garlic and four to six drops of the following herb tincture: blue cohosh, black cohosh, blue vervain, skullcap, and lobelia (B&B), plugging ears overnight with cotton, six days a week, four to six months, or as needed. On the seventh day, flush ears with a small ear syringe using warm apple cider vinegar and distilled water half and half. [EWH p.200]

**Flaxseed Meal and Blue Vervain:** Made into a poultice with flaxseed meal, using a strong

infusion of Blue Vervain instead of plain hot water, it relieves ... earache and ear abscess as well. [NL 5-10]

### Testimonials

1. **Garlic:** When my little girl had an earache I put a piece of fresh garlic in her ear and it was better by morning. The previous alternative was to go to the doctor and pay a lot of money for penicillin. [NL 4-4]

2. **Ant-Plg:** Dr. Christopher's Immune System Support Formula: The anti-plague formula contains Black Walnut. When Dr. Christopher was lecturing in Snowflake Arizona, he was describing the need for people to be prepared for the coming plagues in the last days.

Someone raised his hand and asked what should be used for the plague. Dr. Christopher, though he was a most noted herbalist, didn't have a ready answer! After a short prayer, he gave the anti-plague formula to the audience and then just forgot about it. Not long after, people began asking him for the formula again, as those at the Snowflake lecture had made it up and had, had marvelous results; they had cleared up flu, earache, eruptive diseases, car-sickness, and had even saved the life of a poisoned puppy! This anti-plague remedy is a most valuable combination. [NL 5-7]

## Fever

### Definition

The elevation of the body temperature above normal (98.6 F., 37 C).

### Symptoms

It is characterized by increased heat, accelerated pulse, general functional derangement, and usually is accompanied with thirst and loss of appetite. [SNH p.23]

### Cause

Fever is not a disease but a condition in the body wherein the balance of circulation has become disturbed. This is nature's way of trying to burn out the toxic poisons. When the body becomes exposed to excessive chilling or dampness, the capillaries near the surface contract and the pores close by becoming obstructed with body waste matter. This results in a containment of body heat and a sudden rise of body temperature. In fever the natural body function is to increase the heat to a point wherein the thick glutinous and fibrinous matters loading and congesting the system are made liquid enough to pass through the fine and delicate excretory membranes and tubules. [SNH p.23]

### Herbal Aids

General Instructions: If the fever is from cold or flu, eliminate the mucoid condition and eliminate the problem. Raspberry, and other sweetening herbs, are very beneficial. Raise the body heat with moisture, a stimulant and diaphoretic herbs so the restricted blood vessels relax, the obstructed pores open, and the morbid material washes out in the subsequent profuse perspiration. [SNH p.23]

Echinacea: Fever, typhoid fever. Drink sufficient of the hot tea to induce diaphoresis, and administer hourly thereafter until the system is relieved of stagnated wastage. [SNH p.89]

See formula for the Four Greater Cold Seeds remedy for catarrhal affections, bowel and urinary disorders, fever, etc. using pumpkin seeds, ground seeds, watermelon seeds and cucumber seeds. [SNH p.126]

Camomile: Colds, bilious fever. Give a warm infusion with a little ginger added. [SNH p.219]

See formula using pleurisy root and ginger. [SNH p.221]

Boneset: Influenza, colds, fevers, etc. Give the patient 1/2-1 teacupful hot, every hour until freely perspiring and the fever begins to subside- then give in smaller dose as a tonic (cold) every 2-3 hours and keep closely-covered in bed 24-48 hours until all signs of the fever are gone. [SNH p.225]

See formula for fever, (opens pores, equalizes circulation), inflammation of throat using hyssop, vervain, raspberry, centaury, and cayenne. [SNH p.232]

Fever Compound: See formula using catnip, pleurisy root, lobelia and composition powder. [SNH p.237]

Fever Tonic #1 (tincture): See formula using Peruvian bark, wild cherry, cinnamon and

[Hernia](#)[Hiccoughs](#)[Hypoglycemia](#)[Hysteria](#)[Impotency](#)[Incontinence](#)[Indigestion](#)[Infertility](#)[Inflammation](#)[Influenza \(Flu\)](#)[Insect Sting](#)[Insomnia](#)[Itch](#)

cayenne. [SNH p.444]

Fever Tonic #2 (tincture): See formula using Peruvian bark, wild cherry, cinnamon, cloves, nutmeg and brandy. [SNH p.444]

[Cold Sheet Treatment](#): A fever is given to a person to assist in healing the body which has an over-case of toxicity which is causing a disease (lack of ease). Fever is like a fire, which can warm your body and save your life, or burn your house down and kill you. If the fever is properly controlled and skillfully handled it will clean the poisons, toxins and surplus mucus from the body and bring on a healing crisis. If not controlled properly the fever can kill the patient. See the instructions for the nine step [Cold Sheet Treatment](#). [HHH p.70]

See entire Appendix on Fevers: Their causes and their Aids in Herbal Home Health Care. [HHH p.170]

When a Fever Just Gets Started: it can be cleared up very easily, if these following procedures are started early. One of the most simple remedies is to stop the use of all foods and beverages, take a high herbal enema (catnip is good) and drink only red raspberry tea. Between cups of this tea, distilled water may be used, and if desired, give some good organic (natural) Vitamin C. Drink several quarts of red raspberry tea during the day, but no solid foods. The running nose, fever, headache and weariness will soon leave and one will feel like a new person. Even after feeling greatly improved, continue on with the red raspberry leaf tea all that day and well into the next day. If an adult will stay on the tea for three days, it would do a wonderful cleansing job for the body. To make red raspberry leaf tea put one heaping teaspoonful of cut or granulated (powdered) raspberry leaves into a teacup. Fill the cup with boiling distilled water, cover and let stand in a warm place for five or ten minutes. Strain, and drink it while it is very warm (You may use an ounce of red raspberry leaves to a pint of distilled water, if desiring to make up more at a time). [NL 3-1]

Elder Flowers and Peppermint: When taken alone, elder flowers are inclined to be an emetic, and somewhat nauseous to some people. The effect can be prevented by combining them with peppermint (*Mentha piperita*). Peppermint is a stimulant, nervine, calmative, and antiemetic, which offsets the undesirable effects of elder flowers. This combination is world famous as a great fever and cold remedy. [NL 3-1]

Blue Vervain: Blue Vervain is a powerful sudorific; taken in warm infusion it will produce profuse perspiration and efficiently break a fever. (Capsules taken with water can have the same effect) (Hut:59). It is especially effective in intermittent fevers and is said to cure colds overnight (Klo:59), possibly due to its tonic and hepatic properties. Give hot as a febrifuge while the patient is closely covered in bed, every hour or so until perspiration flows and the fever breaks. This is much better than artificially breaking the fever with aspirin or other such drugs, for a fever broken through perspiration will cleanse the body, but a fever treated with medicines will weaken the body and render it susceptible to further illness. Be sure, however, that high fevers are kept moist, that is, that the patient drinks copiously and is kept covered, for a high, dry fever can kill. Needless to say, a powerful sudorific such as Blue Vervain is excellent used in Dr. Christopher's [Cold Sheet Treatment](#). [NL 5-10]

### Testimonials

1. Yarrow: If the array of so-called remedies of orthodox medicine were any good, there would be no sick left. How different is this to the simple methods of the old-time herbalist. He saw a patient who was fevered. He did not even take the temperature. Often he did not know what a clinical thermometer was. But he knew there was fever. He placed a handful of yarrows in a jug, poured a pint of boiling water over it, and after allowing it to stand a few minutes, gave the tea to the patient as warm as it could be drunk. The result was a free perspiration. Congestions were removed; the circulation was equalized. The patient-treatment was easy, the results were sure and the remedy was safe, simple and natural. We know as we write this that yarrows is just the same today as it was a thousand years ago. [SNH p.216]

2. Yarrow for Dr. Christopher's Daughter: Two years ago while away at a summer camp my daughter caught a severe cold. When I went to the island for the weekend I found her in bed with

a high temperature, headache, and the general symptoms of influenza or la grippe, the body aching and in a most restless condition. I had noted some yarrows growing a little distance from our cottage and went and gathered a handful. I did not weigh it. I had no scales. It was not necessary. It was not a harmful drug. I placed a bunch of the whole plant in a jug and poured over it about one and a half pints of boiling water, covered it for about five minutes, then poured off a cupful of the warm tea. I gave this to my patient who, by the way, insisted that she would vomit if I made her drink the whole of it. I merely told her that if the stomach rejected it, the result would be a cleaner stomach for the next dose. She drank the cupful, I went into the kitchen and poured off a second cupful of the warm tea and gave this to the patient. She got it all down, and in a few minutes was perspiring freely. In half an hour she informed me she felt better and in the morning she was completely recovered. You ask me what would I have done if there had been no yarrows there. I would have looked for sage, peppermint, hyssop or any other of the half a dozen other herbs which will do the work. [SNH p.216]

3. Discovery of the Powers of Peruvian Bark for Fevers: The story is told that an Indian was cast out from his tribe when he had a high fever; a jungle fever that was thought by tribal associates to be highly contagious and fatal. And, as was their custom, he was cast out from among his people, and it was believed that he would soon die. But, as he crawled on his hands and knees through the dense jungle, in a state of delirium and trying to find water (as his fever had him to the point where he was literally dying from thirst), he found a pool of water. A tree had fallen into the pool and the water was very bitter, yet he was thirsty enough that he didn't care--it was water! After a short time, the fever left. So he went back to his tribal friends and loved ones, to their great astonishment, and he told them about the miraculous powers in the "healing waters" that had saved his life. So these Indians discovered the source of these bitter waters and to use the bark thereafter for fevers and other afflictions, and they found it to be marvelously healing. And from here, the fame of this great bitter, yet curative herb spread abroad, with many other effective cures resulting. [SNH p.445]

4. Water Cure: An old story of the first written instances of the water cure is as follows: Many years ago a peasant was heading home on foot, with miles to go. He was racked with fever, colds, and lumbago. While crossing a stream, over a log for a bridge, he slipped and fell into the icy cold water and was drenched to the skin. It was a bitterly cold day and the man had to walk home in the cold in sloppy wet clothes. By the time he had arrived home, his clothes were nearly dried out. The fevers and heat in his body had been raised, while hurrying miles home, to a point of healing climax and was down to nearly normal at the end of his journey. The lumbago and fever were gone and he rejoiced! The next time he got lumbago and fevers he knew the cure--he would return to the stream, fall in and walk home again. [HHH p.70]

5. Lobelia: "Another incident I will relate while I was cutting up the lap of a large oak tree, together with a man named Jackson, as it was our day to work tithing. We were strangers to each other. It was hot weather and very sickly. Some would take the fever and die before the news would get circulated. Early in the day he suddenly took a very high fever; it was a very serious case and he was very much alarmed about it. I told him that there was a little weed growing around I thought might do him good. He eagerly wished for it. It was lobelia of the first year's growth. Some not much larger than a dollar and lay flat on the ground. I got some of it and told him to eat it, just like a cow would eat grass and he did so, and in a few minutes it vomited him powerfully and broke the fever and he finished his day's work. I mention this to show you what virtue there is in lobelia." [NL 2-11]

6. [Antsp](#): Dr. Christopher's Anti-Spasmodic Tincture: My main reason for my letter is: My neighbor's little son of 3 ½ had a fever of 104 F. for three days. I brought him one cup of honey-cider vinegar and water and the antispasmodic tincture. He drank ½ cup of the mixture (1 tsp. of each) took ½ dropper of the tincture and in three hours the fever was broken--his mother thought it was a miracle. So do I. [NL 3-7]

7. Intermittent Fever: Dr. Millspaugh wrote of an experience a physician friend of his had with this valuable Indian remedy: When he was a young man, he was attacked with intermittent fever,

which lasted off and on for three years. Being of a bilious temperament, he grew at length sallow, emaciated, and hardly able to get about. As he sat one day, resting by the side of the road, an old lady of his acquaintance told him to go home and have some boneset "fixed," and it would certainly cure him. (He had been given, during the years he suffered, quinine, cinchonine bark and all its known derivatives, as well as cholagogue, and every other substance then known to the regular practitioner, without effect; the attacks coming on latterly twice a day.) On reaching home, with the aid of the fences and buildings along the way, he received a tablespoonful of a decoction of boneset evaporated until it was about the consistency of syrup, and immediately went to bed. He had hardly lain down when insensibility and stupor came on, passing into deep sleep. On awakening in the morning, he felt decidedly better, and from that moment improved rapidly without further medication, gaining flesh and strength daily. No attack returned for twenty years, when a short one was brought on by lying down in a marsh while hunting. [NL 4-11]

## Flatulence

### Definition

Gassy condition in the alimentary canal, especially the gastrointestinal tract. [SNH p.24]

### Cause

Flatus (which is gas or air in the gastrointestinal canal) is the result of poor digestion. The food becomes fermented and sour in the stomach due to an acid condition. This is caused by wrong food combinations, drinking with meals, hasty eating, or poor mastication. [SNH p.24]

### Herbal Aids

**General Instructions:** There are a number of herbs that will help relieve gas. Some of the best are wild yam, celery seed tea, and peppermint or spearmint teas. Carminative teas are specifics for the stomach area to soothe the flatulent condition and to correct the digestive functions. Golden seal with myrrh is an excellent stomach tonic. [SNH p.24]

**Sassafras:** Pains and spasms in the region of the hearty flatulence. Give the warm infusion. [SNH p.79]

**Garlic:** Hysteria, flatulence, sciatica. Give an infusion of garlic in hot milk and water. [SNH p.99]

**Dr. Coffin's Stomach Bitters** is an excellent compound to help correct the bile, create appetite and correct flatulence. See formula using bayberry, balmony, white poplar, ginger and cayenne. [SNH p.136]

**Thyme:** Stomach weakness, dyspepsia, flatulence, spasms, diarrhea. Give a cold infusion of thyme. [SNH p.229]

See formula using spearmint and ginger. Give an infusion, and add ginger to intensify and accelerate the action [SNH p.240]

See formula for Babies soothing syrup (stomach and bowel pains, aches, cramps, colic, spasms, convulsions, flatulence, common ailments) using parsley seed, caraway seed, rhubarb, cinnamon, sugar, essence of peppermint and water. [SNH p.248]

See formula for flatulence ginger and baking soda. [SNH p.415]

**Ginger:** Place poultice of Cloves over stomach. [SNH p.420]

**Intestinal Flatulence:** See formula using calumba root, ginger and senna. [SNH p.434]

**Indigestion, Heartburn, Flatulence, Stomach Pains** See formula using centaury, agrimony, barberry, calumba and raspberry. [SNH p.450]

**Colic, Flatulence** See formula using myrrh, nutmeg, cayenne and brandy. [SNH p.456]

**Catnip & Fennel:** Dr. Christopher's Catnip and Fennel Tincture: A blessing for infants. A fine combination helpful for colic, biliousness, flatulence, spasms, etc. Use a few drops, or as much as needed, when desired. [HHH p.196]

**AT-GS:** Dr. Christopher's Anti-Gas Formula: Contains fennel, wild yam, catnip, ginger, peppermint, spearmint, papaya, lobelia. This formula was designed to help relieve flatulence.

[Hernia](#)[Hiccoughs](#)[Hypoglycemia](#)[Hysteria](#)[Impotency](#)[Incontinence](#)[Indigestion](#)[Infertility](#)[Inflammation](#)[Influenza \(Flu\)](#)[Insect Sting](#)[Insomnia](#)[Itch](#)

[HHH p.197]

[Peppermint](#): Many people, because they lack sufficient enzymes, or do not chew their food properly, or eat improper combinations of foods or improper foods, suffer from flatulence. Some foods, such as the legumes, contain chemicals which cause gas formation in the system, although certain methods of cooking them can reduce the gas considerably. However, many people take a cup of Peppermint tea after meals as insurance against flatulence. Taken with meals, it will help assist digestion generally (Bethel:134) and is much a preferable beverage for everyday use instead of coffee or tea, which hinder proper digestion and cause health problems generally.

[UW-Peppermint]

[Sage](#): Fresh leaves were crushed, strained and mixed with lukewarm water for stomach distress or were chewed for flatulence. [UW-Sage]

[Juices for Flatulence](#): Celery, carrot. [NL 3-5]

[Vegetables for flatulence](#): Carrot, beet greens, Jerusalem artichoke. [NL 4-12]

[Cayenne Tea](#): Drink the tea if you have problems with flatulence. [NL 6-3]

### Testimonials

1. [Fen LB](#): Dr. Christopher's Lower Bowel (Colon) Formula: I must tell you why I am subscribing to your newsletter. My confidence in you arose from the most remarkable help I received in the use of your Fen LB (incidentally, I am 73 years old).

For years I have suffered from gas and flatulence to an extreme degree--with no answer or relief from my own physician nor a specialist to whom he referred me. After the first day of use of your herbal formula, I had relief which has continued consistently for the month I have been taking it. [NL 2-2]

2. Not a Heart Attack - Only Gas: One particular woman was worried that she was dying of a heart attack. Dr. Christopher checked her eyes and told her that there wasn't anything wrong with her heart; in fact, it was in excellent condition. He wished his own heart were as good as hers! He assured her that she was not having a heart attack.

She was somewhat belligerent: "Well, don't tell me, I should know, it's me that's having them. I can be washing dishes and all of a sudden, my heart will stop beating and I fall on the floor and pass out. Or I'll be walking down the street, shopping, and pass out. They rush me to the hospital, and I always come to before anything is done, like operations."

Dr. Christopher told her she hadn't any heart problems at all, but that she did have a condition on her descending colon, where she had a bowel pocket, a gas pocket, and whenever she got gas in that, it pushed up against her heart valves and cut the heart off. That is why the heart would stop, because of the gas pressure. She said that she was having a heart pain right then and that the heart was constantly troubling her. She was afraid she would pass out.

He told her to hang on, and he called on the intercom to the laboratory, where they always had hot water ready. He had them mix up a teaspoon of wild yam and a cup of hot water. Within a very short time he strained out a cup of wild yam tea for the woman. She was just about ready to pass out. She took a couple of drinks of the tea and started to burp. Finally the gas was completely relieved.

After taking Dr. Christopher's advice and not gulping her food, but chewing more thoroughly, using wild yam as she needed, she got over this problem and never had another attack. [EWH p.126]

## Flu

### Definition

Any viral infection of the intestinal or breathing system.

### Symptoms

An epidemic affliction, characterized by catarrhal inflammation of the mucous membranes of the throat and bronchi, accompanied by mucopurulent discharge, fever, vascular prostration, and severe neuralgia pains. Complications of pleurisy and neuritis may appear. This condition is characterized by chilling, stuffy head, dizziness, sneezing, loss of appetite, fever, coughing sore throat, etc. [SNH p.24]

### Cause

Flu is an advanced cold condition. A body catches flu when it is full of waste matter and toxins through lowered vitality and by body exposure to cold and dampness. This is due to mucus in a weak spot in the body--in this case, the respiratory tract. The contributing factors to this weakness are shallow breathing and a lack of oxygen to that particular area. [SNH p.24]

### Herbal Aids

**General Instructions:** The fastest way in eliminating this body condition is by proper diet and rest, and by flushing the body system with diaphoretics. Take a ginger bath (using up to a pound of ginger to a tub of water), or a mustard-cayenne bath with [cold sheeting](#). The antispasmodic agents help relax the constricted cell structure, loosen and discharge the mucoid matter. Fruit juices (especially hot lemon juice) should be taken alternately with the herbal teas. After the cleansing crisis, the body system should be built up with tonic herbs and with nutritious, non-mucus forming foods. [SNH p.24]

**Colds, Pneumonia, Flu:** See formula using pennyroyal and elder flowers. [SNH p.285]

**Peppermint and Elder Flowers:** For one of the greatest flu remedies there is, see formula using peppermint and elder flowers. [SNH p.419]

**When You Feel the Flu Coming On:** Another simple procedure for if you feel a cold or flu coming on in the evening, use boneset tea. This herb is a nervine stimulant, tonic, diaphoretic, diuretic, and in large doses, emetic, aperient. Here is another wonderful formula to help the body break a chill in intermittent fever (so-called break-bone fever), muscular rheumatism, bronchitis, influenza, dyspepsia, sore throat, etc. [HHH p.53]

**Herbal Composition:** Dr. Christopher's Herbal Composition Power: As Dr. Nowell, our instructor at the Dominion Herbal College, Let. of Vancouver, British Columbia gave in our textbook, quote: "We have made and used composition powder for over forty years. When we state we regularly mixed it in batches of sixty pounds the student will readily see that we have had at least some experience with it. As a helpful formula for colds, beginning of fevers, flu, hoarseness, sluggish circulation, colic, cramps, etc. We believe it has done more good than any other single preparation ever known to man." [HHH p.189]

**INF Combo:** Dr. Christopher's Anti-Infection formula: Composed of plantain, black walnut, golden seal root, bugle weed, marshmallow root, and lobelia is great for the cleansing of the lymph system as well as purifying the blood and fighting infection. [NL 4-1]

Lemon Juice: The symptoms of flu may be relieved by drinking lemon juice in warm water several times daily. [NL 5-1]

Ginger: Ginger tea is often given in cases of colds and flu. It will help produce perspiration and increase circulation, thus helping to speed the removal of toxins from the body. A favorite treatment in colds, flu and bronchitis is the Ginger bath. Simply add three tablespoonfuls of the grated root powder to a tubful of hot water. Let the person soak in the tub, adding hot water occasionally to keep the tubful good and hot. Give sips of diaphoretic teas during this soak (camomile is pleasant and well-accepted by most sick people). Be sure to coat the genitals which will be immersed with Vaseline or any other non-penetrating coating so that the herbs will not irritate them. You can add cayenne, mustard or other rubefacient herbs to this soak. It helps relax the body as well as opening the pores and stimulating elimination. By all means keep the patient warm after this soak. Put him into warm, clean cotton under clothes and bedclothes and put him to bed. Ginger baths are well-accepted even by children. [NL 7-3]

### Testimonials

1. Overnight Recovery for Flu: If the array of so-called remedies of orthodox medicine were any good, there would be no sick left. How different is this to the simple methods of the old-time herbalist. He saw a patient who was fevered. He did not even take the temperature. Often he did not know what a clinical thermometer was. But he knew there was fever. He placed a handful of yarrows in a jug, poured a pint of boiling water over it, and after allowing it to stand a few minutes, gave the tea to the patient as warm as it could be drunk. The result was a free perspiration. Congestions were removed; the circulation was equalized. The patient-treatment was easy, the results were sure and the remedy was safe, simple and natural. We know as we write this that yarrows is just the same today as it was a thousand years ago. [SNH p.216]

2. Red Raspberry Leaf Tea Helps the Entire Family: A lady called Dr. Christopher when he was in Great Falls, Montana. A patient of his, she was really worried because a couple of their children had come home from school with the stomach flu. This particular flu was spreading very rapidly; when people get it, the whole family gets it. She had eight children--and only one bathroom!

He answered, "The last time I was over at your house, I noticed you had a large patch of red raspberries."

"Yes, but what has that got to do with the stomach flu?"

"Go out and gather several bushels of leaves of the red raspberry bushes; don't rob any of them, but just take a little off each bush. Make it up into a tea. Take a big handful and pour a pint of boiling water over that portion and let it steep for twenty minutes. Make up gallons of it. For the children that have already come home with the flu, give them some as well, and you and your husband, too. If they're hungry, give them this tea. Give them lots and lots of it."

The lady was willing to try anything. And the next time he saw her, she was very happy. She said the two children that had come home sick, just like the rest of the children, might have been out of school for days, maybe weeks. Yet they went to school the next day, along with the rest of the children. She and her husband didn't catch flu, either. Red raspberry tea cleared the sick ones and kept the others from getting sick.

This lady was so enthused about herbs that she decided to study more about herbs. She continued to study, but continued to have her family as well, so that by the time the last one was weaned, she had sixteen children. She then went back to school, to Brigham Young University in Utah, where she got her degree as a registered nurse. She served as a nurse, helping other people.

Once, one of Dr. Christopher's students had broken his leg and was lying in the hospital, in a great deal of pain. The curtain opened, and a little lady put her head through; she had a white nurse's cap on. She said, "You broke your leg? If you want to get healed fast, use lots of comfrey tea." [EWH p.122]

3. Dr. Christopher's Son: David used the raspberry leaf tea and cleared an impending case of flu in just one day. He was so delighted that he took his wife out to dinner--and they ate the wrong

things. His flu came back strong as ever the next morning. He tried the raspberry tea again, but it didn't work. So he had to use the anti-plague formula which, he said, tastes so nasty that any self-respecting germ will leave just because of the unpleasantness. [EWH p.122]

4. [Ant-Plg](#): Dr. Christopher's Immune System Support Formula: While lecturing in Snowflake, Arizona one night, one of the group asked if we had an anti-plague formula, and I was prompted to give them a "certain combination" of herbs to use.

The people there were very impressed to go right to work and prepare this liquid, having it read for use. We had told them that plagues come at unexpected times and it could be tomorrow or maybe even years away, but expect the unexpected and be ready now. If the formula was still unused, from "no need" years later, we could all be happy but "TIS BETTER SAFE THAN SORRY".

These good people made it up in gallon lots and had it on hand. Months later while speaking in Tucson, Arizona, someone asked for the "anti-plague remedy." I was surprised and asked where they had heard of it, as we had only given it out once. We were informed that a plague-like condition or flu had hit the Snowflake area and when other aids failed, this combination of herbs in liquid form performed its job with amazing speed. [NL 2-9]

## Gallstones

### Definition

A stone formed in the biliary tract consisting of bile pigments and calcium salts.

### Herbal Aids

Parsley: Parsley taken with boiled onions is said to be good to remove gallstones although some writers prescribe juniper berries instead of the onions which would also be a great specific for the urinary tract. [UW-Parsley]

Juices for Gallstones: Celery & parsley, tomato, grapefruit. [NL 3-5]

[Barberry LG](#): Dr. Christopher's Liver-Gallbladder Formula: If gallstones are present and the ducts are blocked, bile may be forced back into the liver and enter into the bloodstream. The skin may take on a jaundiced color. Ultimately, the bile is excreted through the urinary tract. The urine is often dark red or amber color and is very concentrated. Clay color stools are another symptom. During a time of a gall bladder inflammation, heavy eating should not be done. Fruit and vegetable juices are recommended along with the liver-gallbladder herbal formula. The bowels should be kept open and unconstipated through the use of the lower bowel formula [[Fen LB](#)]...Olive oil (2 tablespoons, 3 times a day) should be taken to lubricate the bile ducts. Our hydrangea root formula, made with 1 quart of apple juice and one ounce of hydrangea root soaked together for three days in a cool place and taken in two ounce doses during the three day cleanse, is capable of dissolving stones anywhere in the body. Light, more frequent meals are preferred over large heavy ones. [NL 4-2]

Parsley: Parsley will work on the gall bladder and will help remove gallstones if used properly by taking a pint of the tea daily. [NL 4-12]

### Testimonials

1. Woman Avoids Gallbladder Surgery: During a lecture in Ogden, one of his students, a lady, came to him, saying she was in terrible trouble. She had gallstones so bad and painful that her doctor would give her pain shots. The doctor now refused to give any more shots, but if she had another attack, the stones would be removed.

Another attack was starting, and the doctor told her that an operation to remove the stones would cost \$1200. "I haven't got the money," she told the doctor. He said to put it on the medical credit card, which she didn't have either. He said that he couldn't help her until she had the money for the operation.

Then she remembered about the three-day cleanse that goes with the mucusless diet. You use apple juice for three days, as well as olive oil, a couple of spoonfuls three times a day. She decided to try it.

After about a week, Dr. Christopher returned to Ogden. This lady came bouncing through the door, with no pain at all. "Hello, doctor," she said, "I am so glad to see you. We had a rock slide last night."

"A what?"

Her husband, following her in the door, explained that he was in the other room and heard the gallstones hitting the bottom of the toilet bowl as they dropped out. He collected maybe a cup of

[Insomnia](#)

[Itch](#)

gallstones that had come out after three days of juice. Instead of \$1200 for the operation, it cost them about \$12 for the juice and oil. She had no more gallstones, and felt wonderful.

Other herbs used for gallstones are dandelion, golden seal, mistletoe, yellow dock, oak, parsley, and wild yam.

Prevention, however, is the key, and adherence to Dr. Christopher's mucusless diet will prevent the formation of these stones. [EWH p.124]

2. Passing Gallstones: Dr. Christopher related an interesting story about a patient who suffered a sever gallstone attack. His naturopath would not handle the case, considering it too sever, and an orthodox medical doctor told him to report immediately to the hospital. But the man refused to be operated on, and went back to his naturopath, who referred him to Dr. Christopher.

He was advised to go on the three-day cleanse, using apple juice, the Lower Bowel Formula [Fen LB], olive oil, and the Liver-Gallbladder Formula [Barberry LG] three or more times a day. He used no other food, but did apply a castor-oil fomentation on the liver.

He immediately improved, the pain left, and he went back to work in a few days! He passed a large amount of bile marbles and gallstones, and he was a very grateful man [NL 5-4]

## Gangrene

### Definition

Mortification or death to a part of the body due to interference with and failure of the local blood supply.

### Symptoms

The moist type gangrene begins with inflammation, with the dying or dead tissues becoming bluish or black. The dry gangrene results from contracted arterioles where circulation is poor, and it begins with yellow or black spotting in the tissue. [SNH p.25]

### Cause

Gangrene is the advanced condition of blood poisoning. [SNH p.25]

### Herbal Aids

General Instructions: This condition will never happen to a person who has good blood circulation and whose blood has been cleansed. Soak the afflicted area with marshmallow root tea, covering the area with tea as hot as the patient can take and leave it there for long periods of time. Soaking works faster than the poultice or the tea, but drinking the tea along with the soaking will speed the action. Plantain used as a poultice is also excellent. Pain in the infected part can be relieved by adding a small amount of lobelia. Be sure that the bowels move properly by cleansing them with the lower bowel tonic [[Fen LB](#)]. [SNH p.25]

Red Oak: Apply the powdered bark as a poultice. [SNH p.139]

Marshmallow: Obstinate inflammation and threatened mortification (gangrene). Apply a poultice of the powdered or fresh crushed roots on the affected area as hot as possible and renew it before it dries. The poultice will be more effective with the addition of slippery elm (*Ulmus fulva*). [SNH p.327]

Gangrenous Wounds (will arrest gangrene): See formula for slippery elm, brewer's yeast and raw milk. [SNH p.338]

Offensive Gangrenous Wounds or Sores (antiseptic poultice): See formula using slippery elm and vegetable charcoal. [SNH p.338]

Again Marshmallow and Slippery Elm: Most herbalists have not used Marshmallow for gangrene as thoroughly as Dr. Christopher, so his discovery is an important addition to herbal practice. He mentioned that the addition of slippery elm powder to a hot root-poultice on gangrene will greatly enhance the action of the herb. Do not allow the poultice to become cold, but reapply a new one (or supply new fresh, hot tea, after the cold soak). This can safely be used on open sores without danger of contamination. [UW-Marshmallow]

Dr. Shook's Excellent Liniment of Peppermint: See formula using olive oil, oil of peppermint, menthol crystals and flowers of camphor. [UW-Peppermint]

Marshmallow Root Powder: This is an invaluable herb which can be used as an herbal food as well as a soothing bath for helping to heal the worst of open sores, especially gangrene. Marshmallow root powder can be reconstituted and used as a drink (a tea or thicker if desired) that can keep one from starvation. [NL 3-1]

[Hernia](#)[Hiccoughs](#)[Hypoglycemia](#)[Hysteria](#)[Impotency](#)[Incontinence](#)[Indigestion](#)[Infertility](#)[Inflammation](#)[Influenza \(Flu\)](#)[Insect Sting](#)[Insomnia](#)[Itch](#)

Cabbage Leaf Dressing: In 1875 a 75 year old man suffered arteriosclerotic gangrene of the lower right leg and foot. The skin was black and the front of the lower leg was decayed. Following the local application of cabbage leaf dressings, the skin changed from black to brown to red, and then returned to its normal healthy color. Three weeks later, writes doctor Blanc, there was a considerable improvement. [NL 4-12]

Echinacea: Echinacea is especially useful in gangrene and sloughing of the soft tissues, as well as in glandular ulcerations and ulcers of the skin. Foul-smelling discharges are deodorized by it and the odor removed from cancers and ulcers; it has been proven to have helped in mammary cancer (Eil:359). A concentrated preparation of the root, excluding its sugar, called "echafolta," was used in these cancer [NL 6-12]

### Testimonials

1. The Carrot Poultice is Good for Man or Beast: Traveling from our office in Evanston, Wyoming, a number of years ago, I had to go over to Woodruff on a house call, to a family that was very, very sick. They improved so rapidly and were so pleased with our program that it was with some reluctance and embarrassment that the man said to me "Would it insult you if we asked you something about an animal?" I said, "No, we're good for man or beast." He said that he had a favorite horse outside that got tangled up in the barbed wire. "The vet was here yesterday and used the last ointments, salves and things that he knew about, and then he said there was only one thing more left to do, as the gangrene is setting in, so just shoot the horse." Well, this lovely animal was part of the family. They had quite a few children, and they still loved the horse, so he said "What can we do?" So we went out and looked at the horse's leg. I said "All right, you have been taking carrot juice and you have some pulp there and a ton or so of carrots that you have brought in from your field, just grind up carrots and make a great big poultice and cover that horse's leg. That will do him good, and then give the horse all the carrots it can eat." Within seven days time that horse's leg was completely healed. The flesh was fully restored. [SNH p.266]

2. Gangrenous Limb: We had a case where a man had injured his leg and gangrene had set in. He went to a medical doctor, who insisted that it should be amputated. That he refused to do, and he came to us. We dug up a large quantity of marshmallow root in the yard, sufficient to make enough decoction to completely submerge the leg in the liquid and after just a number of hours, the tissue returned to normal. This is the plant that people keep trying to weed out of their yards. It has big, deep roots which gather generous amounts of minerals and nutrients. [SNH p.332]

3. Scorched Foot Turns Gangrenous: A young woman in Yakima, Washington, had lost feeling in her feet. One day she was standing on a floor register and didn't realize how hot it was. She scorched one foot so badly that it had become raw and infected. Gangrene set in and the infection had gone up past her foot and into her ankle, and partway up her knee. She was under the care of the county financially, and when the county agent saw her foot in this gangrenous state he insisted that she go to the hospital and have her leg amputated. At the hospital, all agreed that only amputation could solve the problem; there was not cure for it. She refused, saying she had a friend who could get the gangrene out of the foot. They argued back and forth, and they finally gave her 48 hours to heal the problem.

One of Dr. Christopher's students lived in Yakima and knew the cure for gangrene, but she called him for additional help. He gave her step-by-step instructions on what to do. She was find marshmallow plants, pull them up, and use the entire plant, root to flowers, as a tea with from a tablespoon to an ounce of cayenne added. In this tea she was to soak her leg for thirty minutes, as hot as the girl could stand it, in a large container so that when the foot was submerged, it could cover the entire place of infection, right up to the knee. After the thirty-minute soak, she was to put the foot into a container of cold water, as cold as could be taken from the tap, and leave it there for five minutes, which would give her friend time to have ready a new pot of marshmallow tea to put the foot back into. This cycle of 30 minutes tea, five minutes water, should be repeated throughout the day, a rather strenuous procedure, but necessary in such an extremity. At night, they could put a wet compress on the infection while the girl slept.

The next morning, the whole procedure would be repeated until the infection was clear. In the morning, the pain was already gone. Within forty-eight hours, the gangrene had left the ankle and

foot, and there was just a small amount showing in one of the toes. The county agent said to continue with the program and he would keep in touch to see how she was progressing. The girl was completely cleared. [EWH p.132]

4. Blood Clot and Gangrene Gone: One time, a doctor called Dr. Christopher from one of the largest hospitals in Seattle, Washington. He had traced him down by calling Mrs. Christopher, as the Doctor was lecturing throughout the country, often only one night in one place. The Doctor was then on the West Coast. The medical man asked the Doctor how he might save the leg of a patient with a case of blood clotting associated with gangrene. This was located in the leg and because of the gangrene, the hospital staff wanted to cut off the leg; the medical doctor wished to save it. Dr. Christopher told him to put an oak bark fomentation on the blood clot and a Marshmallow fomentation on the gangrene. He promised the doctor that the blood clot would be cleared within twenty four hours (that's quite a promise!). The clot had been bad enough that the hospital staff decided to do bypass surgery, but then they noticed that the gangrene had set in on the bottom of the leg, on the foot and the ankle. When they decided to cut off the leg, the woman's daughter refused; thus the doctor had called Dr. Christopher.

The medical doctor called Dr. Christopher back a week later and told him that the blood clot had truly cleared itself within twenty-four hours. When you've got a bad blood clot that is stopping circulation which can be cured in twenty-four hours, it is quite an accomplishment. Also the Marshmallow fomentation on the leg had pulled the gangrene out so that the green and black in the ankle and the foot were all gone, except for a little around the toes. Later the woman's daughter called Dr. Christopher and told him that the clot and gangrene had completely cleared when the woman got the one problem that frequently occurs in the hospital--pneumonia. The staff was concentrating on fighting the pneumonia and forgot all about the gangrene and so it came back, even though it had previously cleared. They used the same treatment to clear it again. [UW-Marshmallow]

5. Miracle Marshmallow: Dr. Christopher was giving a one week series of lectures in Seattle a few years back, and after the Friday night talk, most of the people were standing around talking to each other, some leaving, when a young man came in the door pushing a wheel chair. In this chair was a man about seventy years old with a lap robe thrown over his legs. He was wheeled down to the podium, and the man in the chair motioned for Dr. Christopher to come down. He introduced himself as the president of the Northwestern Spiritualist Church organization. He was scheduled to go to the hospital the following Wednesday to have his legs amputated just below the hips. The gangrene was up partway to his knees by this time and by the time they could get him into the hospital, they estimated that the infection would be so high that it would necessitate taking the legs off just below the hips.

"I do not want to lose my legs," he said. Having heard of others being helped by Dr. Christopher, he asked, "Would you please help me save my legs?" Dr. Christopher asked the young man pushing the chair to come outside with him to the parking lot. There was Marshmallow growing, just handy to show to him. I asked the young man if he knew what it was, and he said, "Yes, it is cheesies; I have been digging it out of the garden and field all day." When asked if there was more that had not been dug yet, he laughingly said, "Acres of it." Dr. Christopher took him back inside to give instructions on the procedure to save the legs. They should gather bushels of Marshmallow herb and root, shake or quickly rinse the roots off, and simmer in large buckets or pots made of stainless steel, unchipped enamel, or other inert substances--never aluminum or copper. They should make gallons of tea from these herbs. Then they should place it in a large container where the tea would come up almost to the knee, such as a five-gallon can with the top out, tall waste baskets, etc. Put the tea in as hot as can be borne without damaging skin tissue, and use one container for each leg, filled as high as possible. Into the tea, they should put an ounce or more of cayenne pepper. After soaking the legs for thirty minutes in the hot tea, they should take them out and place them into buckets of ice water--or water as cold as it can be obtained. Leave the legs in the cold water five minutes, ten back into the fresh Marshmallow root tea, with cayenne, as above. This should be continued, thirty minutes hot and five minutes cold all day long; by nightfall, the extreme pain should be alleviated enough to apply fomentations over the legs, covered with oiled silk, plastic, or waxed paper. These fomentations are made best by soaking a Turkish towel or gauze in the very hot tea, lightly wringing it out just so that the tea will not run out of it, and placing as hot as possible without blistering over the area. People

sometimes apply a hot water bottle or other source of moist heat (never dry heat) to continue the warming, healing influence of the fomentation. This fomentation should be kept on the legs all night long.

The next morning, the soaking program should begin again, and should be continued until complete healing occurs, so that even the scars are gone. During this time, the patient was to drink at least three cups of Marshmallow root tea per day and to stay on juices and distilled water. Food taken should be of the mucusless diet, that is, fruits, vegetables, grains, nuts, and seeds, raw or low heated. Zone therapy could also be applied to speed the action, but never on the afflicted area. If the gangrene occurs on the leg, for example, do reflexology on the arm on the same side, and in the area of the malfunction on the other extremity if it too is not affected.

The men promised to apply this therapy. When Dr. Christopher returned to the area for another week's lecture the following month, a man came down to the front of the hall and asked permission to speak. He said that the Doctor probably would not remember him, but that the last time, he had been brought to the lecture in a wheelchair prior to having his legs amputated for gangrene. He followed the instructions, and using the herbs the good Lord had placed on earth to heal mankind, his legs had been completely healed. He stood there and stomped both feet on the floor so people could see that they were his own, not artificial. This man was quite emotional during his short talk, but he convinced a roomful of people how Marshmallow is truly a great herb. [UW-Marshmallow]

## Glands

### Definition

Some of the important and mysterious parts of the body are the various glands. These select their required substances from which they synthesize new compounds. Upon the work of these secretions which the glands send forth into the body depend digestion, absorption and utilization of all food elements, and the very existence of cells. No physiological or mental activity is possible without them. In their absence the body and its activities would cease to be. Manifestly, the glands cannot pick their required elements from the blood unless their progenitors were previously taken in the foods eaten.

The lymph vessels are fine tubes which accompany the blood vessels. They contain the lymph, a colorless, alkaline fluid, partly derived from the blood, partly from the juices of the partaken foods. To the lymph tubes belong the lymph glands, which are distributed over the whole system, having been given the task of extracting poisonous substances from the lymph. The lymph travels through the whole body like the blood, gathers in larger and larger vessels, and finally flows into the large veins near the heart; here it mixes with the blood, passes through the kidneys and lungs, and finally enters the heart as fresh new blood. [HHH p.80]

### Cause

The more toxic the poisons and mucus materials taken into the system, the more often the glands accumulate this bad waste from the lymph system and we have glandular swellings over various parts of the body. An impure blood stream, constipation and a generally toxic body condition cause the glands to swell up and become painful. These may be on the neck, under the armpits, groin, etc. [HHH p.80]

### Herbal Aids

Enlarged Lymphatic Glands (especially of the neck). Poke Root. Use 1/2 - 1 teaspoonful of the fluid extract in 1 glassful of water, give 1 teaspoonful of the mixture every 2-3 hours; or 10 drops of the tincture every 4 hours. [SNH p.60]

Inflamed Tonsils, Salivary Glands, Neighboring Lymph Glands. Garlic. Keep garlic in the mouth constantly during wakeful hours, renewing morning and evening after the cloves have absorbed the poisons; or, use another appropriate garlic preparation. [SNH p.100]

See formula for swollen glands using garlic, glycerine and burdock seeds. [SNH p.103]

Parsley: It is a remarkable aid for helping expell watery poisons, excess mucoid matter, flatulence, reducing swollen and enlarged glands, etc. [SNH p.245]

Swollen Breasts, Enlarged Glands: Apply a poultice of bruised parsley leaves. [SNH p.246]

Mumps: Apply a fomentation as hot as possible on the swollen glands, wrung out of a tea made from mullein leaves; also the fresh mullein leaves soaked in apple cider vinegar may be applied. [SNH p.317]

[Adrenetone](#): Dr. Christopher's Adrenals Formula: See formula using black cohosh, licorice root, bladderwrack, golden seal, ginseng, lobelia, ginger and cayenne. [SNH p.400]

[Panc Tea](#): Dr. Christopher's Herbal Aid for Pancreas and Companion Glands Formula: An aid for the pancreas and other affiliated glands that through malfunction cause high or low blood

[Hernia](#)[Hiccoughs](#)[Hypoglycemia](#)[Hysteria](#)[Impotency](#)[Incontinence](#)[Indigestion](#)[Infertility](#)[Inflammation](#)[Influenza \(Flu\)](#)[Insect Sting](#)[Insomnia](#)[Itch](#)

sugar (namely diabetes or hypoglycemia). This combination has assisted many that have had hypoglycemia after six months or more of using two to three capsules three times a day six days a week (all herbal aids give faster results in six days a week instead of seven) using the same day of each week for rest. They have had a glucose tolerance test with a clean bill of health on the pancreas area. Many reports came in of heavy insulin users who continue using the insulin but by watching litmus paper or other types of diabetic checking, have gradually tapered down on the insulin and many, within a year of using two to three or more three times a day, six days a week of this combination, have reported to have found complete relief. Of course, the closer a person stays on the mucusless diet and eliminates the sugars (unnatural), soft drinks, candies, pastries, bread, etc., the quicker the results. [HHH p.95]

[CSK](#): Dr. Christopher's Anti-Obese Herbal Food Combination: Combine this anti-obese aid with the mucusless diet and you have a winner. This is not a crash program of fast loss of weight, but graduated and accurate loss without robbing the body of the needed nutrients like so many fad diets do. This acts as a blood purifier, aids kidneys in relieving excess fluids, feeds the body for relief from nervous tension generally caused by diets, appeases the appetite, feeds the thyroid and other malfunctioning glands and thus gains a healthier state for holding weight control. Take two or three capsules or tablets morning and night with a cup of chickweed tea. The formula is chickweed, burdock, licorice, saffron, mandrake, fennel, parsley root, kelp, echinacea, black walnut, hawthorn berries, papaya. [HHH p.187]

[Mullein & Lobelia](#): Dr. Christopher's Glandular Formula: Through the accumulation of toxic waste in the body from improper diet, poor blood stream and sluggish circulation of the blood system the glands become congested and infected, and swell up to cause much pain and misery. (There are glands that swell on the neck, breast, groin, under arm pits, etc.) Make a tea of three parts mullein and one part lobelia herb and use as a fomentation over swollen or malfunctioning glands. Leave on all night (covering fomentation with plastic), six days a week until relief is obtained. Use a fresh fomentation as warm as possible each night.

This can be used as an aid to relieve mastitis, thyroid malfunction, etc., etc. In addition to the external fomentation, also drink a cup of this tea two or three times in a day or take two of the capsules or tablets with a cup of steam-distilled water. [HHH p.187]

[Kelp-T-Comb](#): Dr. Christopher's Kelp Combination: This is a thyroid and assisting glandular aid. This herbal group helps assist in controlling metabolism and gives herbal feeding to the thyroid glands to do their job more efficiently. This is a very fine glandular aid. [HHH p.195]

Addison's Disease: For a discussion of Addison's Disease see Newsletter 2-3. [NL 2-3]

Rebuilding Glands: Formula for rebuilding glands using sarsaparilla, licorice, ginseng and astragalus as found in the Adrenal Newsletter. [NL 2-3]

What Can be Done for a Malfunctioning Thyroid? From a question to Dr. Christopher in his Newsletter. His Answer: "The thyroid, through the hormone thyroxine determines growth, controls body temperature, regulates the metabolism or the burning of food in the body and influences, to a great extent, mental and emotional balance. Also, it is of special importance for the proper functioning of the reproductive system. The inter-relationship between reproductive functions and thyroid functions is very complex and not entirely understood, but it is known that various changes, especially in girls and women, are apt to cause changes in thyroid functions. For instance, a slight enlargement of the thyroid gland is common at puberty, during pregnancy and menopause.

"When the thyroid gland is functioning properly, we are hardly aware of its existence. It stores practically all of the body's supply of iodine, releases thyroxine into the blood stream at intervals and regulates all the bodily functions we have mentioned above. Disorders of the thyroid gland are apparently caused by two conditions:

(1) lack of sufficient iodine in the diet, so that the thyroid cannot obtain enough to manufacture thyroxine, or (2) some disorder of the body which creates a demand for more thyroxine than the gland can manufacture."

Taken from THE ENCYCLOPEDIA OF COMMON DISEASES by the staff of Prevention Magazine, copyright 1976.

Our recommendations to aid the thyroid are in two parts. First we need to strengthen the deficiency of the gland by using Dr. Christopher's glandular formula [[Mullein & Lobelia](#)] as a

fomentation around the throat at the thyroid area. This formula is made up of mullein and lobelia in a combination that is beneficial in aiding and strengthening the glands of the body, in this case, the thyroid gland. It would also help to use two capsules of our gland formula [Mullein & Lobelia] three or more times a day.

Second, take Dr. Christopher's thyroid combination [Kelp-T-Comb] as an herbal food aid to this gland. It consists of the following herbs - parsley, watercress, kelp, Irish moss, romaine lettuce, turnip tops and Iceland moss. This herbal group assists in controlling metabolism and gives herbal feeding to the thyroid glands to do their job more efficiently. These two aids will assist the thyroid to function properly whether it be underactive or overactive. [NL 3-4]

Jojoba for Sebaceous Glands: Skin specialists are finding that Jojoba oil has a remarkable ability to dissolve those waxy deposits of sebum, the natural secretions of the scalp's sebaceous glands, which sometimes resist even the most determined shampooing. Sebum, if unchecked, tends to build up and harden around the hair follicles, effectively clogging pores and preventing the normal regrowth of hair. Other signs of sebum build-up are dryness, scaliness, and dandruff. Jojoba oil also helps regulate the scalp's natural acidity, lessening the flow of fresh sebum between shampoos. A number of persons have reported successful regrowth of hair after using jojoba based shampoos. [NL 4-11]

Parsley for the Parathyroid Gland: Many have used parsley root tea to make stiff and unmanageable fingers work again. The root contains calcium, B-complex vitamins, and iron all of which nourish the parathyroid glands which are concerned with the regulation of calcium in the body. Pour a quart of boiling water over a cup of firmly packed fresh parsley and allow to steep for 15 minutes. Strain and then refrigerate. [NL 4-12]

### Testimonials

1. **Lobelia for Glands:** Dr. Christopher made up a simple but extremely effective formula for glands, of three parts mullein and one part Lobelia, to be taken as tea, in capsules, or to be used as a fomentation. This is used anywhere in the body where the glands are swollen and malfunctioning. Dr. Christopher liked to relate the cases of two small boys suffering from an enlarged gland on the side of the neck behind the ear. A nurse had called him in desperation to ask his advice on the first case. Usually the medical practice for this malady, besides antibiotics, which are usually ineffective, is just to wait for the child to grow out of it. The nurse accepted Dr. Christopher's advice to use the Mullein and Lobelia [Mullein & Lobelia] fomentation. She asked, "Which way is the toxic accumulation going to come out of the body? Will it come out directly through the skin like a bursting boil or will it be routed through the bloodstream and be taken out through the bowel?" Dr. Christopher replied that he did not know; that it would be "decided" by the Lobelia.

If the bloodstream cannot handle the poison, it will be taken out through the skin; otherwise, the bloodstream will carry it out to be eliminated.

The second little boy had a similar swelling behind his ear. His mother called Dr. Christopher and asked him what to do; he gave exactly the same advice, the mullein and lobelia [Mullein & Lobelia] fomentation. She applied the fomentation as described. In the first case, the poison gathered up and burst, and it drained out straight through the neck. The boy cleared up and suffered no more from the problem. In the second case, the poison was absorbed by the body and the toxic material eliminated through the bowel. [UW-Lobelia]

2. **Mullein & Lobelia:** Dr. Christopher's Glandular Formula: We have applied this fomentation to a young boy whose glands became so swollen that he had huge lumps at the back of his neck as well as almond-shaped lumps behind his ears. This had become such a chronic condition that we had little hope of improvement.

We applied it to him last thing at night, and in the morning when he awoke, the swelling was absolutely and completely gone. We were so amazed that we decided that we must have this combination in the house at all times! [UW-Lobelia]

3. **Mullein Oil:** We have had earaches in our family which resulted from congested lymph glands and colds. Although we treated the problem with garlic oil and B&B tincture, the problem did not

clear up. By inserting oil of Mullein into the ear, however, we were able to stop the irritation in the ear as well as in the accompanying glands. [UW-Mullein]

4. Swollen Glands in Throat Cured with Dr. Christopher's Glandular Formula: (Mullein & Lobelia) One time, after coming home from a lecture series, it was good to see the grandchildren from the family of one of our daughters, who were visiting with us. That evening one of the little granddaughters, then about seven years old, came to me crying because the glands in her throat area and behind the ears had swollen up and it was very difficult for her to swallow. I mixed up three parts of mullein and one part of lobelia, made a fomentation, and pinned it around her throat. The next morning she came downstairs, all smiles and no pain, and paid me well for my services with a big kiss. [NL 1-9]

5. Alfalfa Helps Family Survive Concentration Camp: Alfalfa can be used as a food or a food supplement. it contains essential hormones and enzymes necessary to keep the pituitary and adrenal glands functioning. There is a story we have told at many lectures and classes about the family that was incarcerated in a concentration camp during the Nazi occupation of Europe. This particular family found the strength to carry them through to the end of the war when they were released. The key was an alfalfa plant growing in the corner of the compound inside the fence. Each member of the family secretly permitted themselves a few leaves of the plant every day...allowing the alfalfa plant to replenish its leaves throughout the long months. The family obtained the necessary nutriments from the plant. These nutriments were not provided by the inferior and scarce prison food. The family maintained their health while others around them dropped dead from malnutrition. [NL 3-1]

## Goiter

### Definition

An overgrown thyroid gland, usually seen as a swelling in the neck.

### Herbal Aids

Poke Root Extract: [SNH p.60] Use 1/2 - 1 teaspoonful of the fluid extract in 1 glassful of water, give 1 teaspoonful of the mixture every 2-3 hours; or 10 drops of the tincture every 4 hours. See formula using poke root, alcohol and water. [SNH p.61]

Poke Root Liniment: [SNH p.61] Use the fluid extract externally as a liniment, and drink internally in very small doses (as indicated in "Dosage.") See formula using poke root, alcohol and water. [SNH p.61]

Bayberry: Use in doses of 10 grains 3 times daily; take orally and use as a fomentation on the throat. [SNH p.132]

Red Oak: Apply a hot fomentation wrung out of a strong decoction of the inner bark of oak; bind over the swollen gland with woolen or flannel cloth and repeat as required. [SNH p.139]

Juices for Goiter: Spinach, radish, lettuce, watercress, tomato, pineapple. [NL 3-5]

Vegetables for the Prevention of Goiter: Cabbage, carrots, celery, lettuce. [NL 4-12]

Echinacea: Cases of goiter, impetigo contagiosa, local infection, urethral infection, diabetic ulcers, alopecia (baldness), and so on, are reported to have been effectively treated with Echinacea. [NL 6-12]

## Gonorrhea

### Definition

A common sexually transmitted disease.

### Symptoms

In gonorrhea, the genital area becomes extremely inflamed and a burning sensation occurs when the man urinates. There is also a discharge of green or yellow pus which continues for 6 to 8 weeks. It is through this pus that others can become infected. Gonorrhea eventually attacks the nervous system. If a person contracts the disease, treatment should begin immediately. [NL 3-10]

### Herbal Aids

General Instructions: A fresh fruit juice fast is recommended. The bowels should be kept clear by using the lower bowel formula [Fen LB]. Follow the cleansing program recommended in the little booklet, Dr. Christopher's Three Day Cleansing Program and Mucusless Diet. Add to this the herbal formula for the nerves, or some good nervine teas such as valerian root and chamomile. The prostate formula [Prospallate] should also be used. [NL 3-10]

Anal: Use the injection of Red Oak in small and frequent doses. [SNH p.139]

Red Raspberry: Use the strong infusion as a douche. [SNH p.143]

Dr. Shook's Healing Douche: See formula using raspberry leaves, sandalwood oil, Irish moss and glycerine. [SNH p.146]

See formula using cranesbill, golden seal, echinacea and glycerine. [SNH p.155]

See formula using sumac berries, sumac bark, white pine bark and slippery elm bark. [SNH p.158]

Witch Hazel: Apply as a poultice, fomentation, or wash. [SNH p.171]

Thyme: May be taken internally or used externally with amazing and beneficial results. Internally: 1 teaspoonful in 1 cupful of water, sweetened with 1 tablespoonful of honey 3-4 times daily; good for gonorrhea. [SNH p.230]

Cleavers: Acute gonorrhea. Bruise the fresh herb thoroughly in a mortar, then express the juice with strong pressure and take orally. [SNH p.268]

Hops: Simmer 1 tablespoonful of hops for 10 minutes in 1 pint of water and drink 1/2 pint morning and evening. [SNH p.396]

Injection: See formula using golden seal and wild geranium. [SNH p.440]

White Poplar: Drink white poplar bark in tea form. [SNH p.446] , or use as a wash. [SNH p.446]

Golden Seal: It has been used in the treatment of gonorrhea, a lotion applied externally and a syringe injected up the urethra frequently at first, tapering off after a few days. The patient should be warned that the yellow solution permanently stains the linen (Felk:19). [UW-Golden Seal]

Red Raspberry: Dr. Shook recommended this combination: put two ounces of Raspberry

## Gums

### Description

Spongy gums, bleeding gums, sore mouth, thrush, tender gums, teething babies and pyorrhea.

### Herbal Aids

Ulcers, Spongy and Bleeding Gums: Use the decoction as a wash. See formula using bayberry root and distilled water. [SNH p.133]

Sore Mouth and Sore or Spongy Gums. Red oak, use the decoction as a wash. [SNH p.139]

Sore Mouth and Throat, Thrush, Spongy Gums. Red raspberry, use the strong infusion as a wash and gargle. [SNH p.143]

Spongy Gums, etc. See formula using raspberry leaves and bayberry bark. [SNH p.149]

Sore Mouth, Bleeding Gums: Cranesbill, use the decoction or strong infusion as a mouth rinse. [SNH p.153]

Spongy Gums: Sumach, use the infusion of berries as a mouth rinse. [SNH p.158]

Sore and Ulcerated Mouth or Gums, Running Sores, Nasal Problems: Bistort, use the decoction or infusion, etc., as a rinse or wash. [SNH p.162]

Gums (tender, bleeding, spongy). Myrrh, apply diluted tincture or use as tooth powder. [SNH p.455]

[Herbal Tooth Powder](#): Dr. Christopher's Herbal Tooth Powder: This herbal food combination consists of oak bark, oat straw, comfrey root, horsetail grass, lobelia, cloves, peppermint. This formula is used to help strengthen the gums (bleeding and pyorrhea-type infections of the gums), and assist in tightening loose teeth. This type tooth powder will help brighten the teeth's luster and make for a healthier mouth. For severe cases place this powder combination between the lips and gums (up and lower) around entire tooth area and leave on all night, six nights a week (as well as brushing regularly) until improvement is evident. Then continue on with regular tooth brushing with this herbal food combination. [HHH p.189]

Teething Babies: Catnip and fennel extract massaged into the gums help take off the edge. Some teething preparations are made from oil of cloves, which is a natural remedy for toothache and should help localized pain. Sips of camomile or catnip tea can give generalized relief of pain. [EWH p.104]

General Herbs: Other herbs used for troubles with teeth and gums include barberry, bistort, cranesbill, oak, Oregon grape, potentilla, self heal, strawberry, and prickly ash. An excellent formula to help pyorrhea is [X-Ceptic](#). For a toothache, you can use cow parsnip, cranesbill, oak, tobacco and, of course, cloves. Camomile, cayenne, hops, plantain, prickly ash, and sassafras can relieve pain, while elecampane is said to help with tooth decay. [EWH p.140]

Apples: Some have called the apple "Nature's Toothbrush" as it helps clean the teeth and massage the gums. Research has proven that eating one apple removes over 30% more bacteria from the mouth than two-three minute brushing plus a gargle. [NL 5-1]

[X-Ceptic](#): Dr. Christopher's Antiseptic Tincture: An excellent formula for pyorrhea is X-Ceptic. [EWH p.140]

[Hernia](#)[Hiccoughs](#)[Hypoglycemia](#)[Hysteria](#)[Impotency](#)[Incontinence](#)[Indigestion](#)[Infertility](#)[Inflammation](#)[Influenza \(Flu\)](#)[Insect Sting](#)[Insomnia](#)[Itch](#)

## Testimonials

Pyorrhea: One night Dr. Christopher decided that he would not give his lecture on his usual series because there was a blizzard on. He figured that nobody would come out on such a night. He was going to put a sign on the door that they would meet the following week. But something said to him, "If you can help just one person, it would be worth staying." So instead of going home, he opened up and put the chairs out. Soon people started coming, and the house was nearly full. He had finished his subject, and said, "We are now going to talk on a subject that has bothered many people, pyorrhea." And just as he began to say this, a woman stepped in the door. The street light showed that the storm was still going, and the woman brushed snow off her coat and stomped it off her overshoes. He said there was another seat available in front, but, crying, she shook her head and stood there by the door.

He continued to tell the audience what to do for pyorrhea, which was to use powdered oak bark, putting it up between the lips and gums at night before going to bed, leaving it in all night. This should be done faithfully six nights a week, week after week. It would tighten the gums and heal, and if the teeth were loose, they would tighten up again. An American Indian remedy, it had cleared many cases of pyorrhea.

As he finished this subject, the door opened and the lady stepped out again. He thought little of it and finished the lecture. But two weeks later during the same lecture series, there was a lady down in front that he didn't recognize. This lady raised her hand and asked if she could say just a few words before starting.

He thought she might be telling about someone who had left their lights on or something, but she stood up and said that she had been at the lecture two weeks before, although no one would recognize her. She was from out-of-town and came in by bus to Salt Lake City. Some time before she had gone to a dentist because her teeth were getting loose. When the dentist looked into her mouth, he said it was the worst case of pyorrhea that he had ever seen in his life. He said that there was nothing that he could do other than to pull all her teeth, trim her gums, and put in a new set of teeth. He didn't feel qualified to do this because he hadn't the equipment or knowledge, but that a specialist in Salt Lake City could do it.

This specialist said he had never seen a case that bad. She had 32 teeth of her own, without a filling, and yet they were all loose; they all had to be pulled. The dentist took an impression of her mouth, and asked her to come back in two weeks, when he would have her false teeth ready and he would pull the teeth and trim the gums.

This nearly broke her heart, because her teeth had been perfect up until then. She went back to her hotel because she couldn't get a bus back home until morning. During the blizzard, she just lay there worrying about losing her teeth and, not being able to rest, got up, dressed, and went out for a walk. She didn't know the town at all, but just walked up one street and down another. She didn't know where she was, and all of a sudden she wound up on State Street right in front of Christopher's store.

The curtain was closed, and a light was shining through it and, feeling chilled, she entered the room just to get warm. Later she felt that the good Lord had her wander around the streets until he knew it was time for Dr. Christopher to talk about pyorrhea. When he finished the subject, she felt that all the weight of the world was suddenly lifted off her shoulders. She knew the right way to be healed. She went right back to her hotel room and slept like a baby. The next day, she found a health store close to the hotel and bought some powdered oak bark. She put it right in her mouth and got on the bus.

Within a matter of days, she went back to her dentist to tell him that her gums were healing and her teeth getting solid again. He had never seen anything like this. He wanted her to go to the specialist in Salt Lake City to show him her mouth. She went to Salt Lake City the day she spoke in the lecture, and that specialist said that in his years of dentistry, he had never seen a miracle like this. He didn't know pyorrhea could ever be healed. He thought it was an act of God.

She just told the class to listen to what Dr. Christopher told them, because here she stood, with all of her natural teeth intact because of oak bark. [EWH p.138]

## Hay Fever

### Definition

A severe seasonal allergic irritation of the sinuses and nose caused by tree, grass and weed pollens.

### Cause

Many folks suffer great discomfort during the pollination season of plants. They attribute their symptoms to the pollen, saying that they are "allergic" to it. What is happening is that the pollen is bringing out of their bodies years of accumulated toxins. These come out in the form of mucus running from the nose, eyes, and lungs. [NL 3-9]

### Herbal Aids

[Dr. John R. Christophers "Mucusless Diet"](#): Symptomatic relief can be obtained by using the Hayfever Formula, but again, permanent change can only be had through faithful adherence to the mucusless diet. After one year on the mucusless diet, all allergies should disappear. [NL 3-9]

[Honey for Immunity](#): For an immunity to the local pollen, a tablespoon of local raw honey may be taken daily. It won't do you any good to take honey from Hawaii or Minneapolis if you are sneezing from pollen in Copperstown, North Dakota. [NL 3-9]

[Cough, Phthisis, Pulmonary Diseases, Hemorrhage, Asthma, Bronchitis, Croup, Hay Fever, etc.](#) Drink the strong decoction of leaves and flowers of mullein, or combine with comfrey root and garlic juice. [SNH p.316]

[Steam Baths](#): One of the most important procedures of water therapy are the steam or sweat baths, and these will bring the poisons out of the body wonderfully. There are various types of steam baths, and these are all very valuable, very invigorating and health giving. This therapeutic procedure is recommended for arthritis, asthma, bursitis, colds, flu, hay fever, neuritis, pneumonia, rheumatism, sinusitis, stiff joints, etc. Someday, I hope to see a steam cabinet in every home (not a chicken on every plate and a car in every garage). In sweat therapy, we also have the [Cold Sheet Treatment](#)--a positive remedy for colds, flu, and pneumonia--which can be effectively used even in advanced and chronic cases. [SNH p.502]

[Sha Tea](#): Dr. Christopher's Formula for Allergies, Sinus, Hay Fever: This is an aid for clearing up these malfunctions, a "natural and herbal help" working as a decongestant and natural antihistamine to dry up the sinuses and expel from the head and broncho-pulmonary tubes and passages the offending stoppage and mucus. This formula consists of the following herbs: Brigham tea, marshmallow root, juniper berries, golden seal root, chaparral, burdock root, parsley root and lobelia.

To speed up this cleansing procedure, use the following combination in addition to the above: blend fresh, chopped-up horseradish roots mixed with apple cider vinegar into a thick pulp and chew thoroughly before swallowing. Take 1/3 teaspoon three times in a day. Each three days increase this amount from 1/3 teaspoon up to one teaspoon, increasing the amount 1/3 teaspoon each three days. [HHH p.185]

[Herbal Eyebright](#): Dr. Christopher's Herbal Eye-Health Formula: Hay Fever and acute attacks of cold in the head may be checked by an immediate dose of the infusion of Dr. Christopher's eyebright repeated every two hours. [NL 3-9]

[Resp-Free](#): Dr. Christopher's Herbal Formula for Lungs and Respiratory Tract: This combination of herbs in tea form or the powder in capsules or tablets is an aid to relieve irritation in the respiratory tract, lungs and bronchials. This is an aid in emphysema as well as other bronchial and lung congestions such as bronchitis, asthma, tuberculosis, etc. This formula is extremely valuable in helping to strengthen and heal the entire respiratory tract. It promotes the discharge of mucus secretions from the broncho pulmonary passages. Suggested amount for an adult is a cup two or three times a day, or two or three capsules or tablets two or three times a day with a cup of comfrey tea. For additional help in the program, it is good to add three to six drops of tincture of lobelia to each cup of tea. [HHH p.188]

## Headache

### Definition

Pain in or around the head. [SNH p.27]

### Cause

This is often the result of a disturbance in some other part of the body, such as digestive disorders in the stomach, liver or bowel; problems in the abdominal area; menstrual irregularities, impingements in the cervical; concussion, eye strain, nervous excitement, fatigue, etc. The headache is a mechanism which signals some serious problem elsewhere. The common headache is due to faulty elimination, and the waste matter causes problems until the toxic wastes reach the stomach nerves and affects them. Sometimes headaches are caused from panic, fear, or worrying about the unknown. Headaches of this type are the hardest to relieve, generally requiring something strong like a heavy nervine tea with lobelia in it to diminish the nervous excitement. A nerve tea such as valerian or skullcap with a few drops of tincture of lobelia to a cup will give relief. [SNH p.27]

Food allergies are another very common cause of headache. The worst culprit is sugar; I have experienced sugar headaches, which are sort of a withdrawal; you eat the sugar, and then as the body is trying to eliminate the toxic substance, your head pounds. Cheese commonly causes headaches, probably the worst of the dairy products for this, although allergies to any of them may cause the pain. Meats and eggs are also common allergens. [EWH p.146]

### Herbal Aids

General Instructions: Improve elimination with the lower bowel tonic [[Fen LB](#)] (use the cathartics and enemas only in case of emergency). If the problem is in the stomach area, use any of the following stomach herbs: angelica, balmony, black alder, elecampane, gentian root, raspberry leaves, rhubarb, strawberry leaves, wild cherry, wormwood. Use ginger for a menstrual problem. To help relieve the local headache pain, two or three drops of tincture of lobelia in a little water three times a day or up to every hour if required will often give temporary relief. If the contents of the stomach causes the problem, empty that area with an emetic. Where the nerves are raw, the following herbs are excellent: catnip, peppermint (hot), rosemary herb, skullcap, spearmint, wood betony, and since plenty of rest is needed, any of the foregoing herbs along with hops tea is very soothing and will produce sleep. [SNH p.27]

Migraine Headache: See formula using wormwood, Culver's root and cayenne. [SNH p.109]

Relaxing Nervine (headache, neck, shoulder and muscular tension, irritability, nervousness or raw nerves, sleeplessness, female organs): See formula using camomile, white poplar, false unicorn, lady's slipper, lobelia and ginger. [SNH p.220]

Nervous Headache: Chew 1-2 freshly-picked leaves of rue. [SNH p.295]

Headache: Apply the freshly-bruised leaves of rue to the temples. [SNH p.295]

Nervous Headache: See formula using lady's slipper, catnip and scullcap. [SNH p.385]

Nervous Headache: See formula using wood betony, rosemary and peppermint. [SNH p.390]

Insomnia, Headache, Indigestion, Bronchitis, etc. Give black cohosh infusion in small doses. [SNH p.399]

[Hernia](#) Peppermint Tea: Drink a cupful of hot peppermint tea; then lie down and relax. [SNH p.419][Hiccoughs](#) Oil of Peppermint: Apply externally on the affected area for rheumatism, neuralgia, and headache. [SNH p.419][Hypoglycemia](#) Stress Headache: My favorite headache/stress herbal aid is blending a banana into a cup of pineapple juice, adding a bit of nutmilk, and mixing in one to two tablespoons of brewer's yeast, blending briefly. In fifteen minutes I am calm and ready to deal with the problems that cause the stress. [EWH p.146][Hysteria](#)[Impotency](#) Constipation Headache: Headaches can stem from several sources. Very common is the constipation headache, where compressed fecal matter presses on the nerves that affect the head. We have seen severe migraine headaches cured by taking a catnip enema. For longer-term relief, the lower bowel formula [Fen LB] can heal the bowel so that there is no constipation. [EWH p.146][Incontinence](#)[Indigestion](#) Severe Migraine: For a really severe migraine headache, apply cold packs to the neck and head while the patient soaks in a very hot tub or whirlpool. Be sure to drink lots of feverfew tea and water, take copious amounts of Dr. Christopher's Calc Tea and try to enjoy the bath. [EWH p.146][Infertility](#)[Inflammation](#) Dehydration Headache: Sometimes people get headaches because they are dehydrated. You would be surprised that most people walk around in a state of dehydration. You need about a gallon of steam-distilled water each day in order to stay completely hydrated. [EWH p.146][Influenza \(Flu\)](#)[Insect Sting](#) Rosemary: Another method to relieve headache is, as soon as the headache begins, a small bottle of spirits of Rosemary is held to the nose and the fumes are inhaled. In addition, a few drops of the preparation are rubbed gently but thoroughly on the temples, on the forehead, on the veins of the neck and behind the ears. This reputedly gives prompt relief. [UW-Rosemary][Insomnia](#)[Itch](#) Juices for a Sick Headache: Celery, celery & apple. [NL 3-5] Cabbage Leaves: Apply cabbage leaves to the forehead and nape of the neck and leave on overnight. Applications of the leaves over the liver may also be necessary. [NL 4-12]

### Testimonials

1. [Cayenne Ointment](#): ([Deep Heating Balm](#)) My husband gets severe migraines occasionally, presumably because he does high-stress academic work. These headaches can keep him sitting up all night because they hurt too much for him to lie down. Once when he was suffering from one of these I thoroughly rubbed his back with Professor Cayenne's [Deep Heating Balm](#), rubbing out the tense places as much as I could. Soon he was asleep and slept all night. [EWH p.146]

2. Kelp: A man reported to Dr. Powell with much indigestion with bilious turns. Almost every morning for some months he had risen from bed in the morning with a sick headache. For a time he had taken purgatives, salts and aspirins, which, although giving relief, failed to heal the man; indeed, these things had made him worse. The doctor asked the man to fast and then put him on a cleansing diet. He got somewhat better, though not completely. Eventually he began to take Kelp and cell salts at every meal, and after some weeks his troubles left him. In this case, the doctor noted, Kelp not only acted on the liver, but also on the toxic colon, the gall bladder, kidneys, and meninges. The latter are usually involved when the headaches are severe. [UW-Kelp]

## Heart

### Description

Heart circulation, cholesterol, heart disease, palpitation, heart weakness, heart attack, how to strengthen the heart, stress on the heart, etc.

### Herbal Aids

[Cayenne](#) for Heart Circulation: Take cayenne, working up to a teaspoon three times a day. This increases the power of the heart and corrects the circulation problems. [SNH p.31]

Wheat Germ for Cholesterol and Heart: Wheat germ oil is excellent for feeding the heart and helps cut the cholesterol and smoothens its removal from the area. [SNH p.31]

Dropsy, Heart Disease: See formula using parsley, lily-of-the-valley, garlic, sugar and glycerine. [SNH p.102]

Heart Trouble, Palpitation. Make a decoction of tansy by simmering the herb 10 minutes, take 2 fluid ounces 4-5 times daily. [SNH p.123]

Motherwort Vies for the Honor of Being the Best Heart Tonic Known. It calms and supports the heart and nerves, and may be used in large doses. Motherwort is beneficial as a healing tonic in recovery from debilitating fever where other tonics are inadmissible; it is a good diaphoretic. [SNH p.298] SYRUP OF MOTHERWORT acute and chronic heart troubles. See formula using motherwort, water and sugar. [SNH p.299]

Compound Infusion (heart tonic, etc.) : See formula using motherwort, hawthorn berries, cactus grandiflorus, asparagus root or seed, bugleweed and lily-of-the-valley. [SNH p.300]

Heart Weakness: Scullcap combined with cayenne and golden seal cannot be surpassed. [SNH p.371]

Heart Palpitation: Administer hot valerian with cayenne pepper. [SNH p.377]

Heart Attack: Prop up the patient and pour hot cayenne tea down, ( use a teaspoonful of cayenne in a cup of hot water), and have the patient drink the full cup. and the attack will stop immediately. We have been called in the middle of the night so many times. A teaspoon of cayenne should bring the patient out of the heart attack. In case cayenne is not around and you have a heart attack, the dosage on black pepper can be tripled and used. [SNH p.409]

[Hawthorn Berry Syrup](#): Dr. Christopher's Hawthorn Berry Syrup to help Build and Strengthen the Heart: The heart is our life pump, and when it is not properly fed (with wholesome foods) it suffers malfunction (weakness and heart attacks) causing the heart failure condition that is one of the world's greatest killers. The mucusless diet used over a period of time can rebuild a heart to a good strong condition, but if the heart, its valves, and other working parts are in a weakened condition and need quick help we use a great "heart food or tonic" to assist it back to health. This food is the hawthorn berry ... This herbal formula is thought of by many to be a wonderful aid for organic and functional heart disorders such as dyspnea, rapid and feeble heart action, hypertrophy, valvular insufficiency sufficiency, and heart oppression. Hawthorn berry syrup is made with hawthorn berry juice concentrate using grape brandy and glycerine as aids and preservatives. Recommended dosage is one half teaspoon three times in a day.[HHH p.184]

[BPE](#): Dr. Christopher's Blood Circulation Combination: This formula is given to assist blood

[Hernia](#)[Hiccoughs](#)[Hypoglycemia](#)[Hysteria](#)[Impotency](#)[Incontinence](#)[Indigestion](#)[Infertility](#)[Inflammation](#)[Influenza \(Flu\)](#)[Insect Sting](#)[Insomnia](#)[Itch](#)

purifying teas to work more efficiently and to also help aid the clearing up of allergies, etc. This group of herbs feeds cayenne (a stimulant) and ginger (stimulant) into the circulatory system where the cayenne works from the bloodstream to the heart and arteries, out into the veins. The other herbs in the formula assist these two herbs and work together to equalize the blood pressure (whether high or low) and to bring it to a good systolic over the diastolic reading. Blood flow is life itself. The blood circulatory combination consists of ginger, cayenne, golden seal, ginseng, parsley and garlic. [HHH p.185]

[Adrenetone](#): Dr. Christopher's Adrenals Formula: to Compensate for Stress Placed on Heart From Adrenals: Contains mullein, lobelia, Siberian ginseng, gotu kola, hawthorne berries, cayenne, and ginger. As this formula helps correct any imbalance in the adrenal gland it also compensates for any stress placed on the heart. [EWH p.208]

Calcium Chloride is a Great Heart Tonic. In fact, it is so potent and effective in its action upon a weak heart that the great English scientist, Sir Lauder Brunton, said: "Heart failure, which so often follows influenza and pneumonia, may be averted by the extended use of calcium chloride." [NL 1-11]

Juices for Functional Heart Troubles: Carrot, cucumber & cabbage, endive, carrot & spinach, apple. [NL 3-5]

### Testimonials

1. **A New Life Through Proper Diet and Herbs.** Not long ago, we had an experience that we will not forget for a long time. A gentleman came to visit us on his way through the area with his wife, and when we saw him the previous year on a business deal, he was so bad that rigor mortis had almost set in. In fact, the medical doctors had refused to give him any more medication. He had a heart condition that had gone into dropsy, and his blood pressure was so high that he was just tottering around. There was so much mucus in his body that the tissue was completely loaded to suffocation. At the time, knowing of my profession, he asked what could be done. We started him off with a very simple procedure: We put him on nutritional herbs (fruits and vegetables--our Regenerative Diet) and on Medicinal herbs. Now, a year later, the man had just finished 8,000 miles of touring! He had the finest skin-color you ever saw, and it was a thrill to see a man so full of pep and energy. Tears dropped from his eyes in our meeting, because he was so happy to be alive. These are times that make it worth all of the trouble we have suffered to assure others (seeking vibrant life today or in the future) and to have the legal right to use and obtain healing with medicinal herbs. And here is a living example of our chief message that health begins in the bowel, for when the colon is clean, when we are free from the morbid matter that is toxifying and defiling the system there, then the system can be fed properly, and we begin to live! [SNH p.176]

2. **Hawthorn Berry Syrup Stops Heart Attack:** One doctor who had learned the formula for Hawthorn berry syrup from Dr. Christopher raised his hand after a lecture to tell the following story. He had gone on a house call in response to a call about a heart attack, one so serious that the family was afraid that death was imminent. The doctor had no cayenne in his bag and the family had no cayenne; the doctor began to panic. He remembered that he had a bottle of Hawthorn berry syrup with him. The usual dose is a half-teaspoonful, but the doctor thought a little more might help, so he gave the patient a full tablespoonful. The patient drank it down, sat right up, and said, "Well, I feel okay". The doctor checked him with the stethoscope and the heart sounded alright. As the doctor said, "Talk about quick relief!" [UW-Hawthorn]

3. **Hawthorn Cures Lifelong Heart Problems:** During the second World War a man had been accepted to work in a large chemical depot. The firm had hired him because he was physically unfit for military service--he had a heart leakage--and they were short of manpower. They placed him in their construction division without a physical examination when he was sixty-two years of age, and he worked for them until he was sixty-five years old. He had begun using this heart tonic when he was sixty years old, using it faithfully because, according to him, it tasted good. Now he was sixty-five years old and the war came to an end. He was called into the company's main office, where they complimented his work record and asked him if he would remain as an employee. He wanted to, but feared the necessary physical examination. He finally agreed to take

the examination.

You may imagine his surprise when he found that he had been given a clean bill of health. He asked the doctor, "What about my heart leakage?" The doctor replied, "I wish I had a heart as good as yours. You should never worry about dying from a heart attack; in fact, if you don't get hit by a truck or lightning you will probably die quietly in your sleep from old age and won't even muss up the covers." This man worked several more years at the plant, retired, and then lived on until he was in his eighties. On a July evening in 1970, he went to the rodeo with his family and enjoyed the evening like a kid as he watched his son ride and perform. The next morning one of his sons came over to his home and found his father lying peacefully in his bed. He had passed away with his hands folded over his chest and, just as the doctor had predicted, the covers were not even mussed up. No heart attack, just the final sleep of old age. [UW-Hawthorn]

4. Hawthorn to Feel Better: A lady once came to Dr. Christopher to have her irises read and was told that, among other things, she had a heart weakness. She was advised to use a half teaspoon of Hawthorn berry syrup three times a day. She began using the tonic on a Tuesday; before the week was even over she had experienced a dramatic improvement in her condition. [UW-Hawthorn]

5. Wheat Germ Oil Saves Man: I remember an incident well over twenty years ago when I was called upon to visit a home in Idaho to see a patient who was lying helplessly in a bed with a severe heart condition. He was not even allowed to get out of bed to use the bathroom and how he hated that bedpan! His family had been informed that he would live a few days because of his heart and they were also told that another attack might suddenly take him at any time. This gentleman was from the old school of eating--a meat, potato and gravy man. He ridiculed the idea of a mucusless diet, a cleanse program and the use of cayenne, saying, "I love eating the way I have always eaten and would rather die early with a belly full of steak than live your way." Knowing that he was a cattle man I asked him what he did for his sick cattle. He explained that experience had taught him that the best medicine for sick cattle was wheat germ oil and he purchased it in large drums to supply his herds. I asked him if there was any reason, seeing that the wheat germ oil was good enough for his prize stock, why he himself could not use the same procedure. He was then instructed to use three to six tablespoons of the wheat germ oil each day.

One day two years later as I was waiting in the lobby of a Salt Lake City hotel I saw a man run up the front steps in great haste and into the lobby where I was sitting. When he saw me he came to a screeching halt, yelled my name, and vigorously extended his hand to me.

"Bet you don't remember me," he said. "I am that 'dying' heart patient in Idaho you saw a couple of years ago. I took that 'cow oil' (wheat germ oil) and in a few days was up and around; in a few weeks I was out on a little business and in six months was out with the cattle, doing a hard day's work. Boy, am I a ball of fire today. Thanks Doc."

His thanks meant much more to me than any money I had been paid to make that house call. [NL 1-5]

6. Man Recovers Totally from Heart Attack: I have some friends where the wife was using some herbs, with good results, but her husband did not believe in them at all. One day he had a heart attack and was in the hospital for two weeks and was then sent home to rest. He was given an appointment to come back for tests such as the tread mill and that he may have to have a very dangerous surgery. His wife finally talked him into taking Cayenne and Hawthorn syrup. In slightly less than one week he went to the doctor. He went the full length of the tread mill without it even slightly affecting the heart. They then told him they had never seen such clean arteries.

One month later he went back for another check up and he was told that in the fifteen years they had been treating him, never had his heart beat been so strong. [NL 1-11]

7. Woman Able to Stop Taking Heart Medicine: After purchasing your book 'School of Natural Healing' and learning the value of cayenne pepper, I have been taking it regularly since last December. I have had a heart problem 18 years and have had a pace maker for the last six years. I had been on digorin and inderol for seven years. With the use of the cayenne along with your health food program, my health has improved greatly. I no longer have to take any heart medication and my health in general is much improved. I am even rid of most of my varicose

veins. [NL 1-12]

8. Various uses for Dr. Christopher's Hawthorn Berry Syrup: Monday afternoon we took a bottle over to my 85 year old sister-in-law who has been in and out of hospitals for years with a bad heart and a bundle of other ailments. She kept a large oxygen tank in her living room, as she had trouble with breathing spells. Believe it or not, after the first ½ teaspoon of hawthorn berry syrup she never used oxygen again, in fact, they had Medicare pick up the tank last month. Then they charged her \$240 rental.

I have another business friend that weighs 440 pounds--63 years old. His heart stopped as he came home in an 11 in. snow storm April 5th. He was in the hospital 14 days. But the doctors never figured out why his heart stopped. When he came home from the hospital I gave him a pint of syrup and he is doing fine now....

My wife and I take the syrup morning and night. My wife noticed pains in her chest when working in the garden and shoveling snow last winter. Now she does not feel it any more, since she is taking the syrup. [NL 3-9]

## Heartburn

### Definition

A burning sensation or gnawing pain in the area of the chest over the heart (precordium) or beneath the sternum and near the heart.

### Symptoms

Usually a symptom of indigestion or esophageal spasm. Generally this comes from gastric pyrosis, a stomach problem characterized by belching (eructations) an acid, irritating fluid. [SNH p.28]

### Cause

As heartburn is an acid condition of the system, it is necessary to go on a complete cleansing program to clean out the system. Proper foods, proper eating habits, and effective elimination are very important. A cure is effected only with a complete change of living habits. [SNH p.28]

### Herbal Aids

General Instructions: Prompt and temporary relief may be given for heartburn with cramp bark, ginger, wild yam, etc. Massaging tincture of lobelia externally into the area and taking two or three drops regularly internally is often sufficient. [SNH p.28]

Slippery Elm: Chew the bark of slippery elm. [SNH p.335]

See formula using wood betony, rosemary, scullcap and yarrow. [SNH p.390]

Indigestion, Heartburn, Flatulence, Stomach Pains: See formula using centaury, agrimony, barberry, calumba and raspberry. [SNH p.450]

Heartburn During Pregnancy: Many women experience indigestion and heartburn, and sometimes gas, during pregnancy. This may be caused by the stomach having less room to do its work, nervous tension which inhibits good digestion, too many stomach acids, or a relaxed stomach, which allows foods to back up. Be sure that you do not take antacids during pregnancy. They further inhibit digestion, and they may cross over the placenta into the baby. To deal with these symptoms, Dr. Christopher first emphasized that we must chew our food. Many of us just gulp it down, and the large particles cause gas, fermentation, and pain. Chew well; even juices should be swished in the mouth to mix them with saliva and begin digestion. Don't drink with your meals; water or other liquids dilute the digestive fluids; you may, however, want to take broth or juices with the meal, but you should "chew" these, too. Increase your B-vitamin foods, including whole grains, brewer's yeast, wheat germ, yogurt, perhaps acidophilus. Don't smoke or drink tea or coffee; these irritate the stomach and increase heartburn. Eat small meals frequently; if you must be away from home, take juice, fruit and nuts with you to prevent your blood sugar going down and stomach acids overproducing. Papaya can aid digestion--fresh, dried or in tablets. Some women take tablets of activated charcoal to absorb gases in the system. Slippery elm gruel will alleviate heartburn and absorb gases and toxins. [EWH p.41]

Papaya: As mentioned above the Papaya is considered wonderful for digestive disturbances. The unripe fruit abounds in the enzyme papain which diminishes as the fruit ripens until there is a relatively small amount in the completely ripened fruit...Papain can digest about 35 times its weight of lean meat and 300 times its weight in egg albumin. This is considered important

because these heavy proteins as well as those in beans, peas, nuts, and lentils are often difficult to digest and putrefy more quickly in the digestive tract causing gas, foul mouth taste, foul breath, constipation, sour stomach, and heartburn. [UW-Papaya]

Wormwood: Its use as a digestive tonic is indeed one of the foremost applications of Wormwood. "Wormwood is above all a stomach medicine, being useful for indigestion, gastric pain and lack of appetite, as well as the related problems of heartburn and flatulence" (Lust:409). [UW-Wormwood]

### Testimonials

One herbalist, whenever he "pigs out on eggs or meat", brews a cup of Papaya leaf tea mixed with spearmint and camomile or if he's in a hurry (which, he mentions, is the worst cause of indigestion), he takes a Papaya-papain enzyme tablet. This removes the indigestion well. [UW-Papaya]

[Hemorrhoids](#)

## Hemorrhage

### Definition

A discharge or escape of blood from the blood vessels, either by passage of blood cells through the intact and unruptured walls (diapedesis) or by flow through the ruptured walls. [SNH p.29]

### Cause

This problem is caused by severing or rupturing a blood vessel. If the rupture is from an artery, the blood (usually bright red) spurts and flows fast. If it is a vein, the blood is dark and flows more slowly and constantly. [SNH p.29]

### Herbal Aids

General Instructions: Hemorrhage throws many people into shock and can bring on death very rapidly. If the wound is small, the blood usually coagulates and the area seals itself, but if the rupture is large, some herbal aid is needed. The first thing one should think about is cayenne as quickly as possible. Using one teaspoon to the cup, as hot as can be taken without scalding. This will stop any hemorrhage, internal or external, by the time a person can count to ten. If the rupture is external and cayenne is not available, comfrey placed over the wound will stop bleeding quickly. [SNH p.30]

Hemorrhage (uterus, bowels, lungs): Use the infusion or decoction of bayberry alone, or in combination with suitable stimulants (cayenne, ginger, etc.). [SNH p.132]

After-Pains (childbirth): Uterine hemorrhage, miscarriage, preventive: Drink the raspberry leaf tea with a little Composition Powder [Herbal Composition] in it. [SNH p.143]

Special Strong Decoction (Hemorrhage of the lungs, internal wounds): See formula using cranesbill, comfrey and glycerine. [SNH p.153]

Bistort: Use a strong decoction. [SNH p.162]

Chronic Hemorrhage: See formula using tormentil and hops. [SNH p.169]

Witch Hazel: Witch hazel is a valuable and soothing astringent, and it is especially useful in hemorrhage of the lungs, stomach, nose, rectum, uterus, and kidneys. It is useful in threatened abortion, and it influences the venous structures and restores perfect circulation. It can be used locally or internally for hemorrhoids. [SNH p.169]

Witch Hazel: Hemorrhage, threatened abortion, etc., drink the infusion freely. [SNH p.171]

Yarrow: Hemorrhage of the bowels. Use a clean enema, then inject the cool tea into the bowels (where there is pain, the tea should be about 112 degrees F.); then inject 2 tablespoonfuls several times a day, and after each stool. [SNH p.214]

Yarrow: Hemorrhage, spitting of blood. Drink the warm infusion; it will equalize the circulation and relieve the pressure from the ruptured vessel, allowing it to heal. [SNH p.215]

Comfrey for Hemorrhage of the Lungs: Give the mucilage of comfrey often and in large doses or give 1 teacupful of the decoction or mucilage (1 mouthful at a time and mix well with saliva). Rest 1 hour, then repeat until all soreness is gone and blood is not in the sputum. If the patient sleeps, awaken and continue with the same dosage for two hours and administer every three hours thereafter. Do not give food for at least twelve hours. [SNH p.310]

[Hernia](#)

Marshmallow for Hemorrhage of the Urinary Organs: Boil the powdered root in milk and drink freely. [SNH p.326]

[Hiccoughs](#)

Tuberculosis, with Severe Hemorrhage: See formula using elecampane, comfrey, horehound, licorice, Iceland moss, Peruvian bark, composition powder, cayenne, acacia, sugar, queen's delight and antispasmodic tincture. [SNH p.345]

[Hypoglycemia](#)

Lung Hemorrhage: See formula using black cohosh and blood root tincture. [SNH p.401]

[Hysteria](#)

Hemorrhage of Lungs and Salivary Glands: Chew rhizome or root of Jamaica Ginger. [SNH p.414]

[Impotency](#)

Danger of Miscarriage, Uterine Hemorrhage: Give false unicorn copiously, by the quart. [SNH p.466]

[Incontinence](#)

Hemorrhage after Childbirth: (For the Midwife) If you experience hemorrhage, which is defined as more than two cups of blood, either seeping slowly or gushing out, the first thing you should do is work the uterus externally, kneading the belly until the uterus maintains its shape. This may take some time, but continue until it works. Mistletoe leaf tea of blue cohosh tincture are oxytocic and may help clamp down the uterus. Motherwort tea is claimed to help. Most midwives I have met swear by shepherd's purse, best used as a tincture. This humble garden weed is a powerful styptic, although it should not be used routinely as it can cause large, painful blood clots. In hemorrhage it is said to work every time. I consider the shock tea an excellent anti-hemorrhage remedy, although controversial, local midwives trust cayenne and use it extensively. Cayenne does not contract the uterus; it merely controls bleeding. You might combine it with blue cohosh for both activities. [EWH p.82]

[Indigestion](#)[Infertility](#)[Inflammation](#)[Influenza \(Flu\)](#)[Insect Sting](#)[Insomnia](#)

Garlic for Bowel Hemorrhage: Garlic is used internally for the treatment of gastro enteric problems. It is simmered in milk and taken for bowel hemorrhage [UW-Mullein]

[Itch](#)

### Testimonials

1. [Cayenne](#): Dr. Christophers many Cayenne Combinations for Nosebleeds: As I have taught for over thirty years, if you will drink a cup of cayenne tea it will stop any unnatural hemorrhage due to injury, etc., by the time you can count to ten. One patient contradicted me on this, laughing as he said it, "You said a cup of cayenne tea will stop a hemorrhage by the time you count to ten--you were wrong. I tried this when I had a "nose bleed" and I started to count, but I only got up to six instead of ten." [NL 1-9]

2. [Herbal Eyebright](#): Dr. Christopher's Herbal Eye-Health Formula Restores Vision from Subretinal Hemorrhage: My right eye went bad last January, diagnosed as "subretinal hemorrhage" which left me with probably 20-30% vision.

Since using Eyebright Comb., I now have 70% or 80% vision. Miracle Medicines-God's wonderful herbs. [NL 1-12]

## Hemorrhoids

### Definition

An enlarged vein in the lower rectum or anus caused by blockage in the veins of the area.

### Cause

Varicose veins and hemorrhoids are both evidence of the same problem: lack of nutrients causing weakness in the circulatory system. Improving the diet and supplementing Calc Tea makes a big difference in the problem right away. [EWH p.43]

The basic cause of this condition is sugar in the form of candy, beverages (pop, coffee, etc), pastries and bread. These leach out the calcium from the body. Other culprits are white flour, tobacco, and liquor. One of the first places the leaching starts is in the venous structure of the body, drawing off the supporting calcium. This in turn weakens the veins, causing varicose veins, which will, if allowed to continue, become phlebitis. Another serious area for leaching is the bowel area, where old fecal matter has accumulated. The body tried to remove the impaction by draining as much fluid from the body as it can. There is generally enough fluid to cause a bowel movement, but the liquid which is left absorbs the sugar. It then feeds into the veins and leaches out the tensile strength of the veins in the lower bowel area. When straining for a bowel movement, the veins have more pressure exerted, and in turn, the weak walls break and result in a varicose condition called piles or hemorrhoids. [NL 2-10]

### Herbal Aids

Plantain: Use a strong tea (steep one ounce of the granulated herb for twenty to thirty minutes in one pint water), inject one tablespoonful three of four times daily (or more frequently in bad cases), and especially after each bowel movement. [SNH p.53]

Poke Root: Use the fluid extract as a wash and injection. [SNH p.60]

Chaparral: Use externally as a sitz bath. [SNH p.71]

Hemorrhoids (cathartic injection): See formula using bayberry, African ginger and Pinus. [SNH p.135]

Hemorrhoids (suppository): See formula using bayberry, pinus, golden seal and wheat flour. [SNH p.136]

Red Raspberry: Inject 1 teacupful and retain as long as possible. [SNH p.143]

Tormentil: Bleeding and internal hemorrhoids. Inject 3-4 ounces of the undiluted decoction and retain as long as possible. [SNH p.168]

Balm of Gilead: Apply the ointment to the affected parts. [SNH p.202]

Yarrow: Use a clean enema, then inject the cool tea into the bowels (where there is pain, the tea should be about 112 degrees F.); then inject 2 tablespoonfuls several times a day, and after each stool. [SNH p.214]

Hemorrhoids (piles): See formula using yarrow and mullein. [SNH p.216]

Uva Ursi: Use the tea or diluted tincture as a wash. [SNH p.259]

Mullein: Apply mullein ointment and take the tea internally. [SNH p.316]

[Hernia](#)

Chickweed: Hemorrhoids and rectal disorders. Bathe the area 2-3 times daily with the decoction, infusion, or diluted tincture (as warm as possible), then apply chickweed ointment [Chickweed Ointment] or Dr. Christopher's healing ointment. [SNH p.322]

[Hiccoughs](#)

[Cayenne](#) Ointment: [Red Sun Balm] Cayenne may be applied on hemorrhoids for it does bring relief and healing, but the patient should be warned of its potency. [SNH p.408]

[Hypoglycemia](#)

See formula using myrrh and golden seal. [SNH p.456]

[Hysteria](#)

Sitz Bath: There are a number of differing opinions on sitz baths. The common sitz bath is merely sitting in a tub, wherein just the buttocks, the lower back into the sacroiliac and the upper thighs are immersed, though the feet should be in another tub; or where the buttocks would be in cold water, the feet should be in hot water; or vice versa. The most important part of the sitz bath, of course, is soaking the anal area in herbal aids to give relief. This is used for itching, piles, hemorrhoids, acid burning from urine and rectal discharges, or toxic conditions wherein the flesh is raw. [SNH p.494] If you are suffering from hemorrhoids, a sitz bath of strong oak bark tea will help, as well a Sitz of witch hazel tea. [EWH p.43]

[Impotency](#)

[Black Ointment](#): Dr. Christopher's Black Ointment is an excellent drawing ointment. For use externally on old ulcers, tumors, boils, warts, skin cancers, hemorrhoids, excellent for burns and as a healing agent. This is made with chaparral, comfrey, red clover blossoms, pine tar, mullein, beeswax, plantain, olive oil, mutton tallow, chickweed, poke root. [HHH p.196]

[Incontinence](#)

[CMM](#): Dr. Christopher's Healing Ointment: Made of comfrey, marshmallow, marigold, bee's wax, and oils, this is an antiseptic to be used on lesions, eczema (dry), poison ivy, soothes inflamed surfaces, abrasions, burns, hemorrhoids, for bruises and swellings. Good to have on hand at all times. [HHH p.196]

[Indigestion](#)

Red Potato: Dr. Christopher suggested inserting a piece of red potato, about the size of the little finger, into the rectum, for nearly instant relief. [EWH p.43]

[Infertility](#)

Golden Seal: Likewise, internal hemorrhoids which are also accompanied by various dyspeptic symptoms, can be helped by a weak infusion given as an enema, with the tincture, tea or capsules taken internally during treatment. The disinfectant and astringent properties of the herb effect this cure. [UW-Golden Seal]

[Inflammation](#)

Onions: For hemorrhoids, two cups of finely chopped or grated green onions are mixed with wheat flour and fried in animal fat until the mixture resembles a salve. A thick layer is spread on a cloth and bound to the affected area just before bedtime. Repeat for two days; this usually clears it up in two days. [UW-Onions]

[Influenza \(Flu\)](#)

Plantain: It is well known for the treatment of piles (hemorrhoids). Make a strong tea with an ounce of granulated Plantain to a pint of boiling water. Let steep for twenty to thirty minutes. For hemorrhoids, use a syringe and inject one tablespoonful of this tea three or four times a day at least, and especially after each stool, using more frequently in bad cases. For external hemorrhoids, apply externally with soft gauze or cotton. A saturated piece of gauze may be kept on the piles by using a belt or band around the body to which has been attached a narrow strip of cloth for holding the saturated gauze. Plantain ointment may also be applied, and even a poultice of the fresh, pulped herb may be held to the area with a cloth band (Kloss:296). [UW-Plantain]

[Insect Sting](#)

[Cayenne](#): Dr. Christopher's many Cayenne Combinations: To correct this condition, follow the mucusless diet and use cayenne regularly. Cayenne aids in strengthening the veins and arteries because it increases circulation and is rich in calcium. Work up to taking a teaspoon of cayenne three times a day by starting with one-third of a teaspoon three times a day in water, cold or warm, as you prefer. Do this three days, and add one-third teaspoon each day until up to the one teaspoon three times a day, six days a week, as with all aids. Rest one day; then continue. [NL 2-10]

[Insomnia](#)

Juices: Carrot & watercress, carrot & turnip leaf, prune. [NL 3-5]

[Itch](#)

[Fen LB](#): Dr. Christopher's Lower Bowel (Colon) Formula: In the case of hemorrhoids we suggest the following: Number ONE: eliminate constipation. Use the lower bowel formula along with the mucusless diet and drink plenty of water. [NL 4-2]

## Testimonials

1. Hemorrhoids and Cayenne: Dr. Christopher tells this story. I traveled with a man younger than myself several years ago all over the western part of the United States on business. He marveled at the stamina that an older man could have on long drives without displaying the usual fatigue. Each morning I would get up and have my cayenne and my wheat germ oil (I don't pay attention to anyone else, I just take them, regardless). Finally he got curious and said, "What's that stuff?" So I gave him an illustrative lecture, and he responded, "Well, I have hemorrhoids; my mother died of high blood pressure, and I have high blood pressure; and with the hemorrhoids I have to wear a belt, as you probably noticed, to keep my hemorrhoids up in place. Do you think that (meaning cayenne) will help?" "Not unless you take it," I replied. "Well, I will start taking it." Then I added, "I don't think you're man enough; I don't think you are brave enough," and I turned and walked away. Now, he was well-proportioned and a weight lifter, so after I left, he went over and got into my car and started using the cayenne along with the wheat germ oil, and by spring he did not have to wear a belt any longer as his hemorrhoids were cleared. Then he had an amazing surprise when he went to his doctor for a regular check-up; the doctor took his blood pressure three or four times and said, "This is supposed to be progressively worse. I don't know what has happened; your systolic and diastolic are near perfect. You don't need to come back any longer --I don't know what happened!" Well, he did not have to go back, and today this gentleman who lives in the Salt Lake City area has no high blood pressure, for he kept on taking his cayenne. [SNH p.412]

2. Margarine and Hemorrhoids: For a couple of weeks, we tried using the cheaper margarine instead of our usual butter. After that time, we experienced large, protruding and very painful hemorrhoids, as well as congestion generally. When we began using butter and oil again, the symptoms just disappeared. This confirmed the belief that margarine is a dangerous junk food! The body cannot handle the hydrogenated oils. Although our experience flies in the face of standard dietary recommendations, which say that butter is dangerous, not margarine, we think that a moderate amount of butter is fine. [EWH p.43]

3. Papaya Saves from Surgery: Papaya has also remarkably healed painful hemorrhoids. A woman 52 years old, suffered painful external piles. Standard therapy produced no results. Her doctor told her to take one papain tablet every four hours. In two days swelling and pain both subsided. After three more days she was completely healed and did not have to consider painful surgery (Luc:Secrets:194). [UW-Papaya]

## Hernia

### Definition

A hernia commonly refers to the escape of some part of the intestine from the abdominal cavity, through an opening in the abdominal wall. The intestine is pushed out from the inner body, often to a point just below the surface of the skin. When it reaches this point, we have a visible hernia. At first it is about the size and shape of a marble, and grows larger as more and more of the intestine escapes. [NL 1-8]

### Symptoms

Extreme pain in the abdominal area whenever there is an exertion, such as bending over, leaning back or any other small movement involving the abdomen.

### Cause

Early in life the male infant can encounter complications. Two months before birth, the testicles descend from the abdominal cavity into the scrotum. They descend through the inguinal canal which soon closes behind them. If the canal doesn't close, however, this could be a later trouble spot for a hernia precipitated by muscle weakness and sudden heavy lifting. [NL 3-6]

Other causes are from overexertion in lifting which can cause the tear in the abdominal wall.

### Herbal Aids

**BF & C:** Dr. Christopher's Bone, Flesh and Cartilage Formula: A number of patients with hernias and ruptures have used the "bone, flesh and cartilage" formula with great success. This formula, which will be given, is applied over the afflicted area as a fomentation a day and night, using a truss or pad to hold in place. Then soak some flannel in this tea and apply. It can also be obtained in a concentrated liquid form or as an ointment. Use whichever type is best in your case. It is also helpful to take the formula internally as a tea, or in capsule or tablet form--two or three of these three or more times per day: This can be purchased under the Christopher name of Bone, Flesh and Cartilage. [BF&C]

Bone, flesh and cartilage (comfrey combination fomentation). This is an aid for malfunction in bone, flesh, sinews, etc. Make a tea of the following herbs: six parts oak bark, three parts marshmallow root, three parts mullein herb, two parts wormwood, one part lobelia, one part scullcap, six parts comfrey root, three parts walnut bark (or leaves), three parts gravel root. Soak the combined teas in distilled water, then soaking four to six hours, simmer thirty minutes, strain and then simmer the liquid down to 1/2 its volume and add 1/4 vegetable glycerine (if desired). Example: One gallon of tea simmered (not boiled) down to two quarts and add one pint of glycerine.

Soak flannel, cotton, or any white material other than synthetics (never use synthetics). Wrap the fomentation (soaked cloth) around the malfunctioning area and cover with plastic to keep it from drying out. Leave on all night six nights a week, week after week, until relief appears.

Drink 1/4 cup of finished concentrated tea with 3/4 cup of distilled water three times in a day. [NL 1-8]

**Cleaning Bowels:** For hernias we recommend keeping the bowels clear and open through the use of the lower bowel formula, [**Fen LB**] plenty of fresh juices, a light, mucusless diet to eliminate the strain of bowel movements, and the application of the Bone, Flesh, and Cartilage

**Hernia**[Hiccoughs](#)[Hypoglycemia](#)[Hysteria](#)[Impotency](#)[Incontinence](#)[Indigestion](#)[Infertility](#)[Inflammation](#)[Influenza \(Flu\)](#)[Insect Sting](#)[Insomnia](#)[Itch](#)

Formula [[BF & C](#)] to the hernia area as a fomentation. All stress and strain on the area must be removed while the area is healing. The fomentation should be applied in the evening so that it can remain on the area all night. During the daytime, the BF&C ointment can be used if the fomentation is inconvenient. BF&C capsules or tea may also be taken daily: either two or three capsules three times daily or three cups of the tea. Continue treatment six days a week fasting with distilled water on the seventh until the hernia is healed. [NL 3-6]

**Testimonials**

A friend of mine, who was scheduled for a hernia operation earlier this year, suggested I write to you. After he read your book "The School of Natural Healing" and followed your suggested guidelines for a week to ten days, his hernia problem was solved. Needless to say, he can't say enough good things about your use of herbs and the book. [NL 1-8]

## Hiccoughs

### Definition

An irritation of the phrenic nerve causes the contractions of the diaphragm. Hiccoughs can at times become so serious they cause death, after a period of continued hiccoughing. [HHH p.82]

### Symptoms

This is a sudden inspiration of air caused by spasmodic contractions of the diaphragm. An irritation of the phrenic nerve causes the contraction of the diaphragm. [SNH p.30]

### Cause

This is generally caused by overloading food or drink into the stomach. Relaxation is the most important thing. [SNH p.40]

### Herbal Aids

**General Instructions:** Often hiccoughs can be stopped merely by bending over with the head downward and tipping a glass of liquid to drink it while upside-down. A few drops of antispasmodic tincture taken internally and rubbed on the chest area will often bring relief, as will a teaspoon of onion juice, a cayenne poultice on the chest area, black cohosh tea, blue cohosh, or wild carrot flowers or seeds. [SNH p.40]

**Orange Juice:** Take a good swallow of freshly-squeezed orange juice. Repeat after a few minutes if needed. Dill tea should help. Do a good acupuncture treatment on the hands or feet. [EWH p.167]

**B & B Tincture:** Dr. Christopher's Nervous System Formula with Black Cohosh: Black cohosh, blue cohosh, blue vervain, skullcap, and lobelia. This is used to aid in nervous conditions, sore throat, hiccups, and aid to restoring malfunctioning motor nerves and assisting in adjusting poor equilibrium and hearing, and a great blessing to epileptics. Massage into the medulla (base of skull), and upper cervicals, and do following: With an eye dropper insert into each ear at night four to six drops of oil of garlic and four to six drops of the following herb tincture: blue cohosh, black cohosh, blue vervain, skullcap, and lobelia, [B&B Tincture] plugging ears overnight with cotton, six days a week, four to six months, or as needed. On the seventh day, flush ears with a small ear syringe using warm apple cider vinegar and distilled water half and half. Take six to ten drops in a little water or juice two or three times a day. [EWH p.207]

**Spearmint:** A distilled water of spearmint will relieve hiccough. [UW-Spearmint]

### Testimonials

**B & B Tincture:** Dr. Christopher's Nervous System Formula with Black Cohosh A woman one day came to Dr. Christopher with severe hiccups, and he put a few drops on her tongue--she felt a jolt from the top of her head to the bottom of her feet, and the hiccups stopped. [NL 5-10]

## Hypoglycemia

### Definition

Pancreatic malfunction can manifest in one of two ways: diabetes, which is high blood sugar, or hypoglycemia, which is low blood sugar. Though they are completely different, they both stem from the same cause, a malfunction of the pancreas, which is what we have to treat.

### Herbal Aids

**Panc Tea:** Dr. Christopher's Herbal Aid for Pancreas and Companion Glands Formula: An aid for the pancreas and other affiliated glands that through malfunction cause high or low blood sugar (namely diabetes or hypoglycemia). This combination has assisted many that have had hypoglycemia after 6 months or more of using 2-3 caps or tablets 3 times in a day 6 days a week (all herbal aids give faster results in 6 days a week instead of 7) using the same day of the week of each week. They have had a glucose tolerance test with a clean bill of health on the pancreas area. Many reports came in of heavy insulin users who continue using the insulin but by watching litmus paper or other types of diabetic checking have gradually tapered down on the insulin and many, within a year of using 2-3 or more three times a day, 6 days a week of the tablets or capsules, have found complete relief. Of course the closer a person stays on the mucusless diet and eliminates the sugars (unnatural), soft drinks, candies, pastries, bread, etc. the quicker the results. The herbal formula is golden seal, uva ursi, cayenne, cedar berries, licorice root and mullein.

**Diet and Hypoglycemia:** Most hypoglycemics have problems feeding themselves, for they crave protein and sugar, yet these substances are wearing on the adrenals, which are often exhausted in hypoglycemics. You need to feed the adrenals with licorice root and hawthorne berries, the latter being said to produce natural adrenalin. You need to take high-quality protein, as in the nuts and seeds and legumes. Sprouted sunflower seeds, sprouted almonds, and chia seeds are all high-quality sources of protein. The other seeds and nuts are good as well. You can soak and low-heat legumes, particularly pinto beans, which are high in potassium and easily digested, for satisfying and long-lasting protein. Be sure that you eat plenty of vegetables, both raw and cooked, in preference to too many fruits, which can overload the system with sugar.

When suffering with hypoglycemia, I devised a power-packed drink which helped every time. In a blender place a handful of soaked or sprouted almonds, a cup or two of water, a banana, some pineapple juice, a tablespoon of brewer's yeast, and a handful of chia seeds. Blend until the seeds thicken the drink. This is mild but very helpful in feeding high-vibration protein to the system.

**Juniper:** Stan Malstrom reminds us that diabetes and hypoglycemia patients always have undergone or are undergoing considerable stress, so that if we wish to treat them, we must build the adrenals as well as the pancreas, Juniper berry being an ideal herb for the purpose. He mentioned that Hawthorne berries should be used in conjunction with the Juniper to permanently effect healing.

**Licorice:** LaDean Griffin, in a very interesting article on Licorice, explained the use of Licorice to build the adrenal glands. She noted that we call adrenal exhaustion hypoglycemia in today's modern world. Since we are so stressed at our modern pace of life, the adrenal glands become exhausted easily and frequently. "In hypoglycemia, where sugar is taken to give a stimulating lift in the hope of overcoming (stress), the problem is compounded as sugar leaches the Vitamin B and calcium, causing more stress, losing more potassium and body tone. The insulin is raised to an unnatural high to take care of the sugar, somehow extending past its needs

and afterwards dropping to a new low, causing a low blood sugar called insulin shock (overdose of insulin). Immediately we take sugar to lift us up again and a vicious cycle has begun. Having found the herbs that act like cortisone (cortin hormone), I feel it is important for me to make this known". She then described how primitive people used various herbs, including Licorice, to build the endurance, and how the medical world extracted from the herbs the compound we call cortisone. When a person's adrenal glands become so exhausted that they simply do not function anymore, the condition is called Addison's disease, which is a terminal disease. It is characterized by blotchy pigment appearing suddenly on large parts of the body, intolerance to heat or cold, reduction in capacity for muscular work, weakness, inability to stand any stress or emotional excitement, whether positive or negative, sometimes nervous breakdown or even insanity, complete exhaustion, feeling that one is going to die, inability to digest food, and other similar symptoms. The synthetic cortisone is given to supply the need of the natural substance, but it produces complications, side effects and eventual disillusionment as it will not in any way heal the adrenals (Herbalist:1975:16).

Licorice is an excellent herbal aid to use in this condition, as it contains a cortisone-type substance which will help the body restore itself to the point where it will produce its own cortisone. Its sugar-like substance does not increase the demand for insulin in the body, thus giving strength without bringing on insulin shock. LaDean Griffin explains that she is certain that this works, because at a time when she thought she was making a great deal of personal progress, a sudden shock debilitated her so much that she developed Addison's Disease. She found that two capsules of Licorice each day would give her enough strength to begin healing, and to do the day's work. She needed to continue taking the herb, which is not addictive, she explained, no more than food is. You can stop taking the Licorice root without going into shock as you would if you suddenly stopped taking cortisone, she explained.

"When people who have been under severe stress, overworking the adrenals and becoming extremely nervous and irritable, begin to take Licorice, they think they have suddenly spiritually arrived. It is my opinion that many who suffer in mental institutions could be helped with this wonderful herb" (Ibid.).

Sarsaparilla: Sarsaparilla also contains cortin one of the hormones secreted by the adrenal glands. The body will die almost immediately if this hormone is stopped but if there is only a small or insufficient amount the body becomes easily ill and develops nervous depression and general weakness. So many maladies are related to adrenal weakness and exhaustion, including hypoglycemia, so people should take note if they are striving to rebuild their adrenals. Sarsaparilla may be able to help.

Blueberry Tea: Some who have hypoglycemia have reported blueberry leaf tea as very helpful.

Dandelion: Dandelion has been often thought to have good effect upon the functions of the pancreas. Tierra considers the root a specific for hypoglycemia, a cup of tea taken two or three times a day in connection with proper diet.

Chia: We especially like this preparation of chia seed: in a blender put about a cup of milk (goat's, nut, soy, etc. are all good). Add an equal amount of any kind of juice. Add two bananas and 1/4 to 1/2 cup of chia seed. Blend until smooth. Allow to sit a couple of minutes, to develop the mucilage and blend again. Serve. Everyone likes this and it is very nutritious...Chia is excellent for hypoglycemics. If made into a "shake" as described above it can keep the hypoglycemic person in energy and strength for several hours. [UW-Sage]

Apples: The apple is an excellent fruit for the hypoglycemic because it contains a higher percentage of fructose than other fruits which does not call upon insulin from the pancreas. Fructose is fairly quickly absorbed into the system, goes through the liver and is then available as glucose and may be burned or utilized by the body for energy. A pleasant tea may be made by boiling two or three apples cut in thin slices with their peels in a quart of water for about 15 minutes. A little licorice root may be added for flavor.

### Testimonials

One day a man and his sister, both middle-aged adults, came into Dr. Christopher's office. She had severe diabetes, and his hypoglycemia was so bad that doctors' tests indicated that he could

not get any worse, without offering any hope to help him. They both were told to use the [mucusless diet](#) and to take the pancreas formula [[Panc Tea](#)], although they took the lower bowel formula [[Fen LB](#)] and blood cleansing formula [[Red Clover Combination](#)] before they began on the pancreas formula.

The woman was using around 80 to 85 units of insulin a day, being a severe case. Despite her initial condition, within a year her pancreas was furnishing its own insulin, and she tapered off gradually until she didn't need it at all. Her brother took a glucose tolerance test in six months and received a clean bill of health; his hypoglycemia was completely cleared.

Despite the fact that they had opposite diseases, diabetes and hypoglycemia, both were cleared because each had a family weakness in the pancreas. When their pancreas was cleared, the diseases were removed. [EWH p.134]

## Hysteria

### Definition

Tension or excitement in a person that is marked by unmanageable fear and short term loss of control over emotions.

### Symptoms

A psychoneurotic disorder characterized by emotional excitability, extreme emotionalism involving motor and vasomotor, sensory and visceral functions. This is a condition that varies from mild excitement to laughing and crying with extreme nervous tension, accompanied by fits, convulsions, loss of sensibility and mania. [SNH p.32]

### Cause

Hysteria is considered to be due to mental causes, such as autosuggestion, dissociation or repressed emotion. This condition only occurs while a person is awake and is therefore a willed emotional release to obtain sympathy, to frighten, etc., if another person is involved. This type of person suffers much anxiety and fear. [SNH p.32]

### Herbal Aids

General Information: For immediate relief, give a nervine tea such as an infusion of lady's slipper, skullcap, ginger, raspberry leaves, poplar bark, balmony, colombo root, cayenne, or antispasmodic herbs to help relax the nerve tension. Add a little tincture of lobelia to the nervine as an antispasmodic. If it is impossible to administer these aids orally, the same tea in the form of an enema will help ease the condition very quickly. Rest and cheerful surroundings are needed. The digestive system needs to be toned up properly. [SNH p.32]

Garlic: Give an oral infusion of garlic in hot milk and water. [SNH p.100]

Tansy: Take 2 fluid ounces of the infusion repeated frequently (5-6 times daily). [SNH p.123]

Hysteria (general building tonic): See formula using raspberry leaves, white poplar, balmony, calumba root and cayenne. [SNH p.146]

Catnip: A warm high enema of catnip infusion will bring relief. [SNH p.237]

Catnip: Use the warm infusion orally. [SNH p.237]

See formula using spearmint and ginger. [SNH p.240]

European Pennyroyal: Give the infusion in teacupful doses, repeated frequently (every 1-2 hours), and when the herb is unavailable, 1-3 drops of the oil in warm water is excellent. [SNH p.283]

Blue Cohosh: For hysteria and nervous exhaustion due to shock or accident. Use the warm decoction orally. [SNH p.292]

Antispasmodic Tincture: See formula using lobelia, skullcap, skunk cabbage, gum myrrh, black cohosh and cayenne. [SNH p.363]

Skullcap: When skullcap tea cannot be taken orally, a small quantity may be given rectally every 30 minutes to 1 hour. [SNH p.371]

## Impotency

### Definition

The inability of the adult male to achieve erection or less commonly to ejaculate having achieved an erection.

### Herbal Aids

General Instructions: From a question to Dr. Christopher in his newsletter. Is there a natural treatment for impotency? His answer: There are certain types that are beyond help, such as of course, castration, and others could only be helped by a miracle such as a severe case of mumps that have "gone down," or injuries, etc. But there are many who have been helped who are impotent because of malnutrition of the reproductive area. In this case we have had both husband and wife follow a special routine in diet as follows:

- (a) Stop eating processed foods and start on the [mucusless diet](#) with plenty of raw live food and fruit and vegetable juices.
- (b) Use a gallon of steam distilled water each day, or if one is under 130 pounds, use one ounce of this water to each pound of body weight.
- (c) Keep the bowels free, using the bowel tonic formula if required so as to get three or more bowel movements per day.
- (d) The equivalent of one teaspoon of "false unicorn root" herb a.m. and p.m. (This can be in capsules, tablets, tea, etc.)
- (e) One tablespoon of wheat germ oil three times each day. Both husbands and wife must follow this program. This routine can also be helpful to those who have wanted children, but could not conceive.

While in my early practice nearly forty years ago, I would promise a couple that if they would follow this routine they would either conceive or have a baby within a year. Many have accomplished this. One special (to me) couple had been married fourteen years with no success in reproduction. They followed the suggestion faithfully and had the baby in just a little over the year. We had a number of patients that have had this wonderful result.

The body has to be cleansed of these toxic additive materials we find in our foods today, and this is one of the reasons for the steam distilled water to help flush out the waste to aid the reproductive organs and gain better health. [NL 1-7]

True Unicorn Root: True unicorn root is a very valuable tonic, especially beneficial and healing to the female regenerative organs. It is a good general tonic, and it has proved especially effective for female cases of habitual miscarriage due to chronic weakness. It may be safely used during the entire period of pregnancy. Due to its powerful uterine stimulative properties, it has proved valuable in cases of sterility and impotence (sometimes achieving healing results within a few weeks; but the more difficult cases must be given for a few months); but as it increases the possibility of conception, it should be avoided where frequent pregnancy is undesirable. [SNH p.288]

Sterility, Impotence: Give the decoction over an extended period of time (a few weeks to several months). [SNH p.288]

Aphrodisiacs: Herbs used to help correct conditions of impotence and strengthen sexual power. Arracacha, Betel, Black cohosh, Burr gokhru, Camphor, Carline thistle, Damiana, Echinacea, Coca, False unicorn, Garden sage, Ginseng, Guarana, Jamaica ginger, Matico,

Murira-puama, Night blooming cereus, Nux vomica, Quaker button, Saw palmetto berries, Summer savory, Sundew, True unicorn (impotence), Vanilla pods, Virginia snake root, Yohimbe. [SNH p.581]

Gravel Root: Gravel Root is said to help with problems in the genital tracts. When there is impotence, Gravel Root can help tone and heal the system. [UW-Gravel Root]

Oats: Oats are also used to regenerate and strengthen the male reproductive system, an effective agent in conditions of spermatorrhea, nervous debility of convalescence, nervous exhaustion, and general neurasthenia. They are considered an effective agent in conditions of impotence or sexual debility due to over indulgence as they are said to produce a tonic effect on the nerve structure of the sexual organs. They are employed for prostatic irritation (Luc:Secrets:149). For this purpose they are combined with black willow bark and celery seeds and made into a decoction. One teacupful is taken three or four times a day. For other male troubles, fifteen drops of the extract of oats are taken three times a day in hot water (for quicker effect) or cold water (for more prolonged effect) (Ibid.). [UW-Oats]

Sarsaparilla: A search for hormones from plant substances has been going on for several years. Hundreds of plants have been tested for hormones or pro-hormones. In 1939, two scientists discovered that Sarsaparilla root certainly contained hormones, while other plants often proved disappointing.

The first hormone found was the male hormone testosterone. Progesterone and cortin have also been extracted from the root. In Mexico, another scientist, noticing that Sarsaparilla was used frequently by the Indians for physical debility, weakness, and impotence, found the same results. In Mexico and South America testosterone tablets are made for impotence from Sarsaparilla roots. [UW-Sarsaparilla]

Wild Lettuce: In homeopathy, a tincture extracted from the whole fresh plant is used in the treatment of impotence. This is an interesting contradiction in uses! It is sometimes dissolved in wine to be taken for pain. [UW-Wild Lettuce]

Juices: Watercress, spinach. [NL 3-5]

Pinon Nut: The nut is considered to be effective where there are problems with the lungs such as tuberculosis, impotence, paralysis, low blood pressure, and emaciation. The Pinon nut is one of the best sources of protein in the nut family. [NL 5-1]

Watercress: The seeds in white wine would stop gonorrhoea and impotency. In fact, he said, "the seeds provoke venery and lust" [UW-Watercress]

Chickweed: Chickweed can benefit the whole system, as it soothes and cleanses and paves the way for healing of toxicity-related problems, such as impotency. [NL 6-5]

### Definition

Inability to control urination or defecation, common in the aged.

### Herbal Aids

[Cranesbill](#): Drink the decoction in combination with golden seal (*Hydrastis canadensis*). [SNH p.152]

[Incontinence \(enuresis\)](#): See formula using sumac berries, beth root, yarrow, agrimony and white pond lily. [SNH p.158]

[Bistort](#): Combine bistort with other diuretic agents. [SNH p.162]

[DRI](#): Dr. Christopher's Formula for Bedwetting: For more severe cases of incontinence, enuresis (bedwetting, etc.), a formula we have used a long time is as follows: parsley root, juniper berries, marshmallow root, white pond lily, gravel root, uva ursi, lobelia, ginger root and black cohosh root. This formula is a specific for helping the body to control or overcome bedwetting and to strengthen the entire urethral canal, kidneys, bladder, etc. Recommended dosage two #0 capsules three times a day with a cup of parsley tea. [EWH p.196]

[Mullein](#): One-half teaspoon in one-fourth cup water drunk before retiring will help increase the tone of the triangular base of the bladder (the trigone) and aid in preventing bedwetting, or incontinence. [UW-Mullein]

[Oak Bark](#): take two to three cupfuls a day -  
5 fresh or dried oak leaves  
a small mixed handful of balm, nettle and eucalyptus  
1 and 3/4 pint of water. [NL 2-10]

### Definition

Not being able to produce offspring.

### Herbal Aids

The Following Comes from Herbal Home Health Care pages 1-8.

#### CHAPTER ONE-HEALTH FOR PROSPECTIVE PARENTS

If one has been living on the mucusless diet and is now expecting a new healthy child, remember, "faith without works" is not the proper way to go. To carry on the good works of proper diet and preparation for the new mother-to-be, one should include additional aids to purify her body, in order to pass on good health to the expected child.

Besides keeping away from mucus-forming and toxic "food stuffs," she should also be using "special" foods and wholistic procedures to assist the new one coming, and to also give her an easier time of pregnancy and delivery.

One of the herbal foods is red raspberry leaf tea. This is made by using a heaping teaspoons of red raspberry leaves to each cup of hot steam-distilled water, or one ounce of the herbs (two heaping tablespoons, approximately) to each pint of distilled water. Never let the tea boil, but pour the boiling water over the herbs and then steep fifteen or twenty minutes in a warm place, strain and drink. It is best to drink three or more cups a day of this tea during the entire pregnancy. It is a pleasant-tasting tea and is also an anti-nausea....

Red raspberry is a great agent for cleansing a canker condition of the mucous membranes in the alimentary tract, leaving the tissue toned. In pregnancy the infusion, when taken regularly, will quiet premature pains, and will produce a safe, speedy and easy delivery. Raspberry leaves stimulate, tone and regulate (both the leaves and fruit are high in citrate of iron which is the active alterative, blood-making, astringent and contractive agent for the reproductive area) before and during childbearing, assisting contractions and checking hemorrhage during labor, relieving after-pains, then strengthening, cleansing, and enriching the milk of the mother in the post-delivery period. The tea is a valuable and effective agent for female menstrual problems, decreasing the menstrual flow without stopping it abruptly. Raspberry leaves are soothing and toning to the stomach and bowels, with healing action to sore mouths, sore throats, nausea, aphtha, stomatitis, diabetes, diarrhea and dysentery. They are especially valuable in stomach and bowel complaints of children.

Medicinal uses: Constipation, nausea, diarrhea, dysentery, diabetes, pregnancy, uterine hemorrhage, parturition, uterine cramps, labor pains, cholera infantum, leucorrhea, prolapsus uteri, prolapsus ani, hemorrhoids, dyspepsia, vomiting, colds, fevers, intestinal flu, bowel complaint, thrush, relaxed sore throat, ophthalmia, sore mouth, sore throat, spongy gums, ulcers, wounds, gonorrhea.

Preparation: Decoction, fluid extract, infusion, powder, tincture.

There are pages more in this volume on formulas and many other data, but what we have shown here is enough to show you a great pre-remedy as well as a body builder for the "one to be." Other herbal books such as Kloss' Back to Eden and Meyer's The Herbalist etc. sing red raspberry leaf teas' praises to the sky!

Before and during the pregnancy it is extremely important to see that the reproductive organs are functioning properly, and as well as being healthy and producing the correct amounts of hormones and estrogens.

[Hiccoughs](#)[Hypoglycemia](#)[Hysteria](#)[Impotency](#)[Incontinence](#)[Indigestion](#)[Infertility](#)[Inflammation](#)[Influenza \(Flu\)](#)[Insect Sting](#)[Insomnia](#)[Itch](#)

If the female organs are in a questionable condition, it is well before and during pregnancy (also in the post-delivery period) to use our female corrective formula [\[Nu Fem\]](#) (an herbal food to help strengthen and rebuild the entire reproductive area) and the estrogen hormone combination [\[Changease\]](#) (herbal aid) to assist in supplying needed hormones and estrogens in the correct amount. The human body is computerized to a point that it will take from an herbal formula such as this one the different types of estrogens and hormones it needs, and easily discard the ones not used. These herbs can be not only accepted into the body, but assimilated when needed and eliminated when not required. Many of the inorganic drugs can be accepted into the body and only a small amount assimilated. The rest of the prescription, being inorganic and of a low vibration, cannot be eliminated with ease and lies in weakened areas, accumulative, to cause side-effects and after-effects as time progresses.

Herbal Aid for Female Reproductive Organs. [\[Nu Fem\]](#) This is an amazing combination of herbs to aid in rebuilding a malfunctioning reproductive system (uterus, ovaries, fallopian tubes, etc.). Over the years herbalists and patients have seen painful menstruations, heavy flowing, cramps, irregularity, etc., that have been helped and the patient now has a painless menstrual period, good menstrual timing, and a new outlook on life by using these aids to readjust the malfunctioning areas. The female corrective formula [\[Nu Fem\]](#) consists of three parts of golden seal root and one part of each of the following: blessed thistle, cayenne, cramp bark, false unicorn root, ginger, red raspberry leaves, squaw vine, and uva ursi.

Recommended dosage is one cup or 2 capsules or tablets morning and evening or three times a day if desired, six days a week for as long as required to get results desired. We have seen many severe cases who have had many years of suffering cleared up in 90 to 120 days. Some get relief sooner, some take longer--no two cases are alike. This is a food to rebuild the malfunctioning organs.

Herbal Aids to Equalize Hormones and Estrogen: [\[Changease\]](#) Here are herbs that are an aid to assist the function of developing the hormone and estrogen balance in both female and male. This combination consists of the following herbs: black cohosh, sarsaparilla, ginseng, blessed thistle herb, licorice root, false unicorn root and squaw vine. Adult suggested amount is one to three number 0 capsules morning and evening, as desired. As an aid to youth going into puberty, for expecting mothers, as well as at menopause times.

These two combinations, the female corrective [\[Nu Fem\]](#) and the hormone-estrogen combinations [\[Changease\]](#) can be used during the entire time of pregnancy (and also before and following), as it is an herbal food like any other food and "is there to be used, if needed," but can do no harm in any way.

If there is yeast infection and or Herpes Simplex before or during pregnancy, add also, the vaginal-rectal bolus combination [\[V.B.\]](#) and the slant board routine [\[Yellow Dock Combination\]](#) included herein. These are very beneficial and yet are harmless to the mother and child-to-be.

Slant Board Combination. [\[Yellow Dock Combination\]](#) As an aid in prolapsed uterus, bowel, or other organs, to assist in giving relief, make concentrated tea (simmer down to half its amount) of six parts oak bark, three parts mullein herb, four parts yellow dock root, three parts walnut bark or leaves, six parts comfrey root, one part lobelia, three parts marshmallow root. Inject with a syringe (while head down on slant board) into vagina, 1/4 to 1/2 cup or more; or rectum, one cup or more; for prolapsus or hemorrhoid problems and leave in as long as is possible before voiding. Dose suggested is one-fourth to one cup, one or more times in a day. When the tea is injected into the abdominal area and while on the slant board, knead and massage the pelvic and abdominal area to exercise the muscles, so the herbal tea (food) will be assimilated into the organs.

#### THE FATHER-TO-BE

We are also giving here an herbal formula for the father-to-be. If his reproductive organs are in a good clean healthy condition the seed for conception will be an improvement over seed of questionable quality. The slant board routine [\[Yellow Dock Combination\]](#) following the rectal bolus [\[V.B.\]](#) at night will also, along with the prostate combination [\[Prospallate\]](#), proper mucusless diet and reproductive organ rebuilding will be an asset to the future family and another aid in preventing childhood diseases.

An Aid for the Prostate Area. [\[Prospallate\]](#) In case of malfunction we suggest this combination to assist the male; one part of each of cayenne, ginger, golden seal root, gravel root or queen of the meadow root, juniper berries, marshmallow root, parsley root or herb, uva ursi leaves. This will

dissolve the stones that are in the kidneys, as well as clean out other sedimentation and infection in the prostate. Mix the powders and place in No. 0 capsules and take two or more morning and night, with parsley tea when possible. [HHH p.1-8]

The Following Comes from Every Woman's Herbal, chapter entitled "Before Childbearing" pages 13-25. Although the physical condition of both prospective parents affects the condition of a new child, the mother's health is most critical. Before conception, she and her husband should work together to purify and build their bodies in anticipation of pregnancy and childbirth.

So many factors influence the formation of a new child! It may take some time to build up the health of parents-to-be if they have been living on mucus-forming foods long before they marry.

If a young woman has menstrual problems, she can suspect that her female organs might not be in good condition. Although it should be needless to say, we should avoid drugs in managing our menstrual cramps. In order to treat the symptoms, some people favor red raspberry tea, peppermint tea, camomile tea, or catnip tea. You can take a capsule of cayenne with any of these to help warm the internal organs. If the cramps are really severe, you can use cayenne ointment externally on the abdomen to act as a counter-irritant, but be sure to cover the application with gauze, as it can stain your underthings. Some young women have experimented with relaxation breathing, such as is taught in Lamaze childbirth classes. This allows the body to relax and deal with the pain, rather than fighting against the pain. Often tension really increases menstrual discomfort. Some women attribute cold in the abdominal region to the onset of cramps. Applying moist heat, such as a hot, moist towel covered with a piece of plastic, has helped some. If you wish to make an herbal fomentation of some of the pain-relieving teas mentioned above, it might even work faster and better.

One young woman wrote, "My sister and I suffered from menstrual cramps from the age of 13 on. We both started college at age 18. The first months after we started school, we noticed that neither of us experienced cramps anymore. The only thing we could attribute it to was the fact that we walked approximately 12 blocks to and from college classes five days a week. We are confident that the exercise did the trick. Up to that time, we just suffered it out." (The People's Doctor, Vol. 6, No. 7, page 3.)

As for the drugs you should avoid, knowing their effects may likely deter you from considering them as menstrual cramps panaceas. Aspirin, which can cause digestive-tract problems and deposit coal-tar traces throughout the system, actually doesn't work very well in relieving cramps. Tylenol, which has been the target for poisonings through tampering with the caps of bottles, offers its own dangers. It is evidently easy to overdose, which causes liver damage, sometimes resulting in death. Other effects are related to the liver, including jaundice and bleeding. Because the liver is the body's most important detoxifier, even small amounts of Tylenol may adversely affect the body's ability to handle toxins; these building up in the system may actually increase the pain in menstrual cramping! Talwin, a prescribed drug for the condition, causes nausea, dizziness and weakness and incapacitation. Birth control pills, which are sometimes prescribed for irregular and difficult menstruation, can cause abnormal bleeding and headaches, as well as sometimes endangering future fertility. Anaprox, which is a specifically-prescribed drug for menstrual pain, can cause headache, drowsiness, dizziness, lightheadedness, inability to concentrate, and depression. It can also cause skin reactions such as rash, sweating, easy bruising, and bleeding (Dr. Robert Mendelsohn, The People's Doctor, Vol. 6, No. 8).

In addition to avoiding drugs completely, one should be careful to avoid surgery for any kind of menstrual problems. Even if one's periods are irregular or if they stop completely, sometimes time and circumstances can alleviate the problem. If we are to follow the teachings of natural healers, surgery should be avoided except in the case of extreme, life-threatening emergencies for, as [Dr. John R. Christophers "Incurables Program"](#) has shown time and time again, even serious disorders can be healed naturally. Dr. Mendelsohn, cited above, suggested that sometimes sexual activity in marriage can produce the necessary hormones to activate a regular menstrual cycle. He also suggests that the clinical definition of menstrual normality should not frighten us, as some cycles are longer and some shorter than 28 days. In particular, we should avoid steroid drugs such as Prednisone, which really can cause problems with menstruation.

If a woman suspects that she has less than ideal function in her reproductive system, she can take red raspberry tea daily. She can also take Dr. Christopher's female corrective formula [[Nu Fem](#)] which rebuilds the entire reproductive area, and the estrogen-hormone combination [[Changease](#)] which will supply these factors in the correct amounts. They are present in a natural form, which

allows the body to assimilate them as well as merely accept them. The female corrective consists of three parts golden seal root and one part each of the following herbs: blessed thistle, cayenne, cramp bark, false unicorn root, ginger, red raspberry leaves, squaw vine, and uva ursi.

Over the years, herbalists have helped women overcome painful menstruation, heavy flow, irregularity, etc. One woman in American Fork, Utah, was having difficult periods. These had started in puberty, and she had spent the whole of her adult life traveling from coast to coast, averaging a cost of over \$1,000 a year for ten years, paying medical doctors to tell her what was wrong. She suffered vicious menstrual cramps and extremely long periods. No one was able to help; she was very discouraged; but one of her neighbors said, "Why don't you go to the next town, to Orem, where a man called Dr. Christopher lives? He could give you some help."

When she arrived, Dr. Christopher read her eyes, noting that she did have problems with the reproductive organs. He told her to start on the female corrective formula [[Nu Fem](#)] and the hormone and estrogen formula [[Changease](#)] (which consists of black cohosh, sarsaparilla, ginseng, blessed thistle, licorice root, false unicorn root, and squaw vine). He promised her that if she would follow through, within 90 to 120 days she would get results. Within 120 days, she came back, saying that she was on a 28 day cycle, with no menstrual pains. She was delighted! Where she had spent over \$10,000 traveling from doctor to doctor, it cost her approximately \$10 for the herbs to cure her.

If you suffer from tumors or cysts in the reproductive organs, the vaginal bolus [[V.B.](#)] formula has been reported to work wonders. Mix equal parts of squaw vine, slippery elm, yellow dock root, comfrey root, marshmallow root, chickweed herb, golden seal root, and mullein leaves. These should be powdered. Melt some coconut butter (solid at room temperature) and mix a small quantity of this powder in until it is of pie-dough consistency. Roll this between your hands until it is about the size of the middle finger and about an inch long. Insert several of these into the vagina, as you would use a suppository. You will need to wear a sanitary napkin. Leave in for two days; the coconut butter melts at body temperature, leaving only the herbs. On the night of the second day, douche with yellow dock combination herb tea cooled to tepid, and insert another bolus; after two more days douche again.

On the seventh day, you will rest. Repeat this pattern for six weeks to six months. This will bring out cysts, tumors, polyps, and acids through the vagina, through the rectum and the urethral tract.

A young Englishwoman named Claire suffered from multiple sclerosis so severely that she was confined to a wheelchair. She began to use the mucusless diet, and was miraculously healed and able to walk and work vigorously. Five women, each suffering from cervical cancer, diagnosed by doctors, came to Claire asking for help. Using nutrition and the V.B. therapy, four of the cases were completely cleared and one was in remission.

Sometimes it takes time and patience for these herbal aids to truly work. For example, a lady who had come to Dr. Christopher began the full routine as described above. A number of months later she began to think, "Look, I have been on that program for months now; I have taken the herbs orally; I've used the vaginal bolus [V.B.], including the yellow dock combination, and I am getting sick of this!" She felt somewhat better but didn't notice much change, so she was going to quit that day. That very morning she made the decision, as she was at home, sitting on the toilet. When she got up, she happened to turn around and glance into the bowl, and there was something about the size of a half dollar, with legs on it, swimming around in the water. This something had dropped out of her! She screamed, and her husband came in. They put it in a bottle and took it right over to the family doctor. He examined it under the microscope, and said he had never seen one of these whole like this, because they have to cut them out of a person. This was a spider cancer. They never give up and leave by themselves; usually they must be cut out. The doctor was amazed that it had come out of her. It had done so because her body was now so healthy that the spider cancer didn't have any waste materials to work on. When she saw that cancer, she vowed to continue the program, even if it took six months or years. Dr. Christopher reminded us that some people heal quickly, but sometimes it takes a long time. If we know we are on the right track, we should just continue.

If a couple wishes to delay conception for a time, perhaps in order to improve their health, they should be extremely cautious about what method of birth control they choose. Despite medical assurances that every method is safe, current research proves otherwise. Especially after taking birth control pills, some women suffer bad side effects, including infertility. According to Dr. Mendelsohn, this should not surprise anyone, because most of these pills suppress pituitary hormones because of the estrogenic and progestational hormonal activity of the ingredients in the

Pill. The artificial hormones suppress the natural hormones in the body, leading to inhibition of ovulation as well as other effects. In addition to infertility, side effects may include abnormal bleeding and clotting, including cerebral hemorrhage and cerebral thrombosis. (The People's Doctor, Vol. 4, No. 1, page 5.)

According to information supplied by Planned Parenthood, each year 9,400 women are hospitalized because of complications from taking the Pill. Heart attack and stroke are the major culprits, causing about 500 deaths annually. About 11,000 women annually suffer from thrombosis (blood clots in the superficial veins). Liver tumors account for 300 annual hospitalizations, with a ten percent fatality rate. And 860 women are hospitalized annually for gall bladder problems caused by using the pill. Other complications which do not require hospitalization include nausea, breast enlargement, weight gain, dizziness, and liver spots on the skin. This same publication said that women who suffer from the following ailments must not take the Pill--although the purpose of the booklet is to promote birth control use: phlebitis, stroke, coronary artery disease, benign liver tumor, and cancer of the breast or reproductive area. Women are also advised against taking the pill if they have high blood pressure, acute or chronic liver disease (and if the pill is so hard on the liver, it likely badly affects liver function to begin with), gall bladder disease, and those who are wearing long-leg casts or who have had a major injury to their feet or legs. Women who have diabetes or pre-diabetes (hypoglycemia?) and women expecting to have surgery should not take the Pill. ("Making Choices," Alan Guttmacher Institute, Planned Parenthood, 1983.) Considering all these problems and incipient health dangers, we would certainly advise no one to take the pill.

In addition, the insertion of an IUD may cause problems with conception. Dangers of using an IUD include abnormal bleeding, disturbances in menstrual cycles, fatal and non-fatal infected, spontaneous abortions if a woman becomes pregnant while wearing one, and perforation through the uterus and migration of the device into the abdominal cavity, which will require surgery. (The People's Doctor, Vol. 3, No. 12, page 3.) If a woman does become pregnant while wearing an IUD, she might bear children with birth defects. The British Medical Journal reported two women using copper-containing IUDs who gave birth to children with malformation of the extremities, including missing fingers and toes, fused fingers, and reduced arm length. The article concluded that, while a relationship between birth defects and IUDs has not been conclusively proven, "the possibility of a relationship exists because of the proved association of IUDs with ectopic pregnancy, pelvic and fetal infection, miscarriage, premature labor, and fetal death" (quoted in The People's Doctor, op. cit.).

Although from Dr. Christopher's point of view, abortion certainly represents the most cruel kind of action, still many people are convinced by the medical world's claim that abortion is a good form of birth control. Doctors say that while in former times abortions were performed in unhygienic conditions, that today hospital abortions are perfectly safe. However, quite apart from the moral issue, which is really the paramount consideration anyway, consider this data from the Journal of the American Medical Association: "We compared prior pregnancy histories of two groups of multigravidas (women with more than one pregnancy)--240 women having a pregnancy loss up to 28 weeks' gestation and 1,072 women having a term delivery. Women who had two or more prior induced abortions had a two-fold to threefold increase in risk of first-trimester spontaneous abortion...The increased risk was present for women who had legal induced abortions since 1973. It was not explained by smoking status, history of prior spontaneous loss, prior abortion method, or degree of cervical dilation. No increase in risk of pregnancy loss was detected among women with a single prior induced abortion. We conclude that multiple induced abortions do increase the risk of subsequent pregnancy losses up to 28 weeks' gestation" (JAMA, June 27, 1980). In addition, research indicates that a previous abortion markedly increases the chance of temporary and sometimes permanent sterility (The People's Doctor, op.cit.). If you wish to bear children, do not submit to surgical murder via abortion. Indeed, it is better to avoid surgical intervention at all costs!

Suppose that a couple wishes to delay pregnancy, for health or other reasons. Delaying the birth of babies has become somewhat of a fad recently, and we do applaud any woman who conceives later in life and anticipates her baby with delight. Dr. Mendelsohn says that being fitted with a diaphragm is a safe method of contraception. Although it can be inconvenient, some couples use condoms. But by far the most accurate and holistic approach to birth control was developed by John and Evelyn Billings during the late 1950's. This Australian couple--both doctors--were searching for a more effective alternative to the rhythm method, which doesn't always work. Reading anthropological literature of African and Indian tribes, they found a passing reference to

the idea, "wet for baby, dry for no baby."

The Billings's asked the women in their charge to observe their vaginal discharges daily and to write down their observations. Virtually all the women noticed patterns in the changes of mucus production, and hormone tests confirmed that these changes were related to hormone changes.

Calling their discovery the Ovulation Method, the Billings's saw it taught to women in many Third World countries, in this way, "When the earth is dry and you plant a seed, it won't grow. When the rains come, the earth is wet and a planted seed will grow. For a few days after the rains, the ground is still wet, and a seed can still grow. When the ground is dry again, the seed will not grow when planted." Proven 98.5% effective, this method of birth control can also be an accurate way to achieve conception, so it is a very positive thing.

Basically, it works thus: The body's hormones develop several eggs, fully maturing only one. When this is released into the uterus, it lives for 12 to 24 hours, and if fertility were contingent only upon the presence of the egg, a woman could only conceive during that period of time. However, accompanying the production of the egg is the presence of fertile mucus. You might experience the cycle something like this. After your period, you might have days where your vagina seems quite dry. Then as your estrogen rises, you'll get wetter as you approach ovulation. When you ovulate, the wet or sticky secretion changes to a slippery one--that is fertile mucus. In the presence of this mucus sperm can survive; in infertile mucus, it dies, as the infertile mucus is extremely hostile to sperm. If a couple abstains from intercourse when the wetness first begins to appear, continuing to wait until three days after the slippery mucus appears, they are sure to avoid unwanted conception; or if they have intercourse during this fertile time, conception is more likely to occur. Why should the waiting period precede the actual ovulation? Because women have cervical crypts inside the vaginal passage, which can store sperm in a healthy condition until the body ovulates--as long as there is moisture. You may have heard of women who couldn't imagine that they conceived, because intercourse occurred several days before they reached the middle of their cycle--using the calculations of the Rhythm Method. However, the sperm was stored in the cervical crypts and traveled up the fertile mucus at the proper time.

This very brief description of the Ovulation Method will not suffice if you wish to use it yourself. *Mothering Magazine*, No. 37 (Fall 1985), supplies a good article on the subject; other good books include Terrie Guay's *Avoid or Achieve Pregnancy Naturally* (Emergence Publications, 1978), and *The Ovulation Charting Method* (Small World Publications, POB 305, Corvallis, OR 97339).

Dr. Christopher emphasized that many reproduction problems stem from the unkind and uncooperative behavior of husbands. He spoke openly to husbands who misused the privileges of marriage. For example, a certain woman came to Dr. Christopher in tears. Although the family had a number of children, she said life wasn't worth living any more because her husband forced her to have intercourse with him every night, whether she was sick, in pain, or pregnant. He said that if she wouldn't have intercourse with him, he would go out and get it someplace else, because it would damage his manhood if he didn't have it every night. She asked Dr. Christopher if this were true, that it would force a man into having other women. Of course, the woman was happy to learn that she did not have to suffer this kind of treatment; she said that she had gone through years of misery. After being forced for so long, she wanted some rest.

Dr. Christopher felt very strongly about this because he observed similar things in his own family. His own sister, now deceased, confided that her husband in Colorado demanded relationships every night; if she didn't give it to him, he would go up into town to a professional prostitute for relief. She said that she had suffered many nights of real sickness, yet allowed him to do this rather than have him leave home and go out with other women. The lady who adopted Dr. Christopher, who was the only mother he knew, also went through a similar trauma. As a teenager, he came downstairs to find his mother in tears. His adopted father had left, and the young Raymond asked what was wrong. In all the years they were married, she said, she had to satisfy her husband every night, "regardless of how sick I am." She suffered from arthritis and diabetes, sick through much of her life. Although some people might consider this an oddity, Dr. Christopher saw enough of it during his practice that he felt he must speak out on it. When such a situation occurs, he said, it is nothing but rape. Of course, sexual intercourse should be an exchange, a cooperation, an agreement, tender concern for the other person. Anything else Dr. Christopher considered rape, a disgrace.

In an age where millions of abortions are performed annually in the United States alone, it is an ironic tragedy that many childless couples long to conceive but cannot. Gynecologists sometimes go to great lengths to secure pregnancies for these couples, although the methods are not

completely safe. As an example, Clomid, which is a fertility drug, causes flushes in ten percent of the women who use it, and ovarian enlargement in fourteen percent. Massive cystic enlargement of the ovaries may develop, a painful condition. The ovary continues to enlarge after the drug is discontinued, reaching its maximum size seven days after therapy stops! Other side effects include blurred vision, double vision, spots before the eyes, after-images, sensitivity to light, floaters, waves, cataracts, detachment of the posterior vitreous, spasm of the blood vessels, and thrombosis of the retinal arteries. A woman may also experience abdominal distention, bloating, abdominal or pelvic pain and soreness, nausea and vomiting, increased appetite, constipation, diarrhea, breast discomfort, abnormal menstrual bleeding, dryness of the vagina, headache, dizziness, lightheadedness, vertigo, nervous tension, insomnia, fatigue, depression, increased urinary frequency and/or volume, skin rashes, hair loss, hair dryness, weight gain or loss, jaundice, and fluid in the abdomen.

All of these possibilities would be bad enough, but the possible effects on an infant are worse. If a woman does not know that she is already pregnant and begins taking this drug, Clomid has been linked to congenital heart disease, Down's syndrome, clubfoot, congenital intestinal conditions, abnormal position of the urethral opening, small head, harelip, cleft palate, congenital hip displacement, birthmarks, undescended testes, extra fingers, conjoined twins, inguinal hernia, umbilical hernia, fused fingers, funnel chest, muscle disorders, dermoid cysts, spina bifida, and other defects. Most mothers who take the drug will have multiple births, usually but not always, twins (The People's Doctor, Vol. 6, No. 11, p.6).

The other fertility drugs, such as Provera, Delalutin, or any other chemical substance designed to affect ovulation or fertility, present serious risks commensurate with these. A woman wishing to achieve a natural pregnancy cannot safely consider them.

One young mother, having difficulty with conceiving although she had previously borne two healthy children, went to a fertility specialist for help. The battery of tests--on both father and mother--revealed nothing really wrong, so the doctor gave her some medication without letting the woman know what she was taking. The fertility drugs produced a multiple pregnancy in the woman, and she bore triplets. Although the family was delighted to receive new little ones into the family, the multiple birth has been a tremendous strain on the family. Perhaps with more natural methods the family could have received their babies one at a time and with less stress and strain.

Dr. Mendelsohn suggests some basic approaches to conception, emphasizing the need to stay away from fertility drugs. He advises a nutritious diet, free of junk foods and additives, a sensible regular exercise program, an adequate amount of sleep and adherence to the marital requirements in the Old Testament. This law prohibits sexual intercourse during the menstrual period and for about a week afterwards. Not only does this time intercourse at appropriate fertility, but it also builds up the man's sperm so that there is better chance of fertilization. I feel that it also increases the health of the prospective mother, giving her female organs a chance to regulate themselves during her cycle.

Dr. Christopher had many successes helping couples conceive. One young married man came to see him about his wife, because he felt she was going to lose her mind. She wanted to have a baby so badly that she would hug her pillow at night. They had been married for some years without any success at conception. Dr. Christopher advised them to do the following: they should both begin to use the mucusless diet. In addition, they were to take two tablespoons of wheat-germ oil three times a day (this contains natural vitamin E, among other constituents, which helps the reproductive system). They were to take two capsules three times daily of false unicorn and lobelia combination. If they were faithful with this program, the Doctor promised that they would conceive.

And they did! They brought the little baby in to see Dr. Christopher, and the new mother was absolutely glowing with health and joy at the baby in her arms. This couple had other children as well after following the simple herbal program.

Some couples have conceived when they have included more zinc in their diets, especially that of the father. When the problem is too-thick sperm (common in people on a mucus-causing diet), researchers have found that mega-doses of Vitamin C (1000 mg. or more at each meal) has assisted in conception.

When couples marry and delay their children, they sometimes are tempted to continue on without having them. I can assure you that life without babies and children is much easier than with children! Nevertheless, I couldn't do without any of my six children, and I don't begrudge them

the time changing diapers, reading books, and tending them in the middle of the night.

Dr. Christopher taught much the same. He said that there are just so many babies that are supposed to be here on earth, and if we do our part, we will be able to take care of them. People who rear large families, and devote themselves to the families during their growing years, can do wonderful things. Dr. Christopher knew a family in Salt Lake City who had sixteen children, adopting the seventeenth. The man was only a clerk in an office, and you can imagine that they had a hard time making ends meet. Yet four of the sons became attorneys, a daughter became a professional dancer who demonstrates throughout the United States, and a son became a well-respected organist who performs throughout the country, and others of the children have accomplished great things. I know of a family with seventeen children, natural children in an intact family. Although the mother and father have to pour themselves out to nurture and teach that many, the older children participate in tending the younger ones, the home is well-cared-for and clean, and the children are well-disciplined. Of any babysitters I have ever had in my home, the oldest girls in that family have to be the best! They are intelligent and thorough and wonderful to be around.

In this day and age, most people are tuned into their own personal needs and consider child rearing a secondary sort of pursuit. What could be more far-reaching, however, than raising a whole, happy child? This extends to the third and fourth generation, to many other people than the child. And as for personal achievement, raising children has matured me, given me insights and capabilities that I never possessed before--and wouldn't have achieved without my little ones. I expect that when they are raised, I will be a much richer teacher and writer than I could have otherwise been, and having them has not stopped me from pursuing my career, albeit in a more limited way.

Dr. Christopher said that the children will be born, sometimes against our will! He remembered visiting with a family on business matters. The youngest child was one of the most positive and aggressive children he had ever seen. The mother would tell her to do something and the child said, no--she wanted to do it her way, even though she was still young. She had her own mind, and did what she wanted to do when she wanted to do it; nobody would push her around! Her father just laughed and said that the rest of the children were obedient and docile, except for this aggressive little child. He said that they had decided not to have any more children and his wife had had an insert put in. The doctor assured them they wouldn't have any more. But months later, the wife found out she was pregnant. This child had decided that it would be their child regardless of the birth control method; the baby fought its way through and continued to be a fighter! The child was supposed to be there and made it safely. Dr. Christopher said that it sometimes pays just to let nature take its course.

Other herbs which have been used successfully to promote conception are red clover blossoms (these are considered by some to be as valuable as the false unicorn root), peppermint, stinging nettle, dong quai root, and of course red raspberry leaves.

If you are having difficulty ascertaining the timing of ovulation, or if your cycles are irregular, check to see if there is unnatural light interfering with your cycle. Sometimes when a street light shines in the window, or other lights are on all night, a woman's cycle can be really disrupted. Block out all unnatural light. Some practitioners have suggested that if women are quite irregular, they can keep a light on--say in the closet, or a mild night light--midway between periods, and that this will cause ovulation. A more natural, and more beautiful, alternative, is to sleep without the window shades, providing you live away from bright street lights. The light from the moon is thought to be healing and blessing; it can bring peace and regularity to your feminine cycle. Juliette de Bairacli Levy even suggests sleeping with no window screen--using an herbal insect repellent--to obtain maximum health. We have tried her repellent and it works. Here's how I made it: Combine equal parts of rue, wormwood, basil and rosemary. Grind in a mortar and pestle. Cover with about eight to ten times the herbs' volume of pure olive oil. You may add a couple of tablespoons of apple cider vinegar if you wish. Allow to stand in the sun--or over a radiator or other constant source of warmth--for a week. Strain out the herbs well, and repeat. Repeat a third time, this time letting the herbs stay in the oil as long as possible, perhaps up to three weeks. Although the time involved here is long, the actual work is minimal. Strain well and bottle. Although we have not tested this in terribly infested areas, such as jungle or summertime Alaska, it works for us during our summer camps. Levy said that she and her children slept outside in the Mexican tropical jungles, using this preparation, and were never bitten! [EWH p.13-25]

## Inflammation

### Definition

A local response of the tissues to irritation or injury.

### Symptoms

A local response to cellular injury or an affliction characterized by capillary constriction, then dilation, white corpuscle or leukocytic infiltration, redness, local heat and swelling from congestion, the exudation of noxious wastes in fluids, and the deposition of fibrin to replace the damaged tissue. Serum or white corpuscles are pushed and cause expansion or an elevation of the temperature which carries through the walls of the capillaries into the surrounding tissues or interstices. [SNH p.33]

### Cause

Inflammation is often caused by an abrasion of the clothing, bites of poisonous insects, bumping, shingles, welts, by an acid condition of the body affecting the nervous system, or from an internal acid condition of the urine or the orifice of the genital area.

### Herbal Aids

General Instructions: This condition must be aided instead of inhibited. If the process is stopped it can be compared to putting the cork on the poison bottle. When inflammation is accompanied by blood poisoning use plantain to purge the poisons from the body. If inflammation is caused by a rheumatoid or arthritic condition, either burdock leaves or mullein in combination with lobelia will facilitate cleansing. [SNH p.33]

Lumbago - Inflammation of the Lumbar Muscles: Lumbago is one of the most painful conditions. The use of vapor baths and the [Cold Sheet Treatment](#) will bring relief. A massage with a tincture of cayenne and prickly ash liniment with antispasmodic tincture [[Antsp](#) tincture] will work very well. The eliminative functions should be corrected, especially the bowels which need to be cleaned during attacks. Garlic and lobelia enemas work well. [SNH p.35]

Burdock: Large sores, skin diseases, inflammation, swelling. Apply a hot fomentation of the tea to the affected part, cover with plastic or oil silk to prevent evaporation and bandage; leave on until almost dry, then cleanse the area and make another application; repeat until healed. [SNH p.65]

Chaparral: Old sores, inflammation. Apply a hot fomentation of the infusion. [SNH p.71]

Sciatica and Inward Inflammation: See formula using oil of sassafras, oil of rosemary, oil of oregano, cayenne, camphor and rubbing alcohol. [SNH p.81]

Yellow Dock: Apply a fomentation over the affected part that is wrung out from the strong decoction of hot tea. [SNH p.94]

Red Oak: Use the decoction as a wash, and bathe 3-4 times daily (dilute for open sores); also a fomentation may be wrapped around the affected part and covered well with flannel. [SNH p.139]

Witch Hazel: Apply as a poultice, fomentation, or wash. [SNH p.179]

[Hiccoughs](#)[Hypoglycemia](#)[Hysteria](#)[Impotency](#)[Incontinence](#)[Indigestion](#)[Infertility](#) **Inflammation**[Influenza \(Flu\)](#)[Insect Sting](#)[Insomnia](#)[Itch](#)

**Comfrey**: Inflammation, bruises, sprains, swellings, suppuration of boils. Apply a fomentation made from the comfrey root or leaves. [SNH p.310]

**Lobelia**: When there is acute swelling, such as with boils or inflammation, an external rub of the tincture or a poultice of the bruised herb mixed with flaxseed or bran, suitably moistened, will relieve the pain. [UW-Lobelia]

**Myrrh**: Applied to fresh wounds, the tincture of Myrrh excites healing action and lessens the liability to inflammation or suppuration. [UW-Myrrh]

**Marshmallow**: The herb has been in use long among the Arabs, the ancient Arab physicians using the leaves as a poultice to suppress inflammation, the modern using them the same, chewing the stems well and applying the pulp, well-mixed with saliva and still warm from the mouth, to inflamed parts of the skin and to sores and swellings (Lev:Common:94). [UW-Marshmallow]

**Burdock**: Burdock is well-known world wide as a blood purifying agent and if the leaves are pounded and put on the bruise, abrasion, sprain, etc., it will allay inflammation and ease the pain. [NL 3-1]

### Testimonials

1. **Mullein**: We can report near miraculous results with Mullein ointment in the wilderness. We camped in one of the most mosquito-infested areas in the world, Alaska. The children (and adults) were bitten a great deal. Although we have not yet found a really effective natural mosquito repellent (we didn't rub ourselves with a garlic clove as someone suggested, however; that might work), we found that a simple dab of Mullein ointment was enough to stop the itching and inflammation immediately. We felt very lucky to have the ointment along with us. [UW-Mullein]

2. **Plantain**: Dr. Shook also described a great healing experience with Plantain. A woman with only one arm came to him in great distress. She had been stung by a bee on the only hand she had left. Several years previously, she had been similarly stung by a bee. That time she had gone to a doctor, because the whole arm was swollen and she was in great pain and even danger of her life with the infection.

The doctor lanced and drained the pus from the infected hand, but still the arm continued to swell. Finally, the doctor amputated the arm. This lady was full of despair, thinking that now she would have to lose the other arm.

Dr. Shook went outside his door to where some Plantain was growing. He picked some of the leaves, telling the woman to wash them and crush them, making a poultice to apply to the arm where she had been stung. The next day the lady returned to thank Dr. Shook for his advice and to pay him. The hand was entirely well. No sign of poison or inflammation could be seen, where only a day before there was swelling, inflammation, and the risk of amputation. [UW-Plantain]

## Insomnia

### Definition

Chronic inability to sleep or to stay asleep throughout the night. When you are wakeful and sleepless.

### Herbal Aids

Scullcap: 1 teacupful of warm scullcap infusion nightly upon retiring. [SNH p.371]

Insomnia (sleeplessness, especially morphine addict): See formula using scullcap, lady's slipper, hops, catnip and black cohosh. [SNH p.374]

Insomnia (sleeplessness, caused by nervousness): See formula using valerian, vervain, scullcap and wood betony. [SNH p.379]

Restlessness, Insomnia, Hysteria, Neuralgia, etc.: See formula using valerian, scullcap and mistletoe. [SNH p.380]

Insomnia (nervous sleeplessness): See formula using Lady's slipper, pleurisy root, skunk cabbage and scullcap. [SNH p.385]

Hops: Insomnia, nervous irritation. Take 2 to 3 cupfuls of hot hops infusion or stuff a pillow with hops (sprinkled with alcohol if desired) to sleep on. [SNH p.396]

**Relax-Eze:** Dr. Christopher Nerve Herbal Food Combination Here is a formula we have used with great success for well over thirty years. It is used for helping to relieve nervous tension and insomnia; it is mildly stimulating and yet lessens the irritability and excitement of the nervous system and also lessens or reduces pain. This formula contains herbs that feed and help revitalize the motor nerve at the base of the skull (medulla area and upper cervicals), and also herbs that help rebuild or feed the spinal cord. This group of herbs will also help rebuild the frayed nerve sheath, the nerve itself, and its capillaries. The following herbs in this combination are food for your valuable--and in many cases, shattered-- nerves: black cohosh, capsicum, hops flowers, lady's slipper, lobelia, skullcap, valerian, wood betony and mistletoe. The suggested amount for an adult's use would be one to three cups of the tea, or two or three capsules or tablets three times in a day, taken with a cup of celery juice or steam-distilled water. [HHH p.187]

General Instructions: Some other techniques can help you get to sleep. Very effective is the combination of bath and massage, particularly with a soothing oil, such as chamomile. Herbal oils are easily made; check "Preparations," [EWH p.188]. Chamomile and linden tea both can help a person relax and sleep. For a really stubborn case, take a cup of valerian tea or a couple of capsules with warm water. A pleasant walk out of doors can help a person relax enough to sleep. Sometimes the person's blood sugar is a little low, and simply eating a piece of fresh fruit can put a person out. Warm tea with honey will do the same. [EWH p.151]

Not Hot Cocoa: Many of the people of Dutch extraction, that is, everyone from the Old Dutch Cleanser Girl to the Boy Who Put His Finger in the Dike, were prone to prepare themselves a nighttime cup of hot cocoa for the insomnia which prevailed in the land. Now...how can cocoa possibly cure insomnia when it contains 13.5 mg. of caffeine per cup? This practice was so extensive that it not only included family, but servants and visitors as well. This toxic dose of chocolate was topped with another toxin: cream or marshmallow. Anybody for a little chamomile? [NL 2-4]

[Fever](#)[Flatulence](#)[Flu](#)[Frog](#)[Gallstones](#)[Gangrene](#)[Gas](#)[Glands](#)[Goiter](#)[Gonorrhea](#)[Gums](#)[Halitosis](#)[Hay Fever](#)[Headache](#)[Hearing](#)[Heart](#)[Heartburn](#)[Hemorrhage](#)[Hemorrhoids](#)[Hernia](#)

[Hiccoughs](#)[Hypoglycemia](#)[Hysteria](#)[Impotency](#)[Incontinence](#)[Indigestion](#)[Infertility](#)[Inflammation](#)[Influenza \(Flu\)](#)[Insect Sting](#) [Insomnia](#)[Itch](#) Juices: Lettuce, celery, apple, onion. [NL 3-5] Squash Seeds: Boiling squash seeds for a half an hour and then drinking the water has the effect of calming the nerves and helping in cases of insomnia and is good also for any urinary inflammation. [NL 4-12] Vegetables for Insomnia: Cabbage, carrots, celery, collard greens, kale, lettuce, parsnips, potatoes, spinach, turnip greens, squash. [NL 4-12]

### Testimonials

1. Insomniac Cured after Years of Sleeplessness: Dr. Christopher told the story of a high school teacher who had a terrible case of insomnia. She could only sleep in twenty-minute stretches; thereafter, she would pace the floor throughout the night, keeping her family awake and becoming more and more tired herself. During the day she epitomized the "witch" school teacher. Eventually her screaming and irritability, her meanness and nagging, became so intolerable that her family wanted to have her committed to a mental institution. And she was so weary of it all that she would have liked to go herself.

The family called Dr. Christopher, however, who came over and prepared a cup of his nervine tea [[Relax-Eze](#)]. As it steeped, he chatted with the family, and then she drank the cup. Soon she yawned and said she might like to go lie down. Her husband commented that Dr. Christopher might just as well stay, because she would be up again in twenty-minutes, but Dr. Christopher took his leave.

The next morning, Dr. Christopher answered the telephone; a man's voice began berating him and calling him all sorts of vulgar names. "You ought to be jailed," the man shouted, "for giving my wife heavy drugs when you said they were herbs!"

Dr. Christopher explained he had only given the woman herbs, so mild that a newborn baby could safely use them. When the man calmed down, he explained that his wife had slept all night, and awakened calm and refreshed.

She continued taking this formula, and cleaned up her diet as well. Before long, she was as sweet and cooperative as she could be with her family and her classes, and everyone was grateful that she didn't have to be committed to a mental institution! [EWH p.151]

2. Nervous Debility and Insomnia: Lucas reports the case of a gentleman who was otherwise in good health but was continually suffering nervous debility and insomnia. Treatment by other doctors had not helped him at all. He was encouraged to try natural medicine and was given a combination of an ounce of Skullcap, an ounce of hops, and a half ounce of gentian root. He took this as an infusion and within a week he was sleeping well. At the end of two months he was fully recovered. Lucas mentions that Skullcap, catnip and peppermint work the same way for many people (Luc:Herbal:25). It is said to give natural sleep to morphine addicts, especially when combined with catnip, lime blossom and hops (Lev:Common:134). [UW-Scullcap]

3. Static Causes Insomnia: Dr. Christopher also said that our bodies collect excessive static vibration. Our bodies receive electricity through the top of the head where we used to have soft spots when we were babies. This electricity is essential to our bodies but it must be fresh and free flowing, coming through the top of the head, down the spine, through the body and is grounded out into the earth. When we do not let the electricity out and be grounded into the earth, it becomes static and toxic and builds up so much that new electricity can't come in. We can't sleep and we become hard to live with. Each day, therefore, we need to send some time out on the lawn or the ground to get rid of this static electricity in the body. There was an elderly man who was having a lot of trouble sleeping. His insomnia got so bad that he became very difficult to be around. His son knew this principle of walking on the earth to discharge unwanted energy and tried to convince his father to do so, but his father said that no one was going to get him to take off his shoes in public and walk on the lawn barefooted! However, one day, the son said, "Dad, I have something I must talk to you about". He sat the old man down, quickly took off his shoes and whisked him outside. They walked around the lawn a few times, talking and then the old man said that he was feeling tired. He went in the house and went to bed--and slept all night! We have

noticed that native peoples who walk without shoes or who wear leather soles that let the energy through are much less nervous than those of us who wear synthetic or rubber soles. We spend a good deal of the summer without shoes and although it may not look as proper or civilized as wearing the plastic sandals that are the style now, we feel much less nervous and very harmonious during this time. [UW-Valerian]

## Broken Bones

### Definition

Fracture, break or crack in the bone.

### Herbal Aids

Comfrey Tea and Organic Calcium: After the doctor has set the bone, drink three or more cups of comfrey tea each day--the more the better. With each cup of tea take the calcium combination. This is the formula: [This is [Calc Tea](#): Dr. Christopher's Calcium Formula]

6 parts horsetail grass

4 parts comfrey root

3 parts oat straw

1 part lobelia

For children old enough to take capsules, use two capsules or more, three times in a day. As suggested, take these capsules with the comfrey tea. Mix the powder with blackstrap molasses, if it is hard to swallow the capsules. [HHH p.47]

Steroids Can Exacerbate Broken Bones: More dangerous still are the steroid drugs, such as Vanceril and Prednisone. If taken by children, these drugs can adversely affect growth and sexual maturation. It encourages yeast infections both locally and systemically. Adrenal insufficiency has been traced to this drug, so severe that death could result. Broken bones become more common among recipients of this kind of drug. And when you are ready to get yourself off the drug, you can suffer all kinds of side effects (withdrawal symptoms), such as inability to maintain body warmth, extreme tiredness, faintness, exhaustion, heart palpitations, and so on. [EWH p.127]

Broken Bones After Being Set: After a doctor has set the bone, drink three or more cups of [BF & C](#) and/or comfrey tea or green drink per day. With each cup take two or more capsules of the Calc formula. [EWH p.165]

[BF & C](#): Dr. Christopher's Bone, Flesh and Cartilage Formula: Over the years of practice I have had a number of patients who have had broken bones from osteoporosis. One case was a woman in her middle eighties with a fractured hip. After three months in a cast it showed no sign of healing, any more than two pieces of stick growing together. This woman was frightened because she was told that if the hip bones did not knit after putting on another cast for three months, they would cut her leg open and use stainless steel rods, bolts and nuts to make it possible for her to at least get around on crutches.

This was in the early sixties and not much comfrey was available then. The lady's daughter was in one of my classes, and we asked the students to help out by donating as much comfrey as they could. We had enough donated from the class members that the patient had from a pint to a quart of comfrey green drink or comfrey tea each day, six days a week, week after week. At the end of this "three months," the cast was removed and the doctors were amazed, because during the first three months there was "no knitting" of the bone even evident, but with the comfrey being taken orally during the next three-month period the leg was healed. The daughter told us her mother was out square dancing within a couple of weeks after the cast was removed!

[Bed Wetting](#)[Bee Sting](#)[Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#)[Blood Pressure](#)[Boils](#)[Breast](#)[Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#)[Bursitis](#)

Since this case was so outstanding we have had a formula developed called "bone, flesh and cartilage." [\[BF & C\]](#) This formula has done miraculous things with broken backs, legs, hips, etc. This formula has been used to help with curvature of the spine, polio, multiple sclerosis, and muscular dystrophy, stroke and arthritis of the bone. This formula is used externally as well as orally and has brought tremendously fast results. [NL 1-11]

[Dr. Christopher's Comfrey Combination Fomentation: \[\\(BF & C\\)\]\(#\)](#) This is an aid for malfunction in bone, flesh, sinews, etc. Make a tea of the following herbs: oak bark, marshmallow root, mullein herb, wormwood, lobelia, skullcap, comfrey root, walnut bark (or leaves), gravel root. Soak the combined teas in distilled water (at the rate of one ounce of combined herbs to a pint of distilled water), then soaking four to six hours, simmer thirty minutes, strain and then simmer the liquid down to 1/2 its volume and add 1/4 vegetable glycerine (if desired). Example: One gallon of tea simmered (not boiled) down to two quarts and add one pint of glycerine.

Soak flannel, cotton, or any white material other than synthetics--never use synthetics. Wrap the fomentation (soaked cloth) around the malfunctioning area and cover with plastic to keep it from drying out. Leave on all night six nights a week, week after week, until relief appears.

Severe cases: Drink 1/4 Cup of finished concentrated tea with 3/4 cup of distilled water three times in a day. [HHH p.193]

[Calc Tea: Dr. Christopher's Calcium Formula:](#) A wonderful natural calcium capsule or tea made up of horsetail grass, oat straw, comfrey root and lobelia. As explained in the book "Biological Transmutations," the silica in horsetail grass converts to calcium, and the other herbs work in close conjunction with this master calcium herb. We need calcium for nerve sheath, vein and artery walls, bone, teeth, etc. This combination is all pure herbs. It is also used for cramps, "Charlie horses," and for all calcium needs in the body.

Children with crowded, crooked teeth who later must have the wisdom teeth pulled because of a too narrow jaw are lacking calcium in the body. The pregnant woman should increase her natural calcium intake now for two people, so as to build for the child a good wide jaw and tooth material. Sugars, pastries, soft and alcoholic beverages, breads, candies, etc., leach the calcium out of the body, causing varicose veins, cramps, Charlie horses, loss of teeth, nervous upsets, etc. [HHH p.185]

### Testimonials

**Heavy Milk Drinker Constantly Breaks Bones:** A young man came as a patient to us when our office in Salt Lake was on 1st South, from the American Telephone and Telegraph office down the street. He was not feeling well and had not been helped from other medical sources he had visited, so he finally came to us to find out if we could help him get back his health. He was only 18 years of age and had suffered 17 broken bones, one at a time in his lifetime, and at this early age had false teeth. This young man had grown up on a dairy farm in Smithfield, Utah (a dairy center), and as he said, he "practically swam in milk", for it was his main food during most of his life. And if the dairy association's advice that lots of milk will make good teeth and strong bones were literally true, with the amount of milk he had consumed, he should have been "king for the year," but here he was, a really sick young man. [SNH p.538]

## Bronchitis

### Definition

Bronchitis is the inflammation of the bronchial tubes. [HHH p.42]

### Symptoms

An acute or chronic inflammation of the mucous membrane of the bronchial tubes. [SNH p.6]

### Cause

This is a condition from improper diet and results in bowel problems. Relieving the effects of the condition will not heal it. Bronchitis usually develops from a cold which settles in the lungs and develops into a chronic condition if not healed, eventually going into consumption or tuberculosis. [SNH p.6]

### Herbal Aids

Comfrey and Aalmond are Specifics for Bronchitis. Since constipation is one of the chief causes of the problem, the bowels must be cleared and kept open with the lower bowel tonic [[Fen LB](#)] or herbal laxatives. If one has shortness of breath and needs the throat cleared of mucus, he can use an emetic. [Cayenne](#) is very effective for cutting the phlegm, as are fruit juices such as grapefruit, lemon, orange, or pineapple. Chickweed, comfrey, marshmallow or mullein are the greatest cleansers to get the mucus out of the body. One can relax the throat, stomach, and bronchi rapidly with a very small amount of lobelia. Other useful aids for relief are a hot vapor or steam bath followed by a cold shower or sponging; also hot fomentation of pleurisy root or mullein (with lobelia in it) on the chest and spine. If you want to speed up any fomentation, add cayenne as a counterirritant. [SNH p.6]

Bronchitis, Bronchial and Spasmodic Coughs, Whooping Cough: Drink the infusion of red clover freely. [SNH p.56]

[Garlic](#): For chronic diseases of the upper respiratory tract (inflamed tonsils, salivary glands, neighboring lymph glands), pharyngitis, laryngitis, bronchitis, etc. Keep garlic in the mouth constantly during wakeful hours, renewing morning and evening after the cloves have absorbed the poisons; or, use another appropriate garlic preparation. [SNH p.100]

Garlic Syrup: for asthma, whooping cough, cough, pneumonia, smallpox, bronchitis, dyspnea, etc.: Where there is spasm, give 1 teaspoonful of the syrup with or without water every 15 minutes until the spasm is controlled, then give 1 teaspoonful every 2-3 hours for the rest of the day; thereafter give 1 teaspoonful of the syrup 3-4 times daily. Use the foot poultice; also, mix the freshly expressed juice with leaf lard and rub on the chest, throat, and between the shoulder blades. [SNH p.100] See Garlic Syrup formula. [SNH p.101]

Yarrow: Enuresis, bronchitis (and other respiratory affections): Drink the yarrow decoction cool. [SNH p.215]

Pleurisy Root: for pleurisy, bronchitis, pneumonia, inflammatory rheumatism: Give hot infusion while the patient is closely-covered in bed; repeat the dosage every 30 minutes until free perspiration is produced; apply hot cloths externally, wrung out in the infusion. [SNH p.222]

Thyme: May be taken internally or used externally with amazing and beneficial results.

Internally: 1 teaspoonful in 1 cupful of water, sweetened with 1 tablespoonful of honey 3-4 times daily; good for infectious bronchitis. [SNH p.230]

Hyssop: for fevers, bronchitis, etc. Give 1 wine glassful warm every hour, (acts as a mild diaphoretic, relieves the kidney and bladder, gently influences the bowels, pleasantly soothes the lining of the stomach; sponge daily with vinegar and warm water.) [SNH p.232]

Rue or Garden Rue: Chronic bronchitis, glandular enlargements, scaly eruptions. Apply fomentation or compresses of a strong decoction to the chest or affected area. [SNH p.296]

See formula for Bronchitis containing comfrey, horehound, boneset, coltsfoot, elecampane, ginger and lobelia. [SNH p.312]

Mullein: Drink the strong decoction of leaves and flowers, or combine with comfrey root and garlic juice. [SNH p.316]

See formula using mullein, lobelia and cayenne. [SNH p.318]

Chickweed: Boil the fresh herb, eat the vegetable and drink the water freely. Drink the decoction, and apply hot fomentation of the decoction over the chest area. [SNH p.322]

See formula for bronchitis using marshmallow, coltsfoot, ground ivy, licorice and elder flowers. [SNH p.328]

See formula for bronchitis using slippery elm, boneset, licorice, flaxseed and blackstrap molasses. [SNH p.337]

See formula for bronchitis using slippery elm, boneset, flaxseed and licorice. [SNH p.337]

See formula for bronchitis using slippery elm bark, horehound, garden thyme, red clover, yerba santa, lobelia, resin weed, cayenne, blackstrap molasses and glycerine. [SNH p.339]

See formula for bronchitis using elecampane, comfrey, horehound, wild cherry and spikenard. [SNH p.344]

See formula for bronchitis using elecampane, skunk cabbage, aniseed, pleurisy root, licorice, lobelia, ginger and cayenne. [SNH p.344]

See formula for bronchitis using wild cherry, wahoo, blood root, elecampane, comfrey and golden seal. [SNH p.351]

See formula for bronchitis using wild yam, distilled water and glycerine. [SNH p.403]

**Resp-Free:** Dr. Christopher's Herbal Formula for Lungs and Respiratory Tract: This combination of herbs in capsule form is an aid to help relieve irritation in the respiratory tract--lungs and bronchial. This is an aid in Emphysema as well as other bronchial and lung congestion such as bronchitis, asthma, tuberculosis, etc. Suggested amount of these capsules would be two or more three times in a day or more. Additional aid is sometimes received by taking capsules with a cup of comfrey tea. Comfrey Root, Mullein, Chickweed, Marshmallow Root, Lobelia. [SNH p.528]

**Other Useful Aids:** For relief are a hot vapor or steam bath followed by a cold shower or sponging; also hot fomentations of pleurisy root and/or mullein (with lobelia in it) on the chest and spine. If you want to speed up any fomentation, add cayenne as a counterirritant. [HHH p.43]

**Garlic:** Another instance of the remarkable penetrating power of garlic is the fact that the expressed juice of fresh garlic mixed with olive oil and rubbed on the chest, throat, and between the shoulder blades gives great relief in whooping cough, asthma, bronchitis and dyspnea, according to an English physician who has used it with success for many years. It also has a reputation for safely reducing high blood pressure, and in this relation we have an exceedingly valuable formula. [NL 2-9]

**Garlic Syrup:** See recipe for garlic syrup for use on bronchitis. [NL 2-9]

**Juices for Bronchitis:** Carrot & garlic, carrot & dandelion, carrot. [NL 3-5]

**Vegetables for Bronchitis:** Asparagus, cabbage, carrot, lettuce, black and pink radish, beet greens, broccoli, sweet potatoes, spinach, turnip greens. [NL 4-12]

## Bronchitis

[Ginger Bath for Bronchitis](#): Simply add three tablespoonfuls of the grated root powder to a tubful of hot water. Let the person soak in the tub, adding hot water occasionally to keep the tubful good and hot. Give sips of diaphoretic teas during this soak (camomile is pleasant and well-accepted by most sick people). [NL 7-3]

## Bruises

### Definition

These are wounds to the skin common in childhood...a bruise results from forceful pressure against some object, where the skin is not broken so the blood rushes to the damaged tissue beneath the surface. [HHH p.61]

### Herbal Aids

Plantain: Bleeding of minor wounds; cuts, scratches, bruises, etc. Apply a poultice of the fresh, bruised or mashed leaves; drink the tea internally. [SNH p.53]

Chaparral: Bruises, cuts, minor wounds. Use the infusion as a wash. [SNH p.71]

Tansy: Sprains, bruises, inflammations, rheumatism, sciatica, etc. Bruise and apply the green leaves, or use the herb preparation as a fomentation, wash, etc. [SNH p.124]

See formula using camomile and poppy flowers. [SNH p.219]

Hyssop: Rheumatism, bruises, contusions. Apply a fomentation of the infusion from the leaves externally, and keep warm with moist heat. [SNH p.232]

Bruises, Foul Ulcers, Black Eye, Facial Burns, Skin Problems, Leprosy, etc.: Make an apple cider vinegar tincture with the freshly bruised herbs apply as a fomentation outwardly and drink internally. [SNH p.284]

Comfrey: Inflammation, bruises, sprains, swellings, suppuration of boils. Apply a fomentation made from the comfrey root or leaves. [SNH p.310]

Mullein: Neuralgia, sore throat, pleurisy, pneumonia, bruises, sores, wounds, lacerations, swollen joints, torn ligaments, purulent ophthalmic, appendicitis inflammation, skin diseases. Rub mullein oil in well, or apply on saturated cotton and cover. [SNH p.317]

See formula using marshmallow and camomile for sprains, and bruises (fomentation). [SNH p.331]

See formula for poultice using slippery elm, wild indigo and myrrh. [SNH p.337]

See formula for a liniment for wounds using cayenne, golden seal and myrrh. [SNH p.411]

See formula for liniment for sprains, bruises, rheumatism and neuralgia using cayenne, lobelia, oil of wormwood, oil of rosemary and oil of spearmint. [SNH p.411]

Gentian: liniment for parasitic affections, infected wounds, vermin, sprains, bruises, burns, inflamed joints, etc. Dip linen or other appropriate material into a strong decoction or diluted tincture; squeeze until the material does not drip; apply to affected area (hot or cold); cover with plastic (or wax paper, etc.), and bandage on. [SNH p.463]

Wheat Grass Chlorophyll: Skin--Burns, skin abrasions, bruises, wounds. The wheat grass chlorophyll has both healing and antiseptic characteristics. The chlorophyll is applied either directly onto the afflicted surface, or, it is soaked in a cloth and bandaged to the area. At the same time, the chlorophyll should be taken internally. [SNH p.545]

Comfrey: Fresh or dried comfrey can be applied directly over the damaged area--just keep adding additional amounts as needed. Cover with gauze, bandage lightly to hold comfrey in place

[Abrasions](#)

[Abscess](#)

[Acidosis](#)

[Acne](#)

[Addison's Disease](#)

[Adenoids - Polyps](#)

[Adrenals](#)

[Ague](#)

[Alcoholism](#)

[Allergies](#)

[Alopecia](#)

[Anemia](#)

[Anthrax](#)

[Apoplexy](#)

[Appendicitis](#)

[Arthritis](#)

[Asthma](#)

[Athlete's Foot](#)

[Bad Breath](#)

and so the area can breathe. Comfrey paste can also be applied directly over the damaged area as with burns.

A wound, external or internal, will stop bleeding if the individual will drink a cup of water (preferably hot) with a teaspoon of cayenne pepper (red pepper) stirred into it. The bleeding will stop generally by the time a person can count up to ten after drinking the cayenne tea. The cayenne equalizes the blood pressure from the top of the head to the feet. This keeps the pressure from the hemorrhage area so it will clot naturally, which it cannot do with heavy blood pressure pumping the blood rapidly at the hemorrhage area. The leaves, moistened chewing tobacco, shave grass, shepherds's purse, wild alum root, yellow loosestrife will all aid in stopping bleeding and assist in healing, but comfrey is one of our favorites and should be in everybody's yard or in a flower pot in the apartment or house, or keep a good supply of the powdered leaf and root on hand. Bruises respond equally well to a pack of fresh, crushed comfrey, or the powdered leaves or roots made into a paste with water. [HHH p.62]

[CMM](#): Dr. Christopher's Healing Ointment: Made of comfrey, marshmallow, marigold, bee's wax, and oils, this is an antiseptic used historically on lesions, eczema (dry), poison ivy, inflamed surfaces, abrasions, burns, hemorrhoids, for bruises and swellings. Good to have on hand at all times. [HHH p.196]

Dr. Christopher's Comfrey Paste: One of the best aids for sprains and muscle soreness, cuts and bruises is comfrey paste. Apply this one half inch thick or more over the malfunctioning area and keep in a loose bandage, adding paste as is needed until relief occurs. Since this paste will keep for months at room temperature, it can also be used while traveling (keep a metal or glass container for emergencies). [NL 3-1]

[Cayenne Paste](#): This ointment can help bring temporary relief to internal pains of arthritis, stiff neck, muscle soreness, sprains, bruises and other aches. It can be applied to the chest during respiratory ailments to ease pain and help breathing. The heat generated by the capsicum increases circulation to the area and facilitates healing. [NL 4-5]

Cervil: good for a poultice for bruises. [NL 4-12]

## Burns & Sunburns

### Definition

Burns are the result of damage to the skin by some source of heat, such as the sun, fires, stoves, or also from chemicals. [HHH p.43]

### Symptoms

A mild burn, often termed "first-degree," results in a reddening of the skin. More severe burns, "second-degree," may show blisters in addition to the redness, while severe or "third-degree burns" always show blisters and usually consist of damage to deeper tissue, and present the possibility of scarring. [HHH p.43]

### Herbal Aids

Plantain: Burns, scalds, erysipelas. Use the strong tea as a frequent wash, and drink the infusion internally. [SNH p.53]

Bayberry: Slow-healing burns or wounds, indolent ulcers. Dust on powder and bandage; change according to discharge. [SNH p.133]

European Pennyroyal: Bruises, foul ulcers, black eye, facial burns, skin problems, leprosy, etc. Make an apple cider vinegar tincture with the freshly bruised herbs apply as a fomentation outwardly and drink internally. [SNH p.284]

Comfrey: Wounds, bruises, burns, varicose veins, ulcers, boils, etc. Paint the part with pure olive oil to prevent sticking, then saturate a thick layer of cotton with comfrey mucilage and apply to the affected parts. Cover with plastic or waxed paper, bandage, and leave on until nearly dry. Make a fresh application by following the same process. If pus is present, paint the part with oil of garlic instead of olive oil and take 1 teaspoonful of the oil, internally. This will help prevent or stop putrefaction and pus formation, which will hasten the healing process. Give fomentation wrung out of a strong decoction. [SNH p.310]

Mullein: Burns. Apply juice of mullein leaves mixed with apple cider vinegar. [SNH p.317]

Chickweed: Boils, scalds, burns, inflamed or sore eyes, ulcerations, mouth or throat, deafness, wounds, etc. Use the decoction warm as a wash and apply the ointment (the ointment may be used externally and internally). [SNH p.323]

Slippery Elm: Drawing and healing poultice (inflamed surfaces, ulcers, wounds, burns, boils, skin diseases, purulent ophthalmic, chilblains, etc.) Add water to the powder to make an application of due consistence (use alone or in combination with other healing agents discussed) and place on the affected part. Stripping the bark straight from the tree and binding the inner side to a bad wound will work. [SNH p.335]

See formula for burns and scalds (after skin is broken) containing slippery elm, white pond lily and olive oil. [SNH p.338]

See formula for burns using slippery elm, horehound, thyme, red clover, yerba santa, lobelia, resin weed, cayenne, blackstrap molasses and glycerine. [SNH p.339]

See formula for bruises using cayenne, golden seal and myrrh. [SNH p.411]

Gentian: Liniment for parasitic affections, infected wounds, vermin, sprains, bruises, burns,

[Bed Wetting](#)[Bee Sting](#)[Bites, Insect Stings](#)[Black Eye](#)[Bladder Ailments](#)[Bleeding](#)[Blood Poisoning](#)[Blood Pressure](#)[Boils](#)[Breast](#)[Bright's Disease](#)[Broken Bones](#)[Bronchitis](#)[Bruises](#)[Burns & Sunburns](#)[Bursitis](#)

inflamed joints, etc. Dip linen or other appropriate material into a strong decoction or diluted tincture; squeeze until the material does not drip; apply to affected area (hot or cold); cover with plastic (or wax paper, etc.), and bandage on. [SNH p.462]

**Wheat Grass Chlorophyll:** Skin--Burns, skin abrasions, bruises, wounds: The wheat grass chlorophyll has both healing and antiseptic characteristics. The chlorophyll is applied either directly onto the afflicted surface, or, it is soaked in a cloth and bandaged to the area. At the same time, the chlorophyll should be taken internally. [SNH p.544]

**Comfrey Paste:** The following paste formula can be used for the mildest to the most severe third-degree burns with assurance of success, if used as instructed. This paste has been used by hundreds of people with great success. It is made as follows: to equal parts of liquid honey and wheat germ oil, blend in finely chopped or powdered fresh or dried comfrey leaf or root. When the mixture is the consistency of a heavy spreadable paste it is ready to use. Apply it a half-inch thick or more over the entire area that has been burned, scalded, etc. Cover with gauze and bandage lightly. Observe area from day to day and if paste has been absorbed add more on top of the original application. Do not remove original, just add to it when needed. This paste will keep well for many months at room temperature if kept in a tightly closed jar. Always have it on hand for emergencies. You might want to carry a small jar on trips in case of emergency. If the paste is not available, submerge the burned area in cold water and leave it there as long as possible to take the heat out, or keep cold wet compresses over the burned area. If honey, wheat germ oil, or olive oil are available, use them to saturate the area completely, keeping it well soaked in the honey or oil until healed. The gel from the aloe vera plant promotes the healing of burns. These are all good, but nothing can compare to the comfrey paste. [HHH p.45]

**Black Ointment:** Dr. Christopher's Black Ointment: An excellent drawing ointment. For use externally on old ulcers, tumors, boils, warts, skin cancers, hemorrhoids, excellent for burns and as a healing agent. This is made with chaparral, comfrey, red clover blossoms, pine tar, mullein, beeswax, plantain, olive oil, mutton tallow, chickweed, poke root. [HHH p.196]

**CMM:** Dr. Christopher's Healing Ointment: Made of comfrey, marshmallow, marigold, bee's wax, and oils, this is an antiseptic historically used on lesions, eczema (dry), poison ivy, inflamed surfaces, abrasions, burns, hemorrhoids, for bruises and swellings. Good to have on hand at all times. [HHH p.196]

**Cabbage Leaves for Burns:** Apply mashed cabbage leaves to the burn area to relieve pain and speed healing. [NL 4-12]

**Pumpkin and Squash:** These can be applied as a poultice for burns. [NL 4-12]

### Testimonials

**BF & C:** Dr. Christopher's Bone, Flesh and Cartilage Formula Paste: We see maimed, crippled, burn-scarred people--who could surely have found a "better way to go" than that which was used on them, in many cases.

As a good example I would like to cite the case of two boys, about ten years of age, who were playing with gasoline and matches. Both of the boys' hands, up to the wrists, received third degree burns. The boys were taken immediately to the hospital where the surgeon pronounced, for both boys, "incurable third degree burns"! He told both sets of parents there was a choice in each case--either removing the hands at the wrist and attaching iron claws both right and left, or, with numerous operations and skin grafts, over a period of about one year in the hospital, the boys could keep their hands, but they would be just like mummified claws and could not be used as hands, but, in a claw-like manner, they would be able to pick up materials but the fingers would not move as would the ones on the metal hand. One set of the parents told the doctor to keep their boy there and, even though it would be a year and the cost very high, to go ahead and work on him as soon as possible. The other couple told the doctor they wanted to see another person first about their boy's condition and then they might come back.

As they had heard of our work, they brought their boy to the building when I was lecturing, to show me the boy's burned hands. The nails, much of the flesh, tendons, etc., had been so badly burned it made one shudder to look at it. The temporary preliminary bandages were put back on while answering their request as to what could be done instead of cutting off the hands or surgery

and skin grafting. I gave them a formula to use that is based on comfrey. This is a paste made up of comfrey, wheat germ oil and honey. The paste was to be spread, 1/2 to 3/4 inch thick, over the entire burn area. They were instructed to watch the paste and if it had, in any areas, been absorbed into the flesh to add additional paste in these areas, not disturbing the condition below.

Within the week they returned to the hospital and the same doctor they had seen before examined the boy. He was amazed and told them that where the burns had been third degree burns in these past few days, they were now first degree burns. He asked them what in the world they had used, and they told him it was an old-fashioned remedy. The doctor then told them to continue using it and, further, there now would be no need for any surgery or skin grafting, because it looked as though the hands would heal perfectly with this procedure without any scar tissue. In a few weeks time the boy's hands were completely healed. Later the nails had grown back on, the tendons, nerves, muscles, flesh and skin were all renewed, and the hands were as perfect as they were before the burns.

The other boy was still at the hospital nearly a year later, with continual surgery and skin grafting. The cost was, we understand, well over one hundred and fifty thousand dollars. When he was sent home his hands were two ugly "mummified-type" unbending claws, so sad-looking he wore gloves to hide them from view.

The parents that used the herbs spent approximately ten or twelve dollars for the first materials to apply (honey, wheat germ oil and comfrey) and only small amounts at times to replace the paste that was used.

The paste can be used for cuts, abrasions, burns, bruises, sprains, and an external aid to spread the healing up of broken bones.

If kept in a wide-mouth closed jar the paste will keep in a ready-to-use condition for many months. This is one of the fine emergency first aid helps you can have on hand. It is good to have some in your cars and in various places in the home or where you work, in case of an accident.

[NL 1-8]

2. Third Degree Burns: Most recently, one of our school of Natural Healing staff members (we call him "Professor Cayenne") accidentally scalded his hand with burning olive oil during a kitchen fire. He acquired Third Degree burns from this misfortune. There was no one around to properly dress the wound, so he went to the local emergency room to have the toasted, dead flesh cut away. They cleaned the burn and informed him that he would need skin grafting if he wished to regain the use of his hand. He said, "No, thank you. Not unless there is a donor for the skin. I don't want flesh cut from anywhere on my body!" The hospital assured him that the skin grafting was the only route to go. He still refused. But when he got home, he asked a friend to 1) take pictures of the hand for documentation, and 2) make up the comfrey burn paste and apply it to the hand. After a few weeks of using the comfrey paste, he was able to move his hand. The hand is still scarred somewhat, but new flesh has grown in and he has total use of the hand. With dry skin brushing and use of the [Cayenne](#) and [BF & C Ointment](#), he began improving the circulation as soon as the skin grew back. The comfrey paste had turned an almost mummified-looking hand to one that is now living again. [NL 4-3]

## Bursitis

### Definition

A swelling of the bursa, the connective tissue structure surrounding a joint.

### Symptoms

This causes a rheumatic or arthritic tendency that affects different parts of the body, often the shoulders. [SNH p.7]

### Cause

The cause of bursitis is the same as arthritis and rheumatism: malnutrition and poor circulation. Generally, the problem of most bursitis in the shoulder and neck areas comes from a congested condition in the transverse colon. A toxic acid condition irritates a specific area causing the specific inflammation. [SNH p.7]

### Herbal Aids

Fomentations and Liniments: These will help give very quick relief (but this is just giving relief and not healing). A fomentation, poultice or tea of burdock leaves (three parts) and lobelia (one part) is good. Wormwood oil in combination with other oils is one of the fastest and most effective pain relievers. Cleanse the inflamed tissue of the toxic accumulations with the cleansing program, and change to a mucusless diet. [SNH p.7]

Meat: If all the blood were out of the meat, it would be gray, and not red at all--as tissue, muscle, the flesh without blood is colorless, with a grayish tinge. It was said by one analyst (and is accepted by many) that the higher the uremia acid in beef, the richer the flavor, and these toxins and poisons in meat are a main contributor to gout, rheumatism, bursitis, and many other mucoid ailments. The fat of the animal is the hardest part for the body to eliminate, and Moses in particular condemns the use of fat. Notice that very few animals will eat fat at all. Again, the only value in meat is what the particular animal has received from eating green herbs (and this is why the range animal is so much better than the stockyard-fattened beef). [SNH p.536]

Apple Cider Vinegar and Honey: It was noted that Vermont folk medicine, although they did not distinguish between arthritis, bursitis, rheumatism, gout, osteoarthritis, etc., they were successful in treating all these diseases with two teaspoonfuls of apple cider vinegar and two of honey in a glass of water three times a day. They felt that arthritis treatment began in the stomach where the acid balance prevented putrefaction of food. (Bacteria will not grow in an acid medium.) These bacteria guard the door to proper assimilation of nutriment in the stomach and intestine. One of the body's chief necessities is calcium. If the calcium balance is off, the results will be seen in many ways. There will be frayed nerves, inferior fingernails and hair, and other disorders including susceptibility to infectious diseases and arthritis resulting from altered body chemistry. [NL 3-11]

## Eczema

### Definition

Eczema is an inflammatory skin disease--sometimes a rash with watery discharge or development of scales and crusts. [HHH p.68]

### Symptoms

The skin breaks out and itches with burning and stinging. Sometimes little pimples form which turn into water blisters. Usually the skin dries up into little scales and itches.

### Cause

1. **Cleansing the Skin:** The skin is a very important part of the body; it is an "extra kidney," an extra set of lungs for breathing, and has many other functions. We should keep it in a good condition, important as it is, but we usually treat it shamefully. Cleanliness is next to Godliness, and the skin should be bathed daily. This does not mean to use soap with each bathing, unless it is a natural type biodegradable liquid soap. Nearly all bar soaps do more damage to the skin than they aid it, by leaving residue of the soap to clog the pores. The pores are the doors and windows of the temple and must be kept open to let in oxygen (the breath of life) and to excrete toxins and waste. [HHH p.68]

2. **Diet and Use of Natural Fibers:** A person who uses lots of mucus foods has a gluey, sticky type perspiration. When this individual sweats and the body is not cleaned regularly, the dried sweat clogs the pores. This is a beginning cause of dermatitis, or skin malfunction. In addition, as a nation we have fallen in love with easy to wash and iron synthetic clothes. These rob the body of the breath of life because manmade synthetic fibers do not "breathe." Only natural fibers such as cotton, wool, linen, silk, etc., can allow the skin to breathe properly. [HHH p.68]

3. **Diet:** These are two of our big problems; the third one is a diet devoid of wholesome foods. We use man's prepared materials, called food, that have been contaminated and processed, and in so many cases, should be classified as "junk food." All aids to fighting dermatitis work better and faster if we consider the first three things mentioned--bathe regularly, return to natural fibers to wear, and eat wholesome foods [HHH p.68]

### Herbal Aids

**Poke Root:** Use the liniment or the infusion as a wash, and drink internally. [SNH p.60]  
Formula for liniment and infusion. [SNH p.61]

See formula for skin afflictions using burdock root, yellow dock, yarrow and marshmallow. [SNH p.67]

See formula for skin afflictions for a decoction using burdock root, centaury, fumitory, yellow dock and cayenne. [SNH p.67]

See formula using garlic, glycerine and burdock seeds. [SNH p.102]

**Sun:** Helios-therapy on the skin is very important, as the sun is the Great Doctor of all times. But this therapy must always be done with caution because the sun (though being a healer) is like fire, which can either provide gentle warmth or it can burn a city down. The sun will help assist the body where medicinal aids, herbs and other procedures are slower. In many cases, it will help bring skin cancer to the surface; and various other skin problems (such as acne, eczema, etc.) are

beneficially aided by bathing in the sun. The internal use of tea or other herbal aids are often an herbal wash before the sunbathing are congenial and excellent. [SNH p.502]

Chickweed or Plantain: For eczema and other skin problems, use a fomentation over the irritated area made with chickweed tea and/or plantain, burdock root, Oregon grape root, and echinacea--covered with plastic. Or bathe the area with the tea a number of times during the day. Chickweed or plantain ointment is a helpful aid for small outbreaks. Drink a cup of the tea two or three times or more a day. To each cup of the tea you drink add three to six drops of tincture of lobelia. [HHH p.68]

Walnut: A wonderful aid to help relieve cases of dermatitis is found in the walnut family, using black walnut hulls or leaves or bark (*Juglans nigra*), English walnut (*Juglans regia*), or butternut (*Juglans cinerea*). Treat the skin malfunctions the same as with number six. [HHH p.68]

Golden Seal: Take one ounce of powdered golden seal root and mix thoroughly with nine ounces of linseed oil. Use the medicinal linseed oil from the health food store or drug store; do not use linseed oil from the paint store or hardware store--apply freely, externally. Use as an oral aid white poplar bark (*Populus tremuloides*--also known as quaking aspen), one cup three times in a day. [HHH p.68]

**BF & C**: Dr. Christopher's Bone, Flesh and Cartilage Formula: For the most severe cases of skin diseases in the advanced stage, use a combination we have called Bone, Flesh and Cartilage combination, internally and externally. Repeat procedure. Make the tea, soak flannel, cotton, or any white material other than synthetic--never use synthetic--wrap fomentation (soaked cloth) around the malfunctioning area and cover with plastic or wax paper, leave on all night six days a week and for as many weeks as needed until relief appears. Then continue a week or two for severe cases. Drink one fourth cup of finished concentrated tea with three fourths cup of distilled water three times or more each day. [HHH p.68]

**Chickweed Ointment**: Dr. Christopher's Chickweed Ointment: This is made of chickweed herb and bees wax and oils. Excellent for eczema and/or other skin infections, sores, burning, itchy skin or genitals, swollen testes, acne, hives, also for ulceration of mouth and throat. This is a wonderful ointment. [HHH p.196]

See formula to make a liniment using peppermint, olive oil, menthol and camphor. [UW-Peppermint]

Plantain: For skin diseases that result in scrofula or eczema, use the tea internally as a blood cleanser and use the strong tea externally as a wash. If the skin is not oily, you can use the ointment topically to affected areas. [UW-Plantain]

Juices for Eczema: Carrot, carrot & cucumber. [NL 3-5]

Cabbage Leaves: Cabbage leaves applied to an infected wound, ulcer, or oozing eczema should be layered like roof shingles, allowing secretions to drain between the layers. [NL 4-12]

Tarragon: Soothing for eczema and scurvy. [NL 4-12]

**CMM**: Dr. Christopher's Healing Ointment: Made of comfrey, marshmallow, marigold, bee's wax, and oils, this is an antiseptic to be used on lesions, eczema (dry), poison ivy, soothes inflamed surfaces, abrasions, burns, hemorrhoids, for bruises and swellings. Good to have on hand at all times. [HHH p.196]

### Testimonials

1. **BF & C** cures skin problem worse than eczema: One day a lady came into my office in a frantic state of near hysteria. She told me that her fourteen-year-old daughter was at home and some neighbor ladies were with her, to keep her from doing harm to herself. That morning the mother had stopped her daughter from committing suicide. The girl, for several years, had a severe dermatitis that had baffled the family physician, dermatologists and allergy specialists. The skin problem was from the knees down to her feet, the arms from elbows down over the hands, and her neck and face were also covered with this dermatitis condition. The dermatologists said it was different from pityriasis, psoriasis, eczema, etc., and had no name for this thick, heavy scaling

from which the girl was suffering. This young girl had become a recluse, refusing to go to school, church, parties, etc., and because of this terrible condition which was called "incurable" she was eating herself into an extremely oversized individual. The despair she was suffering was pushing her into a suicidal frame of mind.

I had never had such a case presented to me before and my "back was up against the wall." This was an emergency and I did not have the time to sit in a laboratory and figure out a combination to try on her. I offered a quick silent prayer for help and a formula came immediately to my mind. As it came I had the lady and her companion write it down. I told them to go to an herb shop or health food store and get the various herbs, mix them, and make a fomentation. She was to foment the legs, arms, neck and face areas, and also to have the daughter drink some of the tea. I felt confident enough to promise good results!

It was on a Tuesday morning that the mother had come to see me. On Friday the report came back that the scabs and scales had left the afflicted areas and the girl's skin had a good "healing glow" to it. The next message I received was six months later. The girl was now a choir leader at the school she had returned to, and she was again busy in church and social activities.

This particular group of herbs is one we called "bone, flesh and cartilage" formula. We found it would do many things besides skin problems. [NL 1-8]

2. Cabbage Leaves: A watchmaker suffered for a year with a painful eczema of both hands, preventing him from working. The lesions were acutely inflamed, and the fingernails were separating, about to fall off. Applications of cabbage leaves twice daily for a few days brought relief from pain, as clear fluid drained onto the dressing. With continued treatment healing took place within two months. [NL 4-12]

3. Newborn Cured of Eczema: At one of Dr. Christopher's lectures, a woman brought a bundle to the front, a little baby all wrapped up. She unwrapped the bundle, and as she did, eczema scalings flew up all around dusted Dr. Christopher's dark suit. The baby was simply covered with eczema; he described it as horrible to see. The family had adopted the baby six months previous, and it was entirely covered with the scaling, evidently from birth. The family had employed their usual doctor, a pediatrician, and a skin specialist, but no one could do a thing for the little sufferer.

Dr. Christopher told the mother to fill a bassinet with warm Chickweed tea and to bathe the baby, pouring the tea over the head that could not be submerged. The mother was also to give Chickweed tea internally, in small amounts.

Within just a matter of days, the baby began to improve, and after a week or two, the eczema disappeared completely, though the child had suffered with it so many months. [NL 6-5]

### Testimonials

1. [Antsp](#): Dr. Christopher's Anti-Spasmodic Tincture: I just received your newsletter, and in reading the information on epilepsy I found that you didn't mention your antispasmodic tincture. I have epilepsy and have followed your program with the B & B tincture and oil of garlic and I'm sure this is effective over a period of time; but the antispasmodic tincture will stop the seizure in the process. I have used it successfully--even during home childbirth. This is a very good test, as epileptics could tell you, as childbirth always causes seizures.

I have also given the tincture to a friend for her baby. They had just spent almost \$1,000 on tests and medication the "AMA Way" and were having no success in stopping the seizures. They say this tincture has changed their lives. Having experienced epileptic seizures, I know that is no exaggeration.

I have never read or heard of this tincture being used for epilepsy, but was led by the Spirit to use it. I hope this might be of help to others who are suffering. God bless you. [NL 1-4]

2. [B & B Tincture](#): Dr. Christopher's Nervous System Formula with Black Cohosh: A boy 12 years old, was brought to me as a patient several years ago, who was having severe epileptic seizures and these had started after the child had received head injuries in an automobile accident. I have had success treating epileptic patients up to this time, by using our basics; bowel cleaning and blood purification, as well as using antispasmodic herbs. However, none of the procedures I

had used over the years so successfully, worked at all with this new 12 year old patient.

One night I sat alone in my office, after all my patients had left for the day, wondering why I was not getting the results with this boy as I had with others with the same condition. I realized that I needed "help" and so I prayed earnestly that something could be done for this child and after some time of praying and meditating an "idea" for a "formula" of herbs for nerves came to my mind. I quickly wrote down: blue cohosh, black cohosh, blue vervain, scullcap, and lobelia in a 90 proof tincture. I immediately went to the lab we had out in back of the office, and made up the tincture. When this formula was given to the epileptic boy patient, there was an immediate reaction, and before long, he showed great improvement.

We found this same amazing formula would stop hiccups and was great to use by drops in the ear with oil of garlic to clear up earaches, and has even restored hearing in some cases. We called it B & B Tincture. [NL 2-11]

3. Dr. Shook Cured Epilepsy: Dr. Shook related a case wherein a young girl was brought to him with a longstanding case of epilepsy. She had suffered various injuries during her attacks. Shook made a strong decoction of Black Cohosh, blue gentian and valerian root, expecting immediate results, but the seizures continued. Shook then consulted an old herbalist, who informed him that only alcohol could extract the antispasmodic values from Black Cohosh. The parents tried the tincture, given here, and the seizures gradually decreased from up to thirty in one day to nearly none after six months. [NL 5-6] Dr. Shook's Formula consists of black cohosh, blue cohosh and blue vervain. [NL 5-6]

## Eye Ailments

### Definition

Any problem affecting the eyes such as glaucoma, cataracts, poor vision, conjunctivitis, etc.

### Symptoms

Sty: Inflammation of one or more of the sebaceous glands of the eyelids. Painful and swollen eyelids. [HHH p.114]

### Cause

Sty: Toxic poison accumulation. [HHH p.114] , conjunctivitis, foreign particle, poor vision, cataracts, glaucoma.

### Herbal Aids

Sty: Apply a hot fomentation of strong sarsaparilla tea over the eye. [SNH p.84]

Ophthalmic (sore eye, inflammation of the eye). See formula using raspberry, agrimony, eyebright and buckbean. [SNH p.148]

Ophthalmia, Eye Inflammation: Apply the compound oil to the eye on cotton using formula of oil of rue and olive oil. [SNH p.298]

Herbal Eyewash: ([Herbal Eyebright](#)) This formula is excellent for helping to brighten and heal the eyes, and it is known to help remove the cataracts and heavy film from the eyes. See formula using bayberry, cayenne, eyebright, golden seal and red raspberry leaves. [SNH p.525]

Sty: Place a fomentation of mullein leaves, red raspberry leaves, golden seal, slippery elm, lobelia and marshmallow root over the eye. Apply for one hour each, a fresh application three or more times a day, or leave on all night, until healed. [HHH p.114]

[Herbal Eyebright](#): Dr. Christopher's Herbal Eye-Health Formula: This formula is excellent for helping to brighten and heal the eyes, and it is known to remove the cataracts and heavy film from the eyes: Make tea and put into a glass eye cup. There will be a slight burning sensation when using the cayenne in the eye at first, but there is nothing to be concerned about. Tip head back and apply the eye cup to eye. Exercise eye while doing this as though you were swimming under water. Do this three to six times a day. Drink 1/2 cup a.m. and p.m. This formula has aided many sty cases. [HHH p.114]

Baby Clogged Eye Duct: If your baby has an eye infection which is not gonorrheal you can suspect a plugged tear duct. Many mothers gently massage the area and/or wash it with eyebright and golden seal tea, which sometimes helps open the duct. If it doesn't open after a couple of months, you may wish to go to a good eye doctor for surgical opening of the duct. [EWH p.88]

Conjunctivitis: Some babies--and children--get pinkeye or conjunctivitis. To treat this eye infection a warm pack of chickweed or teas of red raspberry leaf or eyebright and golden seal, meticulously strained through sterile muslin, can be used to wash the eye. Some midwives suggest flooding the eyes with mother's milk, which contains antibodies. I have tried this with my seven-year-old, who had caught a neighborhood infection of pinkeye. I flooded his eyes with my milk several times a day, and his infection cleared up fast. He thought it was pretty funny, too. [EWH p.88]

[Diabetes](#)[Diarrhea](#)[Digestion](#)[Diphtheria](#)[Dizziness](#)[Dropsy](#)[Dysentery](#)[Dyspepsia](#)[Dyspnea](#)[Earaches](#)[Eczema](#)[Edema](#)[Enuresis](#)[Epilepsy](#)[Eye Ailments](#)

Foreign Particles: If you get a foreign particle in your eye, or if your eyes become red and irritated, you can wash them either with Dr. Christopher's Eyewash, being sure to strain the tea carefully through a fine, clean cotton cloth, or a simple tea of red raspberry leaves. These teas help astringe and heal the irritated surface. [EWH p.168]

Is There a Natural Way to Remove Scar Tissue From the Cornea of the Eye Caused by Viral Infection (Herpes Simplex)? Answer: To work on the scar tissue in the eye which results from such an infection one needs to use Dr. Christopher's eyewash combination [[Herbal Eyebright](#)].

This formula should be made into a tea. Using a glass eye cup wash the eye thoroughly. You will notice a slight burning sensation when you first apply the tea. This results from the cayenne in the combination. Do not be alarmed for this is a perfectly normal reaction and is harmless.

With the head thrown back and the cup in place over the eye, exercise the eye muscles as you might if you were swimming under water. Do this in the morning and at night or more frequently if you desire.

The Herpes simplex of course must be cleaned from the system by proper diet and the use of a good purifying tea. Three times each day drink a cup of burdock root tea (*Arctium lappa*). Continue taking this tea for six days a week for a period of six weeks. After six weeks change this infusion to an Ephedra herb tea (also known as Brigham tea, desert herb or Mormon tea). Take the Ephedra tea again for six days of each week for another six week period. You will continue rotating the different teas at six week intervals. To every cup of tea that you take add six to ten drops of tincture of lobelia. Also take three fifteen grain chaparral tablets along with each cup of tea. [NL 1-3]

Is There Any Help for Eye Muscle Degeneration? Answer: The herbs in the eye wash combination which I recommend as one of cell-proliferation. They have a special affinity for feeding the cell structures around the eyes themselves. One of the herbs was named "eyebright" many years ago, because people discovered the fact that this herb was helpful for ailing eyes. Each of the other herbs in this combination has its own way of helping improve the eye. These herbs are chosen as a good food for strengthening and rebuilding of the muscles in the eyes. [NL 1-7]

"I Have Been Using the Herbal Eyebright for Several Months Now. I have followed the instructions exactly. Is there anything else I can do to help speed this along?" Answer: In order for any herbal combination to be effective, the body must be in good working condition. This would include using the lower bowel combination [[Fen LB](#)] and strictly following the mucusless diet. In addition it is also important to improve the circulation to the head area. This can be accomplished by laying your head down on a slant board each day. Gradually work up to 20 minutes twice a day. There is also a tendency for the eyesight to seem to worsen for a while. This is due to the toxins being released from the system and coming to the surface of the eye to be washed away. This also indicates that the lower bowel formula [[Fen LB](#)] should be used as a means for keeping the eliminative channels open. [NL 3-10]

[Cayenne](#) and the Eyes: Dr. Christopher related the humorous story of a very fine student of his who had begun teaching herb classes on his own. This young man happened to precede Dr. Christopher's lecture one evening in Arizona. The young man said, "You know, ladies and gentlemen, that Dr. Christopher has always made me gasp. I've seen him drink two or three tablespoons of Cayenne in water--and I'd just shudder. But tonight I'm going to do something that he may have never done himself." With that, he reached down into a container of Cayenne and threw a pinch right into his eye. Dr. Christopher thought that the man must have gone crazy and he was concerned that one of his students would do such a thing in public, although he knew that Cayenne can never hurt the cell structure, no matter how delicate it is. The tears ran down the man's cheek as he continued talking, and when he was finished, he opened his eye and invited everyone to look. The eye just sparkled; it was by far the brighter of the two, although Dr. Christopher said that he never had seen this antic performed again--and that he never dared to try it himself! [NL 6-3]

Near-Sightedness and Far-Sightedness with Herbal Eyebright: Dr. Christopher said that, oddly enough, it took longer to correct near-sightedness and far-sightedness than blindness or cataracts or glaucoma. [NL 6-8]

## Testimonials

1. Carrot Juice: A young man came to us wanting help. He wanted to become an Air Force Pilot with the government but was turned down because of bad eyesight. He had passed everything else with high grades, but the answer was still "no," because of poor eyesight. When he asked the medical doctor if he could try again later, he was laughed at and told this condition could not be changed. He persisted and so was given a three-months return date. We had him "clean his bowels," go on the mucusless diet after the three-day cleanse, and then drink one quart or more of freshly-made carrot juice each day, six days each week. He was to use nothing but distilled water on the seventh day. In three months he returned for another eye examination at the Air Force Agency, and this time was given the approval with a "clean bill of health" and "good eyesight." [HHH p.66]

2. Vision Restored: Dr. Christopher was sitting in his office in Evanston, Wyoming one day, and in walked an elderly, white-haired woman with a little child leading her. The woman was completely blind, and the little child brought her right up to the desk. The woman said she had been blind for over ten years, not able to see anything, using a child or a seeing-eye dog to find her way around. Lately she had heard about Dr. Christopher's eyebright formula and wanted to know if it could help her. Dr. Christopher could not promise her anything, but he said it had done much good and never any harm. He told her about the mucusless diet, because everything works better when you have a cleaner body, and she began the eyewash formula [[Herbal Eyebright](#)]. She kept visiting Dr. Christopher regularly, and he gave her adjustments and other therapies.

One day, she came into the waiting room and into the office, without a seeing eye dog or child. She smiled and said, "Hello Doctor." This was the first time, she said, that she knew what he looked like--just like she had pictured him, she said. She had her eyesight back, truly thrilled, because for ten years she had been walking in a blind world.

"I want to show you how my eyes have healed," she said. She walked over and picked up a book off his desk and read the title on the outside. She opened the book and read several verses.

Dr. Christopher commented that most blind people feel hopeless, but there is hope. Thousands have had their eyesight improved with the eyewash routine, which is one part each bayberry bark, eyebright hub, golden seal root, red raspberry leaves, and 1/8 part cayenne. Make a tea and use as under "Formulas."

When people become blind from cataracts, glaucoma, near- or far-sightedness, there are no two cases alike. Not everyone can be cured, Dr. Christopher stressed. A brother-in-law of his had a torn retina, and the program could not help him at all. Even medical science could do nothing. He had laser beam treatments and other things, but without success. But others who had had the same condition have been healed. Some people who have been born blind have been able to see. Two adults and one infant the Dr. Christopher recalls were born blind, and were later able to see, thanks to this program. [EWH p.131]

3. Cataracts Disappear: A lady with cataracts had been blind for a number of years, and yet in nine days she had her full sight back. This astounded Dr. Christopher, for it to have happened so fast. Other people go on the program for as long as three years, and though they then can see better than before, they have not been completely healed. Others clear in a matter of months--it varies with the individual. [EWH p.132]

4. Dry Eyes and Cataracts: I have had bad eye trouble for two or three years. The beginning of cataracts on both eyes, I had the jel break in both eyes--at that time my eyes were so terribly dry that I would have to lift the eyelids off my eyes in the morning with my fingers. My vision was getting real bad. I have been taking exercises for my eyes, using the eye wash and taking the Eye Wash Formula [[Herbal Eyebright](#)]. My eyes are much, much improved. I am positive that the cataracts will be completely dissolved. Thank God for you and the wonderful work you are doing. [NL 1-7]

5. Cataracts, Glaucoma and Bad Vision: I was diagnosed as having a fast growing cataract in my right eye and a build-up of pressure in both eyes causing glaucoma. I then found in Newsletter

#19 all about Herbal Eyewash [[Herbal Eyebright](#)] and capsules, which I ordered and received on November 4. I immediately started using both three times a day--with marvelous results. Within three days I could see through my new glasses, bi-focals. I hadn't been able to since I got the new glasses which had stronger vision for distance and weaker bi-focals. So I had to change to my old glasses for my bookkeeping work and the new ones for driving. Suddenly I realized I forgot to change them when I sat down at my desk at my office (because I was seeing figures perfectly, I had forgotten I had them on). Then within two weeks I suddenly realized I could see much farther with the bad eye with the cataract, when I could not see with it at all before. All along small pieces of mucus is coming out of my eyes many times daily. Before using eyewash, I couldn't stand driving after dark as the car headlights, tail lights, signal lights and street lights all had huge halos around them of flashing red, yellow and green, very scary. So I had to be very careful not to leave my office so I would get home after dark. Now the halos have disappeared and I see only a tail on each light which I think looks like only a small part of a halo and I take that to mean my eyes are improving. I am very happy with continuing improvement and have full confidence that my cataract and glaucoma will be cured. I have started two friends using it too, and they both tell me they are having good improvements too. Neither have cataracts or glaucoma, but they do have weak eyes and wear glasses. [NL 1-7]

6. Vision Improves: I started the Eyebright formula treatment [[Herbal Eyebright](#)]... TWO WEEKS AGO. My vision has improved immensely, needless to say my first few days of treatment were rather hectic, but as I read the doctor's answers to questions in the Healthview letters, I was encouraged to go on. I bought the herbal eye-wash powder so it was necessary for me to strain it as I made it each morning. In preparation I had bought a box of filter drip coffee filters rather than using the gauze. When I poured the tea through the filter, it plugged up almost immediately. So the next morning, I put a teaspoon of the powdered tea in the filter, tied it shut with a twistum, thus making a tea bag. Bring the cup of distilled water to a boil with the tea bag in it. Let it stand until it cools. Works beautiful. No fuss no muss. Someone else has probably already thought of this method. I'll write you more as it progresses. [NL 1-12]

7. Subretinal Hemorrhage: My right eye went bad last January, diagnosed as "subretinal hemorrhage" which left me with probably 20-30% vision. Since using Eyebright Comb. [[Herbal Eyebright](#)], I now have 70 or 80% vision. Miracle Medicines-God's wonderful herbs. [NL 1-12]

8. Glaucoma Disappears: I have a friend who had had eight major surgeries. She lived in constant pain, very seldom was she able to go places and her physician had told her there was nothing more they could do.

She went on [Dr. John R. Christophers "Three Day Cleansing Program"](#) and [Dr. John R. Christophers "Mucusless Diet"](#). She started on herbs to cleanse the colon, [[Fen LB](#)] the blood [[Red Clover Combination](#)] Cayenne, Calc tea, Yucca AR, Herbal Eyebright, etc. In a matter of about three weeks, her pain was gone. She was able to start living again. In about 3 or 4 months her arthritis left her.

She had had glaucoma for 13 years. Her glaucoma medicine was making her ill, so she went to her eye specialist. He tested her and said there is not even a trace of glaucoma left. There is virtually no cure for glaucoma, how did you do it. Her reply was thru herbs and diet. She was told whatever it is, don't stop it. He took her off her glaucoma medication, and a special pair of glasses. She now tells me her eyes have improved so much that she can now watch TV without glasses, which she never before had done. She started on this program less than a year ago. Her dark brown eyes are now turning green. She has a ways yet to go, but she is really living again. She is a composer and this past holiday season, had a Christmas Album published. [NL 2-2]

9. Eye Pain: The eyebright combination [[Herbal Eyebright](#)] has brought good results for a very severe pain behind one eye. (I have had this for over two years and the doctors have been unable to find the cause). [NL 2-2]

10. Pressure in Eyes: I just want to make a statement about the eye wash [[Herbal Eyebright](#)] I ordered in Oct. I have Glaucoma have had since 1972 - they claimed I came to the Dr. in time, as

I hadn't had it very long. I had my usual 4 month ck. up Sept. 25 - 1979 Just a while after the ck. up I rec'd the eye wash. and immediately begin using it as directions stated, and was soon getting wonderful results, was called to my daughter's bedside in Houston Nov. 1st, 1979 carried my eye wash with me. and I used it regularly, came home Dec. 26 -1979 still using my eyewash, by this time I had eliminated all my eye drops-(I was using 3 kinds) except twice a day on the latest drops. On Jan. 25 1980 my 4 months was up - time to go to the eye Dr. again for my ck. up - something happened my appointment had to be changed to Feb. 5th 1980 So on the 5th of Feb. when the eye Doctor tested me for reading the chart on the wall - he only took a minute he said that's o.k. and moved on to the field test I was able to do that so well, he quit that quickly also. Then he dilated my eyes & said you sit there 10 mins. I'll be back by then & I can't do anything till then anyway. So exactly in 10 minutes he was back and he took the pressure in my eyes & said NOTHING And there he took my blood pressure & still said nothing, so I asked if my blood pressure was o.k., he said yes, good very good 140/80 couldn't be better.

Then I said there wasn't any pressure in my eyes either was there? he flashed his eyes on me quickly & said No, none whatever, How did you know? I laughed & said Dr. I can tell when there is pressure in my eyes or when there isn't any. He said you are a very prudent women, and your doing so well I don't think its necessary for you to come back for 6 months, If at any time in between the 6 months & now anything out of the ordinary should happen give me a call, I'll give you an appointment so that's how much your wonderful eye wash has helped me. its the 1st time since 1972 I have been clear of pressure in my eyes. Thanks to you. [NL 2-2]

11. Vision Restored in Only Remaining Eye: I am a firm believer in Herbs for better health. I first heard about Dr. Christopher's Natural Herbal Formulas thru the Healthview Newsletter several years ago, and, I might add have had wonderful results from Dr. Christopher's Herbal Eye wash [[Herbal Eyebright](#)] - even tho my ophthalmologist laughed when I mentioned it to him and stated it as quackery.

I have only one eye, and, the remaining had cataract removal with an inter-ocular lens inserted - still my vision was poor - reading about your Herbal Eyewash gave me hope - my ophthalmologist's's statement did not deter my desire to try it even tho I was cautioned about possible injury to my only left eye.

I only use the eye wash once each day - when retiring for the night. The burning is rough, but, the results are gratifying. I go see my ophthalmologist's once every 6 months. My last visit was May 14,1980 - after my eye examination my ophthalmologist said, "Holy Hell, Bill, your eye examination is going backwards" - I knew what he meant, but I thought I would ask -'What do you mean, backwards?' - "Why you need less stronger glasses. You only missed 3 letters on the bottom line - and the bottom line is 20-20 eye vision." So you see I am sold on Dr. Christopher's Herbal Eyewash [[Herbal Eyebright](#)] [NL 2-3]

12. Baby Born Blind Sees: A young couple came up to the podium after one of my lectures to find if it had been a "slip of the tongue" or did I actually mean a statement I had made, namely, "There are no incurable diseases, only incurable patients." My answer was "Yes, this is correct." A diseased or malfunctioning condition of the body can usually be made whole again, if the program is followed faithfully.

The question was then asked me, "We know of cases wherein eyesight has been restored (one individual we know had their sight restored) but how about our little child?" This small toddler was born blind. Medical science tells us that the child was born without any optic nerves. The baby, according to them, will remain blind all of its life, as there is no way man knows of giving sight to one who was born without the optic nerve. It would be like telling a person to listen to beautiful music, yet born without hearing organs, or for one to run when born without legs.

With pleading in their voices, they asked if I believed the child could see. I told the parents that up until this time, I had never seen an infant born blind receive vision, but have had reports on several others who had been born blind, and receive their sight later on in life, such as in their twenties.

The advice given to this couple was as follows: I can guarantee nothing, as it is a new problem to me, but if you will apply our "eyebright formula" [[Herbal Eyebright](#)] as external application, give the child some of this formula to drink, as well, and then several times a day, give orally (by mouth) and also put into the ears the formula we call our [B & B Tincture](#). This procedure they

were told, can do no harm in any way, but are made from good herbal foods for the areas mentioned and therefore, can do nothing but good. (Remember, the baby they told me about was an infant at the crawling stage, and had been pronounced by eye doctors "legally blind").

Just about six months later, in another state, just before going out to the podium, as assistant who was traveling with me came back stage where I was sitting and told me a lady asked to say a few words to me before the lecture started. They had explained to her that I had a question and answer period toward the end of the evening and she could ask any question of me at that time. But she insisted she must talk to me first, and she knew I would appreciate hearing what she had to say. And was I ever pleased to find out who she was. She had tears of joy in her eyes when she told me about the little "now toddling" child she and her husband had brought to me earlier. He was now able to follow a rolling ball across the floor and pick it up. He could now even see and pick up small colored bits of paper that had been scattered around the room!

We have here the case of a child born blind who would be able to see the wonders of sight that most of us just take for granted. [NL 2-8]

13. Eighty-Two Year Old Get Drivers License: "I began using Dr. Christopher's herbal eyewash [[Herbal Eyebright](#)] after getting the Healthview Newsletter. In a few weeks I could read fine print without glasses, even though two years ago I had been told I had cataracts on both eyes.

I had them tested again in January, and the cataract on my right eye was gone. The doctor OK'd the paper for my driver's license. I am eighty-two." [NL 2-8]

14. Takes Off Glasses Worn 40 Years Never To Put Them On Again: "Healthview interviews have cleared up the fine line between true or false, good and evil for me. I love being brainwashed as long as it's good or true. In less than 3 months, thanks to Dr. Christopher, I received my best Christmas present ever. On December 23rd 1978, after using eyewash since 10-10-78, 5 to 8 times daily and enjoying it burning and running down my face, I took off my glasses after 40 plus years, never to put them on again. When I looked in the telephone book and realized I could see names and numbers, I started calling some friends. They had said that when I started using Dr. Christopher's eye mix with cayenne [[Herbal Eyebright](#)], that within 4 months, if I was not blind using a white stick and a lead dog, they would consider using it also. Already, five have started. This time I cannot say thank you, but I sure can say thank you to Healthview for allowing as my Savior said many times, those with ears let them hear. Praise God and I believe that Jesus has already proved what Dr. Christopher said: "there are no incurable diseases, but many incurable people." I am 68 years old and on 10-21-78, when I had my glaucoma test ... the Dr. said ... no glaucoma but have your eyes treated soon. 1/10/79 the pus and mucus continues coming out in hunks and the more that comes out the better my eyes are." [NL 2-8]

15. Woman's Vision Improves: "Yes, that's what happened when I suggested to ten of my patients with chronic eye problems to try it, and see what happens.

By the way, one of them happens to be my own mother of 79, she was on the eyewash [[Herbal Eyebright](#)] and the capsule for three days and then left for Florida to visit her sister. Oh yes, she also has cataracts. Three others do also, but I must tell you about my mother. I called her in Florida about a week after she had left and asked her how her eyes were coming along, and she said to me I think I am going blind. Blind I said, what do you mean? Isn't your eyesight a little brighter at least? Oh yes, she replied, but sometimes I cannot read the paper at all and everything gets blurry and my eyes are always watering.

I asked her if she had taken her old glasses along with her, as I told her to do and she said yes. I said to her, lay the phone down and get them and a newspaper and come back to the phone which she did, but before she came back, I could hear her scream "I can see myself in the mirror". When she came back to the phone, she didn't bother to bring a newspaper with her, all I heard was that she could see herself clear in the mirror.

I told her before she left if there is a change in her eyesight to try one of her old glasses, which she forgot to do. Meantime, her eyes had gotten stronger and her present glasses were the wrong prescription.

Well, she sure knows now that she isn't going blind. [NL 2-8]

16. Cold Washrag Helps After Eyewash: I have been using Dr. John R. Christopher's eyewash [[Herbal Eyebright](#)] for seven going on eight weeks now. My eyes at first were so bad I couldn't even see my own face in the mirror clearly, without standing three inches from it. Now I can sit and watch TV and its clear across the room, and I can see clearly enough now, I can tell who the actors are! I also found at the beginning a cold washrag put to the eye, after it is washed, helps relieve the stinging. And it took me up to now to have any of my mucus or pus come out, and it pours out. I surely say it is worth every effort, because I know it works." [NL 2-8]

17. Floater Disappears: I have been using your Eyebright [[Herbal Eyebright](#)] 3-5 times daily. Before using eyebright, my lids hurt when I tried to open them in the morning. Now it does not take as long for the pain to vanish. This is a great help and comfort and I thank you. The "floater" in my left eye has vanished. [NL 2-8]

18. Sore and Tired Eyes No More: I received my first Eyebright [[Herbal Eyebright](#)] from your company on a Friday in October of 1979. My eyes were sore and really hurt. As I said the drops did not help me...OR THE NEW GLASSES. I washed my eyes out before retiring that Friday night. The next morning my eyes were glued shut with so much "crud" and dead cells. But as soon as I washed them again with Eyebright, they were not sore and I have not used an eye drop since. Saturday I washed them again. Sunday morning I sat at the kitchen table and I always call the weather. So I thought I would see if I could dial without my glasses. I have been wearing glasses since 1933. But I don't think I have been able to dial a phone without glasses for at least 25 to 30 years. Believe it or not, I dialed the phone without glasses. I work long hours in my lab. Sometimes from 5 a.m. to 11 p.m., all under lights. My eyes are never sore anymore - or tired. After eight months I could not feel the Eyebright anymore, so I put two capsules in and I can hardly feel that. But I do not miss a day in washing my eyes. I used to have sore eyes after every family gathering due to the heavy smokers. (I do not smoke. I quit at sixteen.) I cured my own cataract and glaucoma, using B-15 as a helper. [NL 3-1]

19. Coloboma: Our daughter was born in 1973, with coloboma. We had three eye specialists look at her, but all said there was no operation or anything they could do for her. One doctor said she might see movements, but he did not think she would know what they were. She also has one eye that is smaller. Then I read the article in the Healthview Newsletter about the Herbal Eyewash [[Herbal Eyebright](#)]. So we ordered some and began. We had to use an eyedropper because of being for an infant. After three months she reached for a magazine while sitting on her daddy's lap. What a joy. Her progress continued, next she would move her head to follow close objects. She is now three years old. Loves to look at her books, go up and down stairs, feeds herself, runs, etc. Thank you. [NL 4-10]

## Itch

### Definition

To feel a sensation that is usually on the skin that makes you want to scratch.

### Cause

Itch is caused by various germs or bacteria trying to clean the body through the pores of the skin (instead of through the kidneys and the bowels) resulting in formation of pustules or rashes accompanied by intense itching. [HHH p.99]

### Herbal Aids

General Instructions: For itch and other skin problems, use a fomentation over the irritated area made with chickweed tea and/or plantain, burdock root, Oregon grape root, and echinacea--covered with plastic. Or, bathe the area with the tea a number of times during the day. Chickweed or plantain ointment is an aid for small outbreaks. Drink a cup of the tea two or three times or more a day. To each cup of the tea you drink add three to six drops of tincture of lobelia.

A wonderful aid to help relieve cases of dermatitis is found in the walnut family, using black walnut hulls or leaves or bark (*Juglans nigra*), English walnut (*Juglans regia*), or butternut (*Juglans cinerea*). Treat the skin malfunctions the same as above.

Take one ounce of powdered golden seal root and mix thoroughly with nine ounces of linseed oil. Use the medicinal linseed oil from the health food store or drug store; DO NOT use linseed oil from the paint store or hardware store--apply freely, externally. Use as an oral aid white poplar bark (*Populus tremuloides*--also known as quaking aspen), one cup three times a day.

For the most severe cases of skin diseases in the advanced stage, use a combination we have called Bone, Flesh and Cartilage [BF & C] combination, internally and externally. Repeat procedure. Make a tea of the following herbs: six parts oak bark, three parts marshmallow root, three parts mullein herb, two parts wormwood, one part lobelia, one part skullcap, six parts comfrey root, three parts walnut bark (or leaves) and three parts gravel root. Soak the combined herbs in distilled water (at the rate of one ounce of the combined herbs to the pint of distilled water) for four to six hours, simmer thirty minutes (do not boil), strain and then simmer the liquid down to one-half its volume. Example: One gallon of tea simmered down to two quarts of tea, which is called "concentrated" tea. Soak flannel, cotton, or any white material other than synthetic--never use synthetic--wrap fomentation (soaked cloth) around the malfunction area and cover with plastic or wax paper, leave on all night six days a week and for as many weeks as needed until relief appears. Then continue a week or two for severe cases. Drink one fourth cup of finished concentrated tea with three-fourths cup of distilled water three times or more each day. [HHH p.99]

Plantain and Yellow Dock: Make a strong tea of equal parts of plantain and yellow dock (*Rumex crispus*), and bathe the affected area frequently as a wash. [SNH p.54]

Itch Ointment: See formula using burdock root, olive oil and bee's wax. [SNH p.68]

Black Walnut: Black walnut tincture can be applied on itching skin. This works especially well if the irritation is due to a fungus or similar invasion. One ounce of powdered golden seal root mixed with nine ounces of pure, food-grade linseed oil (not paint store linseed oil) can be applied externally with good results. White poplar bark tea should be taken internally. [EWH p.163]

[Hiccoughs](#)[Hypoglycemia](#)[Hysteria](#)[Impotency](#)[Incontinence](#)[Indigestion](#)[Infertility](#)[Inflammation](#)[Influenza \(Flu\)](#)[Insect Sting](#)[Insomnia](#) **Itch**

**Poke:** The skin is an indicator of toxicity in the body. Poke is a good aid for skin problems. It is also good for "the itch" in cases of scabies. Anytime you have skin which doesn't eliminate properly along with vitiated blood, you can well use Poke. It is said to be a great eliminator of toxins out of the system (Hut:36). Usually the glands are not performing properly in these conditions so the herb works on both areas. It is often used in chronic eczema, syphilitic eruptions, psoriasis, varicose veins and leg ulcers (Felk:1473). [UW-Poke]

**Plantain:** Plantain bruised, or juiced in a juicer, and placed over the sting or bite will generally bring relief within a short time. The pain and itch will cease and the swelling will leave. [NL 3-1]

## Jaundice

### Definition

Jaundice is due to absorption of bile into the blood vessels, a disposition of bile pigment in the skin and mucous membrane. [HHH p.100]

### Symptoms

A morbid affliction characterized by yellowness of the skin, eyes, mucous membranes, and urine, due to bile pigments in the blood and tissues, [SNH p.34] bitter taste in mouth and constipation. Urine is dark, there is a slight fever, headache, and dizziness. [HHH p.100]

### Cause

The liver is the main seat of the problem. The bile does not excrete properly and is passed off into the blood stream and the body tissues, causing a toxic condition (called cholemia) causing indigestion, sluggishness, fatigue, constipation, upset stomach, chills, vomiting, and fever. The stools become a light clay or chalky color, the skin takes on a gold cast, yellow shows in the whites of the eyes, and bile deposits in the skin causing itching. [SNH p.34]

As we said, jaundice, hepatitis, and contagious hepatitis stem from a liver/gall bladder malfunction. This is the cause, but the cause behind this cause is diet.

Jethro Kloss (Back to Eden, Beneficial Book, Box 404, New York 10016) gives the following on jaundice:

Causes: Obstruction of the bile. When the bile gets into the blood or circulation it causes the skin all over the body to become yellow, as well as the whites of the eyes. The bile does several important things: It neutralizes the gastric juice which would otherwise interfere with intestinal digestion; it alkalinizes the food and enables the system to take care of it; it has a special effect on the fatty foods. Deficient bile is the cause of constipation. Derangement of the stomach, liver and bowels is the cause of this ailment, and of course, these troubles arise from errors in diet. [HHH p.100]

### Herbal aids

Carrot Juice: This will bring the skin from clear to yellow (as the liver clears) and then back to normal, which is a sign that the bile is now cleared and flowing properly into the intestinal tract. Tonics for the liver are helpful, such as barberry, carrot juice, blueberry bark, cranesbill (crow foot) root, red raspberry root, and white oak bark. Proceed with caution since rapid unloading of toxic bile may upset the body and induce vomiting as well as turn the skin extremely yellow. Take golden seal and drink fruit juice to help cleanse. Other excellent herbs for this liver problem are agrimony, dandelion, mandrake root, self-heal and yarrow. Unsweetened fresh lemonade is good. [SNH p.6]

[Dr. John R. Christophers "Three Day Cleansing Program"](#): One of the safest and fastest methods of reversing these conditions is to follow the three-day cleanse routine as follows: drink apple juice each waking hour, swishing (chewing) each mouthful of the juice in the mouth, so the saliva mixes with it thoroughly. A child eight years old or older can generally use an eight-ounce glass each hour, younger children in proportion. No other food is used. If desired, on the half-hour distilled water can be used. During each day of the three days, take one tablespoon or more of sweet-tasting (not rancid) olive oil, three times during the day. To take away the oily taste, eat an

[Neuritis](#)[Nightmares](#)[Nipples](#)[Nosebleeds](#)[Obesity](#)[Osteoporosis](#)[Palpitations](#)[Paralysis](#)[Parasites and Worms](#)[Pleurisy](#)[Pneumonia](#)[Poison Ivy and Poison Oak](#)[Polyps](#)[Pregnancy](#)[Prostate](#)[Pyorrhea](#)

apple or "chew" juice well right after the oil. [HHH p.100]

Give the child the lower bowel formula [[Fen LB](#)] several times a day to keep the bowels clear.

This is a very important part of the program--keeping the bowels free. One way to help is to start the day off with eight ounces or more of prune juice. Any good brand from the grocer's shelf is good, as long as nothing has been added such as preservatives, etc.

During each day have the child take one half cup (more or less according to age) of a liver-gallbladder tea formula three times a day. One of the best formulas we have recommended for many years is; three parts barberry root (*Berberis vulgaris*) or substitute Oregon grape root or rocky mountain grape root, and one part of wild yam. If wild yam is not available, substitute two parts of sweet fennel seed. [HHH p.101]

Castor Oil Fomentation: During acute stages of jaundice (hepatitis), use a castor oil fomentation over the liver and gall bladder area (right side, lower rib cage and across abdomen). Massage castor oil (circular clockwise motion) over the area, using it liberally. Or soak a flannel cloth in castor oil, squeeze out excess and cover area. After castor oil is applied either by massage or fomentation (the latter is better), cover the area, flannel and all, with a hot wet towel. Keep a hot water bottle or a moist-type heating pad over the area for a half hour to an hour several times daily. Repeat the entire program from time to time until condition is cleared. Then stay on the mucusless diet, use plenty of carrot and other type juices and no less than one ounce of steam distilled water per each pound of body weight each day. [HHH p.101]

Alfalfa: This has been used in the treatment of jaundice. Harris reports that some doctors supply their patients with fresh Alfalfa. [UW-Alfalfa]

Butcher's Broom: This is not as commonly used in modern times as it once was. It is also called Knee-Holly because it grows to about the height of a man's knee and has prickly leaves and red berries; it also grows in the vicinity of holly bushes, mostly in England and Europe. It is an excellent herb for the urinary system, opening obstructions and increasing the flow, expelling gravel, and also working on an adjacent system, the female tract, helping to bring on suppressed menstruation. Because of its action on the urinary system, it is excellent for cases of jaundice. The herb also acts as a diaphoretic. [UW-Butcher's Broom]

Wormwood: Take 2 fluid ounces of the infusion 3-4 times daily. [SNH p.108]

See formula using raspberry leaves, barberry bark, agrimony, cleavers, mountain flax and cayenne. [SNH p.147]

Dr. Shook's Jaundice Formula: See formula using turkey rhubarb, aloe leaf, fringetree, Culver's root, wahoo bark, poke root and nux vomica seeds. [SNH p.186]

Compound Syrup of Mandrake: Uses mandrake root, licorice root, ginger root and sugar. [SNH p.196] Regulate the dose to suit the bowels, trying to effect a soft, molded stool and avoiding any tendency to diarrhea. The formula is slow working, but if persisted in for a time, it will act with certainty in clearing jaundice conditions and restoring the liver to normal function. [SNH p.197]

Culver's Root: Culver's root may profitably be used alone 3-5 drops of fluid extract (add cayenne where the pulse is weak); or, it is beneficially combined with positive hepatic stimulants (such as mandrake or bitter root) [SNH p.206]

Bitter Root: Give 3-5 drops of fluid extract every 2-3 hours combined with tincture of cayenne or some syrup of ginger, in water, etc. [SNH p.209]

See formula using boneset, butternut and ginger. [SNH p.227]

Compound Lobelia Capsules: See formula using lobelia and lobelia seed, cayenne, acacia vera and anise seed. [SNH p.364]

See formula using balmony, golden seal, dwarf elder, gentian, prickly ash and wahoo. [SNH p.460]

Infant Jaundice: Many parents worry about infant jaundice, which occurs in an increasingly high percentage of newborns, which some attribute to the use of drugs in the birth process. Although the symptoms are pretty much the same--yellowness in the skin and eyes--there are actually three kinds of jaundice. Physiological jaundice occurs in blonde babies, Native American

babies, those born with the aid of drugs, those not allowed to nurse immediately after birth and on-demand, and preemies. This "normal" jaundice occurs in an actively-nursing and otherwise active, normal baby. It disappears within one month. In order to help the baby overcome this jaundice be sure that the baby passes its meconium within the first day, because meconium contains bilirubin which causes this jaundice. Nurse the baby lots in order to help the meconium pass; if it doesn't come within a day or two, you might need to see a doctor to find if there is something wrong with the baby's eliminatory system. Take the baby out into the sunlight, naked, for a few minutes each day, or let him lie undressed in front of a sunlit window if the weather is cold. Sunlight breaks down bilirubin. Do this every day until the baby's color is normal. Catnip, comfrey and dandelion tea are said to be good for relieving the problem; drink them yourself, and offer a few drops, from an eyedropper, to the baby; however, do not give any honey to a small baby!...As a side note, I believe the best form for giving herbs to a small baby is in tincture or extract form. We gave Sarah dandelion extract, along with yellow dock, catnip, marshmallow, and others, and I believe they were extremely helpful in healing her. Three drops of tincture or extract can equal a full cup of tea for a little one; it is much easier to administer.

Doctors admit that another form of jaundice, breastmilk jaundice, is extremely rare. Doctors say that this jaundice is also not life-threatening. You can stop breastfeeding for a day, or at the most two, if you wish, but I would just keep taking dandelion for the liver and supplying milk for the baby. Some mothers take fresh wheat grass juice, giving a few drops to the baby.

Both physiological and breastmilk jaundice occur in a healthy, active baby. Neither requires special treatment, and the bilirubin usually goes down after the third day. Many doctors wish to treat these babies with bilirubin lights for these types of jaundice. The dangers of this treatment to babies have been identified as irritability and sluggishness, diarrhea, lactase deficiency, intestinal irritation, dehydration, feeding problems, riboflavin deficiency, disturbance of bilirubin-albumin relationship, poor visual orientation with possible diminished responsiveness to parents, and DNA-modified effects (The People's Doctor, Vol. 4, No. 7, p. 2). In addition Dr. James Sidbury of the National Institute of Child Health and Human Development suspects phototherapy might be responsible for increased mortality, particularly in small infants, because of lung problems and hemorrhage.

The only dangerous kind of jaundice is pathological, resulting from an Rh or ABO blood incompatibility, or a damaged or malformed liver, or as a side effect of something wrong with the mother, including drug use. The bilirubin continues to rise after the third day, and the baby becomes dehydrated and lethargic. This unnatural condition must be treated medically, as it can lead to brain damage. As usual, the best way to decide what to do is to watch your baby and follow your maternal intuition. [EWH p.95]

Juices: Dandelion, carrot & spinach, apple, grape, tomato. [NL 3-5]

Barberry: Edward Shook, among many herbalists, identifies Barberry as one of the best herbs for stimulating the liver, especially useful in cases of jaundice, causing the bile to flow more freely (ATH: 208). Jaundice results from bile buildup in the tissues, causing skin, eyes, mucus membranes and urine to turn yellow. Barberry can soften and breakup congealed bile and cause it to flow through the gallbladder into the digestive tract (H:439). [NL 5-4]

### Testimonials

A woman was brought into a hospital with serious jaundice. She had been well up to the onset of the disease, but had become extremely yellow in just a few days. She then began to bleed from her nose, from the bowel, and clots of blood began to form under her skin! Bile in the blood--which is what jaundice is--prevents the clotting of blood, and so doctors hesitate to do surgery for that reason. The laboratory analysis showed that the prothrombin in the woman's blood--the element necessary for clotting--was only five percent of what it should have been. A researcher recommended that the situation be treated with Alfalfa, which it was, and the woman completely recovered. [UW-Alfalfa]

## Kidney

### Definition

Anything related to the kidneys.

### Symptoms

An unhealthy, morbid condition of the kidneys. [SNH p.35]

### Cause

Kidney trouble is caused by a local infection. [SNH p.35]

### Herbal Aids

General Instructions: The greatest aids for this problem are juniper berries, marshmallow root, parsley, and watermelon seeds. [SNH p.35]

Plantain: Drink one teacupful of the tea four to five times daily until relief is obtained. [SNH p.53]

Parsley: Make at least 2 quarts of the parsley root strong decoction and drink copiously. [SNH p.246]

Diaphoretic: See formula using juniper berries, parsley seed and rest harrow. [SNH p.251]

Spearmint: It has a gentle diaphoretic action of mild perspiration, and as a diuretic it is very beneficial to the kidney, bladder (especially for suppression of urine). [SNH p.238]

Strong Decoction of Gravel Root (cystitis and kidney troubles,). See formula using gravel root, water and glycerine. [SNH p.256]

Gravel, Stone or Calculi: See formula using gravel root, wild carrot, meadowsweet, marshmallow, uva ursi and honey. [SNH p.256]

Kidney and Bladder: See formula using uva ursi, mountain mahogany, couchgrass, buchu leaves, juniper berries, prince's pine, shavegrass and celery seeds. [SNH p.260]

Gravel, Kidney and Bladder Problems: See formula using buchu powder, uva ursi, parsley root, gravel root and ginger. [SNH p.272]

Herbal Kidney Aid: See formula using cayenne, ginger, golden seal, gravel root, juniper berries, marshmallow, parsley root and uva ursi. This will dissolve the stones that are in the kidneys, as well as clean out other sedimentation and infection in the prostate. [SNH p.524]

[Juni-Pars](#): Dr. Christopher's Kidney Formula: for kidney malfunction. Approximately 80% of the body is liquid, and much of this fluid must be pumped, filtered, etc., etc., through the urinary system of the individual. We do not take the best of care of this delicate tract, but through it go lots of irritating and clogging-type materials, i.e., tea, coffee, soft drinks, hard water, alcohol, etc.

Over the years we have used a formula of herbs with people who have been afraid to be out in public, because of a lack of control over the urinary tract and unknowingly void urine. After using this formula, many people have found relief from this condition and are living normal lives again.

[Neuritis](#)[Nightmares](#)[Nipples](#)[Nosebleeds](#)[Obesity](#)[Osteoporosis](#)[Palpitations](#)[Paralysis](#)[Parasites and Worms](#)[Pleurisy](#)[Pneumonia](#)[Poison Ivy and Poison Oak](#)[Polyps](#)[Pregnancy](#)[Prostate](#)[Pyorrhea](#)

This formula consists of juniper berries, parsley, uva ursi, marshmallow root, lobelia, ginger, and golden seal. Suggested use is a cup morning and evening, or two tablets or capsules morning and evening taken with a cup of parsley tea. [HHH p.183]

[Prospallate](#): Dr. Christopher's Prostate Formula: In case of malfunction we suggest this combination to assist the male: cayenne, ginger, golden seal root, gravel root or queen of the meadow root, juniper berries, marshmallow root, parsley root or herb, uva ursi leaves. This will dissolve the stones that are in the kidneys, as well as clean out other sedimentation and infection in the prostate. Mix the powders and place in No. 0 capsules and take two or more morning and night, with parsley tea when possible. [HHH p.191]

[Aloe Vera](#): Aloe Vera taken internally is said to help maintain good blood vessel tone and healthy circulation. The potassium in the plant is said to aid the heart's rhythm and stimulate the kidney to dispose of body wastes. The herb is said to help the action of digestive enzymes and deter kidney stones. [UW-Aloe Vera]

[Hydrangea](#): There is much disagreement about Hydrangea's stone-dissolving properties. Most authorities agree that it does remove the stones, but not everyone considers the herb a solvent. Dr. Butler affirmed that the herb relieves the pain of the passing of the calculi. Dr. Shook explained that the sharp pain that is associated with gravel deposits comes from the sharp points of the crystal piercing the kidney or ureter. When the sharp points are even partially dissolved, he said, the pain, hemorrhage and inflammation all subside, and the stone or stones frequently pass with just a stretching of the tubes. How, he asked, is it possible to account for the fact that when these stones pass through easily after the administration of Hydrangea, they are found to be smooth and round, while x-rays revealed their sharp point piercing the tissues? He said that their clinical evidence proved that Hydrangea is truly a stone solvent (ShoA:85). He said it was destined to become a universal remedy for phosphaturia, cystitis, alkaline urine, stony deposits, deposits of calcium oxalate (which forms many calculi), chronic gleet, mucus irritation of the bladder in old people, backaches caused by kidney trouble, rheumatism of long standing, arthritis and gouty affections, arteriosclerosis and many other common conditions--quite a claim for a disputed herb! As Dr. Shook said, "Dear student, you will never find a more remarkable herb " (ShoA:83). [UW-Hydrangea]

[Juniper Berry Wine](#): For a kidney and stomach tonic, Juniper berry wine is easy to make. Place a large handful of the berries in any gallon of any kind of good quality wine. The bottle is capped and allowed to stand for three days. During this period the bottle is shaken thoroughly once a day. At the end of three weeks the berries are strained off and thrown away (Luc:Secrets:120). [UW-Juniper]

[Kelp](#): In recent years, we have found that the kidneys are not only eliminative organs, they also aid in assimilation and are partly responsible for adequate nutrition (Ibid). Kelp cleanses and tones these organs, and can be especially valuable in cases of irritable or painful kidneys. Dr. Powell cleared up kidney cases that were very stubborn and had failed to respond to other treatments, whether natural or medical. [UW-Kelp]

[Juices for Gravel in Kidney's](#): Carrot & cucumber, endive & parsley. [NL 3-5]

[Juices for Kidney and Bladder Troubles](#): Cucumber & parsley, dandelion, spinach. [NL 3-5]

[Juices for Renal Calculus \(Stones in Kidney\)](#): Carrot & cucumber, celery & parsley. [NL 3-5]

[DRI](#): Dr. Christopher's Formula for Bedwetting: For more severe cases of incontinence, enuresis (bedwetting, etc.), a formula we have used a long time is as follows: parsley root, juniper berries, marshmallow root, white pond lily, gravel root, uva ursi, lobelia, ginger root and black cohosh root.

This formula is a specific for helping control or overcome bedwetting and to strengthen the entire urethral canal, kidneys, bladder, etc.

Recommended dosage two No. 0 capsules three times a day with a cup of parsley tea. Upon retiring at night fasten about a six or eight inch ball of yarn or string or cloth onto night clothes in the middle of the back. This is for the purpose of preventing the individual from lying on the back, as this is generally the time the valves release to void urine. [HHH p.184]

[Water](#): The main trait common to men who complain about kidney problems is that they do

not drink enough water. They will admit and even brag about it if you ask them. "Water? That's the stuff you wash with. I never drink it. Don't like the taste." Coupled with a heavy consumption of meat, salt, coffee, alcohol, and soda pop (or any of the above) the "waterless wonder" is bound to suffer distress and discomfort. This includes the kidney damage which he passes on to his children. We must realize that our bodies are made up of 80% water and that this water needs to be filtered and replaced. The delicate tubules which run from the kidneys to the bladder could be pinched through and broken with a fingernail! The amazing apparatus which are our filters and elimination system have the tremendous task of pumping hundreds of thousands of gallons of liquid through them in a lifetime. Why wear them out in a few years through neglect and abuse? It is as though we were throwing a great gift from the Creator into the garbage can with the trash.

Distilled (steam distilled, if available) water is the only water we recommend for herbal teas or drinking. A person should drink about two ounces of distilled water per kilogram of body weight daily. That's about one gallon for the average weight man. If this is done faithfully along with a good diet, there is relatively no chance of contracting any kidney disease. [NL 3-6]

**Kidney Infections:** Kidney infections can be extremely painful. There is the burning sensation when urinating, the dull to excruciating back pain, and the possible retention of urine. There is the low grade fever which accompanies the chronic kidney infection or the high fever accompanying the acute attack. Prevention is the superior cure, but if the infection has already set in, we can use the kidney-bladder formula with parsley tea, or juniper berry tea and, if urination is extremely painful we can drink a demulcent or soothing tea such as marshmallow root or slippery elm. Of course all irritants to the kidneys should be discontinued. [NL 3-6]

**Retention of Urine:** If there is retention of urine, juniper berry tea is the quickest acting diuretic we have known. People who were writhing on the floor in agony from retention of urine have voided in a few minutes after the administration of juniper berry tea. Sometimes, when the urinary tract is loaded with mucus and morbid matter, and has been so for years, there will be a rush for the sludge to get out through the small opening to the outside of the body. If this is the case, elimination should be attempted more slowly and a diluted dose of diuretic tea can be used. Once elimination has started and the tract does become clogged, however, hot fomentations alternating with cold can be used on the kidney and groin area to make elimination possible by breaking up the blockage by increasing circulation to the area. [NL 3-6]

**Kidney Cleanser:** Women who do not have a lot of money to spend on fancy vitamins and food supplements (and even those who do) would do well to take no less than 15 alfalfa tablets daily. Alfalfa is also a well-known kidney cleanser. [NL 3-6]

**Cabbage Leaves for Kidney Disease:** Apply cabbage leaves over the kidney areas and leave on overnight and also for a few hours during the day [NL 4-12]

**Dropsy:** This is a sign that the kidneys are partially paralyzed and are not eliminating the urine sufficiently, so the diuretic agent should be used in combination with a diffusive stimulant (such as Jamaica ginger or Virginia snake root), or even cayenne may be used. [SNH p.242]

See formula using parsley, juniper berries, buchu and flax seed. [SNH p.247]

**Inflammation of the Kidneys:** See formula using wild carrot, pellitory-of-the-wall, uva ursi, dandelion, marshmallow, white poplar and cayenne. [SNH p.265]

**Inflamed Kidneys:** Combine comfrey root with gravel root (*Eupatorium purpureum*) in a decoction. [SNH p.310]

**Nephritis (fomentation):** See formula using marshmallow, wormwood and southernwood. Place a piece of flannel in the liquor, wring it out and apply as hot as conveniently possible over the kidneys. Cover with a thick piece of blanket and change the application when it begins to cool. Repeat for 1 hour and at the same time give an appropriate tea internally. [SNH p.330]

### Testimonials

1. Knowledge by Divine Assistance: I had a personal acquaintance, a Mrs. Hanger, who came here from England in her twenties. She was very sickly; at the time had no children, so her husband (who was a paperhanger and painter) told her to go to the doctor. She did, and when she returned home she was very discouraged and very unhappy, because he told her, "You have a

kidney infection which is a very progressive type and there is nothing we can do to heal it; you will have possibly six months to live."

So she was at home meditating (the house was in Salt Lake City) when she heard a knock at the front door. There stood a bearded man in a gray suit; he said: "Sister Hanger, may I have a glass of water?" To which she replied "Certainly," although she didn't know him. She gave him the glass of water, and he said: "Sit down, I want to talk to you a minute, Sister Hanger," and she wondered then how he knew her name. He continued: "I would like to help you if you would like me to. You have just come from the doctor's and he told you that you have a bad kidney condition. Well, you are from England and you have brought your herbs with you, and you have a little herb garden out in the back in which you have a nice stand of parsley. Now, if you will take a handful of parsley each day and put it into a pint of water, cover and steep it, and drink it in regular doses during the day, it will heal this condition. The doctor told you that you have only six months to live, but I will tell you what you will see; you will see another depression"--and he went on and told her all the things she would see--"and there will be a Third World War, but you won't see this one; it will be after you go." When he had finished the short interview, something momentarily distracted her attention and in that instant he disappeared.

Well, I spoke at her funeral; and it wasn't six months after she was supposed to die, she was eighty-six years old, and she had raised a number of wonderful children. [SNH p.248]

2. Parsley: We have had several students testify in herbology classes as to the value of parsley, among which is the following: "I talked to a man who went into the hospital for infection. He was there six weeks and it was costing \$45.00 a day for the drugs they gave him. Then someone told his wife to take him some parsley. The doctor said, "Well, it won't hurt him, but it won't help him." He was released from the hospital after he had taken it for one day; it had started to drain the infection he had." [SNH p.248]

3. Juniper Berries Saves Pioneer Woman: In N. B. Lundwall's book, Assorted Gems of Priceless Value, there is an attested account by Elizabeth J. Barney, concerning her mother, who was about to die during a pioneer journey (at the beginning of this century) of an apparent kidney ailment. The wagon caravan stopped because of her and made camp for the night, intending to bury the rapidly-declining woman in the morning. A stranger suddenly was seen approaching the camp, and he told the husband (the father of the lady attesting to the account) to go and gather juniper berries and leaves growing in the vicinity and to "mix them together, steep them and give them to your wife and you can be on your way within an hour." Then the stranger said he had to go, and at that moment something drew the people's attention away, and during that instant he disappeared. The prescription was obeyed, the woman revived miraculously, helped prepare the breakfast, and continued on the journey completely healed. So you will find that these herbs will not only repair the body as with a "divine touch," but they restore our faith in the Supreme Maker. [SNH p.253]

4. Marshmallow Relieves Pain from Unvoided Urine: Marshmallow is excellent as a diuretic and kidney healer. One of Dr. Christopher's students, living in the southern part of Salt Lake Valley, had a teenage boy who was continually ridiculing his mother for studying about herbs and becoming a "witch doctor". One day he was brought home from football practice with severe pain in the abdomen, unable to void his urine. He refused to be taken to the hospital from school, asking instead to be brought home. He lay there on the floor screaming in pain and doubled up in a fetus position. He begged his mother, whom he'd ridiculed, to help him. She went out and pulled up some Marshmallow plants, root and all, because fortunately it was just after an irrigation turn and the fields were flooded. When she returned to the house, the boy asked how long it would take for her to make up the tea, as the pain seemed almost more than he could stand. She replied, ten or fifteen minutes. Instinct made him ask her to wash and hand him a Marshmallow root immediately. This she did, and he immediately began to chew on the root. Within seconds, he straightened out, stood up, and headed for the bathroom, voided his urine, and was relieved of the excruciating pain. He never again ridiculed his mother's herbal studies. [UW-Marshmallow]

5. Parsley: Parsley root tea will help remove all stones including gallstones and kidney stones if they are not too large. One doctor who made a trip to Holland was surprised to see medical doctors prescribing Parsley tea for kidney stone and other kidney and related complaints,

including pressure of the prostate. He returned to his practice at home and began prescribing the same remedy with the same good results (Luc:Herbal:89). [UW-Parsley]

6. Kidney Infection Cured by Sage: However, in one case the combination of peppermint and Sage is particularly good. It is used thus for kidney infections, equal parts being made into a tea. The herbs are covered with boiling water, the pan lidded and the tea allowed to stand until cold. One cupful is taken three times daily. One woman reported that she suffered from a kidney infection for more than a year, antibiotics only helping temporarily. She finally had so many treatments of antibiotics that they stopped working entirely. Her son brought home an Oriental friend whose father was an herbalist. He suggested a tea of Sage and peppermint. The next day she began drinking the tea, two cups a day for three months and her kidney infection never returned (Luc:Secrets:127). [UW-Sage]

7. Dr. Christopher's Kidney and Prostate Formulas: (White Mallow and Prospallate) First, I want to thank you for making your herbs and combinations and knowledge available! My husband was suffering from kidney/prostate troubles and had gone to the urologist after the local P.A. was unable to help him. The urologist had him on a sepra which made his health seem to improve for a couple of weeks--then he had the same symptoms all over again and a lot worse. So much so, he stayed home from work for four days, sleeping and very uncomfortable. When he went back to the urologist and had x-rays they weren't able to find anything, told him to go off the medicine and that the urologist felt he would just have to "live with it." He must of thought my husband was off upstairs or something, maybe.

So we went to the health food store for help. Through reading material and the lady there he started on distilled water and KB and PR. He is much better and has been able to do heavy work again. Thank you greatly. [NL 3-4]

## Laryngitis

### Definition

The inflammation of the mucous membrane lining the voice box with accompanied swelling of the vocal cords with hoarseness or loss of voice.

### Herbal Aids

Garlic: Keep garlic in the mouth constantly during wakeful hours, renewing morning and evening after the cloves have absorbed the poisons; or, use another appropriate garlic preparation. [SNH p.100]

Sage and Vinegar: Use equal parts of the sage infusion and apple cider vinegar as a gargle. [SNH p.234]

Pine: Chicanos and Indians used the charcoal wrapped in a wet cloth as a throat compress for laryngitis. [UW-Pine]

Sage: Sage tea is said to cure laryngitis and to help public speakers who can strengthen their throats and voices by taking a tablespoon of the tea internally just before the meeting starts. [UW-Sage]

Stillingia: Small pieces of the fresh root, chewed occasionally throughout the day, have said to effectively and permanently cure laryngitis and bronchitis. It is good for an ordinary sore throat used the same way. It is "one of the most important of laryngeal remedies, not only relieving irritation of that important organ but proving beneficial in irritative disorders of the fauces, trachea and bronchia. [UW-Stillingia]

Juice: Carrot, pineapple. [NL 3-5]

Cabbage: A Doctor Roques of the eighteen hundreds protected himself and his family for many years against the epidemic winter diseases by eating a daily salad of cooked cabbage. He recommended the following treatment for cold and laryngitis; One pound of strained red cabbage juice, 3 grams of saffron, 1/2 pound of honey and sugar, the whole boiled to a syrup; 1 tablespoonful is taken in a cup of tea 3 or 4 times daily. [NL 4-12]

Garlic: Take the freshly expressed juice mixed with syrup, honey, or other appropriate vehicle. [SNH p.100]

Syrup of Licorice: See formula using licorice, water and yellow D sugar. [SNH p.355]

[Herbal Composition](#): Dr. Christopher's Herbal Composition Power: Herbal composition powder made of bayberry bark, cloves, ginger root, cayenne and white poplar bark. As Dr. Nowell, our instructor at the Dominion Herbal College, Let. of Vancouver, British Columbia gave in our textbook, quote:

"We have made and used composition powder for over forty years. When we state we regularly mixed it in batches of sixty pounds the student will readily see that we have had at least some experience with it. As a remedy in colds, beginning of fevers, flu, hoarseness, sluggish circulation, colic, cramps, etc. We believe it has done more good than any other single preparation ever known to man."

"If this compound were kept in every home, and used as the occasion arose, there would be far less sickness. Give it freely in your practice and your patient will bless you. Look over the ingredients, and consider how it will clear canker, ease cramps and pains in the stomach and

## Leukemia

### Definition

Using Dorland's The American Medical Dictionary (Philadelphia and London: W. B. Saunders Co.):

Leukemia: A fatal disease of the blood-forming organs, characterized by a marked increase in the number of leukocytes and their precursors in the blood, together with enlargement and proliferation of the lymphoid tissue of the spleen, lymphatic glands, and bone marrow. The disease is attended with progressive anemia, internal hemorrhage (as in the retina, etc.) and increasing exhaustion. Leukemia is classified clinically on the basis of (1) the duration and character of the disease--acute or chronic; (2) the type of cell involved--myeloid (myelogenous), lymphoid (lymphogenous) or monocyclic; (3) increase or nonincrease in the number of abnormal cells in the blood--leukemic or aleukemic (sub-leukemic) etc. etc., over three pages of details of the effects. [HHH p.102]

### Cause

We have a different approach--namely going into the cause. Using non-toxic, non-poisonous, non-habit-forming aids to clean up the basic cause of malfunction, we clean the bowel, strengthen and rebuild and purify the blood stream. With the herbal aids (food) we rebuild the nerves, the muscles, bones and tissue by properly feeding these areas with rich herbal nutrients.

The cause of leukemia is based on inherent weaknesses ("sins of the parents to the third and fourth generations"). These weaknesses are sins of commission or omission but these weak conditions can be strengthened and the body rebuilt by using the "Incurable" routine. [HHH p.102]

### Herbal Aids

See the entire section on [Dr. John R. Christophers "Incurables Program"](#). [HHH p.85]

Is There a Natural Treatment for Leukemia? This was a question to Dr. Christopher in his newsletter. His answer: A number of people have been aided in this type problem by following the instructions in the little booklet [The Incurables](#) by Dr. John R. Christopher [HHH p.85]

Dr. Martin Protzel, chief of oral pathology at City Hospital, Newark, has shown evidence that the liver may be degenerated by heavy smoking, heavy drinking and nutritional deficiency. When this organ which the body depends upon to neutralize and eliminate its poisons becomes impaired, cancer may be the result, in his opinion. (Source: The Encyclopedia of Common Diseases, by the staff of Prevention Magazine, Rodale Press, 1976.)

With this statement by Dr. Protzel in mind, it will be easy to see how our booklet [The Incurables](#) works on this problem. We instruct how to clean up and rejuvenate the liver, gall bladder and bowels, using herbs, and how to change the diet to aid the patients to regain their health. [NL 1-7]

Chaparral: Chaparral contains a phenolic compound, nordihydroguaiaretic acid (known as NDGA for short). It is found on the external surfaces of the leaves and stems in all the species of Larrea. NDGA has many uses in industry. It is an antioxidant for foods, especially fats, oils and vitamin A. It stabilizes polymers, lubricants, rubber, perfumery oils and olive husks. It is useful in photography as a developer. NDGA prevents metals from rusting.

NDGA is effective against molds, salmonella and penicillium. There is documentation that NDGA inhibits tumor cell activity in mice and men. This includes leukemia type of tumors. In the

[Neuritis](#)[Nightmares](#)[Nipples](#)[Nosebleeds](#)[Obesity](#)[Osteoporosis](#)[Palpitations](#)[Paralysis](#)[Parasites and Worms](#)[Pleurisy](#)[Pneumonia](#)[Poison Ivy and Poison Oak](#)[Polyps](#)[Pregnancy](#)[Prostate](#)[Pyorrhea](#)

mice experiments, NDGA combined with Vitamin C was more successful than when used alone. NDGA has been shown to have analgesic (pain relieving) and vasodepressant properties. Experiments on hamsters demonstrated that NDGA somehow inhibited tooth decay and increased the life span of the animals. NDGA is used also in alcoholism treatment, liver disorders and geriatrics. [NL 3-4] Chaparral definitely is indicated in kidney infections, leukemia. [NL 3-4]

Juices: Dr. H. E. Kirschner, M.D. treated people for over 50 years. In his book, Live Food Juices he recounts many fabulous results in his cases of incurable diseases where live juices were used. Some of these diseases were malnutrition, leukemia, failing eyesight, arthritis, bleeding hemorrhoids, obesity, various cancers, kidney disease, bladder tumors ... the list could go on. The doctor states that there could be a table loaded with all types of vegetables and we could still be suffering from malnutrition because our bodies could not possibly eat enough to provide the missing nutriment. With the juices, the pulp is eliminated and we are left with the life-giving vital principles contained within the vegetables. It is, of course, best to use only the organically grown fruits and vegetables (those free of pesticides and preserving chemicals) for our juices. But Dr. Walker states that the detrimental toxins remain in the pulp, and this we can discard. [NL 3-5]

Red Beet: Our common red beet is a highly nutritious plant, The root is an excellent appetite stimulant and is easily digested. The root has been used to treat constipation, liver ailments, dysentery, skin disorders, anemia, menstruation problems, obesity, and nervousness. One therapy for leukemia and tumors is to consume a couple of pounds of raw, mashed beets daily. [NL 4-12]

Periwinkle: Contains two alkaloids, vinblastine and vincristine, which are vital in treating leukemia in children. These two alkaloids also perform a service for the brain, in that they carry more oxygen to the brain than any other herb known thus far, save capsicum. [NL 5-1]

Echinacea; In 1972, Voakin, Denys and-Jacobsen identified an oncolytic hydrocarbon from Echinacea's essential oils, which possess tumor-inhibiting capabilities. These inhibited both Walker carcinosarcoma and lymphocytic leukemia, although it was found to be inactive in lymphoid leukemia. [NL 6-12]

## Lice

### Definition

Louse - a general name for various degraded parasitic insects; the true lice that infest mammals belong to the suborder Anoplura Capitus, or head louse; P. Corporis, the body or clothes louse; and Phthirus, or crab louse which lives in the hair upon the pubis, and the eye lashes and eye brows. [HHH p.103]

### Cause

The causal organisms of typhus fever, relapsing fever, trench fever, and possibly plague are transmitted by the bites of lice.

Head lice will never stay around the body that is completely healthy, with no toxins or accumulations of mucus. Lice and all body vermin are scavengers and cannot exist long with clean healthy cells. Keep the bowels clean, stay on a mucusless diet, bathe daily, and lice will not appear. [HHH p.103]

### Herbal Aids

General Instructions: When they are present, an infusion of six parts hyssop (*Hyssopus officinalis*), one part walnut leaves or inner bark (*Juglans cinerea*), one half part cinnamon bark powder, one half part cloves powder, one half part lobelia, and one half part ginger (*Zingiber officinale*).

Dosage: 1/2 cup (more or less according to age) three times in a day, taken orally. Make fomentation over the head with the same formula, and in other areas infected; covering the fomentation with a plastic or rubber cap at night. Do this six days a week as many weeks as needed to clear up the condition.

For quick relief (working on the effect) is to bathe the head or body parts covered with lice with straight apple cider vinegar, oil of garlic or walnut (leaf, bark or nut husk) tea.

When lice are detected in the family, see that in addition to working on the cause (cleaning the bowel and blood stream) and staying on a mucusless diet, work on the effect itself as suggested here. See that fresh clothes--inner and outer clothing--are changed daily. All of these clothes should be washed with a good biodegradable soap with a cup or more of apple cider vinegar to each washerful of clothes. Change the bed linen each day. Spray the room with tea made of six parts chaparral, three parts black walnut leaf or bark, one part lobelia and to each pint of the spray add some lavender oil or oil of mint to give fragrance.

We must remember one thing, a clean house and clean body are not to the liking of our scavenger friends, lice, mites, fleas, etc. [HHH p.103]

False Unicorn Root: Use strong decoction as spray or wash. [SNH p.466]

Parsley Seeds: The seeds made into decoction, can be cooled and steeped about seven hours and then rubbed into the hair to clear away head lice and any other such vermin. [UW-Parsley]

## Liver

### Definition

Enlarged liver, jaundice, liver disorders, inflammation of the liver, torpid liver, cholagogue and cirrhosis of the liver.

### Herbal Aids

Liver Complaints, Enlarged Liver, Dyspepsia etc.: See formula using cascara sagrada and water. [SNH p.176]

Dr. Shook's Liver and Jaundice Compound: Especially good for a torpid liver. See formula using turkey rhubarb, aloe leaf, fringetree, Culver's root, wahoo bark, poke root and nux vomica seeds. [SNH p.186]

Liver Disorders: take about 10 grains of powdered mandrake and 5 grains of powdered cloves (Caryophyllus aromaticus; Eugenia aromatica) in honey. [SNH p.196]

Dr. Nowell's Compound Liver Capsule: See formula using mandrake root, Culver's root, dandelion, gentian, golden seal and cayenne. [SNH p.197]

Inflammation of the Liver: See formula using mandrake root, Culver's root, blood root and dandelion root. [SNH p.197]

Jaundice, Torpid Liver: Culver's root may profitably be used alone 3-5 drops of fluid extract (add cayenne where the pulse is weak); or, it is beneficially combined with positive hepatic stimulants (such as mandrake or bitter root) [SNH p.206]

Liver Secretary and Excretory Problems: See formula using Culver's root, mandrake and ginger. [SNH p.206]

Liver Tonic: See formula using bitter root, Culver's root, white poplar, ginger root, golden seal and cayenne fruit. [SNH p.209]

Liver complaints: See formula using boneset and butternut. [SNH p.227]

Liver problems, jaundiced skin: See formula using lobelia, pleurisy root, catnip and bitter root. [SNH p.363]

Cholagogue (liver): Simmer 1 tablespoonful of hops for 10 minutes in 1 pint of water and drink 1/2 pint morning and evening. [SNH p.396]

Wild Yam: for Liver affections, rheumatic pains, spasms. Take 1 to 3 cupfuls of cold wild yam decoction during the day. Mix this well with saliva, one mouthful at a time. [SNH p.403]

Wild Yam Decoction: Strong decoction of wild yam for hepatic congestion. See formula using wild yam, distilled water and glycerine. [SNH p.403]

Torpid (numb or lacking energy) Stomach and Liver, with Constipation: See formula using horseradish, gentian tincture, dandelion and syrup of orange. [SNH p.423]

Castor Oil Fomentation: to draw out poisons and flush them out of liver etc. In order to get rid of hardened mucus in the body, which may appear as cysts, tumors or polyps, the following fomentation is to be used:

Soak a piece of outing flannel or baby's diaper in castor oil, squeeze slightly so it won't drip

[Neuritis](#)[Nightmares](#)[Nipples](#)[Nosebleeds](#)[Obesity](#)[Osteoporosis](#)[Palpitations](#)[Paralysis](#)[Parasites and Worms](#)[Pleurisy](#)[Pneumonia](#)[Poison Ivy and Poison Oak](#)[Polyps](#)[Pregnancy](#)[Prostate](#)[Pyorrhea](#)

much, then place over entire frontal torso (neck to groin and side to side). Place a hot water bottle (over the castor oil application) over the liver area (the liver is on the right side just above the waist). It should be noted that a heating pad is not too highly endorsed here, unless a wet towel is placed between it and the skin--but even then, a wet heat (such as the hot water bottle) is best. Leave all this on for 1 1/2 hours; the hot water bottle may have to be refilled with hot water several times, because it cools rapidly. The next three days, over the same area covered by the outing flannel and castor oil, massage in circular motion toward the heart with olive oil for 5 to 10 minutes.

The seventh day is a day of rest, not only from the fomentation, but every part of the program, drinking only water the entire day--and every seventh day thereafter will be done the same way. On the eighth day then, begin again with the castor oil for three days and so forth, along with the mucusless diet, the herbs, etc., until healing is accomplished. In the use of the fomentation, the castor oil goes through the skin into the liver area and lymph glands and starts drawing out the poisons and flushing them out, while the olive oil goes in and helps heal and rebuild new tissue. This procedure may have to be carried on between six weeks to six months to properly clean up the system, depending on the case. [SNH p.525]

[Barberry LG](#): Dr. Christopher's Liver-Gallbladder Formula: To speed up the blood purifying process, it is good to have a good clean liver and gall bladder area. When the liver does not function properly, the bile does not excrete freely into the intestinal tract, and so it passes off into the blood stream and throughout the rest of the system, causing a toxic condition called cholemia, causing indigestion, sluggishness, fatigue, constipation, upset stomach, chills, vomiting and fever. Why wait until it gets to this condition? A combination of barberry (or Oregon grape root), wild yam, cramp bark, fennel seed, ginger, catnip and peppermint--will help promote the relief of this condition.

Suggested dose: 1/3 Cup or one or two capsules or tablets, 15 to 20 minutes before a meal. [HHH p.183]

Castor Oil: This oil can be obtained commercially and is used for the liver fomentation to open the capillaries of the liver. It is an excellent external healing oil for discomforts of windburn and is good for massage. But we never use castor oil internally or for a laxative. [NL 3-2] We often suggest opening up the capillaries of the constipated liver by applying a cotton or flannel cloth which has been soaked in hot castor oil over the area of the liver (on the right side of the body under the rib cage). Place a wet, wrung out hot towel over this cloth and a hot water bottle over that. Keep the fomentation warm for 20 minutes and then alternate with a cold towel fomentation warm for 20 minutes and then alternate with a cold towel fomentation for five minutes. Repeat the hot fomentation and then the cold. This can be continued for about an hour and a half. This has relieved pain of congestion in the liver and other organs such as the gall bladder and the pancreas. [NL 4-5]

Juices for Liver Trouble: Carrot-beet-cucumber, apple, dandelion, grapefruit, lemon. [NL 3-5]

[Cayenne](#): Dr. Christopher's many Cayenne Combinations: There are safer ways to stimulate the gall bladder. One is by taking cayenne pepper orally. This has been reported in medical journals to trip the gall bladder reflex and promote the flow of bile naturally. As we mentioned before, bile is concentrated toxic material recycled by the liver. It acts like a natural laxative. The gall bladder (known in certain surgical circles as "the gold bladder", as we mentioned in an earlier newsletter, because of the tremendous amount of money spent on yearly gall bladder operations), is a reservoir which stores the bile for timed release into the digestive tract where it mixes with other digestive aids. When this organ is removed, the caustic bile drips directly into the duodenum and can cause duodenal ulcers. Dr. Christopher's Liver and Gall Bladder Formula [[Barberry LG](#)], composed of barberry, wild yam, cramp bark, fennel seed, ginger, catnip and peppermint, can help safely promote the rebuilding of the diseased liver and gall bladder and help them to function normally because this formula is a specific food for these organs. The liver is recognized by medical science as a highly regenerative organ. It can rebuild itself even if there is only one-tenth of it functioning. [NL 4-8]

Juice for Cirrhosis of the Liver: Drink cabbage juice and eat raw or steamed cabbage. [NL 4-12]

**Lemon Juice:** Fresh lemon juice is considered by some to be the most potent or effective single liver rebuilder known to man. There seem to be only a very few people who cannot handle lemon juice. [NL 5-1]

**Dandelion Coffee:** Dandelion coffee is a good coffee substitute, although some claim that it is an insult to coffee and to Dandelions too! We like it very much, however. It is quite expensive to buy, but not difficult to make. Dig Dandelion roots and clean them thoroughly. Cut them into pieces and roast them slowly in a moderate oven until they are coffee-colored and crisp. Cool completely and store in a cool dry place, well-stoppered as they prone to infestation by moths and worms, having such a high sugar content. Prepare the coffee by simmering the quantity of roots desired to taste. Strain and add honey and milk or cream if desired. Taken daily, this is an excellent liver tonic as well as pleasant drink. [NL 6-11]

### Testimonials

1. **Carrot Juice:** One of the most common misconceptions regarding carrot juice is that one will start to develop orange or yellow colored skin after steadily drinking the juice because of the carotene content in the juice. This is not true. The development of yellowish skin is due to the fact that carrot juice is a great liver cleanser and the toxicity within the body is coming to the surface. Keep up with the carrot juice and the symptoms will soon disappear. The formerly constipated liver is reconditioned once again to experience a free flow of bile the excess of which is eliminated through our largest eliminative organ, the skin. I have personally experienced this phenomenon during a time when we prepared hundreds of gallons of carrot juice a week for sale. Because the juice was so abundant and available, I drank it for nearly every meal...sometimes instead of meals. My wife soon commented upon the yellow cast which my skin began to take on. I continued drinking the juice, however, and within a week my skin color was back to normal. But my liver had gone through a wonderful cleansing! It is often a surprise to me that the most learned of health authorities will try to sell you the carotene theory without any sort of proof, personal experience or background. [NL 3-5]

2. **Dandelion:** A classic story about the use of Dandelion is often repeated. Around the turn of the century, A Dr. Sparks wrote, "Fifteen years ago I was afflicted with the liver complaint. I used all my skill trying to cure it but failed. I then tried two physicians, Doctors Wilson and Jordan, but without success. An old nurse told me that Dandelion was an effective folk remedy for this disorder, so I decided to try it. Using Dandelion promptly restored me to health. It then became my favorite prescription for liver complaint, either by the simple extract of the herb or by taking a teacupful of a strong decoction of it twice a day. In almost every instance I have succeeded in restoring those who have used this plant." (Lucas:Herbal:35). [NL 6-11]

## Measles

### Definition

A contagious eruptive fever with cold and catarrhal symptoms, due to a filterable virus (germs and bacteria surging out of the body through the skin)-measles is one of nature's methods of housecleaning. (HHH pg.70)

### Symptoms

This is mainly a child's disease, although older people sometimes contract it. It is an infectious febrile affliction, characterized by round red eruptions on the skin, and catarrhal inflammation of the mucous membrane passages. It begins after two weeks incubation with the common cold (coryza), cough, inflammation of the conjunctive (referred to as conjunctivitis), and the appearance of small red spots surrounded by white areas. On the third or fourth day of chills and fever, dark rose-red maculopapular eruptions appear (concentric and confluent groups) on the face or behind the ears. In three or four days the eruption fades, and the skin sheds or peels (including the mucous membranes). Measles begin with sneezing and dry coughing, redness of the eyes and sensitivity to light. The red rash appears on the fourth day. The fever subsides on the sixth day, and peeling continues until the ninth to eleventh days. [SNH p.36]

German measles are not quite so severe as red measles (although, of course, dangerous to a pregnant woman and the unborn child). After an incubation period of one to three weeks, the disease German measles begins with a slight fever and catarrhal symptoms, sore throat, pain in the limbs, and the appearance of an eruption of red papules similar to those of measles but lighter in color, not arranged in crescentic masses, and disappearing--without scaling or flaking--within a week.[HHH p.104]

### Cause

Measles is evidence that the body is loaded with toxic poison and is trying to expel it with the assistance of nature. Microorganisms are brought into activity by nature as the cleansing scavengers. [SNH p.36]

It is alarming to hear a mother say, "When my child was breaking out with chicken pox (measles, or some other childhood disease), he was given some suppressive medication, and only two or three small spots broke out on his body." Here, unknowingly, the parents have gone against nature's procedure for cleaning out the toxins of the body. They have locked in the harmful condition, which may give the body trouble, perhaps many years later. [HHH p.20]

### Herbal Aids

General Instructions: This disease must be brought to the surface through the skin as rapidly as possible. Diaphoretic herbs such as yarrow and raspberry leaf are excellent. Use vapor baths (such as ginger, mustard and cayenne) which bring the toxic wastes to a head quickly. Moisture is required or the organic calcium will turn into inorganic calcium because of the feverish dry body heat, which causes further tissue damage. Rheumatic fever is often the aftermath of diseases such as chicken pox and measles. Take care of the bronchi and the eyes. Avoid bright light, since the eyes are weak at this time. The bowels should be kept open with the lower bowel tonic [Fen LB]. A catnip enema is soothing and beneficial. Ripe fruits will assist in the cleansing process. [SNH p.36]

General Instructions Especially for Children: If the child is slow in breaking out, give a good

[Neuritis](#)[Nightmares](#)[Nipples](#)[Nosebleeds](#)[Obesity](#)[Osteoporosis](#)[Palpitations](#)[Paralysis](#)[Parasites and Worms](#)[Pleurisy](#)[Pneumonia](#)[Poison Ivy and Poison Oak](#)[Polyps](#)[Pregnancy](#)[Prostate](#)[Pyorrhea](#)

hot bath. It is important to clean out the bowels, so give the patient a warm catnip (tea) enema each day. Put him to bed and give a tea made of equal parts of yarrow, pleurisy root and lady's slipper (use valerian root or catnip if lady's slipper is unavailable). Give this tea freely to produce perspiration which will also lower the fever. (Red sage, red raspberry leaf or camomile teas are also excellent for a patient with measles.) Also, a pleasant herbal tea made of equal parts catnip, raspberry leaf, peppermint leaf, can be given freely throughout the day. It is best to keep the room dark so that the eyes will not become irritated. In the event the child's eyes do become sore, bathe them two or three times a day with a solution (tea) made of equal parts of eyebright, raspberry leaf, and golden seal. If the child complains of itching, bathe or sponge the skin with a tea made of yellow dock and burdock root and/or golden seal. Adding a little apple cider vinegar to a tub of bath water is also helpful. Guard the patient against bronchial troubles and earache and have him drink plenty of liquids (distilled water, herbal teas, as recommended, and fruit juices). The diet should be simple--plenty of fresh ripe fruit, fruit juices and fresh vegetable juice. One very good combination is carrot juice with celery, spinach and parsley juice added to taste. [HHH p.105]

Tansy Infusion: Use the infusion or decoction as a wash, etc. [SNH p.123] See formula for infusion using tansy and distilled water. [SNH p.124]

Bistort: Bistort decoction, powder, etc., is very cleansing, astringing and toning; also combine equal parts with red raspberry leaves (*Rubus idaeus*). [SNH p.162]

European Pennyroyal: Give the infusion in teacupful doses, repeated frequently (every 1-2 hours), and when the herb is unavailable, 1-3 drops of the oil in warm water is excellent. [SNH p.283]

Valerian for Restlessness in Measles: Give small doses of Valerian infusion 2 to 3 times daily. A sound sleep will generally result. [SNH p.377]

Golden Seal Wash: Use as a wash the formula using golden seal and linseed oil. [SNH p.439]

Yarrow: If you give the tea to children during the early stages of eruptive diseases, such as measles, chicken pox, smallpox, etc., the tea will help the disease to break out more quickly and thus shorten the time. Dr. Christopher recommended a mixture of Yarrow, pleurisy root and lady's slipper (or skullcap) for the measles. Anytime there is a fever, no matter what the disease, Yarrow can help break it and bring the disease to a speedier ending. [UW-Yarrow]

## Meningitis

### Definition

Any infection or swelling of the membranes covering the brain and spinal cord. It is usually pus-forming and involves the fluid of the brain and spine in the space between the membranes that cover the brain.

### Symptoms

There are certain late complications of head injury which may be of serious import. Of these the most frequent are the occurrence of late bleeding, meningitis and brain abscess.

Concussions may give rise to nothing more than the sensation of giddiness and slight headache of short duration. The patient may, when recovering from a stunning blow, feel nauseated and vomit. Persistent vomiting after a head injury is always a serious sign. ... Should meningitis or brain abscess develop the patient shows a temperature rise. In meningitis the headache is intense and the patient is often sensitive to light. [NL 2-1]

### Cause

Spinal meningitis may be caused by extension from the meninges of the brain, as in cerebrospinal fever, or occur independently, when the cause may be a penetrating or other injury, or infection. [NL 2-1]

### Herbal Aids

Anal Use of Lobelia and Catnip: Add lobelia to a catnip enema. [SNH p.362]

Lobelia is helpful in meningitis, hepatitis, peritonitis, nephritis, etc. (Malstrom:94). Used in very small doses, frequently given it can raise a vigorous perspiration, being a diaphoretic, after which a long sleep of ten to twelve hours often follows. When the patient awakes, he is either cured of his illness or feels greatly improved (Thomson: 138). [NL 6-9&10]

Echinacea: It was used in cases of cerebrospinal meningitis because of its pain-relief and because this malady is caused by general sepsis. Prof. Webster, an early practitioner who used it in these cases, asserted that as a stimulant to the capillary circulation, no remedy is comparable with it, and it endows the vessels with a recuperative power or formative force, so as to enable them to successfully resist local inflammatory processes due to debility and blood deprivation. [NL 6-12]

## Menopause

### Definition

The end of menstruation.

### Herbal Aids

See formula using squaw vine, white poplar, American pennyroyal, Mexican damiana and Beth root. [SNH p.280]

See formula using blue cohosh, lady's slipper, hyssop and chestnut leaves. [SNH p.293]

See formula using true unicorn, lady's slipper and black cohosh. [SNH p.290]

Is there danger of overdosing with estrogen herbs for menopause as is known to happen with manufactured birth control pills which sometimes cause clotting because of the excess estrogen? Question to Dr. Christopher in his Newsletter. His answer: No. Herbs are assimilable and any part unused is dispelled naturally. The inorganic preparations are accumulative, causing the side- and after-effects. [NL 1-5]

[Changease](#): Dr. Christopher's Herbal Hormone Formula: A hormone estrogen herbal combination consisting of: black cohosh, sarsaparilla, ginseng, blessed thistle herb, licorice root, false unicorn root and squaw vine.

These are natural herbal foods that are needed by both men and women of all ages. Since they are natural, the body can accept, assimilate and use those materials that are needed to produce estrogens and other hormones naturally. This formula will help assist in rebuilding the weak malfunctioning areas and help keep the organs healthy so they can supply the proper amounts of hormones and estrogens themselves. Herbs are a natural food, so they do not have "side effects" and "after effects" as are so evident in man-made and synthetic drugs.

The recommended dosage is a cup of the tea (one teaspoon of tea to cup of hot water) or two #0 capsules, both a.m. and p.m. (or more often if needed) six days a week as long as necessary to get the desired results. This herbal combination is a great blessing during puberty; and again a boon to womankind right after a baby is born in order to replace the estrogens and hormones used during pregnancy.

One of the most appreciated times for this formula's use is during menopause. Many older women claim they have found relief from hot flashes--and other menopause problems, after using this formula. The recommended dose would be a cup, two or more times a day, as needed, or two capsules or tablets instead of the cup of tea. [NL 1-7]

### Testimonials

Dr. Christopher Helps Menopausal Woman: Dr. Christopher recalled the case of a lady in Vancouver, B.C. She was climbing the wall with nervous tension due to menopause. Her hot flashes were driving her almost insane. When she would throw off the covers at night, her husband would get cross, and she was keeping him awake at night as she would get up and down with discomfort of hot flashes. She was using estrogen, but she felt it was doing her more harm than good, so she asked Dr. Christopher for help.

He put her on the [three-day cleanse](#) and [mucusless diet](#), and she suffered for a time from extreme withdrawal symptoms from taking the commercial hormones. She took the female corrective formula [[Nu Fem](#)], two or three capsules, three times a day, and the hormone-estrogen formula

[[Changease](#)], using those three capsules, three times a day. After a short time, she came to Dr. Christopher and said that her whole life had changed. She could sleep all night, without throwing the covers off. She didn't have the nervous screaming jags as she had before, and her husband fell in love with her again. She felt that it was worth the dietary change and the effort to take the herbs to make this difference. [EWH p.170]

## Menstruation

### Definition

Amenorrhea: menstrual obstruction resulting in the absence, delay, retardation, or suppression of menstruation. [SNH p.275]

Menorrhagia: profuse menstruation or menorrhagia, resulting from too frequent or too excessive menstrual flow, or continuing longer than normal, with accompanying symptoms of lumbar pains, bearing down in the abdomen, possible nervous irritation, constipation frequently, etc. [SNH p.275]

Dysmenorrhea: Painful menstruation or dysmenorrhea, a condition of weakness in the generative organs from colds and general body weakness, with accompanying severe pains at the time of menstruation in the abdomen, loins and back. [SNH p.275]

### Herbal Aids

Painful Menstruation: Use a decoction of Jerusalem Oak. [SNH p.116]

Excessive Menstruation: See formula using raspberry leaves, prickly ash, blue cohosh, wild yam and cinnamon. [SNH p.145]

Menstruation (decreases or regulates flow): Use the diluted decoction of bistort as a douche. [SNH p.162]

Dysmenorrhea (painful menstruation): See formula using squaw vine, red raspberry, uva ursi, golden seal and white poplar. [SNH p.279]

Dysmenorrhea (painful menstruation): See formula using squaw vine, red raspberry, rue, white pond lily, black cohosh, uva ursi, ginger root, camomile and spearmint. [SNH p.280]

Amenorrhea (suppressed menstruation): See formula using pennyroyal, motherwort, blue cohosh, life root and thyme. [SNH p.285]

**Note of caution: Rue is a potent healer, but in large doses it has powerful ecboic and abortifacient action that can be most detrimental to the health and life of the user (producing inflammation and nerve derangement), so care must be taken to use the appropriate and indicated dosage. If there is any doubt as to whether or not the delay in menstruation might be conception, avoid rue and use another safe emmenagogue. Never use rue during pregnancy. [SNH p.295]**

SYRUP OF MOTHERWORT : (delayed menstruation): See formula using motherwort, distilled water and sugar. [SNH p.299]

Amenorrhea (suppressed menstruation), Female Weakness: See formula using motherwort, camomile, blue cohosh, golden seal and ginger root. [SNH p.300]

Dysmenorrhea (difficult or painful menstruation): When taken hot, Valerian will promote menstruation. [SNH p.377]

Dysmenorrhea (difficult or painful menstruation): See formula using cramp bark, squaw vine, white poplar, unicorn, beth root, blue cohosh, pennyroyal, sacred bark and allspice. [SNH p.394]

[Nightmares](#)[Nipples](#)[Nosebleeds](#)[Obesity](#)[Osteoporosis](#)[Palpitations](#)[Paralysis](#)[Parasites and Worms](#)[Pleurisy](#)[Pneumonia](#)[Poison Ivy and Poison Oak](#)[Polyps](#)[Pregnancy](#)[Prostate](#)[Pyorrhea](#)

**General Instructions for Painful Menstruation:** If you happen to suffer from menstrual cramps, try some of the following. Catnip tea is a great pain reliever and general relaxant. Take it sweetened with honey, nice and hot. It can also bring on delayed menstruation. Another favorite for these uses is camomile tea. Sometimes, if you have enough camomile around for this purpose, you can make a very strong brew and add it to a hot bath for pain relief and relaxation. Basil, marjoram, and thyme--the common kitchen friends--make up into relaxing and pain-relieving teas. Hot ginger tea can bring on a delayed period and relieve cramps. [EWH p.2]

**Foods for Irregular Menstruation:** Beets, corn, lettuce, peas. [NL 4-12]

**Ginger for Suppressed Menstruation:** A hot cup of Ginger tea is said to be an excellent remedy for suppressed menstruation. It has an agreeable, warming feeling which is so grateful in this condition. Dr. Christopher used Ginger alone, with amazing results, in the treatment of menstrual cramps. It can also be used as a catalyst with black cohosh to bring the cramps to a timely end. [NL 7-3]

**Nu Fem:** Dr. Christopher's Herbal Aid for Female Reproductive Organs: This is an amazing combination of herbs to aid in rebuilding a malfunctioning reproductive system (uterus, ovaries, fallopian tubes, etc.). Over the years herbalists and patients have seen painful menstruations, heavy flowing, cramps, irregularity, etc., that have been helped and the patient now has a painless menstrual period, good menstrual timing, and a new outlook on life by using these aids to readjust the malfunctioning areas. The female corrective formula consists of golden seal root, blessed thistle, cayenne, cramp bark, false unicorn root, ginger, red raspberry leaves, squaw vine, and uva ursi. Recommended dosage is one cup or 2 capsules morning and evening or three times a day if desired, six days a week for as long as required to get results desired. We have seen many severe cases who have had many years of suffering cleared up in ninety to 120 days. Some get relief sooner, some take longer--no two cases are alike. This is a food to rebuild the malfunctioning organs. [HHH p.190]

**Teens:** A girl approaching puberty should drink a cup (or more) of red raspberry leaf tea daily and the same of blessed thistle tea. These supply the estrogen materials her body will require. Continue to drink these throughout the teenage years. They taste pleasant, and you can sweeten them and cool them in the refrigerator for a healthy substitute for soft drinks. [EWH p.2]

### Testimonials

1. **Ten Dollars of Herbs Solves Ten Year Old Problem:** One woman in American Fork, Utah, was having difficult periods. These had started in puberty, and she had spent the whole of her adult life traveling from coast to coast, averaging a cost of over \$1,000 a year for ten years, paying medical doctors to tell her what was wrong. She suffered vicious menstrual cramps and extremely long periods. No one was able to help; she was very discouraged; but one of her neighbors said, "Why don't you go to the next town, to Orem, where a man called Dr. Christopher lives? He could give you some help."

When she arrived, Dr. Christopher read her eyes, noting that she did have problems with the reproductive organs. He told her to start on the female corrective formula [[Nu Fem](#)] and the hormone and estrogen formula [[Changease](#)] (which consists of black cohosh, sarsaparilla, ginseng, blessed thistle, licorice root, false unicorn root, and squaw vine). He promised her that if she would follow through, within 90 to 120 days she would get results. Within 120 days, she came back, saying that she was on a 28 day cycle, with no menstrual pains. She was delighted! Where she had spent over \$10,000 traveling from doctor to doctor, it cost her approximately \$10 for the herbs to cure her. [EWH p.15]

2. **Twice Monthly Menstrual Cycle Made Normal:** We had a young lady who had a great fear of marriage. She would have menstrual periods every two weeks or so and be in bed 6-7 days each time. She was weak, anemic, and could hardly sit up in bed. We simply used the Lower Bowel Tonic [[Fen LB](#)] to clean out the defilement in her bowels, then put her on the Cleansing Program, the Regenerative Diet and emmenagogue herbs, and within just six weeks she was feeling wonderful and looking beautiful. She gained weight, took on the glow of health, and was the happiest girl in the world. Not long after this, she got married and later entered motherhood normally with a bouncing baby. These herbs have great power in bringing order and strength to the generative system wherein there may be a fruition of life in both the mother (or father) and the prospective child (embryo). [SNH p.285]

## Miscarriage

### Definition

An end of pregnancy before the 20th week and occurring by itself.

### Herbal Aids

Preventative: Drink the raspberry leaf tea with a little Composition Powder [[Herbal Composition](#)] in it. [SNH p.143]

True Unicorn Root: is a very valuable tonic, especially beneficial and healing to the female regenerative organs. It is a good general tonic, and it has proved especially effective for female cases of habitual miscarriage due to chronic weakness. It may be safely used during the entire period of pregnancy. Due to its powerful uterine stimulative properties, it has proved valuable in cases of sterility and impotence (sometimes achieving healing results within a few weeks; but the more difficult cases must be given for a few months); but as it increases the possibility of conception, it should be avoided where frequent pregnancy is undesirable. True unicorn root is soothing to the gastric area, and is especially useful where the stomach is upset in pregnancy. It resembles false unicorn. [SNH p.288] See dosages [SNH p.288]

Uterine Tonic, to Prevent Miscarriage, to Ease Cramps and Pains: Wild yam relaxes the muscular fibers, soothes the nerves, and gives positive relief from pains, especially those associated with bilious colic, gall stones, and uterus. It is of great value in nervousness, restlessness, nausea, and pains that are common to pregnancy. Wild yam has a potent tonic effect on the uterus when taken throughout the period of pregnancy. It is excellent for relieving the trying cramps during pregnancy (especially during the latter stages), and will greatly assist in preventing a miscarriage. [SNH p.402] See formula using wild yam, squaw vine, false unicorn and cramp bark. [SNH p.404]

Tendency to Miscarriage: See formula using American colombo, true unicorn root, golden seal, squaw vine and orange peel. [SNH p.436]

When ordering false unicorn root, be sure to distinguish it from true unicorn (*Aletris farinosa*), or else you will not get the therapeutic results you desire. The powder or fluid extract is generally very readily obtained, but few stores ever carry the root itself. [SNH p.466]

Danger of Miscarriage, Uterine Hemorrhage: Give false unicorn copiously, by the quart. [SNH p.466]

Pre-delivery, Preventative in Miscarriage: Drink 1 cupful false unicorn every 1/2 hour. [SNH p.466]

[False Unicorn & Lobelia](#): Dr. Christopher's Anti-Miscarriage Formula: False Unicorn, 3 parts, and Lobelia, one part, constitute this combination. Unless otherwise specified, teas are always made with one teaspoon of herbs to a cup of distilled water (if obtainable). If hemorrhaging starts during pregnancy, stay in bed, use a bed pan when needed, and use 1/2 cup of this tea each 1/2 hour until bleeding stops, then each waking hour for one day, while in bed as much as possible and then three times in a day for three weeks. If bleeding continues instead of decreasing, see a doctor. [SNH p.532] Lobelia is also an important herb in the anti-miscarriage formula. It will do such wonders as seal up a tear in the bag of waters in an instance of a threatened miscarriage. [UW-Lobelia]

[Neuritis](#)[Nightmares](#)[Nipples](#)[Nosebleeds](#)[Obesity](#)[Osteoporosis](#)[Palpitations](#)[Paralysis](#)[Parasites and Worms](#)[Pleurisy](#)[Pneumonia](#)[Poison Ivy and Poison Oak](#)[Polyps](#)[Pregnancy](#)[Prostate](#)[Pyorrhea](#)

Squaw Tea (for strengthening the uterus and preventing miscarriage): See formula using both root, star root, black haw, squawvine and squawweed. [NL 3-8]

For Threatened Miscarriage: (1) 2 oz. wild yam, 1 oz. coltsfoot. Boil in 1 ½ quarts water for 20 minutes. Take 1 tsp. in a cup of water 3-4 times a day. (2) 1 part black haw, 3 parts false unicorn root, 1 part lobelia. Boil 3 oz. herb in 1 ½ quarts water for 20 minutes. Take 1 tablespoon in water 3-4 times daily. Supplement any treatment with 2000 IU Vitamin E until the danger is passed. [NL 3-8]

### Testimonials

1. **Saved Both Babies:** In our offices in Evanston, Wyoming, a few years ago, we had two cases at the same time from different sides of town. In each of these cases, the women still had a long time before delivery and they were both hemorrhaging. We administered false unicorn, and saved both babies. In one of these cases, the problem was so serious that the doctor said he would scrape the uterus in the morning, for (according to his training) the baby could not live. When he came the next morning, the woman was all right and the baby was delivered a couple of months later. [SNH p.466]

2. **Lobelia the Thinking Herb, Helps Abort Six-Week Dead Fetus Easily:** This combination can also help pass a dead fetus. How does it work in both cases? The lobelia in the formula is a thinking herb. Where the baby is strong, as in the above cases, the lobelia seems to have the knowledge to assist in healing a tearing and bleeding condition and stopping the bleeding. But if the baby is dead and should be aborted, the lobelia has the intelligence of directing the abortion. For example, a lady in American Fork, Utah, became pregnant, but started miscarrying in the fourth or fifth month. Dr. Christopher was out of town, but one of his students came over to give her some help. She brought about five other ladies from the class. They all brought false unicorn with them, but one of them remembered the lobelia. They mixed it together, and gave the woman the tea every half hour. Instead of the bleeding receding and eventually stopping, the bleeding got worse. Five of the ladies got scared and didn't know what to do, because this was new to them, but the sixth lady (the one who brought the lobelia) said, "The doctor said that if the bleeding gets worse, then we have to rush her to the hospital immediately." They called the American Fork Hospital and asked them to prepare a bed for her. They put her in the car and took her to the hospital, which wasn't very far away. When the doctor had her on the table, she started to abort the baby. The doctor gasped, saying, "That baby is dead, and has been dead about six weeks. I have never seen a baby abort itself like this; you must have been using something special." The lady told him she was using an anti-abortion formula. The doctor said, "I'd like to know what it is, but I don't dare, because I would be in trouble if I used it with any of my other patients. But don't forget what this formula is, and remember to use it whenever needed." This formula saved the lady from a stressful D&C, quite a blessing to her. [EWH p.47]

3. **Dr. Christopher Saves Unborn Baby:** Dr. Christopher was lecturing in a large city when a young man came up to the podium to shake his hand; he nearly shook the Doctor's hand off! He said he had been trying to catch up with the Doctor for a long while. His mother had told him that one night, when the weather was fifty below zero, the Doctor had traveled forty miles to their home. The mother was aborting, ready to lose her baby. The Doctor had given her some herbs and saved the baby--and the young man was that baby! He was about twenty-five years old. He said, "I enjoy life. I love you, sir, and I had to thank you". [UW-Lobelia]

4. **Lobelia to the Rescue Again:** Dr. Coffin used Lobelia extensively in his obstetrics practice. He used Lobelia and yarrow combined to stop threatened miscarriage, as well as using the herb itself during childbirth. He described the case of an Irish girl, unmarried, who was unfortunately pregnant. She had been in labor three days under the direction of a physician who considered the case so desperate that he recommended breaking open the infant's skull, extracting the brains, and then pulling out the remainder of the child. He had planned this operation for two o'clock that day. The girl called for Dr. Coffin, who found her lying on a pallet of straw on the floor, totally exhausted. The head of the child had advanced into the pelvis, where it was completely wedged and had been so for two days. Dr. Coffin gave her a strong dose of red-raspberry leaf tea together

with a half-teaspoonful of cayenne; in fifteen minutes he gave her tincture of Lobelia by the teaspoonful. In about one hour the contractions began to increase, the girls strength returned, and in two hours from the time Dr. Coffin had arrived, the child was born, healthy and strong. In this case the Lobelia did not make her vomit at all, although she took enough to have vomited three times over, the doctor commented. He called Lobelia and red-raspberry leaf tea the greatest midwife in the world. Needless to say, the other doctor in attendance was astounded; he said, "Good Good--the child is born?" [UW-Lobelia]

5. Letter to Dr. Christopher: In the past 20 years I have had a history of nine miscarriages. I have three children ages 20, 19, & 14. All the miscarriages took place in the 2nd and 3rd months. Also with the three children I have, I was in bed most of the first 3 months with spotting and threatened miscarriage.

Since I have been taking female corrective herbs [[Nu Fem](#)] and others for general building of health, I have become pregnant again. I am now 5½ months along and have not been down at all. The first 3 months if I felt any cramping I took the False Unicorn, Lobelia combination and the problem went away.

Also, during the first trimester of this pregnancy, we did quite a lot of traveling, attending 2 conventions in the mountains where I did a good amount of hiking which I never could have done. Because of my age of 41, I am at a disadvantage, but thanks to the herbs I feel better than I ever have.

I had a miscarriage last Spring just before I knew about the False Unicorn, Lobelia combination. I started taking the combination during the miscarriage and had the easiest miscarriage that I ever had.

Thank you very much for sharing your knowledge in this field. I know of many others that are being helped by the natural method that God has given to us. P.S. The writer now has a cute little girl. Editor. [NL 2-2]

## Motion Sickness

### Definition

A condition caused by uneven or rhythmic motions in any combination of directions.

### Symptoms

Nausea, vomiting, dizziness and headaches.

### Herbal Aids

Dr. Christopher's Anti-Nausea Formula: Use the anti-nausea formula, which is 1 ounce each of the following herbs: powdered cinnamon, powdered cloves, and powdered nutmeg. Simmer in one pint of water five to ten minutes. Do not boil, pour this decoction over four ounces of spearmint leaves and steep for twenty minutes. Strain, sweeten with honey and use from a teaspoonful to a tablespoonful or more as needed. The [Ant-Plg](#): Dr. Christopher's Immune System Support Formula may also be used. This is good for car, plane, or boat sickness; in fact, for most any motion sickness. It is also good for nausea from pregnancy, etc. You may find the relaxase formula [\[Relax-Eze\]](#) to be helpful also. [NL 3-1]

Another Anti-Nausea Formula: Here is an anti-nausea formula we have used throughout the years for morning sickness: ½ oz. Turkey Rhubarb (powdered), ½ oz. powdered cinnamon, ½ oz. powdered cloves. Simmer on low heat for about 10 minutes. Pour over 1 oz. spearmint leaves. Let it steep. Strain and drink by the teaspoonful or by the cupful. This formula can also be used for nausea other than morning sickness; in motion sickness, for example. A small thermos bottle will hold enough for an automobile trip. [NL 3-7]

Ginger Root: "The R.P. Scherer Survey of Health and Nutrition Literature reports that ginger root, long considered an effective aid for gastrointestinal distress, is equally effective for the relief of motion sickness," as noted in the Natural Foods Merchandiser, July 1982.

"Thirty-six subjects with a high susceptibility to motion sickness participated in a study conducted by researchers Daniel Mowrey and Dennis Clayson. Half the group was given ginger root, the other half Dramamine or a placebo. All the subjects were placed in a tilted rotating chair for up to six minutes in an attempt to induce gastrointestinal discomfort. The subjects given ginger root were able to stay in the chair the full six minutes, while not one person given Dramamine or the placebo was able to stay in the chair for the full time." [NL 3-10] The Ginger seems to work in the gastrointestinal tract to prevent nausea; one or two capsules every few hours should help [NL 7-3]

## Mumps

### Definition

A contagious childhood disease with inflammation of the glands around the tonsils and salivary glands. [HHH p.108]

### Symptoms

After an incubation period of about three weeks, the symptoms appear with fever, headache, and pain beneath the ear. Soon there develops a tense, painful swelling in the parotid region, which interferes with chewing and swallowing (both actions become very painful). After a few days to a week the symptoms gradually disappear. Sometimes the submaxillary and other salivary glands are involved, and occasionally the testicles become swollen. [HHH p.108]

### Cause

Mumps are the result of toxic mucus accumulations in the body. [HHH p.108]

### Herbal Aids

General Instructions: As quickly as evidences of mumps present themselves, use a fomentation of three parts mullein herb and one part lobelia around the neck and swollen area. Cover this with plastic and a cloth or towel over the plastic to be more comfortable and also to hold in the heat. Replace fomentation each half hour or each hour for the day and leave it on all night.

In addition to using the fomentation on the neck area, also have the child drink a half cup (more or less according to age) of the mullein and lobelia [[Mullein & Lobelia](#)] tea, three or more times a day. [HHH p.108]

With mumps, as with all fever diseases, use the fever routine as explained [[Fever](#)].

See formula using raspberry leaves, bayberry bark and ginger. [SNH p.147]

Mullein: Apply a fomentation as hot as possible on the swollen glands, wrung out of a tea made from mullein leaves; also the fresh leaves soaked in apple cider vinegar may be applied. [SNH p.317]

See formula using mullein, lobelia and cayenne. [SNH p.318]

Mumps (poultice): See formula using mullein and camomile flowers. Apply as warm as possible without inconvenience, cover well and change the application when cool. Repeat until the swelling is relieved. Give the patient stomach bitters of raspberry leaves (*Rubus idaeus*) or bayberry bark (*Myrica cerifera*) which are excellent for cleansing the stomach and removing canker from the digestive tract. [SNH p.320]

Lobelia: Lobelia is said to be an excellent herbal aid (and preventative) for infectious diseases. Since most fevers result from obstruction in some part of the system--usually the digestive tract, we have found--Lobelia "locates" and removes the obstruction. We have seen this happen many times with children; they begin to sicken, and you can tell there is something congesting their system. By removing that congestion, you remove the cause of the illness. Lobelia can be used as an enema to remove congestion from the body via the colon. When Lobelia causes vomiting, Malstrom claims, it usually signals a cleansing process in the body

[Neuritis](#)

[Pregnancy](#)

[Prostate](#)

[Pyorrhea](#)

expelling debris that cannot be expelled in any other way (Mal:94). He considers it an effective remedy in scarlet fever, measles, whooping cough, mumps, and other contagious diseases. It gives almost immediate relief from suffocating mucus and phlegm that has accumulated in the respiratory tract and which is often associated with these diseases (Rose:Herbs:77). [UW-Lobelia] Lobelia is used in the case of mumps; when catnip enemas and Lobelia are given, mumps usually have very little effect on males, although there is usually concern when males contract the disease. The illness will disappear, after mild symptoms, within five days (Mal:14).

[UW-Mumps]

[Mullein & Lobelia](#): Dr. Christopher's Glandular Formula: Through the accumulation of toxic waste in the body from improper diet, poor blood stream and sluggish circulation of the blood system the glands become congested and infected, and swell up to cause much pain and misery. (There are glands that swell on the neck, breast, groin, under arm pits, etc.) Make a tea of three parts mullein and one part lobelia herb and use as a fomentation over swollen or malfunctioning glands. Leave on all night (covering fomentation with plastic), six days a week until relief is obtained. Use a fresh fomentation as warm as possible each night.

This can be used as an aid to relieve mastitis, thyroid malfunction, etc., etc. In addition to the external fomentation, also drink a cup of this tea two or three times in a day or take two of the capsules or tablets with a cup of steam-distilled water. [HHH p.187]

## Nausea

### Definition

Any feeling of discomfort in the stomach region, with aversion to food and a tendency to vomit. [SNH p.37]

### Cause

The problem has a number of origins, such as bilious attacks, pregnancy, undigested food, etc. [SNH p.37]

### Herbal Aids

General Instructions: With some people, the discomfort can be cleared up quickly by chewing hard, common cloves. With others, it takes something a little more potent such as catnip, peach leaves, peppermint, raspberry leaves, spearmint or sweet balm. A few drops of tincture of lobelia or antispasmodic tincture [[Antsp Tincture](#)] is very good. A combination of cinnamon, cloves, spearmint, and Turkey rhubarb will bring good results when used as prescribed later in the book. [SNH p.37]

Nausea, Vomiting (especially during pregnancy): See formula using Turkey rhubarb, spearmint, cinnamon and cloves. [SNH p.187]

Vomiting and Nausea of Pregnancy: Use spearmint tea alone, or for an excellent combination, see [SNH p.239] formula using spearmint, cloves, cinnamon and turkey rhubarb. [SNH p.240]

European Pennyroyal: Give the infusion in teacupful doses, repeated frequently (every 1-2 hours), and when the herb is unavailable, 1-3 drops of the oil in warm water is excellent. [SNH p.283]

Strong Decoction of Wild Yam: See formula using wild yam, distilled water and glycerine. [SNH p.403]

Nausea in Pregnancy: See formula using cloves powder and white poplar or quaking aspen bark powder. [SNH p.422]

Golden Seal: Golden Seal is said to alleviate nausea during pregnancy, combined half-and-half with ginger and put into capsules, to be taken with spearmint tea every few hours. This is one of the few applications of Golden Seal during pregnancy because of its possible overuse and toxicity. [UW-Golden Seal]

Peach: Peach bark is most well-known for its action against diarrhea. An infusion or a few capsules are said to stop cases of difficult diarrhea almost immediately. However, if the system is constipated Peach tree leaves are an excellent, gentle laxative. Evidently the medicine regulates the eliminatory tract whatever the problem.

This balancing effect may explain a very important use of Peach bark; the relief of the nausea and vomiting of morning sickness in pregnancy. Anyone who has suffered this problem will be glad to know of a possible Peachy solution. Two to four tablespoons of the tea are to be taken first thing each morning and the same dosage continued if necessary every one to two hours. The tea may prepared the night before and refrigerated, reheating in the morning to take first thing. Dr. Eric Powell of England pointed out that if some do not respond to the infusion they usually react

positively and immediately to the fresh plant tincture of the bark, the dose of which is about five drops in a little tepid water (Luc:Herbal:163-4). [UW-Peach]

[Dr. Christopher's Anti-Nausea Formula](#): Use the anti-nausea formula, which is 1 ounce each of the following herbs: powdered cinnamon, powdered cloves, and powdered nutmeg. Simmer in one pint of water five to ten minutes. Do not boil, pour this decoction over four ounces of spearmint leaves and steep for twenty minutes. Strain, sweeten with honey and use from a teaspoonful to a tablespoonful or more as needed. [Ant-Plg](#): Dr. Christopher's Immune System Support Formula may also be used. [NL 1-3]

### Testimonials

**Red Raspberry During Pregnancy:** Dr. Christopher recommended taking at least a daily cup of Red Raspberry tea throughout pregnancy. He said that in addition to its good effects on the uterus it is also anti-nausea. A woman who was expecting her ninth child often experienced nausea during pregnancy. When she suspected that she might be pregnant again she began taking the tea even before she began to feel morning sickness. She never experienced any discomfort so she wondered if it might just be an unusual or unhealthy pregnancy, so she discontinued the tea. Not long after she began to feel nausea! She quickly began to take the tea again and felt no discomfort since then. [NL-Red Raspberry]

## Nerves

### Definition

Anything affecting the nerves such as raw nerves, epilepsy, hysteria, stress, etc.

### Herbal Aids

Raw Nerves: Where the nerves are raw, the following herbs are excellent: catnip, peppermint (hot), rosemary herb, skullcap, spearmint, wood betony, and since plenty of rest is needed, any of the foregoing herbs along with hops tea is very soothing and will produce sleep. [SNH p.27]

Relaxing Nervine (headache, neck, shoulder and muscular tension, irritability, nervousness or raw nerves, sleeplessness, female organs): See formula using camomile, white poplar, false unicorn, lady's slipper, lobelia and ginger. [SNH p.220]

Hysteria (relax nerve tension, soothe and tone nerves): See formula using lady's slipper, skullcap, ginger and raspberry leaves. [SNH p.385]

Spinal Nerves and Epilepsy: See formula using golden seal, hops and skullcap. [SNH p.440]

Relax-Eze: Dr. Christopher Nerve Herbal Food Combination: See formula using black cohosh, cayenne, hops, lady's slipper, lobelia, skullcap, valerian, wood betony and mistletoe. With this tonic you will begin to feel stronger in just a matter of a very few days because it will rebuild frayed nerves and sheath on the nerves. For a person having difficulty in sleeping, take 1/2 to 1 cup of hops, valerian, or skullcap (any of these alone in tea form or the three mixed together), and these will relax the nerves. [SNH p.525]

Relax-Eze: Dr. Christopher Nerve Herbal Food Combination: Here is a formula we have used with great success for well over thirty years. It is used for relieving nervous tension and insomnia; it is mildly stimulating and yet lessens the irritability and excitement of the nervous system and also lessens or reduces pain. This formula contains herbs that feed and revitalize the motor nerve at the base of the skull (medulla area and upper cervicals), and also herbs that help rebuild or feed the spinal cord. This group of herbs will also rebuild the frayed nerve sheath, the nerve itself, and its capillaries. The following herbs in this combination are food for your valuable--and in many cases, shattered-- nerves: black cohosh, capsicum, hops flowers, lady's slipper, lobelia, skullcap, valerian, wood betony and mistletoe. The suggested amount for an adult's use would be one to three cups of the tea, or two or three capsules or tablets three times in a day, taken with a cup of celery juice or steam-distilled water. [HHH p.187]

Mistletoe: Mistletoe's historical use, which as been corroborated by modern herbal findings, has been to help in epilepsy. Dr. Christopher taught that this disorder results from an extreme exhaustion or derangement of the nerves; if the nerves can be rebuilt, the malady can be allayed. He mentioned combinations of herbs featuring Mistletoe that can help with such diseases. For Chorea or St. Vitus' Dance, he mixed 1 ounce Mistletoe with 1/4 ounce cramp bark, 1/4 ounce hops and anise or peppermint flavoring to taste, making an infusion, sweetening and flavoring the mixture, and refrigerating. This can be given to children. He noted, however, that involuntary twitching and contraction of muscles is common before puberty and that parents should avoid drawing attention to the problem. A steam bath, followed by a sponging with equal parts of apple cider vinegar and cold water, helps prior to administering this formula. [UW-Mistletoe] Mistletoe is said to help promote the full relief of stubborn headache, even migraine. The extract is also used in headaches which are accompanied by dizziness, in spells of vertigo when there is a tendency to fall backwards, in people whose gait is wavering, who are afraid of open places, get

attacks of "pins and needles" in the limbs and suffer from cold feet (Ibid.). Mistletoe is also a specific in the treatment of neuritis, an inflammatory condition of the nerves or nerve sheath resulting in shooting or other pains throughout the body. [UW-Mistletoe]

Valerian: Dr. Christopher classified this herb among the nervines, those herbs that stimulate and heal the nerves. He said that we usually bring on our nervous problems ourselves because the sheaths of the nerves have been worn or eaten away by the calcium having been leached off with the sugars that we take so much in beverages, candies, pastries and from the many breads that turn to sugar in the body. When the sheaths are thus worn off the nerves lose their energy and their power. It can be so bad that we wind up in the asylum. Dr. Christopher said that when we find ourselves becoming nervous wrecks, we wonder why the Lord has done this to us! The nerves become so frayed that they become like uninsulated electric wires, finally shorting out and that is what causes our nervous problems. When there is a stressful argument, our nerves cannot take the load and give out. Dr. Christopher said that we have to feed the nerves. They are usually robbed of the foods that they need. Dr. Christopher's Relax-Eze [[Relax-Eze](#)] formula was a specific herbal food to help the body rebuild the nerves. He said that it doesn't taste too bad, either. Some English people came into his shop and bought so much nerve tea that Dr. Christopher said, "You buy such a lot of nerve tea. You seem such quiet folks!" He replied, "Oh, we like it better than Lipton's". The Doctor said that it was surely better for them, especially since black tea deranges the nerves. [UW-Valerian]

General Instructions: The fact that caffeine depletes the bodies calcium and places additional stress on the arteries, nerves, and endocrine system enables one to see caffeine in chocolate as one of the contributing factors to coronary disorders. Historically herbalists have recommended the herbal calcium formula [[Calc Tea](#)], the hawthorne berry syrup, and cayenne pepper plus the various herbal aids for the heart, nerves, circulation, in addition to a wholesome diet of fruits, vegetables, grains, nuts, and seeds, plus the elimination of chocolate and other stress-producing foods from the menu. [NL 2-4]

Dr. Christopher's [Nervine Formula](#) and [B & B Tincture](#): It can be seen now, how these nerve herbs, when combined as a B & B Tincture, can take care of the central nervous system, the brain and spinal cord.

Then there is the peripheral nervous system, made up of the nerves that extend out from the spinal cord and the base of the brain to the various parts of the body, and the autonomic nervous system, which regulates internal organs. Obviously, these systems must be fed properly throughout one's life in order for them to work properly. If there has been many years of neglect and wrong eating habits that has caused malfunctions and nervous disorders, there is the nine-nerve herb formula (we call Relax-Ease) that can make life worth living again!

These two sets of herbal formulas work well together, the [B & B Tincture](#) aiding the brain, medulla, spinal cord and the nine-nerve herb formula aiding the rest of the nerve systems. [NL 2-11]

Calcium: If the calcium balance is off, the results will be seen in many ways. There will be frayed nerves, inferior fingernails and hair, and other disorders including susceptibility to infectious diseases and arthritis resulting from altered body chemistry. [NL 3-11]

Elder Flowers: A bag of Elder flowers steeped in the bath water makes a refreshing bath for nerves or skin problems as recommended by a French doctor. [NL 4-10]

Epilepsy: In more serious nervous system ailments, Black Cohosh has produced good results. It is often used in cases of chorea (St. Vitus' Dance) to allay the symptoms as well as heal the nerves and remedy the disease. It has been used effectively in epilepsy. Dr. Shook related a case wherein a young girl was brought to him with a longstanding case of epilepsy. She had suffered various injuries during her attacks. Shook made a strong decoction of Black Cohosh, blue gentian and valerian root, expecting immediate results, but the seizures continued. Shook then consulted an old herbalist, who informed him that only alcohol could extract the antispasmodic values from Black Cohosh. The parents tried the tincture, given here, and the seizures gradually decreased from up to thirty in one day to nearly none after six months. Dr. Shook's Formula 150: See formula using black cohosh, blue cohosh and blue vervain. [NL 5-6]

[B & B Tincture](#): Dr. Christopher's Nervous System Formula with Black Cohosh: Black cohosh, blue cohosh, blue vervain, skullcap, and lobelia. This is used to help aid in nervous

conditions, sore throat, hiccups, and aid to restoring malfunctioning motor nerves and assisting in adjusting poor equilibrium and hearing, and a great blessing to epileptics. Massage into the medulla (base of skull), and upper cervicals. With an eye dropper insert into each ear at night four to six drops of oil of garlic and four to six drops of the following herb tincture, blue cohosh, black cohosh, blue vervain, skullcap, and lobelia, plugging ears overnight with cotton, six days a week, four to six months, or as needed. On the seventh day, flush ears with a small ear syringe using warm apple cider vinegar and distilled water half and half., and take six to ten drops in a little water or juice two or three times a day. [HHH p.195]

[Wild Lettuce and Valerian](#): Dr. Christopher's Formula for Minor Pain Relief: This is a tincture or tea consisting of wild lettuce and valerian. It is to be taken orally or massaged externally as relief of minor pain. It is a natural sedative, quiet and soothing to the nerves. [HHH p.195]

Nervine Cough Syrup: See formula using comfrey root, turkey rhubarb, spikenard, skunk cabbage, horehound and yellow D sugar. [SNH p.311]

Dr. Nowell's General Nervine Tonic; Hysteria: See formula using scullcap, hops, valerian, gum asafoetida and gentian root. [SNH p.373]

Dr. Shook's Nervine Tonic: See formula using scullcap, vervain and damiana. [SNH p.374]

Dr. Shook's Compound Nervine: See formula using cramp bark, wild yam, vervain, scullcap, cloves and glycerine. [SNH p.394]

### Testimonials

1. Kelp: Most nervous disorders result from a deficiency of certain cell salts, so we can correctly term nervous disorders "deficiency diseases". Kelp can considerably help balance the system and correct the problems. Dr. Powell helped a lady who could not sleep because of "nerves". She responded to the use of Kelp. [UW-Kelp]

2. Kelp Again: An elderly gentlemen with a nervous heart and very frightened about his condition responded to Kelp after many weeks on the remedy. The older you are, Dr. Powell said, the longer you have to take Kelp for remedial purposes. It has no drug action itself but helps rebuild the weakened organs. One of the functions of iodine is to bring calmness to the mind and body by relieving nervous tension. When nervous tension is marked, there is excitability and irritation, sleeping becomes difficult, and there is a drain on the vitality (Powell:14). Kelp reduces tension, produces relaxation and enables the system to store up vitality and reserve energy; concentration becomes easier owing to the freer flow of blood through the brain and it is easier to think clearly (Ibid.). [UW-Kelp]

3. The Beginnings of B&B Tincture: After nearly forty years of helping people regain their health, I was quite upset a number of years ago (over ten years ago) by a case that did not respond to our program, as others had done in the past. This was a case of epileptic seizures. It was late in the evening and I had sent a young boy (12 to 14 years old) back to their motel after treating him. I was confused, and the first time really baffled on an epileptic case. I sat back of my desk, alone in the office and asked, through prayer, for help for this fine young chap. I explained, in my prayers for help, about my utter confusion. Then the "idea" for this "nerve formula" came to my mind, and I went out into the herb lab and put the tincture together. When the tincture was finished in two weeks, I had the young man back, put it into his ears, preceding it with the oily garlic (to kill infection with garlic's natural sulphur base). Then I massaged his neck area at the base of the skull and gave him six to ten drops of this same nerve tincture in a little distilled water--to drink, three or more times a day.

Results came rapidly and they took the boy back home to Arizona. One of the other children in the family had an earache later so the mother used this same tincture (preceded by the oil of garlic) with success, the ear healing quickly. An elderly gentleman with hearing aids in both ears, progressively getting more and more deaf, saw the earache cleared and decided to try it in his ears. After a number of months he threw away his hearing aids. Since that time many people have had their hearing restored, even though they were told there was no known help. Of course there

are some cases where the "loss" is complete, and it is too late.

One day I sat down, years later, to find out why this amazing tincture could do these things: stop long range hiccupping, remove warts, aid in other nervous disorders, etc. As I analyzed the different herbs and checked out old herbal books, I found that blue cohosh, black cohosh and blue vervain are specific herbs to nourish and rebuild the nerves in the motor-nerve area in the medulla and upper cervical areas. The scullcap is one of the greatest nerve herbs known to strengthen, repair and rebuild the spinal cord. The lobelia is an antispasmodic (the catalyst and thinking herb) as well as being a great nerve herb food! Here I was given a precious group of herbs to be used as food to rebuild a shattered motor nervous system, and to also get the spinal cord into a healthy condition to relay the healing messages to various parts of the body. [NL 1-6]

4. Frayed Nerves: A gentleman called us years ago in reference to his wife, a teacher. Her irritable nature had made her unbearable to live with and many complaints were coming from her associate teachers, as well as from pupils. Her husband said her main problem was insomnia, causing extreme fatigue. She would only sleep a half hour or less, then walk the floor for long periods of time, then sleep again but only for a few minutes, and so on throughout the night. They could find no help for her, and both were ready to sign the papers to have her committed to a mental institution.

After arriving at their home, we had her drink a nerve tea combination. In a few minutes, as we talked, she became drowsy. She interrupted our conversation to say she would like to relax a few minutes and then return. She left the room to lie down for a while, and her husband said she would be back in fifteen to twenty minutes, as this was her pattern. It was late in the evening, so, after assuring him that there was no narcotic ingredients in the tea, I left.

About 8 o'clock the next morning, the phone rang and a man said, "Dr. Christopher, you are a liar!" I asked him why such a blunt accusation. He said, "When my wife went in to lie down last night, instead of sleeping 'a few minutes', she slept all night and is still asleep this morning. After all these years of insomnia, she-has never slept all night. It has to be drugs and you guaranteed it was not."

I assured the gentleman that this very tea could be given to a small child with no side- or after-effects, and explained that the herbal food in the tea gave her nerves the first good nerve food they had received in many years. He apologized, adding he would have to awaken her or she would be late for school. [NL 2-11]

5. Facial Tic and Hearing Loss: At the time of this writing, there is no surgical cure for nerve hearing loss. The causes are fetal damage, trauma at birth, infections, drugs, thyroid disease, diabetes, injuries, noise exposure, or nerve deterioration from age or malnutrition. Just last month, a woman said to us, "I wish they (medical science) would hurry and find a cure for nerve deterioration." We said, "For the nerves in the body?" She said, "No. For the nerves of the ear! I'm having a terrible time with hearing loss and it's getting worse. It's driving me crazy!" We told her that if she didn't have eardrum breakage, there were some herbal nervines that could be used directly in the ear as ear drops. She agreed to try the B and B tincture. As she spoke, her face exhibited a spastic dance of small nervous tics. A month later, on the B and B tincture, her hearing began to gain momentum while the nervous tics faded into the background. Going to the ear, there are three cranial nerves. One is the auditory nerve which controls hearing. The other two are the facial nerve which controls some of the muscles in the face and the vestibular nerve which helps with balance. B and B tincture will aid all three of these nerves. [NL 4-6]

## Neuralgia

### Definition

A severe, intermittent pain lasting a short time.

### Symptoms

The pain radiates along the course of a nerve and its branches, but is not associated with any manifest changes in the nerve structure. The tender spots are often where the nerves exit and paroxysm can be produced by contact with a certain area (the trigger zones). Often there are sharp, stabbing attacks of pain in the eye, brow, temples, or back of the neck. There are also various forms of neuralgia along the spinal column, and the various internal organs (viscera), along the sciatica nerve, or in a joint. [SNH p.37]

### Cause

Neuralgia is caused by irritation of the nervous system and by heavy mucus throughout the body. An acid condition is also a factor. [SNH p.38]

### Herbal Aids

General Instructions: The sharp, excruciating pains can generally be relieved by placing a poultice or fomentation of mullein and cayenne over the area. Relief may also be obtained by applying a liniment of equal parts cayenne and prickly ash tincture. To remove the cause, rebuild the body with tonics, change the diet and improve the person's general health. [SNH p.38]

Garlic: Sciatica, paralysis, neuralgia pains. Massage [Oil of Garlic](#) over the affected area. [SNH p.101]

Wormwood: Rheumatism, sprains fomentations, neuralgia, etc. Apply fomentation of the herb; or, use the oil as a liniment. [SNH p.108]

Bruises, Swellings, Neuralgia, Toothache: See formula using camomile and poppy flowers. [SNH p.219]

Mullein: Rub mullein oil in well, or apply on saturated cotton and cover. [SNH p.317]

See formula using marshmallow, camomile and poppy heads. [SNH p.328]

Scullcap: Drink 2 fluid ounces of scullcap infusion every 1 to 2 hours and 1 cupful upon retiring. 1 pint during a single evening would not be harmful. [SNH p.371]

Soothing Syrup (children), Neuralgia Mixture: See formula using lady's slipper, scullcap, pleurisy root, prickly ash, lobelia and anise seed. [SNH p.386]

Hops: Use hops poultice and fomentation. Or apply a flannel bag of hops, and moist heat over the affected area. [SNH p.396]

See formula using hops, black cohosh, camomile, yarrow, sage and peppermint. [SNH p.397]

Liniment for Neuralgia: See formula using cayenne, lobelia, oil of wormwood, oil of rosemary and oil of spearmint. [SNH p.411]

See formula using myrrh, cayenne and echinacea. [SNH p.456]

Neuralgia

## Neuritis

### Definition

Swelling of the nerves.

### Symptoms

Injury or lesions of one or more nerves accompanied with hypersensitivity, loss of sensation (anesthesia), sensation of tingling, crawling or burning of the skin (paranaesthesia), paralysis, reduction in muscle size (muscular atrophy), and loss of reflexes in a body part. [SNH p.38]

### Cause

Mucus in the system. Mucus causes an upset in the specific area conducting nerves into the spinal column and throws out a vertebrae, causing even more irritation. The nerves must be rebuilt, and the acid condition of the nerves and the worn sheath around the nerves must be replaced by taking nervines. Besides using the cleansing program, rebuild the entire nervous system and use the cleansing program. [SNH p.38]

### Herbal Aids

General Instructions: Neuritis is frightening because of the pain. Use nervines and antispasmodic to correct the cause. Ease the pain with fomentation, poultices and the green drinks. [SNH p.38]

Neuritis (nerve inflammation): See formula using lady's slipper, scullcap, damiana, wild yam and ginger. [SNH p.386]

Juices: Celery & cucumber, endive, carrot & spinach. [NL 3-5]

Elderberry Wine: The berries are used to make Elderberry Wine which was discovered to be very effective in the treatment of sciatica and other forms of neuritis. The recommended dosage being to mix one ounce of the Elderberry Wine with a third of an ounce of port wine. [NL 4-10]

## Nightmares

### Definition

A dream occurring during rapid eye movement sleep that brings out feelings of fear, terror, anxiety or distress and usually awakens the sleeper.

### Herbal Aids

Nervous Nightmares: Take a small quantity of freshly extracted rue juice. [SNH p.295]

General Instructions: Eat light meals only before retiring. Be sure bowels are moving freely. Catnip tea and enema can help a really bad terror. Be selective of daily mental input. [EWH p.167]

Hops: You can moisten the Hops with water mixed with a little glycerine to reduce the rustling--which might cause insomnia in itself, some suggest! Or you can moisten the Hops with a little alcohol in order to release the medicinal values. Interestingly, as we will relate in the section on Recent Research below, researchers have not been able to find any evidence of physiological activity on the nervous system in Hops. Yet, as Michael Moore pointed out, "Anyone who drinks much of the tea will tend to fall asleep or get groggy". He mentioned that Hops is "a wonderful herbal aid for insomnia brought on by trashing out on oyster stew or candied watermelon peels (and similar gastric manias) shortly before retiring. When the usual nightmares concerning Attila the Hun or the Teapot Dome Scandal ensue and the indulger is unable to reconcile several realities (including being awake with a stomachache at three in the morning) the Hops can be brewed up" (Moore:84). [UW-Hops]

Rosemary: Levy quite seriously mentions that the gypsies place sprigs of Rosemary under the pillows of sleepers, especially children, to protect them from evil spirits and from nightmares. She did so with her children and suggests that people do the same. Others say that the herbs in a small pillow near or under the pillow make for a good night's rest. [UW-Rosemary]

Catnip: The young tops...made into a conserve, help relieve nightmares [NL 6-2]

## Nipples

### Definition

Anything to do with the nipples such as soreness when nursing, tenderness, cracked etc.

### Herbal Aids

Firm Up and Harden Sore and Tender Nipples: Massage the decoction of cranesbill into the nipples only. [SNH p.153] Decoction of cranesbill: See formula using cranesbill and distilled water. [SNH p.153]

Sore Nipples and Green Wounds: Apply the expressed juice of cleavers and take internally 1 tablespoonful of the juice 3 times a day. [SNH p.268]

Sore nipples: See formula using squaw vine, olive oil and beeswax. [SNH p.281]

Golden Seal for Cracked and Abraded Nipples: This herb is considered to be one of the best general medicinal aids in the entire herbal kingdom....(Note: The price of this root has been unusually high--but do not attempt to use other aids here that will not achieve the same results. Always use the herbal agents you need, no matter what the price! Do not purchase or use the commercial colorless fluid extract, however, as it does not contain the needed therapeutic values of the herb.) Generally give small and frequent doses. A Skin lotion formula is 1 teaspoonful of powder in 1 pint of boiling water, dissolve and let stand until cool. See text for more information. [SNH p.437]

Nursing: If your nipples get sore, you can rub on pure lanolin, available at pharmacies. You can sun your breasts briefly, but be careful, because the tissue is tender and sensitive. Honey, comfrey ointment, wheat germ oil, and aloe vera leaf can all be applied, although you should be careful to wash off the honey, as no infant should take raw honey which causes infant botulism, and to remove the aloe vera, because it is very bitter. [EWH p.85]

Commercial Oil of Juniper is made from the ripe fruit; unripe fruit is less effective for making the oil. When the Rob of Juniper is distilled, the resulting oil byproduct is used medicinally. This is sometimes called Oil of Cade. The Eclectic School skillfully blended this oil with lard and Fowler's solution to make a Juniper Pomade, which is said to be excellent for all forms of eczema or tetter. It was...applied to chapped hands and irritated nipples in nursing mothers (Felk:1092). [UW-Juniper]

Myrrh: Applied to fresh wounds, the tincture of Myrrh excites healing action and lessens the liability to inflammation or suppuration. It is good for sore nipples. [UW-Myrrh]

Red Raspberry: Taken during labor the sweetened tea is used as a natural regulator for contractions and after the birth the infant's mouth can be washed with it if the mouth seems sore. The mother can use the tea to wash sore nipples with and to enrich the milk supply (Thom:185). [UW-Red Raspberry]

Squaw Vine: The berries are highly recommended to treat sore nipples. The crushed berries are added to tincture of myrrh for a highly potent cure (Cly:113). Another method is to make a strong decoction of two ounces of the herb, fresh if possible, with a pint of water, then strain and add as much good cream as there is liquid of the decoction. Boil the whole down to the consistence of a soft salve and when cool, anoint the nipple with it every time the child is removed from the breast (Felk:1274). Olive oil is sometimes substituted for the cream. [UW-Squaw Vine]

Yarrow: The tea can be applied to chapped hands or other skin irritations, and it can be rubbed on sore nipples if needed. [UW-Yarrow]

## Nosebleeds

### Definition

A nosebleed is a hemorrhage from the nose--syn., epistaxis (from one side), epistaxis bilateral (both sides); in other words, the escaping of blood from the nose. [HHH p.110]

### Cause

Unless it is from injury, nosebleed results from a calcium deficiency. It is caused by the rupture of a small vessel in the nose due to pressure in the head. There are many causes for nosebleeds, but the weakness stems from calcium deficiency. Of course, it does not matter how much calcium is in the body if one is hit in the nose with a good blow; bleeding will start. [HHH p.110]

### Herbal Aids

[Cranesbill](#): Use the powder as a snuff. [SNH p.153]

[Nosebleed \(epistaxis\)](#): See formula using cranesbill, bistort and raspberry leaves. [SNH p.154]

[Witch Hazel](#): Snuff the tea up the nose. [SNH p.171]

[Cayenne](#): Dr. Christophers many Cayenne Combinations: A teaspoon of cayenne in a cup of water (hot preferred) taken internally will stop most nosebleeds quickly. In an emergency such as this we use cayenne. As mentioned a teaspoon of cayenne pepper in a glass of water and drunk right down will stop a nosebleed in nearly every instance, by the time you can count to ten. This is not a miracle; it is the principle of the cell stimulant cayenne traveling through the entire blood stream and regulating the pressure so the pressure of the flow is the same in the feet as in the head or any other part of the body. This takes the heavy pressure off the hemorrhaging area and allowing a quick coagulation. [HHH p.110]

[Calc Tea](#): Dr. Christopher's Calcium Formula: One of our very finest herbal foods is our calcium formula of four parts comfrey root, six parts horsetail grass, three parts oat straw and one part lobelia. Make this into a tea, using a cup (one teaspoon of combined herbs to cup of distilled water) morning and one evening or two or three capsules or tablets two or three times in a day. [HHH p.110]

[Bayberry Bark or Oak Bark Tea or Powder](#): If the nose bleeds often, the veins, capillaries and tissue often will be strengthened by inhaling a small amount of bayberry bark (*Myrica cerifera*) or oak bark (white, red Tanner's scrub, etc.) tea up into the nose. If desired, use an atomizer to spray it up. Another method is to take the bayberry bark or oak bark powdered and with a small straw blow a very small amount of the powder up the nose each day, until healed. Do not blow too much of the powder up the nose or it will plug up the area. Drink a small amount, one-fourth cup more or less, of the bayberry or oak bark tea each day until the condition is under control. [HHH p.110]

### Testimonials

[Cayenne](#): Within the last year, I purchased from you your wonderful book - The School of Natural Healing and have been enjoying very much using it as a reference book. It is GREAT. With red pepper having the ability to stop heart attacks and to stop bleeding either internal or

[Nightmares](#)[Nipples](#) [Nosebleeds](#)[Obesity](#)[Osteoporosis](#)[Palpitations](#)[Paralysis](#)[Parasites and Worms](#)[Pleurisy](#)[Pneumonia](#)[Poison Ivy and Poison Oak](#)[Polyps](#)[Pregnancy](#)[Prostate](#)[Pyorrhea](#)

external - I just can't see why that information is not more widely known and used, especially by paramedics, boy scouts and girl scouts and athletic managers. People are always hearing about someone having a nosebleed that is very difficult to stop and hikers, etc. having an accident out in the wilderness and almost bleeding to death. Our household or car will never be without some red pepper in it. I am now taking it twice a day. [NL 3-3]]

My 89 year-old grandpa was rushed to the hospital with a nosebleed that wouldn't stop. His nose was packed, and he was told to return to the hospital in a few days to have it cauterized. I asked my dad, who took him to the hospital, why he hadn't tried cayenne. He said "you're right. What was I thinking? I will send some cayenne home with him." The day after my grandpa's nose was cauterized, it started bleeding again. This time my dad told my grandpa to take the cayenne. His nose stopped bleeding in minutes. My grandpa now takes cayenne every day, and the nose bleeding has not returned.

## Obesity

### Definition

An abnormal increase in the amount of fat, mainly in the stomach area and intestines, and in the tissue beneath the skin.

### Herbal Aids

Poke Root: Obesity (adipose tissue): Use an infusion of the berries. [SNH p.61]

No Milk Products: Dr. William E. Ellis is a retired osteopathic physician and surgeon, located in Arlington, Texas, who has done extensive research on the effects of milk on human beings. His conclusion: "Milk and milk products are harmful to many people, both adults and infants. Milk is a contributing factor in constipation, chronic fatigue, arthritis, headaches, muscle cramps, obesity, allergies, and heart problems." Dr. Ellis does not blame cholesterol, but xanthine oxidase, an enzyme in homogenized milk, excess calories, xyramine, a protein in cheese that causes headaches, and poor absorption. He blames especially the latter, as milk neutralizes the hydrochloric acid necessary to digest food, and creates excess mucus which inhibits absorption. [HHH p.15]

Kelp: Obesity is rare among the Polynesians and other races who incorporate seaweeds as a regular part of their daily diet. This plant influences the mucous membranes and lymphatics. It is a slow, persistent agent, but it will accomplish the desired weight loss results. It is stimulating to the absorbents and especially influences the fatty globules. Its best action is observed in individuals having a cold, torpid, clammy skin and loose flabby rolls of fat. It is an agent that gives better results in sick, overweight people than in cases of healthy, fat people (Luc:50). Instead of being simply a weight loss agent, it is more a normalizer, as thin people can put on weight while taking Kelp. [UW-Kelp]

Onion: To build the blood or to prevent obesity, to provide strength during pregnancy or to prevent toxemia, take Onions three times a week cooked, two times a week raw. [UW-Onion]

Sage: Sage tea is given in digestive weakness or ailments. It is especially good for flatulence and lack of appetite, constipation and obesity (Lev:Common:128). In Greek villages it is brewed as a tea in cafes to be used instead of other harmful beverages and its scent characteristically floats over the streets. Kloss said, "The American people would do well if they would use Sage instead of tea and coffee." [UW-Sage]

Juicing: Dr. H. E. Kirschner, M.D. treated people for over 50 years. In his book, Live Food Juices he recounts many fabulous results in his cases of incurable diseases where live juices were used. Some of these diseases were malnutrition, leukemia, failing eyesight, arthritis, bleeding hemorrhoids, obesity, various cancers, kidney disease, bladder tumors ... the list could go on. The doctor states that there could be a table loaded with all types of vegetables and we could still be suffering from malnutrition because our bodies could not possibly eat enough to provide the missing nutriment. With the juices, the pulp is eliminated and we are left with the life-giving vital principles contained within the vegetables. It is, of course, best to use only the organically grown fruits and vegetables (those free of pesticides and preserving chemicals) for our juices. But Dr. Walker states that the detrimental toxins remain in the pulp, and this we can discard. [NL 3-5]

Juices: Celery, spinach, lettuce, orange, lemon. [NL 3-5]

General Instructions: You could change to the vegetarian mucusless diet and exercise more.

[Nightmares](#)[Nipples](#)[Nosebleeds](#)[Obesity](#)[Osteoporosis](#)[Palpitations](#)[Paralysis](#)[Parasites and Worms](#)[Pleurisy](#)[Pneumonia](#)[Poison Ivy and Poison Oak](#)[Polyps](#)[Pregnancy](#)[Prostate](#)[Pyorrhea](#)

Between meals snacks of "foods" which are processed, devitalized, and fattening can be avoided. Fats, sugar, refined cereals, ice cream, soft drinks, desserts, potato chips and alcohol can add many empty calories to your diet while your body is crying for nutriments. The saturated fat in meats, milk, hard shortening, margarine and eggs can be detrimental. Tryamine, a substance found in cheese may result in high blood pressure for some. Snacks of fruit and raw vegetables with a high water content will aid you in feeling satisfied without taking in non-nutritional items. The three-day fruit juice cleansing will eliminate toxic build-up from the system and excess weight as well. The herbal obesity formula will also help curb the appetite. One must not forget to drink plenty of steam distilled water to cleanse and lubricate the system. [NL 3-10]

[CSK](#): Dr. Christopher's Anti-Obese Herbal Food Combination: Combine this anti-obese aid with the mucusless diet and you have a winner. This is not a crash program of fast loss of weight, but graduated and accurate loss without robbing the body of the needed nutrients like so many fad diets do. This acts as a blood purifier, helps aid kidneys in relieving excess fluids, helps feed the body for relief from nervous tension generally caused by diets, helps appease the appetite, helps feed the thyroid and other malfunctioning glands and thus gains a healthier state for holding weight control. Take two or three capsules or tablets morning and night with a cup of chickweed tea. The formula is chickweed, burdock, licorice, saffron, mandrake, fennel, parsley root, kelp, echinacea, black walnut, hawthorn berries, papaya. [HHH p.187]

Chickweed: Chickweed can benefit the whole system, as it soothes and cleanses and paves the way for healing of toxicity-related problems....It is particularly noted for being an effective reducing herb; some smilingly say that any good green herb, if used generously in the diet, is good for reducing (Lev: 165), but others say that it really does remove excess fat, because it is mildly diuretic and laxative. We also think that because it supplies necessary nutrients that the obese person might be lacking; the body then releases the fat which the body has tenaciously held, thinking that it is still hungry and in need of the missing nutrients. At any rate, both in legend and in current herbal practice, Chickweed is considered an excellent reducing remedy. [NL 6-5]

## Osteoporosis

### Definition

Osteoporosis characteristically occurs in women after menopause and is presumably related to low estrogen output--the female hormone that dwindles when ovulation and the monthly periods cease. In men, fragile porous bones typically develops considerably later in life and disorder is less severe. But though the disease is associated with late middle age and old age, the process probably begins many decades earlier. [NL 1-11]

### Cause

1. One cause for osteoporosis: Dr. Harry W. Daniell reports his findings that heavy cigarette smoking appears to be a prominent factor in inducing osteoporosis. Dr. Daniell, who practices in Reddings, California, was prompted to undertake his study when he realized that most of his under 65 patients suffering from osteoporosis were habitual heavy smokers. (When it occurs before 65, osteoporosis is considered "premature".) The west coast physician and his associates then studied records from the three small hospitals in the area, coming up with the cases of 17 women who have had at least one characteristic osteoporotic bone fracture prior to age 65. [NL 1-11]

2. Another reason: Heavy meat-eaters are at risk of this condition because meat, while very poor in calcium, has a high phosphorus content. It's meateaters unbalanced high phosphorus intake, in Dr. Jowsey's opinion, that accounts for the now established fact that longtime vegetarians are less susceptible to osteoporosis than are omnivorous. [NL 1-11]

3. An increase of nitrogen loss through the urine can occur with cortisol administration. This is associated with gluconeogenesis and the trapping of amino acids at a rapid rate by the liver. In extreme adrenal malfunction, Cushing's Disease, and the use of large doses of cortisone or prednisone, the results are loss of muscle mass, decrease in thickness of the skin, and osteoporosis, which is the loss of the ossein network in the bone. [NL 2-3]

### Herbal Aids

Calcium and Trace Minerals: Currently of intense interest, osteoporosis is supposedly treated by taking extra calcium. When a woman with osteoporosis has a blood test, the calcium level is usually not low. But in order to be assimilated, calcium must be present in the body with the appropriate synergistic minerals, in particular phosphorus, which must be approximately twice the amount of calcium, and also silica. Without these minerals, and probably other trace minerals that haven't been linked to the problem yet, the body cannot absorb calcium; it just flows through the body, sometimes depositing and causing gout, arthritis, etc. The amount of calcium in the body doesn't matter; it's the balance you take in foods that's important.

For example, when people have broken bones, if their blood calcium is high and their silica low, the bones heal slowly, but if it's the opposite--with low calcium and high silica--the bones heal rapidly. [EWH p.144]

Dr. Christopher's [BF & C](#) and [Calc Tea](#) formula: Usually the right foods will provide the correct mineral balance that will naturally avoid osteoporosis. The Calc formula as well as the BF & C formula can help provide concentrated sources of minerals for those who are chronically deficient. [EWH p.144]

[Nightmares](#)[Nipples](#)[Nosebleeds](#)[Obesity](#)[Osteoporosis](#)[Palpitations](#)[Paralysis](#)[Parasites and Worms](#)[Pleurisy](#)[Pneumonia](#)[Poison Ivy and Poison Oak](#)[Polyps](#)[Pregnancy](#)[Prostate](#)[Pyorrhea](#)

**Calcium from Vegetables:** When my fingernails have become soft in the past, I have taken calcium supplements in order to harden them, without very good results. But when I am eating many raw, leafy greens, the high concentration of proper minerals harden the nails right up. [EWH p.144]

**Changease:** Dr. Christopher's Herbal Hormone Formula: Sometimes the imbalance in the system can be brought on by hormonal imbalances, so the hormone-estrogen formula can help effectively balance the hormone system. [EWH p.144]

**Apple Cider Vinegar and Honey:** If the diet is adequate and the body is still out of balance, it may be that the body is not digesting your food properly; this especially occurs later in life, when the body doesn't produce adequate hydrochloric acid for digestion. The apple cider vinegar and honey mixture--a tablespoon of vinegar and a teaspoon of honey mixed well into a cup of distilled water--taken three times a day, can correct a hydrochloric acid deficiency. [EWH p.144]

**Rejuvelac:** The intestinal flora may need replacing, which can also cause imbalance in the system. However, taking yogurt probably will not do the job, because most yogurt consists of only one strain of bacteria which, while useful, might not be the one that you need. A multi-strain acidophilus is better. Even cheaper than that is Rejuvelac, which is made by soaking one cup of wheat--previously washed--for forty-eight hours in three cups of water. Use the same seed to make a second and third batch, not rinsing the seed in between. These batches need soak only twenty-four hours. This Rejuvelac, as you can see, is really cheap, and yet provides the ferments which can help restore proper intestinal flora. [EWH p.144]

**Panc Tea:** Dr. Christopher's Herbal Aid for Pancreas and Companion Glands Formula: If the pancreas is inhibiting digestion, one can add the herbal pancreas formula to the healing routine. [EWH p.144]

**Calcium Needs:** "I would advise women to start calcium and Vitamin D supplements at age 30, or perhaps 25," says Dr. Jennifer Jowsey of the Mayo Clinic. With the average American diet, there's apparently a long term gradual loss of bone mineral exceeding the rate of mineral uptake and bone formation. In later years, when hormonal changes increase the susceptibility to osteoporosis, the skeleton has already lost a good deal of its substance. By then, because of previous loss, the rate of bone formation must not only equal the rate of bone demineralization (the normal condition) but must exceed it if bone strength is to be restored.

It is far more difficult, Dr. Jowsey warns, to induce new, compensatory bone formation than it is simply to slow down bone demineralization. Adequate calcium and Vitamin D in the diet will go far to accomplish the latter. But preliminary finds, the Mayo scientist says, indicate that lost bone will not be automatically restored by such dietary correction. [NL 1-11]

**Jumping Rope:** Dr. Carlton Fredericks has said that women with bones weakened by osteoporosis should, if they are capable of doing it, skip rope as a means of therapeutic exercise. The impact on the spine, vertically exerted, generates the electrical forces that drive calcium to the bone areas requiring reinforcement (The Carlton Fredericks Newsletter of Nutrition, July 1, 1972). [NL 1-11]

**Foods that Provide Calcium and Vitamin D:** Calcium and Vitamin D are often deficient in their diets. These can be obtained from broccoli, cabbage, kale, watercress, sun exposure, alfalfa, and cod liver oil. [NL 3-10]

### Testimonials

Over the years of practice I have had a number of patients who have had broken bones from osteoporosis. One case was a woman in her middle eighties with a fractured hip. After three months in a cast it showed no sign of healing, any more than two pieces of stick growing together. This woman was frightened because she was told that if the hip bones did not knit after putting on another cast for three months, they would cut her leg open and use stainless steel rods, bolts and nuts to make it possible for her to at least get around on crutches.

This was in the early sixties and not much comfrey was available then. The lady's daughter was in one of my classes, and we asked the students to help out by donating as much comfrey as they could. We had enough donated from the class members that the patient had from a pint to a quart

of comfrey green drink or comfrey tea each day, six days a week, week after week. At the end of this "three months," the cast was removed and the doctors were amazed, because during the first three months there was "no knitting" of the bone even evident, but with the comfrey being taken orally during the next three-month period the leg was healed. The daughter told us her mother was out square dancing within a couple of weeks after the cast was removed!

Since this case was so outstanding we have had a formula developed called "bone, flesh and cartilage."[\[BF & C\]](#) This formula has done miraculous things with broken backs, legs, hips, etc. This formula has been used on curvature of the spine, polio, multiple sclerosis, and muscular dystrophy, stroke and arthritis of the bone. This formula is used externally as well as orally and has brought tremendously fast results.

This formula is a "power house" and has been used on (and restored to health) cancer of the spine, arthritis and polio, and has helped rebuild torn cartilage and sinews, fractures, etc. etc. As you look over the constituents of each it is easy to see the strength and rebuilding power of this group of "God-Given" herbs. [NL 1-11]

## Palpitations

### Definition

An abnormal and rapid fluttering, pulsation, or beating of the heart. [SNH p.38]

### Cause

Weak heart valves having poor tone may be the cause. Fever and excitement from panic can add to the problem. The fluttering of the heart is due to weakness within the entire body system, but more specifically in the heart area. High cholesterol and dense mucoid stoppage can cause sluggishness of the blood flow. [SNH p.38]

### Herbal Aids

General Instructions: Take [Cayenne](#), wheat germ oil, and hawberry tonic. Motherwort is another specific. [SNH p.38]

Tansy: Make a decoction by simmering the herb 10 minutes, take 2 fluid ounces 4-5 times daily. [SNH p.123]

Rue: Chew 1-2 freshly-picked leaves. NEVER TAKE RUE IF YOU ARE PREGNANT. [SNH p.295]

Valerian: Valerian is powerfully antispasmodic in its effect upon the system. It is gently stimulating, very soothing and quieting to the nervous system. Valerian is an effective calmative. It influences circulation by slowing the action of the heart, while increasing its force; therefore it has been very beneficial in cases of cardiac (heart) palpitation. [SNH p.376]

Valerian: Administer hot valerian with cayenne pepper (capsicum minimum; C. fastigiatum). [SNH p.377]

Black Cohosh: Give a full dose of black cohosh infusion. [SNH p.399]

[Cayenne](#): In acute stages, repeated dosages of one to two teaspoonfuls [in hot water] every 1/2 hour (more frequently when required). [SNH p.408]

[Neuritis](#)

## Paralysis

### Definition

A rapid or partial loss of muscle function and motion or of sensation because of nerve injury or neuron destruction. A slight loss of function is called "palsy". [SNH p.39]

### Cause

Most cases of paralysis are caused by calcium deficiency. Paralysis is generally classified as incurable but no disease is incurable. The problem is due to toxic wastes in the body and it becomes essential to cleanse the body and give it tone and a positive regeneration in order to correct the paralysis. [SNH p.39]

### Herbal Aids

[General Instructions](#): Paralysis has been cleared up with cayenne alone. Correct the cause with a cleansing program and the regenerative diet. Use nerve tonics and antispasmodic. [SNH p.39]

[Paralysis of Throat](#): As an aid, chew ginger root often. [SNH p.39]

[Oil of Garlic](#): Massage garlic oil over the affected area. [SNH p.101]

[Dr. Rudgley's Formula for Paralysis](#): See formula using wood betony, rosemary, sage, juniper, senna, ginger, cubeb, sweet flag and yellow D sugar. [SNH p.391]

[Rosemary](#): When the Queen Elizabeth of Hungary was paralyzed a gnarled hermit invented Hungary water, which is a powerful distillate of Rosemary oil in alcohol. This was rubbed on her limbs and eventually cured her of the problem. Another rendition of the story is that the Queen wanted to retain her flawless complexion without going to any trouble to do so, as she spent a good deal of time working for charities. The hermit said that this formula would make "a young face exceedingly beautiful, an old face very tolerable". To make the distilled oil for Hungary water you put the flowers into a strong glass while tying a piece of fine linen cloth over the mouth. Turn it upside down into another strong glass which is set in the sun for a week or two. The oil is said to distill down into the lower glass. The Hermit's recipe is said to contain 24 tablespoons of Rosemary distilled oil, 2 tablespoons mint distilled oil, 2 tablespoons balm distilled oil, 2 tablespoons fresh lemon peel, 2 tablespoons fresh orange peel, 2 cups Rose water and 2 cups spirits of wine. This is mixed, corked and allowed to steep for three weeks before using three times daily on a clean skin, allowing to dry naturally before splashing off with cold water (Keller: 293). Grieve supplied a simpler recipe. She said that Hungary water was prepared by putting 1-1/2 pounds of fresh Rosemary tops in full flower into 1 gallon of spirits of wine. This was allowed to stand for four days and then distilled. This was used for gout as well as paralysis of the limbs. [UW-Rosemary]

## Parasites and Worms

### Definition

Pinworms, tapeworms, and roundworms are parasites existing in the intestinal tract. The three most common types of worms found in the body are: the thread or seat worms (*Oxyuris vermicularis*), the roundworm (*Ascaris lumbricoides--lumbrici*), and the tapeworm (*Taenia solium*, *Bothriocephalus latus*). There are other less-common worm types that enter the body, such as hookworms (*Ancylostoma duodenale*, *Nectar Americanus*) and those of unclean pork (*Trichinella spiralis*), which thrive upon various conditions of filth and degeneration. [HHH p.124]

### Symptoms

Restlessness at night, picking the nose, gritting the teeth, itching at anus, dry cough, etc. Worms sometimes cause spasms, fits or convulsions. [HHH p.124]

### Cause

Poor diet, poor hygiene, and constipation are usually the problem. Worms are found when the stomach is deranged from eating improper foods. Worms are the effect. The cause of the worms is improper diet--the lack of wholesome foods (do not use processed or refined foods) and heavy mucus and starchy food intake. To work on the effect and rid the body of worms is like killing the flies and leaving the garbage--which has attracted them--in the same foul condition. [HHH p.124]

### Herbal Aids

Pumpkin Seeds: A simple herbal aid for a mild case of worms is to use pumpkin seeds (*Cucurbitaceae*). It is best when fresh seeds are used. To make the infusion, steep one ounce of crushed seeds for fifteen to twenty minutes in a pint of boiling hot water. Dosage: One teacupful or more (up to one pint daily), six days a week for one to three weeks. Also eat one to two ounces of the pumpkin seeds each day. [HHH p.124]

Another "Seed" Aid is to Combine the Following:

1 part pumpkin seeds, crushed (*Cucurbitaceae*)

1 part watermelon seeds, crushed (*Citrullus vulgaris*)

1 part cucumber seeds, crushed (*Cucumis sativus*)

Dosage: Take one pint of emulsion (two ounces of seeds triturated in honey and distilled water) in doses at two hour intervals; or take one to two tablespoons of the crushed seeds in honey, syrup, etc., in three doses at two hour intervals.

The patient should fast during this treatment, then take an appropriate cathartic several hours after the last dosage such as senna tea or preferably the lower bowel formula [Fen LB]. Use this procedure at least three days in a row. [HHH p.124]

One of our Favorite Worm Formulas is as follows:

1 part pink root powder (*Spigelia marilandica*)

1 part burdock root powder (*Arctium lappa*)

1 part black walnut leaves powder (*Juglans nigra*)

[Nightmares](#)[Nipples](#)[Nosebleeds](#)[Obesity](#)[Osteoporosis](#)[Palpitations](#)[Paralysis](#) **Parasites and Worms**[Pleurisy](#)[Pneumonia](#)[Poison Ivy and Poison Oak](#)[Polyps](#)[Pregnancy](#)[Prostate](#)[Pyorrhea](#) 1 part male fern powder (*Dryopteris Filix mas*) 1 part pomegranate root bark powder (*Junies granatum*) 1 part wormwood powder (*Artemisia absinthium*) 1 part lobelia (*Lobelia inflata*)

Dose: Mix the above herbal powders together and give the child 1/2 teaspoon of the powder in sorghum molasses or honey. Take each morning and night for three days. On the fourth day, drink one cup of three parts senna tea and one part peppermint tea, wait two days and repeat, two times. [HHH p.124]

 Start feeding the child [Dr. John R. Christophers "Mucusless Diet"](#) with plenty of whole, uncracked, presoaked, low-heated grains.

Also, fruits, vegetables, nuts and seeds. By using this procedure we are getting to the cause, cleaning it up so there will be no recurrence. Be sure the child drinks at least one ounce of steam distilled water daily for each pound of body weight--32 pounds, then 32 ounces of distilled water, 100 pounds of body weight, 100 ounces, etc.

In addition to the above deworming procedures, some herbalists claim it is good to insert a peeled button of garlic into the rectum each night, six days a week, rest one day and repeat six days a week for several months (or, give crushed garlic enemas). This will strengthen the bowel area, cut infections down, aid hemorrhoid area, and assist in discouraging worms. Keep the bowel area clean always if you want a healthy happy child. [HHH p.125]

 **VF Syrup:** Dr. Christopher's Herbal Aid for Eliminating Intestinal Parasites: (worms, etc.)

This combination of wormwood, American wormseed, tame sage, fennel, male fern, and papaya is to help act as a vermifuge (a combination that will cause expulsion of worms from the body) and/or a vermicide (herbal agent that destroys worms in the body). Recommended dosage is to take one teaspoon each morning and night for three days. On the fourth day drink one cup of senna and peppermint tea (1/2 and 1/2). Rest two days and repeat two more times. [HHH p.189]

 **Vegetarian Diet:** Consider now the ways a vegetarian diet is better:

It conserves food for a hungry world

It is free from parasites and most food-poisoning microbes.

It is free from animal diseases, such as tuberculosis and cancer.

It makes for stronger bones.

It supplies plenty of protein without being in wasteful excess.

It is free from hormones, antibiotics, and much of the pesticides that are in meat.

It does not require the slaughter of other creatures.

It is conducive to healthy arteries.

It is more economical.

It is more likely to supply sufficient vitamins and minerals." (Woolsey, 1974, p. 72) [NL 2-6]

 **Chaparral:** According to Edward L. Card, N.D., of Mexico, chaparral has the ability to stimulate the liver and the intestines to clean out the toxic debris from the human system. The hydrochloric acid produced by most people's stomachs is sufficiently strong to wipe out parasites and their larvae. However, many folks have pockets of old garbage in their intestines from years of indiscriminate eating of pastry, sugar, and greasy foods. Here is where chaparral can be a great aid.

The antiseptic resin of chaparral's leaves can help the organs to remove those pockets of toxic material where parasites have enjoyed their residence for perhaps many years. As soon as the garbage and filth is removed from the intestines, the parasites have no choice but to evacuate the clean premises and look elsewhere for their lunch. [NL 3-4]

 **Walnut:** More recently some have found the walnut to be effective against intestinal parasites by taking two to three ounces of walnut oil each evening for three days. [NL 5-1] **Hazelnut:** The ancients considered the hazelnut to be the most wholesome and nourishing of

any other shell fruit. The hazelnut is the best digested of all oil-bearing fruits. It is used to destroy intestinal parasites by taking one tablespoonful of the oil in the morning for two weeks. [NL 5-1]

Garlic: Give 10-30 drops of the fresh juice or 1 teaspoon of garlic syrup. [SNH p.100]

Wormwood: Round worms (vermifuge). Take 2 fluid ounces to 1 teacup of the infusion night and morning, or take the dosage night and morning and an active cathartic every 2nd or 3rd morning; or take 10 - 30 grains of powder night and morning, followed by an appropriate cathartic as indicated; ... This will clean the worms from the stomach and leave it toned up. [SNH p.108]

Dr. Shook's Anthelmintic vermifuge: See formula using tansy, wormwood, santonica and German camomile. [SNH p.108]

Round Worms (vermifuge): See formula using wormwood, rue and peach leaves. [SNH p.109]

Worm Powder (all types of worms): See formula using male fern, senna and jalap. [SNH p.112]

Round Worms: See formula using American worm seed or Jerusalem oak, pink root and manna. [SNH p.116]

Red Oak: Pin worms. Drink 1 cupful of the infusion 3 times daily. [SNH p.139]

Hyssop: Give the tea 3 times daily before meals. [SNH p.232]

Southernwood: Worms (children). Give 1 teaspoonful of the powder (seed or herb) in molasses morning and evening; a strong decoction is excellent worm medicine, but it is nauseous and bitter. [SNH p.204]

Juices: Garlic, onion, pomegranate, apricot. [NL 3-5]

## Quinsy

### Definition

Outdated word for peritonsillar abscess. An infection of the tissue between the tonsil and the throat, usually after an attack of tonsillitis.

### Symptoms

A severe acute inflammation of the tonsil and peritonsillar tissue with swelling, fever, and generation of pus (peritonsillar abscess) accompanied by chills, fever, painful swallowing, swollen throat and tongue, and dry mouth. It may induce panic if the tightening in the throat area makes breathing difficult. [SNH p.40]

### Cause

The cause is frequently sinus drainage with mucus coming down the eustachian tubes and causing irritation. The basic cause is a dirty transverse colon, which causes poison in the sinus and head areas, which, in turn, drains down into the throat. [SNH p.40]

### Herbal Aids

**General Instructions:** Use an antispasmodic (such as lobelia) both internally and externally (wrapping the throat with a soaked fomentation). This can also be aided quickly by the use of a bayberry gargle (drinking several tablespoons every hour or so) or using mullein (three parts) and lobelia (one part) which should help draw off the toxic poison into the blood stream and disperse it quickly. Use a hot water bottle and either a poultice or a fomentation. [SNH p.40]

**Purple Loosestrife:** Use the warm decoction as a gargle; drink the decoction internally as an herbal tea. [SNH p.91]

**See formula using raspberry leaves, agrimony, horehound, barberry bark, senna leaves and cayenne.** [SNH p.148]

**See formula using sumac berries, agrimony, raspberry leaves, garden sage, cudweed, slippery elm bark, myrrh and cayenne.** [SNH p.159]

**Sage:** Use equal parts of the sage infusion and apple cider vinegar as a gargle. [SNH p.234] Infusion of garden sage. See formula using sage, distilled water and glycerine. [SNH p.234]

**Cayenne:** Dr. Christophers many Cayenne Combinations: Apply tincture of cayenne around the neck, then cover with a flannel fomentation of cayenne infusion, and drink cayenne internally. [SNH p.409]

**Juices:** Carrot & spinach, carrot. [NL 3-5]

## Rheumatic Fever

### Definition

Disease that may develop between one and five weeks after recovery from strep throat or from scarlet fever.

### Cause

When we are faced with a calcium deficiency we can develop rheumatic fever (causing a rheumatic heart and a weakened body) that can even (one day) go into polio, stroke, multiple sclerosis, muscular dystrophy, etc., etc. The rheumatic fever condition leaves a calcium weakness that can lie dormant for years and then with a new loss of calcium at some future date, can develop into one of these maladies. [HHH p.74]

### Herbal Aids

[Antispasmodic Tincture](#): ([Antsp Tincture](#)) Rub the whole body from the neck to the toes with Antispasmodic tincture. In bad cases (where the patient cannot sit up or move the arms or legs), give 1 teaspoonful of Antispasmodic tincture in a little hot water every 1/2 hour until the patient perspires freely. Keep the patient in bed and allow him to cool down; then wash him with apple cider vinegar and hot water. Give the patient 1 teaspoonful of Antispasmodic tincture in hot water every 2 hours during the first day, and every 3 hours for a few days thereafter. When the case demands, rub some Antispasmodic tincture externally, and be sure to sponge the patient with apple cider vinegar and hot water. [SNH p.363] Antispasmodic tincture: See formula using lobelia seed, skullcap, skunk cabbage, gum myrrh, black cohosh and cayenne. [SNH p.363]

[Wheat](#): Wheat has been recommended in cases of arthritis, rheumatic fever, and in some types of cancer, pulmonary disease including tuberculosis, retarded growth, anemia, and physical and emotional weakness. It is felt that the vitamin D in wheat helps in rickets and other Vitamin D diseases. One recipe for a good heart remedy is to soak a half of a cup of coarse ground wheat in a thermos of hot water over night. Eat this each morning for three months. [NL 5-1]

### Testimonials

[Cayenne](#): Our daughter-in-law who had rheumatic fever as a child and is now fighting tension and blood pressure, is also taking cayenne with excellent results. [NL 1-12]

## Rheumatism

### Definition

Afflictions of muscle tendon, joint, bone or nerve, resulting in discomfort and disability from stiffness of the joints or muscles, pain on motion, etc. In this category are often included rheumatoid arthritis, degenerative joint diseases, spondylitis, bursitis, fibrositis, myositis, neuritis, lumbago, sciatica, and gout. [SNH p.41]

### Cause

Poor elimination causes rheumatism due to toxic matter becoming stagnated in various parts of the body. Thomas Deschauer explains it thus: "Urea should be daily expelled from our body, an ounce every day. Urea, as you might know, is completely changed waste matter, and as such easily expelled. Now if the process of turning the dead tissues into urea is incomplete--it forms uric acid. Certain foods and drinks cause the urea to be left unfinished. Or if the urea is hindered or stopped to be expelled, it also returns into the system and forms uric acid. This can be done by stopping perspiration, by cooling off quickly, by neglect of proper bathing, changing of underclothing, inhaling urea at night while sleeping in ill-ventilated room, etc. Avoid all these things if you want to get well. Some persons have what is known as the uric acid habit, that is, the waste matter does not break down completely. This tendency is due to an extremely abnormal and diseased condition of the blood." [SNH p.41]

### Herbal Aids

General Instructions: Relief of Rheumatism can be helped rapidly by a cleansing program and by the use of burdock root tea, with the burdock root and leaf fomentation (on the painful areas). Use apple cider vinegar and honey to cut the toxic wastes loose and expel them from the body. Use MCP pectin (tsp. three times a day) in water (it tastes like weak lemonade), or chaparral tea (three times a day, a teaspoon to the cup). The bowels and urethral tract should be kept open. A stimulant diuretic for the kidneys will aid in waste elimination and a diaphoretic should be used to assist in eliminating through the skin. [SNH p.41]

Chronic Rheumatism: Use the chronic rheumatism infusion in teaspoonful dose alone or the extract as indicated; or in the infusion in compound with black cohosh (*Cimicifuga racemosa*) and wintergreen (*Gaultheria procumbens*). [SNH p.61 Chronic rheumatism: See formula using poke berries, elder berries, sumac berries and blackberry. [SNH p.63]

See formula using burdock root, yarrow, buckbean, meadowsweet, raspberry leaves, barberry bark, licorice and cayenne. [SNH p.68]

See formula using burdock root, yarrow, cleavers, figwort, angelica and ginger. [SNH p.69]

Chaparral: Drink the tea (infusion for 3 weeks), after which the capsules or tablets may be used. [SNH p.71] Chaparral tea (not bitter). See formula using chaparral, elder flowers and peppermint. [SNH p.71]

Rheumatism: Use the strong decoction. [SNH p.73] Strong glycerodecoction of Oregon grape root: See formula using Oregon grape root, distilled water and glycerine. [SNH p.74]

Sassafras and Sarsaparilla: Drink an infusion of equal parts sassafras and sarsaparillas (*Smilax ornata* and 1/2 part *Guaiacum officinale*). [SNH p.79] Infusion of sassafras bark: See formula using sassafras, glycerine and distilled water. [SNH p.80]

Tumors

Wormwood: Apply fomentation of the herb; or, use the oil as a liniment. [SNH p.108]

Typhoid

See formula using turkey rhubarb, guaiacum gum and cayenne. [SNH p.187]

Ulcers

Boneset: Give in small, tonic doses- this is one of the best known remedies for this problem. [SNH p.225]

Uterus

Blue Cohosh: Use the warm decoction. [SNH p.292] Decoction of blue cohosh: See formula using blue cohosh, distilled water and glycerine. [SNH p.292]

Varicose Veins

Fomentation: See formula using mullein, lobelia and cayenne. [SNH p.318]

Vertigo

Compound Lobelia Capsules: See formula using lobelia powder, lobelia seed, cayenne, acacia vera and anise seed. [SNH p.364]

Vomiting

Strong Decoction of Wild Yam: See formula using wild yam, distilled water and glycerine. [SNH p.403]

Warts & Moles

Cayenne is used in nearly all fomentation, plasters, and poultices where speed is necessary, or where quick relief (as in arthritis, rheumatism, bursitis, sore muscles and those types or cases) is necessary. [SNH p.408]

Whooping Cough

Liniment: See formula using cayenne, lobelia, oil of wormwood, oil of rosemary and oil of spearmint. [SNH p.411]

Worms

Liniment for Rheumatism: See formula using prickly ash and olive oil. [SNH p.427]

Yellow Fever

Externally for Rheumatism: See formula using myrrh, cayenne and echinacea. [SNH p.456]

How to Use and Make a Fomentation: Here soak the cloth or Turkish towel application to be used in the herbal compounds that have been prepared in decoctions or infusions or in castor or olive oils, emulsions, essences, fluid extracts, spirits, tinctures juices, onions, garlic, carrots, etc. Here many types of oils are used hot: oil of wormwood, sassafras and peppermint make a very good combination for rheumatism, arthritis, sore joints, muscular spasms, and muscular soreness from exercise you are not accustomed to, and a fomentation with ointment is used occasionally in specific cases. The effectiveness of the fomentation can be speeded by using a hot water bottle during the warm application and alternating this with a cold application in many cases is very beneficial, following again with a hot one. The method to be used will depend on the type of problem, but specifically in sprains and sore muscles, the alternate hot-and-cold applications are very excellent. Generally, fomentation are covered with oiled silk, plastic, or wax paper, and a hot water bottle placed over this to keep the application warm, changing periodically when the potency and value of the tea itself has been absorbed out of the toweling. For a glandular swelling, the preferred procedure is a hot fomentation--always with moist heat. In case a hot water bottle is unavailable, then wrap a hot, wet Turkish towel around heated bricks or rocks, or use an electric heating pad (be sure here that there is no danger of an electrical short, however)--for as long as there is moisture between the body and the dry heat, then it is safe. Along with the fomentation, an internal tea used in combination with the external aid will greatly facilitate the healing process. [SNH p.500]

How to Take an Herbal Bath: For hydrotherapy, we oft times use decoctions, infusions, tinctures, dry powders, etc. in the water to bathe in using herbs (such as ginger, cayenne, mustard, and others). We also use foot baths and/or hand baths in heated apple cider vinegar for arthritis and rheumatism. [SNH p.500]

Steam Baths: One of the most important procedures of water therapy are the steam or sweat baths, and these will bring the poisons out of the body wonderfully. There are various types of steam baths, and these are all very valuable, very invigorating and health giving. This therapeutic procedure is recommended for help with arthritis, asthma, bursitis, colds, flu, hay fever, neuritis, pneumonia, rheumatism, sinusitis, stiff joints, etc. Someday, I hope to see a steam cabinet in every home (not a chicken on every plate and a car in every garage). In sweat therapy, we also have the [Cold Sheet Treatment](#)--a positive remedy for colds, flu, and pneumonia--which can be effectively used even in advanced and chronic cases. [SNH p.502]

Clean Out the Bowel: A condition of sciatic rheumatism will always develop where the sigmoid portion of the lower bowel becomes congested, and the toxic poisons from the bowel

subsequently flow into the adjacent area, irritating the nerves controlling the sacroiliac and, in turn, throwing it out of place--and so goes the vicious cycle! Hence, a periodic purification and cleansing of the lower intestinal tract is very important. This is your sewage system--and when the eliminative function is efficient and clean, you do not have to worry about sluggishness or toxification in the system. [HHH p.131]

[AR-1](#): Dr. Christopher's Arthritis and Rheumatism Formula: This combination consists of yucca, hydrangea root, Brigham herb, chaparral, lobelia, burdock root, sarsaparilla, wild lettuce, valerian, wormwood, cayenne, black cohosh, and black walnut. Here is a combination of herbs that helps the body to detoxify; act as a solvent for the accepted but not assimilated calcium deposits; herbs that help relieve pain; herbs rich in new acceptable organic calcium that can be assimilated and useful; herbs that help kill fungus and infection and that have the ability to help give wonderful relief. This relief is not immediate because here is a long rebuilding job--gradual relief can come, and full healing, if the program is followed faithfully: a cup two or three times a day (two tablets or capsules in Brigham tea or steam-distilled water).

Use as a hot fomentation over extremely painful or crippled areas (in addition to this formula), [BF & C](#): Dr. Christopher's Bone, Flesh and Cartilage Formula. Even though one uses these aids yet continues on with improper diet, one may get some help, but not so much as going all the way. Remember the teachings for years have been -- "No healing in this condition." We are giving you hope if you will follow through with these formulas and the mucusless diet. [HHH p.194]

Hyssop: Some have used it externally for rheumatism, being an old country cure for that complaint, both internally and externally. Hyssop baths have sometimes been used for this cure, although you would have to have a large growth of the plant in your herb garden. It is commonly used in perfumery and in the brewing of liquors. [UW-Hyssop]

Kelp: Kelp can be of great help in arthritis and rheumatism. These are due to an excess of certain acids in the system, and are usually associated with faulty kidney function plus a deficiency of the sodium salts. Orthodox medicine treats this problem with massive doses of sodium compounds to counteract acidity. Unfortunately this overdosing ruins the digestion and the kidney functions; arterial disease may also result. Sufferers from these conditions should limit their intake of acid forming foods, such as sugar, white flour products, and overcooked foods. They should eat plenty of fresh fruits and vegetables--and Kelp--which will help de-acidify the system and provide the necessary salts as well. [UW-Kelp]

Onion: For rheumatism accompanied by shooting pains, bran is boiled in water and the painful part soaked in the solution for fifteen minutes just before bedtime. As soon as the soaking is ended, several onions are separated into leaves and spread on the affected area and bound with a cloth. In the middle of the night, remove the poultice and wash the affected part, replacing the poultice until morning. This is repeated until results are obtained. [UW-Onion]

Gravel Root to Dissolve Minerals: This herb is a natural solvent for inorganic minerals such as calcium and other unwanted inorganic accepted but not assimilable substances. Dead inorganic calcium is accepted into the body but cannot be assimilated. No mineral can be assimilated into the human body unless it has gone through the process of osmosis through plant life (herbs). When an inorganic mineral is accepted into the body it is accumulative and continues to build up. This build-up can cause arthritis, rheumatism, kidney stones, gall stones, hardening of the arteries, cataracts, etc. This "building up" process must be reversed, so here we have an herb such as gravel root that will act as a solvent that will leach off dead inorganic calcium and other minerals in the same state. However, it will not have any influence on live organic minerals that can be assimilated directly into cell structure through the "delivery-system" of the blood stream. A true solvent, such as solvent herbs or steam distilled water acts as a magnet. The magnet will pick up dead inorganic iron and other metals but will not pick up wood, paper or higher vibrating materials. The solvent herbs or distilled water will pick up and leach off dead inorganic minerals, but will not vibrate to live organic minerals that have gone through plant life and can be assimilated into the body's cell structure. Dead, inorganic calcium is the type of material we want to get rid of, because this type of calcium can do us only harm. Some people panic--"What can I do to replace the calcium being leached out?" If you replace what you have just leached out it would be like cleaning out a garbage pail, and then replacing it with more of the same! Instead of doing this, let's replace the dead calcium by putting in a good organic usable calcium. To do this we have included into this formula oak bark, an astringent which is also high in live, assimilable

calcium. [NL 1-8]

Juices: Celery & cucumber, carrot, apple, lemon. [NL 3-5]

Calcium Buildup: Dr. D. C. Jarvis, M.D. ...noted that Vermont folk medicine, although they did not distinguish between arthritis, bursitis, rheumatism, gout, osteoarthritis, etc., they were successful in treating all these diseases with two teaspoonfuls of apple cider vinegar and two of honey in a glass of water three times a day. They felt that arthritis treatment began in the stomach where the acid balance prevented putrefaction of food. (Bacteria will not grow in an acid medium.) These bacteria guard the door to proper assimilation of nutriment in the stomach and intestine. One of the body's chief necessities is calcium. If the calcium balance is off, the results will be seen in many ways. There will be frayed nerves, inferior fingernails and hair, and other disorders including susceptibility to infectious diseases and arthritis resulting from altered body chemistry. Calcium enters into solution in an acid medium. The apple cider vinegar creates an acidic medium which is capable of dissolving excess inorganic calcium--even if it is in the form of arthritic deposits in the joints. [NL 3-11]

### Testimonials

1. Dr. Christopher's Rheumatism Flareups: During the process of cleansing and rebuilding your body, you can expect what is called a cleansing crisis. Your symptoms may all flare up; you may feel bad all over; you may feel like you have the flu. Just keep going, the cleansing crisis will pass, and you'll feel better than ever. Dr. Christopher used to have recurrent flareups of his rheumatism and arthritis; for a week or two every seven years he would have to go back to his wheelchair. He accepted these crises, as hard as they were to live with, and continued on with the business of cleansing and building. [EWH p.187]

2. Poke: The berries are used as a remedy for relieving the pains of rheumatism and arthritis. The tincture is used for this and it is borne out by Western use. One woman suffered intense pain from arthritis so much that she dreaded the winter months that would bring dampness, cold, and pain. She started taking a teaspoon of Poke berry tincture in a small glass of water twice a day and this completely cured her rheumatism (Luc:Secrets:106). [UW-Poke]

## Shock

### Definition

An abnormal condition that occurs when not enough blood flows through the body.

### Symptoms

A state of profound depression of the vital processes from various causes from emotional trauma to injury which reduces the blood pressure and venous return, thus impairing circulation which may cause irreversible circulatory failure and eventually death. [SNH p.44]

### Cause

Bad news or an automobile accident will bring on shock sufficient to weaken the body and bring on the problem. With perfect body function, a shock would not have this effect. It could cause a disquieting moment, but the body system would not undergo the extreme shock. The shock is greater when the person is not well. [SNH p.44]

### Herbal Aids

General Instructions: When a person goes into shock, the administration of medicinal aids orally will often be difficult or impossible. In this case an anus injection (or enema) which will cause relaxation is applicable. Use one cup (to a pint maximum) of catnip, peppermint, skullcap, spearmint, or valerian. Massage the abdomen and parts of the spine with lobelia externally and make sure that the patient gets undisturbed rest. Cayenne should be taken internally to help equalize the blood pressure and insure that the internal functions will remain stabilized during the intense systemal distress. [SNH p.44]

Caused by Hemorrhaging: Hemorrhage throws many people into shock and can bring on death very rapidly. If the wound is small, the blood usually coagulates and the area seals itself, but if the rupture is large, some herbal aid is needed. The first thing one should think about is cayenne as quickly as possible. Using one teaspoon to the cup, as hot as can be taken without scalding. This will help stop any hemorrhage, internal or external, by the time a person can count to ten. If the rupture is external and cayenne is not available, comfrey placed over the wound will stop bleeding quickly. [SNH p.30]

Blue Cohosh: Nervous exhaustion due to shock or accident. Use the warm decoction. [SNH p.292] Decoction of blue cohosh: See formula using blue cohosh, distilled water and glycerine. [SNH p.292]

Shock, Collapse, Prostration: See formula using myrrh, cayenne and echinacea. [SNH p.456]

Shock Tea for use During Labor: Be sure that you have cayenne, vinegar, and honey for the shock tea. Even if you do not tend to shock, it will warm you up and give you energy. [EWH p.70]

More General Instructions: Follow the standard first-aid techniques for shock, keeping the patient quiet and warm, and giving liquids if possible. The herbal shock formula, containing one cup of warm water, 1/8 cup honey, one tablespoon apple cider vinegar, and one teaspoon cayenne, works reliably to help bring a person out of shock. The Bach Flower Rescue Remedy works quickly, though subtly, for shock. Massage the feet and hands to help bring circulation to needy areas of the body. [EWH p.161]

[Tumors](#)

[Typhoid](#)

[Ulcers](#)

[Uterus](#)

[Varicose Veins](#)

[Vertigo](#)

[Vomiting](#)

[Warts & Moles](#)

[Whooping Cough](#)

[Yellow Fever](#)

[Skullcap](#): In addition to its nerve building properties Skullcap is also an antispasmodic. It stops the shaking of St. Vitus' dance, palsy, convulsions, fits and even epilepsy, which is often a result of nervous exhaustion. It will help a person who has chronic twitching of the muscles or eye blinking. In cases of trembling due to shock it will quiet the nervous system and relieve the symptoms. [UW-Skullcap]

[Valerian](#): In mild cases of mental derangement, especially when caused by nervous shock of strain, in nervous atony, simulating paralysis, it is excellent. [UW-Valerian]

## Skin Problems

### Definition

[Acne](#), [boils](#), [bruises](#), [burns](#), [sunburns](#), [eczema](#) etc.

### Herbal Aids

**Poke Root:** Poke root is excellent for all skin problems...Both the root and the tender leaves make an excellent spring tonic, and the tender leaves may be used as greens for the dinner table (boiled in two waters). Poke root has a slow, but persistently powerful action. [SNH p.59] More on Poke Root: The skin is an indicator of toxicity in the body. Poke is a good herbal aid for skin problems. It is also good for "the itch" in cases of scabies. Anytime you have skin which doesn't eliminate properly along with vitiated blood, you can well use Poke. It is said to be a great eliminator of toxins out of the system (Hut:36). Usually the glands are not performing properly in these conditions so the herb works on both areas. It is often used in chronic eczema, syphilitic eruptions, psoriasis, varicose veins and leg ulcers (Felk:1473). Mixed with iris it is used in boils, carbuncles, skin abscesses and all ulcerations of outlets of the body. It helps relieve the pain of burns and promotes rapid healing. For skin problems it should be used internally and externally (Felk:1473). [UW-Poke Root]

**European Pennyroyal:** Make an apple cider vinegar tincture with the freshly bruised herbs apply as a fomentation outwardly and drink internally. [SNH p.284]

**Sun:** Helios-therapy on the skin is very important, as the sun is the Great Doctor of all times. But this therapy must always be done with caution because the sun (though being a healer) is like fire, which can either provide gentle warmth or it can burn a city down. The sun will help heal where medicinal aids, herbs and other procedures are slower. In many instances, it will help bring skin cancer to the surface; and various other skin problems (such as acne, eczema, etc.) are beneficially aided by bathing in the sun. The internal use of tea of other herbal aids are often an herbal wash before the sunbathing are congenial and excellent. When there is moisture in the body, the sunbathing is much more beneficial--for instance, burdock seed and burdock root may be used internally (which work on the lymphatic and oil glands of the body), while at the same time using sun therapy for the outside. Indiscreet exposure can cause third-degree burns, shock, and death. The light-skinned individual must be most careful, but even a person with dark skin can get a very heavy burn. Helios-therapy is used on bright days, but we do advise against sunbathing at midday, between the period 11-1, when sun might be quite toxic to the user. A blonde person who has never done sunbathing before should never be out over one minute on the first day, adding a minute each day. This should be measured by stop watch or clock, and accuracy is important, because the feel of the sun is so luxurious that one will desire to stay in it just a little bit longer, and that can cause serious trouble. This may not sound like very much, but within thirty days a person can be sunning up to an hour total time! Brunettes can often start with two minutes front and two minutes back without any injury at all, and add four minutes a day. A person who has been sunbathing years before and has sunbathed regularly each season may start with a little more, five minutes front and five minutes back for the brunette, and two minutes front and two minutes back for the blonde. If done gradually and judiciously, this can give power to the body. The propaganda in daily newspapers and national publications each year (although promoted often by people with doctoral degrees) stating that "the sun causes cancer" is as ridiculous as saying "the tonsil is poisoning the whole body"--actually it is the putrid condition of the body that is poisoning the tonsil, or the skin! All the sun does is to ripen and bring the cancer that is already there to the surface, wherein the waste matter can slough off, so that the body may

[Tumors](#)[Typhoid](#)[Ulcers](#)[Uterus](#)[Varicose Veins](#)[Vertigo](#)[Vomiting](#)[Warts & Moles](#)[Whooping Cough](#)[Worms](#)[Yellow Fever](#)

heal. This is why we must work inside the body with herbs, as well as outside the body with the sun, which will harmoniously speed the curative process and eliminate the problem so there is no recurrence. [SNH p.502]

**General Instructions:** Skin problems, use a fomentation over the irritated area made with chickweed tea and/or plantain, burdock root, Oregon grape root, and echinacea--covered with plastic. Or bathe the area with the tea a number of times during the day. Chickweed or plantain ointment is an aid for small outbreaks. Drink a cup of the tea two or three times or more a day. To each cup of the tea you drink add three to six drops of tincture of lobelia. [HHH p.68]

**Chickweed Ointment:** Dr. Christopher's Chickweed Ointment: This is made of chickweed herb and bees wax and oils. Excellent for eczema and/or other skin infections, sores, burning, itchy skin or genitals, swollen testes, acne, hives, also for ulceration of mouth and throat. This is a wonderful skin ointment. [HHH p.196]

**Gotu Kola:** The extract has been much-used to treat wounds and other skin problems, such as tuberculosis and leprosy. It's said to work marvelously in these complaints. It has been laboratory proven to help prevent infections, and so far has been shown to be absolutely safe. It can treat depression and mental weaknesses; many claim that it is a marvelous memory herb. If one takes too much of the herb, they will experience headache and stupor; thus, one must regulate one's personal dosage. [UW-Gotu Kola]

**Yellow Dock Combination:** Dr. Christopher's Yellow Dock Combination: Yellow dock along with burdock is noted as a blood purifier, especially helpful in cleansing the related lymphatic system. Because it helps clean the blood, it is also excellent for skin disorders. Its reputation as a blood purifier began in the nineteenth century when it was included in various preparations sold for the purpose and especially recommended for eruptive diseases such as scrofula and for skin problems generally. It is said to be effective for the heart and for impurities of the blood. It is recommended for toxic conditions of the blood and glandular system, especially when discharges are experienced, as in running of the ears, ulcerated eyelids, and skin conditions (Hut:315). There are various combinations recommended for blood purifiers. You can make the simple infusion, allowing to steep for thirty minutes, or you can combine with equal parts of red clover tops, Brigham tea, burdock and figwort, making 2 quarts of tea and reducing it down to one quart. Combine yellow dock, burdock, sarsaparilla and echinacea for an excellent blood cleanser, particularly good in treating post-adolescent skin acne or eruptions related to the menstrual cycle. It will help clear up eruptions on oily skin of the neck and back (Tie:166). [UW-Yellow Dock]

**Elder Flowers:** A bag of Elder flowers steeped in the bath water makes a refreshing bath for nerves or skin problems as recommended by a French doctor. [NL 4-10]

**Chickweed:** Chickweed is an excellent herb for skin afflictions. Used historically for abrasions, eruptions, itching, hives, inflamed surfaces generally, and even cancerous sores, you can bathe the surface of the skin with Chickweed tea or foment it with a cloth of natural fibers--never man-made, changing the application if it dries; you can cover it with plastic and leave it on all night as well. For immediate first aid for a wound or other skin problems, the very best application is the fresh herb, washed, crushed, and applied directly to the area, holding it in place with a bandage, or, according to some of the old-time herbalists, better covered with a large washed leaf of cabbage, lettuce, or beet and then covered with a cotton bandage. This application should be changed every three hours, or when it shows signs of drying out, applying a fresh poultice each time. When removed, it will be very hot and filled with the impurities which it has withdrawn. These "used" herbs should not be given to animals to eat, as they will absorb the toxins contained therein; discard them in an active compost pile or in the garbage. [NL 6-5]

### Testimonials

**Feeding His Own Skin Problems:** While serving in the army during World War II, we had a soldier come to us with a bad case of boils under both arms. We lanced and treated them as usual, but in a week or so he was back with another crop. When questioned about it, he said that he had been plagued with the problem all his life. I asked him if he wanted to rid his body of the boils, and he said he did. So I gave him a prescription, to the mess sergeant (not to the druggist): no

fried foods, no milk, no meat, no potatoes, no soft drinks, but all fresh fruits and vegetables. Needless to say, the boils promptly cleared up and he had no recurrence of them. So these types of diseases must be treated by clearing up the blood stream and keeping it clean if healing is to be realized. [SNH p.69]

## Smallpox

While researching Smallpox to add to HerbalLegacy, we repeatedly found conflicting information. Some sources said that smallpox is not a contagious disease, and other sources said it was a highly contagious disease. All sources expressed concern about the safety of the smallpox vaccine.

For those who are worried about the possibility of exposure to smallpox due to the recent terrorist acts against the United States, there is some good news. Unlike pulmonary [anthrax](#), which is fatal, the majority of smallpox patients survive. When smallpox cases were rampant, knowledge of disease and medical treatment was dramatically different than today. A number of eruptive diseases such as measles, chicken pox, scarlet fever etc. were regarded as smallpox before Dr. Sydenham differentiated between the various symptom-complexes. We do not have accurate numbers as to how many cases were actually smallpox! In addition, how diseases were treated in those days compared to how disease is treated today is astounding. Under the conventional medical treatment at the time, patients were drugged heroically, bled profusely, were smothered in blankets, wallowed in dirty linen, were allowed no water or fresh air. While we might have to agree that patients continue to be “drugged heroically” today, patients are no longer bled, they have fresh bedding, and we give them fluids and fresh air. In addition to these treatments, the patients were often given milk, brandy or wine. They were given Antimony and Mercury in large doses. We have since learned that Mercury is toxic to the body. Perhaps the cure killed off more patients than the disease did! Fever patients were put into vapor bath chambers in order to sweat the impurities out of the system, but they were given no fluids! Anyone who has studied the Dr. Christopher Method knows that hot baths can do wonders, but you must give the patient fluids! You must replace what is removed! When these poor souls would cry for water, they weren't given any, and when they were gasping for air they were carried to a dry-hot room and after a while were returned to the steam torture. Many must have died of Heat Stroke. Remember, “a wet fever heals, a dry fever kills.”

Smallpox appears to have originated after the collapse of the Greek and Roman Empires. These empires were well known for their high standards of health and cleanliness. A disease resembling smallpox devastated Africa and Asia, but the great “pagan” civilizations were spared. Why? Perhaps it had to do with their public baths, gymnasia, solaria, athletic stadiums, municipal water supply, drainage, toilet facilities, well-aired, sunny, spacious and clean living quarters, garbage disposal, simple, natural and unspoiled foods. The sanitary conditions of the towns and cities of Europe were nowhere near as high as that of the Roman and Greek Empires. According to Montgomery's English History, the streets of London and other cities were rarely more than twelve to fifteen feet wide and were neither paved nor lighted. There were pools of stagnant water accumulating everywhere, heaps of garbage piled everywhere, and only removed when it began to obstruct the traffic. There was no sewage and dead dogs, cats, rubbish, rotten vegetable and fruit refuse, human and animal excreta, and slops from the kitchen were all thrown into the streets. This sounds like prime breeding ground for a variety of diseases. These were the conditions in which the bubonic plague thrived! The cities were surrounded by high walls, and could not expand so people were forced to live in a slum-like manner. There were holes for windows, which provided little or no ventilation. Entire families slept in one room—often in one bed—and hundreds of people would live in one building! The people rarely washed, they had no bathtubs, seldom had underwear and wore the same clothes day and night. They lived in utter poverty,

[Tumors](#)[Typhoid](#)[Ulcers](#)[Uterus](#)[Varicose Veins](#)[Vertigo](#)[Vomiting](#)[Warts & Moles](#)[Whooping Cough](#)[Worms](#)[Yellow Fever](#)

working long slave-like hours (even the children), drank heavily of alcohol, ate spoiled, unnatural food and suffered from malnutrition. The wealthier classes fared only slightly better.

With time, these conditions changed. Sewage systems were developed, bathing became more popular, and people stopped dumping their trash in the streets. Dr. John Tilden said "There is no question but that perfect sanitation has almost obliterated this disease, and sooner or later will dispose of it entirely. Of course, when that time comes, in all probability the credit will be given to vaccination." This came to pass in 1977, when the World Health Organization declared that smallpox had been eradicated from the earth. This statement, however, is misleading.

The last naturally occurring case of smallpox occurred October 26, 1977 in Somalia. All cases since then have been caused by laboratory exposure, or vaccination. WHO should have said that there have been no naturally occurring cases of smallpox since 1977. They cannot claim it has been eradicated because it exists in laboratories! Also, the monkeypox virus differs from smallpox by only a slight difference in the protein structure. And, as has been done before, there is a suspicious discrepancy in the number of smallpox cases. Many more deaths have been attributed to the measles and chickenpox in the years of the smallpox decline. There have been several cases of diseases that were most likely smallpox, but were listed as eczema. This could be an attempt to cover up the fact that smallpox was not eradicated, as the World Health Organization claimed. This does not mean that WHO is trying to cover anything up—it just looks a little suspicious.

### **Symptoms:**

Initial symptoms include high fever, fatigue, and head and back aches. A characteristic rash, most prominent on the face, arms, and legs, follows in 2-3 days. The rash starts with flat red lesions that evolve at the same rate. Lesions become pus-filled and begin to crust early in the second week. Scabs develop and then separate and fall off after about 3-4 weeks. The majority of patients with smallpox recover, but death occurs in up to 30% of cases.

### **Cause:**

Smallpox is caused by the variola virus. The incubation period is about 12 days (range: 7 to 17 days) following exposure. Smallpox is spread from one person to another by infected saliva droplets that expose a susceptible person having face-to-face contact with the ill person. Persons with smallpox are most infectious during the first week of illness, because that is when the largest amount of virus is present in saliva. However, some risk of transmission lasts until all scabs have fallen off.

Walene James: "Dr Campbell discovered smallpox was caused by the bite of a bedbug...and the degree of severity of the disease was directly proportional to the cachexia (general ill health and malnutrition) of the patient...He spoke of "scorbutic cachexia" relating it to scurvy, "the disease caused by lack of green food" and said "the removal of this perversion of nutrition will so mitigate the virulence of this malady as positively to prevent the pitting or pocking of smallpox." (Immunization p54. Bacteria Inc by Cash Asher 1949).

"There is no question but that perfect sanitation has almost obliterated this disease, and sooner or later will dispose of it entirely. Of course, when that time comes, in all probability the credit will be given to vaccination." -- [John Tilden MD](#)

"Smallpox...is a filth disease, that its microzymas grow in morbid soil only and that the smallpox eruptions are a sign of rapid elimination of hereditary and acquired disease traits. " -- Henry Lindlahr M.D.

"Noticing the class of people among whom the disease is most fatal, I was led to the conclusion that the cause in most cases was dirt, and that vaccination was powerless to prevent it. I found that where there was most overcrowding there smallpox was most prevalent. The worst case I have ever seen occurred three weeks after re-vaccination." -- Dr Allinson

"I am myself perfectly convinced that all zymotic diseases arise from and are intensified by unsanitary conditions and surroundings; that the abolition of the latter is the only radical method of stamping out this class of disease, that to put out one by a special prophylactic, while the conditions which produce all abound, is as illogical as it is impracticable; and that further, when that prophylactic is fraught with risk which, though it may be small, is yet not certainly avoidable, compulsory vaccination becomes cruel as well as ineffectual." -- Dr Collins

**Treatment:**

Many of the sources we checked while researching smallpox said that there is no treatment. They said that all you can do is administer the smallpox vaccine and treat the secondary infections, such as gangrene. Dr. Christopher said "There are no incurable diseases, there are only incurable people." So we checked to see what Dr. Christopher would do for smallpox. In his books, School of Natural Healing and Herbal Home Health Care, Dr. Christopher mentioned several herbs that would help with smallpox. These herbs are: Garlic, Bistort, Black Cohosh, Goldenseal, Hyssop, Lobelia, Pennyroyal, Tansy, Tormentil, and Yarrow. In addition, the [Anti-Plague formula](#) would be an excellent formula to use, as it boosts the immune system and has anti-viral properties. In addition, the lower bowel tonic would play a big part in the program in that keeping the bowel moving is extremely important in all health issues.

**Herbal Aids:**

Tansy: Use the infusion or decoction as a wash, etc. [SNH p.123] Infusion of tansy: See formula using tansy and distilled water. [SNH p.124]

Natural Cleansing of the Body: It is alarming to hear a mother say, "When my child was breaking out with chicken pox (measles, or some other childhood disease), he was given some suppressive medication, and only two or three small spots broke out on his body." Here, unknowingly, the parents have gone against nature's procedure for cleaning out the toxins of the body. They have locked in the harmful condition, which may give the body trouble, perhaps many years later. [HHH p.21]

General Instructions: Give the child a warm catnip tea enema. Herbal teas such as catnip and peppermint, pleurisy root and catnip, red raspberry leaf, and yarrow or pennyroyal, elder flowers and peppermint with vinegar and water will relieve the itching. Also, bathe or sponge skin with tea made of burdock root, golden seal and yellow dock root in case of severe itching. [HHH p.50]

More General Instructions: The proper program is to cleanse the body and to follow the program of moist heat and bring out a good showing of the pox. Use the following instruction for all types of high fever diseases. (See aids to fevers and their causes, appendix D.) [HHH p.170] If the child is slow in breaking out, give him a good hot (warm) bath. Have him drink lots of liquids throughout the day -- fruit and vegetable juices, lemonade sweetened with honey (no sugars), and fruits. If this program is followed, the disease should follow a mild course with little discomfort. [HHH p.50]

Skin Eruptions: When rashes and pus eruptions of disease break out on the body, do not stop them. This is poison in the body that should be released. Keeping the skin from breaking out is again defeating nature's efforts for a complete healing and housecleaning. The larger the breakout of rashes (chicken pox, measles, etc.) the better off the child! If the body is in a fairly clean condition and you follow these suggestions of natural therapy you may see that the rash is not as heavy as you might expect -- because there was not that amount of toxic waste to eliminate. In other cases the body can be well covered with the dermal or dermatitis breakout.

There is nothing to fear as long as you are willing to work with nature. [There is much more information about skin eruptions in the appendix on p. 174.] [HHH p.174]

Yarrow: If you give the tea to children during the early stages of eruptive diseases, such as measles, chicken pox, smallpox, etc., the tea will help the disease to break out more quickly and thus shorten the time. Dr. Christopher recommended a mixture of Yarrow, pleurisy root and lady's slipper (or skullcap) for the measles.

Anytime there is a fever, no matter what the disease, Yarrow can help break it and bring the disease to a speedier ending. [UW-Yarrow]

Vinegar: A child suffering from the itch of chicken pox or measles can be sponged with a solution of 1/2 apple cider vinegar and 1/2 distilled water. [NL 4-7]

General Instructions: This disease must be brought to the surface through the skin as rapidly as possible. Diaphoretic herbs such as yarrow and raspberry leaf are excellent. Use vapor baths (such as ginger, mustard and cayenne), which bring the toxic wastes to a head quickly. Moisture

is required or the organic calcium will turn into inorganic calcium because of the feverish dry body heat, which causes further tissue damage. [Rheumatic fever](#) is often the aftermath of diseases such as chicken pox and measles. Take care of the bronchi and the eyes. Avoid bright light, since the eyes are weak at this time. The bowels should be kept open with the lower bowel tonic [Fen LB](#). A catnip enema is soothing and beneficial. Ripe fruits will assist in the cleansing process. [SNH p.36]

**General Instructions Especially for Children:** If the child is slow in breaking out, give a good hot bath. It is important to clean out the bowels, so give the patient a warm catnip (tea) enema each day. Put him to bed and give a tea made of equal parts of yarrow, pleurisy root and lady's slipper (use valerian root or catnip if lady's slipper is unavailable). Give this tea freely to produce perspiration which will also lower the fever. (Red sage, red raspberry leaf or chamomile teas are also excellent for a patient with measles.) Also, a pleasant herbal tea made of equal parts catnip, raspberry leaf, peppermint leaf, can be given freely throughout the day. It is best to keep the room dark so that the eyes will not become irritated. In the event the child's eyes do become sore, bathe them two or three times a day with a solution (tea) made of equal parts of eyebright, raspberry leaf, and golden seal. If the child complains of itching, bathe or sponge the skin with a tea made of yellow dock and burdock root and/or golden seal. Adding a little apple cider vinegar to a tub of bath water is also helpful. Guard the patient against bronchial troubles and earache and have him drink plenty of liquids (distilled water, herbal teas, as recommended, and fruit juices). The diet should be simple--plenty of fresh ripe fruit, fruit juices and fresh vegetable juice. One very good combination is carrot juice with celery, spinach and parsley juice added to taste. [HHH p.105]

**Bistort:** Bistort decoction, powder, etc., is very cleansing, astringing and toning; also combine equal parts with red raspberry leaves (*Rubus idaeus*). [SNH p.162]

**European Pennyroyal:** Give the infusion in teacupful doses, repeated frequently (every 1-2 hours), and when the herb is unavailable, 1-3 drops of the oil in warm water is excellent. Pennyroyal has an agreeable and warming influence on the stomach, and its diaphoretic and stimulative action recommends it highly for feverish conditions, bronchial congestion, eruptive diseases (measles, smallpox, etc.). [SNH p.283]

**Golden Seal Wash:** Use as a wash the formula using golden seal and linseed oil. [SNH p.439]

### **Vaccination:**

Vaccination against smallpox is not recommended to prevent the disease in the general public and therefore is not available. Routine vaccination for smallpox was discontinued in 1972. Read on for more information concerning the smallpox vaccine:

"There is no question but that perfect sanitation has almost obliterated this disease, and sooner or later will dispose of it entirely. Of course, when that time comes, in all probability the credit will be given to vaccination." -- [John Tilden MD](#)

"I well remember, some years ago, listening to a knighted medical researcher as he spoke, on the radio, about vaccines. He told two classical stories from the history books. The first concerned Edward Jenner who, according to history, watched as the milkmaid caught cowpox and this protected her from smallpox. So Jenner got some of the 'cowpox' and inoculated it into someone's arm - it fostered and the pus was then inoculated into someone else - 100% success was claimed. 100%!! How absurd - complete with all sorts of germs including [hepatitis](#), [syphilis](#) and whatever. If one did that today, without antibiotics, the death rate would be huge."-- [Dr Kalokerinos, M.D.](#)

"The lymph used was of unknown origin, kept in capillary glass tubes, from whence it was blown into a cup into which the lancet was dipped. No pretence of cleaning the lancet was made; it drew blood in very many instances, and it was used upon as many as 276 during the first day (on board ship). .....no one can estimate the number of healthy, innocent children, as well as adults, who are inoculated with syphilis or other foul disease." -- William Tebb 1884 ([Compulsory Vaccination in England by William Tebb](#))

"The doctor, dipping his lancet in the bottle of mystery, wiped it on a spot on the arm, and cut and cross-cut the skin, and then, after rapidly stretching and closing the incisions with his thumbs, gave the wretch his ticket and passed him on. Such was the ordinance of Vaccination-a sight not

to be forgotten." -- [F. SCRIMSHAW 1883](#)

"HUMAN AND Bovine Tuberculosis.-At a meeting of the National Veterinary Association, on May 8, in a paper written by Mr. J. K. Cox, of the Army Veterinary Department, several cases were cited where the milk from "wasting cows " was used for food, and those using the milk were attacked with phthisia and died. Apparently there is no question among veterinarians that tuberculosis is communicable in the milk and flesh of animals to man; and if thus communicable in the process of digestion, how much more must it be communicable when the products of disease from tuberculosis animals are inoculated in the blood under the euphemism of "pure lymph from the calf!" . ([Vaccination Inquirer 1883 Vol5 p114](#))

"I should be sorry to see a leper cook, and I go further than that. In vaccinating, I think hardly a medical man would take vaccine lymph from the arm of a leper infant. I know it has been our practice for the last twenty years not to do so." -- 1883 Dr Henry Ebden, President of the (South African) Medical Board ([Leprosy & Vaccination by William Tebb](#))

"The chief of the Public Health Department was clearly not aware that until a comparatively recent period arm-to-arm vaccination was practically the only method in vogue; and at the time Mr. Ritchie's declaration was made, to the effect that none of the lymph in use had passed through the human body, at least three-fourths of the lymph in use in the United Kingdom was the variety known as arm-to-arm vaccination virus." -- [William Tebb 1893](#)

"LYMPH, a colourless nutritive fluid in animal bodies" (Chambers' Dictionary). How misleading to apply this term to a product of disease, used to produce another disease, and now admitted to be capable of transmitting some of the most horrible diseases which afflict mankind-syphilis and leprosy!" -- [Alfred Wallace](#)

"Perhaps the greatest evil of immunization lies in its diversion of public attention from true methods of disease prevention. It encourages public authorities to permit all kinds of sanitary defects and social problems to remain undressed, particularly in schools. It ignores the part played by food and sunlight and many other factors in the maintenance of health. It exaggerates the risk of diphtheria and works upon the fear of parents. The more it is supported by public authorities, the more will its dangers and disadvantages be concealed or denied." -- [M. Meadow Bayly, M.R.C.S., 1944](#)

To test the effectiveness of natural immunity versus vaccination, the nonvaccinated Kingston Clinic staff challenged six vaccinated doctors to join them, in 1936, in a smallpox isolation unit. The doctors had the very good sense not to accept the offer.

"Smallpox is considered one of the most virulent of contagious diseases, and it is generally believed that persons exposed are almost invariably attacked, unless protected by vaccination. This is one of the most stupendous exaggerations to be found in medical literature. My experience has been that very few people take it when exposed to it." -- [John Tilden MD](#)

### **Severity of Smallpox:**

Many people are panicking about the possibility of a smallpox outbreak due to biological warfare. These people need to be reminded about the conditions in which smallpox thrived in the 1700's, and how the majority of the population no longer live that way. We no longer throw our trash and sewage into the street. We have indoor plumbing, we live clean lives, and the care that our patients receive is a lot better than it was back then. Our patients are clean, they get clean sheets, and they are not crammed into sickrooms with tons of other patients. Nor are they bled or given mercury, both of which will kill you. Read on for further information regarding the severity of the smallpox disease:

"Dr. Bridges, in his Report, observes that "of 796 visitors who paid 1118 visits, only 3 were afterwards admitted into the hospital with small-pox." Mr. Sweeting, of the Fulham Hospital, writes :-" 33 patients were visited by 48 persons, who made altogether 76 visits; only one of the visitors was afterwards admitted with small-pox." ...Dr. Bernard, of the Stockwell Hospital, writes :-" 1056 visits were paid into the wards of the hospital. It is interesting to be able to say that, as far as I have heard, no one caught small-pox thereby;" -- [The Fable of the Smallpox Nurses and Revaccination](#)

"As a matter of fact, perhaps it is safe to say that not more than 10 per cent of the people ever would take smallpox if sleeping in the same bed with an infected smallpox victim." -- [Dr Hay](#)

"Both Press and Radio continue to preach that smallpox is a terribly infectious and deadly scourge. They never tell us that " - . - provided no mischief be done either by physician or nurse, it is the most safe and slight of all diseases". (Dr. Thomas Sydenham, 1688). -- [Lionel Dole](#)

"For years Dr. Matthew J. Rodermund, MD of Wisconsin, USA, offered \$10,000 to anyone who could prove scientifically that smallpox is contagious. Nobody ever claimed the money. Dr Charles A.A. Campbell, MD of San Antonio, USA, who was for years in charge of an isolation hospital made exhaustive experiments in order to demonstrate that smallpox is contagious, but found that this is not the case." -- [Keki Sidhwa ND](#)

"Dr Rodermund, a physician in the state of Wisconsin, created a sensation by smearing his body with the exudate of smallpox sores in order to demonstrate to his medical colleagues that a healthy body could not be infected with the disease. He was arrested and quarantined in jail, but not before he had come into contact with many people. Not a single case of smallpox developed through this "exposure"....I have ...handled intimately thousands of cases of contagious diseases, and I do not remember a single instance where any of us was the least affected by such contact." -- [Henry Lindlahr MD](#) (Philosophy of Natural Therapeutics p 39).

An Obstinate Baby -- At a public meeting held in the Town Hall, Derby, March 2, 1871, a working man caused much amusement by asking Dr Greaves how it was that when four out five of his children were down with smallpox, the fifth, unvaccinated, would not take the disease, although placed between two of the others in bed.

"In a recent number of the Leicester Free Press, it is said : " So far as we are concerned in Leicester, a town containing 120,000 inhabitants, with many thousands of unvaccinated children, smallpox seems to be about the least dangerous of all diseases, and is not to be named by the side of scarlet fever, measles, whooping cough, diarrhea, or even consumption. If a case of small-pox is discovered, instant isolation is adopted, and during the last five years we have hardly had five deaths. That being the state of the case, one need not wonder that the fear of the disease should disappear, or that resistance to vaccination should increase." -- [William Tebb 1881](#)

"Dr. Russell T. Trall, the eminent Natural Hygienist, considered smallpox "as essentially . . . not a dangerous disease." He cared for large numbers of patients afflicted with smallpox and never lost a case. Under conventional medical treatment, patients were drugged heroically, bled profusely, were smothered in blankets, wallowed in dirty linen, were allowed no water, fresh air and stuffed with milk, brandy or wine. Antimony and Mercury were medicated in large doses. Physicians kept their patients bundled up warm in bed, with the room heated and doors and windows carefully closed, so that not a breath of fresh air could get in, and given freely large doses of drugs to induce sweating (Sudorifics), plus wine and aromatized liquors. Fever patients were put into vapor bath chambers in order to sweat the impurities out of the system. Given no water when they cried for it and when gasping for air were carried to a dry-hot room and after a while were returned to the steam torture. Many must have died of Heat Stroke!" -- [Dr Shelton DC](#)

"During the Brighton smallpox outbreak (1950-51), the usual BBC encephalitis campaign opened with an anonymous doctor assuring the world, with authoritative emphasis, that "smallpox is the most infectious disease known to Man"! The BBC had evidently never heard of influenza. During the smallpox outbreak of 1961-2, on the other hand, we heard medical officers of health saying on the radio such things as, "After all, smallpox is not such a very infectious disease." This would have been held to be pure blasphemy only a few years ago. May the good work go on!" -- [Lionel Dole](#)

## Snakebite

### Definition

A wound resulting from the piercing of the flesh by the fangs of a snake.

### Herbal Aids

Plantain: The American Indians used Plantain for a variety of ills. It is said that a South Carolina Indian was given a reward for the information that Plantain was the chief remedy for the cure of rattlesnake bite. Indians are said to have applied a poultice of Plantain for battle bruises and for drawing out snake poisons (Coon:211). The Shoshone Indians made poultices of the whole plant and applied them to the bruises of battles. In some cases, the poultices are combined with the foliage of wild clematis. The Indians of southern Massachusetts applied the leaves both for wounds and for snakebites (Coon:158). The Chippewas used it for inflammation, and as an application to draw out a splinter (Densmore:291). [UW-Plantain]

Echinacea: The Omaha Poncas used Echinacea as a basic herb for a variety of ailments. The fresh root was placed on toothaches until the pain subsided. It was used on enlarged glands--like mumps. A smoke fumigant of Echinacea was used to treat headaches, snakebite. [NL 6-12]

Black Cohosh: The bruised root, applied to the wound, was used by the Indians as an antidote for snakebite, with the juice in small amounts taken internally, apparently by chewing bits of the root (Hut:79). [NL 5-6]

## Spasms

### Definition

A sudden, involuntary, and unnatural muscular contraction. [SNH p.45]

### Cause

Spasms may arise from calcium deficiency, panic, fear or overeating. [SNH p.45]

### Herbal Aids

General Instructions: If the spasm is in a muscle and easy to reach, a good nervine (especially wormwood oil) as a liniment massaged into the problem area will give quick relief. For internal spasms (such as in the stomach area) give a few drops of lobelia tincture each half hour. [SNH p.45]

About Antispasmodics and What They Do: Antispasmodics are herbal agents that prevent or relieve excessive contractions (spasms) or the voluntary or involuntary muscles in any part of the body. Many function by stimulating the higher nervous, coordinating, and power centers (the nervines); others by depressing all of the vital functions (lobelia, American hellebore, etc.); and a number stimulate the muscular fibers of the intestines to expel gaseous accumulations (asafoetida, valerian, wild yam, cajuput, etc.). The majority of these herbs act upon the functions of deranged nerves, and relieve nervous tension and irritability caused by irregular and painful action of the muscles. These herbs are most effective in cases of suspended animation or locked joints, so they are especially useful as anti-tetanus agents. [SNH p.369]

About Scullcap and How it Works: Scullcap is one of the best nervine agents that nature provides. It is as stimulating to the nerves as quinine, but lacks the harmful side--and aftereffects. It is especially calming and nutritive in neurasthenic conditions (neural conditions characterized by emotional conflict, worry, disturbances of digestion and circulation, etc.). It is an excellent antispasmodic agent for restlessness, tremors, spasms, twitching of the muscles, and hyperesthesia (hyper-sensitivity). Dr. Nowell asserted that: "It will influence the spinal cord and the sympathetic nervous system (supplying the various involuntary organs and blood vessels) as well as the brain, bringing to all a tonic influence which is quite permanent. . . It tones and soothes the nervous system, and, without any narcotic properties, quiets the patient and often brings about quiet, natural sleep." Dr. Shook concluded: "Scullcap is a slow-working, but sure remedy for practically all nervous affections, but it must be taken regularly for a long period of time to be of permanent benefit." [SNH p.370]

About Cramp Bark: Cramp bark is highly regarded as an antispasmodic agent. It is considered one of the best female regulators and relaxants of the ovaries and uterus, and is highly effective in preventing abortions due to nervous affections during pregnancy. Cramp bark will speedily quiet the uneasiness and relieve the pains of uterine and abdominal cramps, and is a remedy for nervous disorders and spasms of all kinds. [SNH p.392]

Using Tinctures (often rectally) for Spasms: These are often used in the anus to save lives, because after a person has gone into spasms or convulsions, nothing can be put into the body through the mouth. Never use a tincture at full strength, always dilute. Be very careful, for, although the tincture injection will not do any critical damage, it may cause inconvenience. With the average tincture (the way we make them to be administered per rectum), the dilution should be 1 teaspoonful to each cup of water or tea combination. [SNH p.495]

[Tumors](#)

[Sassafras](#): Pains and spasms in the region of the hearty flatulence. Give the warm infusion. [SNH p.79]

[Typhoid](#)

[Tansy](#): Take the infusion, making sure to preserve the volatile essential oils which possess much of the medicinal potency for these problems. [SNH p.123]

[Ulcers](#)

[Thyme](#): Give a cold infusion. [SNH p.227]

[Uterus](#)

[Catnip](#): Give 2 tablespoonfuls frequently; children: 2-3 teaspoonfuls. [SNH p.236]

[Varicose Veins](#)

[Babies Soothing Syrup](#) (stomach and bowel pains, aches, cramps, colic, spasms, convulsions, flatulence, common ailments): See formula using parsley seed, caraway seed, rhubarb, cinnamon bark, sugar, essence of peppermint and water. [SNH p.248]

[Vertigo](#)

[European Pennyroyal](#): Give the infusion in teacupful doses, repeated frequently (every 1-2 hours), and when the herb is unavailable, 1-3 drops of the oil in warm water is excellent. [SNH p.283]

[Vomiting](#)

[Rue](#): Chew 1-2 freshly-picked leaves. NEVER TAKE RUE IF YOU ARE PREGNANT. [SNH p.295]

[Warts & Moles](#)

[Syrup of Motherwort](#): See formula using motherwort, distilled water and yellow D sugar. [SNH p.299]

[Worms](#)

[Asthmatic Spasms \(inhalant\)](#): See formula using life root, mouse ear and wormwood. [SNH p.302]

[Yellow Fever](#)

[Lobelia](#): Thomson writes: In cases where the spasms are so violent that they are stiff, and the jaws become set, by pouring some of this liquid into the mouth between the cheek and teeth, as soon as it touches the glands roots of the tongue, the spasms will relax, and the jaw will become loosened so that the mouth will open; then give a dose of it, and as soon as the spasms have abated, repeat it. . . . [SNH p.361]

[Painful Cramps and Spasms](#): Give one teaspoonful of Antispasmodic tincture in 1/2 cup of sweetened warm water. This action will take about 15 seconds. [SNH p.363]

[Jamaica Ginger](#): Muscle spasms and irritations. Use in a liniment or plaster. [SNH p.414]

[Catnip & Fennel](#): Dr. Christopher's Catnip and Fennel Tincture: A blessing for infants. A fine combination for colic, biliousness, flatulence, spasms, etc. Use a few drops, or as much as needed, when desired. [HHH p.196]

[Antisp](#): Dr. Christopher's Anti-Spasmodic Tincture: Consists of skullcap herb, lobelia, cayenne, valerian root, skunk cabbage, gum myrrh, and black cohosh. To be used in cases of convulsions, fainting, cramps, delirium tremors, hysteria, etc., also good for pyorrhea, mouth sores, coughs, throat infections, tonsillitis, etc. Dose 1/2 to one teaspoon to glass of steam distilled water as a gargle and use until throat clears, also take one teaspoon in steam distilled water morning and evening. [HHH p.195] For baby convulsions, place a drop or two of the tincture on the tip of a clean finger and place it in the baby's mouth. This should stop the spasms immediately. The antispasmodic tincture, which combines equal parts of Lobelia, scullcap, skunk cabbage, gum myrrh, black cohosh, and a half part of cayenne, is even more effective. This is also used by the teaspoonful in sweetened warm water for painful spasms of any kind in the body. It should relieve attacks of epilepsy, lockjaw, delirium tremens, fainting, hysteria, suspended animation, etc. (SNH:363). [UW-Lobelia]

### Testimonials

[Lobelia](#): Most people agree that Lobelia is a specific treatment for asthma, as well as other bronchial or spasmodic troubles. Because the herb removes obstructions, giving it when an attack comes on will often cause vomiting; matter will accumulate in the stomach which will cause obstructions. When the person vomits, it removes the intestinal blockage and often removes the mucus accumulations in the bronchial system as well. Dr. Nowell told the story of a woman who at forty years old was pregnant with her first baby. She was suffering terribly with asthmatic spasms, unable to lie in bed, fighting for breath; both she and her husband begged their doctor to

stop the cough. They were told that nothing could be done until the child was born.

Dr. Nowell gave them a bottle of tincture of Lobelia, telling her to take a teaspoonful whenever the coughing began. The next morning, the patient told the Doctor that almost immediately after taking the first dose, the patient brought up long, thick masses of phlegm from the lungs the size of a man's fist. No further dose was taken and the patient never had a trace of any chest trouble since and lived a long and fruitful life (Klo:272). [UW-Lobelia]

## Sprains

### Definition

An injury to the tendons, muscles, or ligaments around a joint, marked by swelling and pain.

### Herbal Aids

Wormwood: Apply fomentation of the herb; or, use the oil as a liniment. [SNH p.108]

Tansy: Bruise and apply the green leaves, or use the herb preparation as a fomentation, wash, etc. [SNH p.124]

Balm of Gilead: Use the ointment (see "Formulas"); for skin diseases, burns, wounds, etc. apply on lint and bandage. [SNH p.202] Balm of Gilead ointment: See formula using Balm of Gilead, castor oil, eucalyptol and anhydrous lanolin. [SNH p.203]

Comfrey: Apply a comfrey poultice of the fresh, bruised leaves. It relieves pain in an hour. [SNH p.310]

Comfrey Paste: See formula using comfrey leaves, lobelia, honey and wheat germ oil. [SNH p.313]

See formula using marshmallow root or leaves and camomile flowers. [SNH p.331]

Liniment for Sprains: See formula using cayenne and apple cider vinegar. Apply over the area where needed without too much massage. [SNH p.410]

Another Liniment for Sprains: See formula using cayenne, lobelia, oil of wormwood, oil of rosemary and oil of spearmint. [SNH p.411]

See formula using myrrh, cayenne and echinacea. [SNH p.456]

Liniments: Massaging oils, tinctures, and teas on the skin are very beneficial. This may be done anywhere on the external tissue, but where rapid absorption is critical, an accentuating aid must be added. Massage the preparation in thoroughly and see that very little medicinal agent is left on the skin surface, but rubbed well into the skin and flesh itself. Liniments are excellent for sore muscles and sprains, and often lobelia is used here in combination with other herbal preparations, to ease the pain. [SNH p.500]

Dr. Christopher's Bone, Flesh and Cartilage: Soak the ankle in a hot foot bath. You can add some fresh, hot comfrey or BF & C tea to the bath if you have it. Alternate soaking the sprain in ice cold water. Drink lots of comfrey in tea or green drink. Apply a fomentation of BF & C and wrap it securely around the sprain. Use a combination of BF & C ointment and Professor Cayenne's Heating Balm. Take it easy until the pain eases. [EWH p.166]

Elder: The leaves are universally recommended for making salves and oils and ointments for wounds, burns, sunburn, bruises, contusions, sprains, and rashes. To make Elder leaf ointment, crush 4 ounces of Elder leaves, add to 6 ounces of melted lard, and place in a moderate oven. Stir frequently until the leaves are crisp and have lost their color. Strain through muslin and press, then add 2 teaspoonfuls of Eucalyptol, stirring it in thoroughly. Pour into jars and cool. [UW-Elder]

Onion: A finely-chopped onion mixed with sugar is spread on a cloth to treat sprains. [UW-Onion]

[Tumors](#)

[Uterus](#)

[Varicose Veins](#)

[Vertigo](#)

[Vomiting](#)

[Warts & Moles](#)

[Whooping Cough](#)

[Worms](#)

[Yellow Fever](#)

[Wormwood](#): The herb is often used externally, mostly in the form of an oil, although the fomentation is sometimes used in rheumatism, swelling and sprains. The oil is rubbed on sprains, rheumatism, lumbago, etc. It can also help relieve the pains of neuralgia and arthritis but must never be taken internally, as it is a strong poison. [UW-Wormwood]

[Cayenne Ointment](#): (Red Sun Balm) This ointment can bring temporary relief to internal pains of arthritis, stiff neck, muscle soreness, sprains, bruises and other aches. It can be applied to the chest during respiratory ailments to ease pain and help breathing. The heat generated by the capsicum increases circulation to the area and facilitates healing. [NL 4-5]

[Cabbage Leaves](#): Tie three or four thicknesses of cabbage leaves around the sprained area and leave on over night. Next time you see the lowly cabbage plant consider that over the centuries many people have derived much relief from physical ailments through using it. [NL 4-12]

[Flaxseed Poultice](#) is probably one of the most famous applications of the herb. The ground seed is mixed with boiling water until it is a thick mush. Other herbs may be added to it for specific conditions, such as hops, mullein, etc. This is one of the best poultices, according to Kloss, for old sores, boils, carbuncles, inflammations, and tumors. It is an excellent herbal aid for enlarged glands, joints, swellings, pneumonia, pleurisy, sprains, bruises, contusions, or inflammations of any part of the body, according to Dr. Shook (ShoA: 182). Apply as hot as possible; cover with waxed paper or plastic, and keep warm, reapplying hot poultices as needed. It helps allay irritation and pain and promotes suppuration; lobelia will help assist the body with boils. It is commonly used for abscesses and other local affections (Gri:319). [NL 7-2]

## Stiff Neck

### Definition

Inability to move neck without pain and/or stiffness. [HHH p.113]

### Cause

Vertebrae in upper cervical thrown out, cold in the neck, etc. [HHH p.113]

### Herbal Aids

[General Instructions](#): The following explanation of our "bone, flesh, and cartilage" [\[BF & C\]](#) formula is the most complete program for this condition of a stiff neck. The fomentation as it penetrates into the area will relax the muscles and feed the nerves so the bone structure (vertebra) will adjust itself. At the same time it will build up the blood circulation to carry off waste materials as well as feed the painful area with herbal food to put it into a healthy state of self healing.

When this formula is not available (it should always be on hand), use hot and cold fomentations five or ten minutes of each; this will work on the effect--but the fomentation (bone, flesh and cartilage) will go to the cause.

Bone, flesh and cartilage (comfrey combination fomentation) is an aid for malfunction in bone, flesh, cartilage, etc. Make a tea of the following herbs: six parts oak bark, three parts marshmallow root, three parts mullein herbs, two parts wormwood, one part lobelia, one part skullcap, six parts comfrey root, three parts walnut bark (or leaves), three parts gravel root. Soak the combined teas in distilled water (at the rate of one ounce of combined herbs to a pint of distilled water), then, soaking four to six hours, simmer thirty minutes, strain and then simmer the liquid down to 1/2 its volume and add 1/4 vegetable glycerine (if desired). Example: One gallon of tea simmered (not boiled) down to two quarts and add one pint of glycerine.

Soak flannel, cotton, or any white material other than synthetics--never use synthetics. Wrap the fomentation (soaked cloth) around the malfunctioning area and cover with plastic to keep it from drying out. Leave on all night six nights a week, week after week, until relief appears.

Severe cases: Drink 1/4 Cup of finished concentrated tea with 3/4 cup of distilled water three times in a day. [HHH p.113]

[Cayenne Ointment](#): (Red Sun Balm) This ointment can bring temporary relief to internal pains of arthritis, stiff neck, muscle soreness, sprains, bruises and other aches. It can be applied to the chest during respiratory ailments to ease pain and help breathing. The heat generated by the capicum increases circulation to the area and facilitates healing. [NL 4-5]

[Thistle Leaves](#): A favorite remedy for a stiff neck was a poultice of mashed thistle leaves. [NL 4-11]

## Stroke

### Definition

A sudden, severe seizure or attack often termed apoplexy. Apoplexy is generally accompanied by a stroke. A stroke does not necessarily mean apoplexy because a stroke can come without heat prostration which occurs in apoplexy. [SNH p.45]

### Cause

A calcium deficiency in the body, where the organic calcium has been burned out by a former fever or by an inheritance to an inorganic calcium, which is devoid of life and does not sustain the muscle, nerve, and bone structure. This causes weakness and inability to use the organ involved. [SNH p.45]

### Herbal Aids

[Cayenne](#): Cayenne should be used generously. Cayenne is known to have relieved paralyzed condition of strokes, even though the person has been in a wheelchair for years. Through the use of cayenne and the cleansing herbs many have been able to walk again. [SNH p.45]

[Incurables](#): This program has been used for many different malfunctions with great success in nearly every case: multiple sclerosis, muscular dystrophy, stroke, deteriorating bones, curvature of the spine, locked arthritis joints, tumors and cysts in nearly all parts of the body. We have seen great improvement, reduction in pain and often complete healing in cases supposedly incurable. As you read each step taken in this program, analyze it and see if it can do anything but good. You will see that not one harmful thing is recommended. [HHH p.85]

[Rosemary](#): After a stroke the Arabs restored speech by eating the flowers pounded with sugar. [UW-Rosemary]

[Different Types of Water](#): Allen E. Banik, O.D., with Carlson Wade in the book "Your Water and Your Health" (Keats Publishing Co., Connecticut 06840, 1974) gives us a listing of the ten basic kinds of water. [NL 1-10]

[BF & C](#): Dr. Christopher's Bone, Flesh and Cartilage Formula: We have had a formula developed called "bone, flesh and cartilage." [BF&C] This formula has done miraculous things with broken backs, legs, hips, etc. This formula has been used on curvature of the spine, polio, multiple sclerosis, and muscular dystrophy, stroke and arthritis of the bone. This formula is used externally as well as orally and has brought tremendously fast results. [NL 1-11]

[Water, and the Diet You Eat](#): One vulnerable area in the human body for this "hardening of the arteries" is found in the brain. Regardless of how intelligent an individual has been in the past, when the arteries in the brain area become hardened there is a resulting slowness in thinking, loss of memory, headaches, dizziness, dimming eyesight, paralysis, and one of the saddest conditions of all - senility.

When there has been a severe condition of stroke, or a long-standing case of senility, autopsy will often show a brain that has practically "turned to stone." So it is obvious that even the most brilliant scholar can become senile if he allows such a condition to occur in his body, i.e., clogged or hardened arteries.

Arteriosclerosis can be reversed if one will reverse the cause and the "cause" is the use of inorganic, dead, stale, processed and overcooked foods. Use fruits, vegetables, grains, nuts and

[Tumors](#)[Typhoid](#)[Ulcers](#)[Uterus](#)[Varicose Veins](#)[Vertigo](#)[Vomiting](#)[Warts & Moles](#)[Whooping Cough](#)[Worms](#)[Yellow Fever](#)

seeds, and as many of these "raw" or "wholesome" as possible. Also, low-heated foods, such as grains, lentils, potatoes, etc., can be used.

Eliminate all sugar and flour products, and change from processed foods to live foods, and healthful drinks such as raw vegetable juices.

Another part of the "reversing program" of overcoming hardening of the arteries is the principle of flushing the system with steam distilled water. The amount used should be one ounce of steam distilled water for each pound of body weight per day. As an example, a person of 130 pounds of weight should drink no less than 130 ounces or approximately one gallon of this water each 24 hours. This (steam distilled) water is pure and can do miracles for a person who will drink it faithfully. [NL 2-1]

**B & B Tincture:** Dr. Christopher's Nervous System Formula with Black Cohosh: When the medulla oblongata, at the base of the skull and into the first and second vertebrae has been damaged, or has deteriorated from improper eating routine (arthritis, etc.), and in some cases because of weak inherent conditions handed down from generation to generation, we have trouble in body motion and movement. This area, when in malfunction, is the inability of the body to control itself, as it should.

This condition displays itself in many ways, as dizziness, lightheadedness, loss of control over locomotion - epilepsy, multiple sclerosis, muscular dystrophy, stroke, etc.

The "number one" part of the body that then needs help in these type of conditions is the motor nerve area, at the medulla.

We have a special formula that we first used with our epileptic patients years ago. This formula came as an answer to a prayer, when help was needed in a severe epileptic case. The formula is made up of blue cohosh, black cohosh, blue vervain, scullcap and lobelia in a regular "ninety proof" tincture form.

There are approximately three million, five hundred thousand herbs, and we do not know of any two herbs on earth that will do the job of rebuilding the motor nerve as well as do blue cohosh and black cohosh. I am glad the good Lord was kind enough to locate them for us; I could never have gone through that many herbs to locate these specific herbs for a specific job.

He also showed the use of scullcap in the formula for the use of rehabilitating and renewing the spinal cord, so it could again relay its messages from the motor nerve area to the parts of the body that required help and guidance. Lobelia is an antispasmodic, to act as a nervine and to discontinue spasms that were cutting off or slowing down the messages being sent.

These five herbs put into a formula, as they have been, have given thousands of people a new lease of life, by cleaning a fouled up message and delivery system and getting it into a smooth and natural response, instead of seizures and contortions as before. [NL 2-1]

**Milk:** Dr. Ellis gives an excellent discussion in the Health View Newsletter on the evils of milk and dairy products. These contain a substance which attacks the arteries, weakening them for such disorders as heart disease and stroke. [NL 2-7]

### Testimonials

Water: From one of Paul Bragg's books "The Shocking Truth about Water" (Burbank, CA 91303, Health Science, 1970), I would like to pass on to you the following:

Take my own life, for instance. I was born on a farm in Virginia, along the Potomac River. We got our drinking water from a well-crystalline, fresh, sparkling water. But it was very hard water, containing in solution-calcium carbonate and other inorganic minerals from limestone.

When we boiled this water, incrustations of these inorganic minerals formed in large slabs inside the kettles, and in time produced holes in the bottoms. Kettle after kettle had to be thrown away and replaced by another, with the same thing happening to the new one in time.

The hard water made dishwashing, laundering and cleaning difficult. The soaps used for these purposes simply would not make suds.

But the greatest damage done by this hard water was to the humans who drank it.

My grandfather was a man in his mid-sixties. He was a big, strong six-footer, about 200 pounds of solid muscle. He was an expert horseman, a finished hunter and a hardworking farmer.

I can remember when he had his first stroke. There was a large family of Braggs, and we were all seated at the dinner table. Suddenly there was a crash of dishes, and my grandfather slumped over the table. When the country doctor arrived, he stated sadly that grandfather had lost all control of his left side due to brain damage.

From now on this poor old man needed constant attention. With a completely paralyzed left side, he could not walk without the aid of someone to steady him. He had absolutely no control of his eliminative system. This, helpless, sick man went into rages of anger. There was great difficulty getting food into his body because he had lost the ability to chew it. Only very soft bland food could be fed him.

This fine man we knew and loved was, as far as real living was concerned, dead. You have no idea what a great burden he was on my parents and family. The poor, helpless man dragged on this way for three years and then the second and final stroke came and he was actually dead.

His body went to the John Hopkins Hospital in Baltimore, where the doctors who performed the autopsy stated that his arteries were like stone. My grandfather was born and reared on that farm and drank that hard water all his life.

It was many years before my questions were answered. In the meantime, I witnessed what the hard water was doing to my family and our relatives and friends.

Here we were living on a big, fine farm, with an abundance of foods of all kinds. We had a good, comfortable home. It was a beautiful farm on a majestic river. But there was suffering among the adults. These pains were bulked into one word, and that was "misery." Each day I would hear my mother ask different people, "How is your misery today?" And the sufferer would give a doleful answer to my mother's questions. [NL 1-10]

## Sty

### Definition

Inflammation of one or more of the sebaceous glands of the eyelids. Painful and swollen eyelids. [HHH p.114]

### Cause

Toxic poison accumulation. [HHH p.114]

### Herbal Aids

Sarsaparilla Root: To give aid to healing a sty on the eyelid, make a fomentation of sarsaparilla root (*Smilax officinalis*) and apply over the eye. [HHH p.114]

Fomentation: Place a fomentation of mullein leaves, red raspberry leaves, golden seal, slippery elm, lobelia and marshmallow root over the eye. Apply for one hour each, a fresh application three or more times a day, or leave on all night, until healed. [HHH p.114]

[Herbal Eyebright](#): Dr. Christopher's Herbal Eye-Health Formula: This formula is excellent for helping promote the brightening and healing of the eyes, and it is known to help remove the cataracts and heavy film from the eyes: one part each bayberry bark, eyebright herb, golden seal root, red raspberry leaves, and 1/8 part cayenne. Make this into tea form and put into a glass eye cup. There will be a slight burning sensation when using the cayenne in the eye at first, but there is nothing to be concerned about. Tip head back and apply the eye cup to eye. Exercise eye while doing this as though you were swimming under water. Do this three to six times a day. Drink 1/2 cup a.m. and p.m. This formula has aided many sty cases. [HHH p.114]

Sarsaparilla: Apply a hot fomentation of strong tea over the eye. [SNH p.84]

Sarsaparilla-yellow parilla compound: See formula using sarsaparilla root, yellow parilla root, distilled water and glycerine. [SNH p.85]

## Syphilis

### Definition

A sexually carried disease caused by a type of bacteria, marked by three stages over a period of years.

### Herbal Aids

Plantain: Use as a tea and an external application. [SNH p.53]

See formula using red clover, burdock seed, Oregon grape root and blood root. [SNH p.58]

Poke Root: Use the liniment or the infusion as a wash, and drink internally. [SNH p.61]

Infusion of poke root: See formula using poke root and distilled water. [SNH p.61] Compound Poke Root Liniment: See formula using poke root, bayberry powder, sassafras, bay or laurel and tragacanth. [SNH p.62]

Burdock Root; Drink the decoction regularly. [SNH p.65] Decoction of burdock root: See formula using burdock root, distilled water and glycerine. [SNH p.65]

See formula using Oregon grape root, red clover, burdock seeds, cascara sagrada, blue flag, prickly ash berries and blood root. [SNH p.74]

Sassafras: Drink an infusion of equal parts sassafras and sarsaparillas (*Smilax ornata*) and 1/2 part *Guaiacum officinale*. [SNH p.79]

See formula using sumac berries, sumac bark, white pine bark and slippery elm bark. [SNH p.158]

See formula using mandrake root, poke root, yellow dock, sassafras, blue flag, elder flowers and caraway seeds. [SNH p.198]

See formula for external use, consisting of mucilage of comfrey, burdock root and distilled water. [SNH p.314]

Pine: The Pine needles were used as an herbal aid for syphilis by the Zunis. The patient chewed the needles, swallowed them, drank a quantity of cold water and then ran for a mile or until he perspired profusely. When he returned home he wrapped himself in a heavy blanket. Women patients were not required to run. A tea of the twigs was drunk warm in conjunction with chewing the needles. Syphilitic ulcers were scraped with the fingernails until they bled and the powdered pinion gum was sprinkled over them to promote healing (Nie:50). [UW-Pine]

Prickly Ash: Because it is an excellent alterative the herb has long been applied in constitutional syphilis and scrofula, being considered as good a herbal aid for the former as other specifics. The herb mixed with blue flag and mandrake should be given in small doses at short intervals. [UW-Prickly Ash]

True Sarsaparilla: True Sarsaparilla was discovered by the early Spanish settlers in Jamaica, Perus, St. Domingo and Brazil in the middle of the sixteenth century. It was introduced into Seville about 1536 from "New Spain" and another variety soon arrive from Honduras. Pedro de Cieza de Leon in 1553 wrote that he saw it growing in South America. It was recommended as a cure for syphilis and for some time was considered the only effective remedy for this ailment. ...It was from the time of its introduction considered a superior blood purifier. It fell into disuse for a while until Sir William Fordyce revived it in 1757. After this short resurgence it was ignored.

[Tumors](#)[Typhoid](#)[Ulcers](#)[Uterus](#)[Varicose Veins](#)[Vertigo](#)[Vomiting](#)[Warts & Moles](#)[Whooping Cough](#)[Worms](#)[Yellow Fever](#)

During the latter part of the nineteenth century its use was considered the result of ignorant superstition.

In 1928, however, Perutz studied it extensively and concluded that it really did help in the treatment of syphilis, probably by stimulating the body's defensive mechanism (Luc:54). [UW-Sarsaparilla]

Stillingia: The herb is used in all the various forms of primary and secondary syphilitic affections in which it appears to have a most definite effect for healing. There is some disagreement about its actual effect in syphilis probably because in earlier years it was somewhat overrated, that poor preparations have been employed and that the proper preparations of the herb have not been followed. When the herb is correctly prepared and administered the results are said to be as good as those obtained from any of the antisyphilitics (Felk:1837). It should be used in those syphilitic conditions where the tissues are feeble and "tardily removed and renewed, the mucous membranes are predominantly affected and the skin secondarily and the mucous surfaces are tumid, red, glistening and the secretion is scanty." The tincture which should be extracted by alcohol or the fluid extract are the preferable modes of administration, usually 1/2 fluid dram of the tincture or 1 to 20 drops of the fluid extract are given three times a day. [UW-Stillingia]

Burdock: Dr. Shook, my teacher in herbal pharmacy, in his textbook says: An excellent blood purifier is Burdock (*Arctium Lappa*), as a blood purifier we use the root. Nature has not produced for us many herbs whose food and medicinal value equal this one. Its ancient history as a reliable herbal aid for bad blood, ulcers, tumors and many skin diseases such as what we today call Eczema, Pityriasis, Psoriasis, Furunculosis (Boils), Acne, Lupus, etc., to say nothing of internal disorders such as Syphilis, Scrofula, Leprosy, Cancer, etc., and the modern proofs of its marvelous efficacy in the treatment of humanity's most fearsome and loathsome diseases is proof positive that very few if any herbs are more virtuous or possess more curative powers. ...The following formula, a decoction, is helpful for syphilis, scrofula, skin diseases, furunculosis, tumors, abscesses, acne, and a general cachectic condition of the system.

Put 4 ounces of the dried cut herb into three pints of distilled water. Soak four hours or more and then simmer 30 minutes slowly. Strain, cool and keep in a cool place.

Dose for adults. A wineglassful (2 oz) 3 or 4 times a day. For children, less according to age.

If it is desired to make up more of this decoction, and it is desired to keep it for any length of time, it should be boiled down to 1/3 of its original amount and add to the finished amount of tea 1/2 vegetable glycerine. In other words to one pint of tea add 8 oz. or to a quart add one pint, etc. [NL 1-2]

Gotu Kola: The plant portion above the ground contains a large amount of Vellarin which is a substance that fights infections diseases like leprosy, syphilis, and eczema. Care is taken to dry this herb in the shade to preserve this valuable substance. [NL 5-1]

Barberry: Barberry is also used for specific ailments, notably syphilis. Felter (EMMP&T:244) mentions that Barberry seems to clear up the bone, mucous membrane and skin ailments of the disease, when given persistently in appreciable doses, to a patient who otherwise takes good care of himself. Most practitioners combine Barberry with other herbs for this ailment. [NL 5-4]

Cloves: Another combination, containing Cloves, sandalwood paste, and saffron is said to help in syphilitic affections as an alterative and tonic (Ibid.). This was recently tested in cases of secondary syphilis, with marked benefits to the patients. [NL 6-6]

Echinacea: Many people have observed its good effects in cases of syphilis. The longest time, reported Ellington, to effect the cure was nine months (Ell:363). The patient begins to feel a general improved condition after taking the remedy a few days. It removes the pain and discomfort, removes the fever, and abates the evidences of the disease without after-effects. [NL 6-12]

## Teeth

### Definition

Decay of teeth: Decomposition due to lack of live organic atoms in the food to nourish the teeth. [HHH p.117]

### Symptoms

Pain or a dying in one or more teeth, sometimes accompanied by swelling of the gums. [HHH p.117]

### Cause

Tooth problems start several generations back. The weakness of calcium deficiency is passed from parent to child. By following the same parental pattern of "poor food selection," each new crop of babies becomes weaker. "The sins (of omission and of commission) of the parents are passed on to the third and fourth generation." While the baby is being carried in the womb, Mother Nature is interested in that which is being produced more than the one producing. She is continually trying to upgrade humans and animals by drawing on the mother to supply the child. How often do we hear the expression, "Well, I'm carrying another child, that means more varicose veins and loss of more teeth - I don't see why mothers have to suffer this way." Please don't blame the Lord for these conditions, rather blame the use of pastries, soda pop, candy, sugar, ice cream, etc. The sugar leaches the calcium out of the body. Pregnancy is a strain on body calcium, because the mother must have enough calcium in her body for both her and the baby being formed, and later for nursing. If there is not enough calcium for her, because of this leaching process by the sugar (of past and present), the fetus draws on the mother's body. The calcium it now takes is from the bones, muscles, and the teeth, etc. Sometimes so much is taken from the mother that she will, after a number of babies, have bone and muscle problems from a great lack of calcium.

When a child is being formed and there is not enough calcium being supplied to the fetus, the jaw of the child will not form fully. It will be narrow instead of broad. When it is time for the child to cut teeth, they cannot come in "Straight" because of a crowded jaw space. So, naturally, they will come in crooked. Later as there is not enough room for the wisdom teeth, they must often be extracted before coming through. When the day comes that the jaw is adequately large and well-shaped to accommodate all thirty-two teeth without crowding them to crookedness, and the wisdom teeth can remain until old age (and in comfort), it will mean we humans have "gained enough wisdom" to keep them!

The basic cause of calcium loss, of course, as mentioned, is leaching out the calcium with sugars and a toxic body condition. Nearly all tooth decay comes from the blood stream, saliva, and the inside of the teeth, not only from the external surface. The teeth deteriorate but it is from the toxic blood stream and the enamel-destroying toxic saliva which is a result of an impure (toxic) blood stream. If a child has good wholesome food and has been given a "good solid start in life" with a full healthy set of teeth and jaws, he can go through life without tooth problems. The condition of perfect teeth is, of course, dependent upon a continual use of wholesome and proper foods. [HHH p.117]

### Herbal Aids

[Plantain](#) for Toothache: Apply the fine powder of the roots to the affected area. [SNH p.53]

Tumors

Sassafras Oil for Toothache: Apply the oil onto the affected area (dilute slightly with olive oil). [SNH p.80]

Typhoid

Poppy Flowers for Toothache: See formula using camomile flowers and poppy flowers. Break up the poppy heads and mix together; pour on sufficient boiling hot water to make a poultice. [SNH p.219]

Ulcers

Elecampane for Tooth Decay: Chew the root (preserves the teeth from putrefaction). [SNH p.342]

Uterus

Hops for Toothache: Apply a flannel bag of hops, and moist heat over the affected area. [SNH p.396]

Varicose Veins

Cayenne for Toothache: Clean the cavity and place cotton saturated with oil into the cavity. [SNH p.407]

Vertigo

Cloves and Peppermint in Toothache: Rub oil of cloves and oil of peppermint on gums. [SNH p.421]

Vomiting

Prickly Ash for Toothache: Chew the bark or berries. [SNH p.427]

Warts & Moles

Organic Calcium: Calcium is a "must" throughout life. It is needed for the formation of good teeth and strong bones.

Whooping Cough

Children need calcium if bones and teeth are to grow strong and well-formed. Adults need an adequate amount of calcium every day. During periods of pregnancy and lactation, women require much more calcium than normally, as they must also furnish extra calcium for the baby. Botanical or herbal sources for calcium are: arrow root, comfrey, camomile, chives, dandelion root, flaxseed, horsetail grass, nettle, okra pods, oat straw, plantain, shepherds purse (and, of course, eat good foods rich in calcium). [HHH p.117]

Worms

Calcium from Eggshells: Another type of natural calcium is found in the use of eggshells. A chicken consumes grit and sandy materials, and these materials go into and through the gizzard into the blood stream. Then these calcium-type materials are taken from the blood stream to form the egg shell. After breaking the eggshell open, be careful to pull out the small membrane that lines the shell. This membrane is high in cholesterol and it is wise to eliminate it. Dry the shells at room temperature or under 130 °F. When thoroughly dry, powder the shells in a blender, nut mill or with a rolling pin. When the powder from one dozen eggshells is ready and finely powdered, cover with one pint of apple cider vinegar or one pint of lemon juice (lemon juice will sour and spoil quicker than the apple cider vinegar). Mix the eggshell powder and liquid in a large container, because the chemical reaction will cause the solution to foam.

For the adult, use two or more tablespoons (or add to distilled water, tea or juice if desired) and for children in proportion. Some people like to add a tablespoon of honey for each tablespoon of the vinegar-calcium mix, as this is a great help in adjusting the hydrochloric acid balance in the body as well as feeding calcium to the system (read Cyril Scott's book on Folk Remedies). [HHH p.118]

Alfalfa to Retard Tooth Decay: A doctor at the University of Indiana pointed out that Alfalfa is especially rich in iron, calcium and phosphorus, all necessary for strong, healthy teeth. Some claim that Alfalfa not only retards tooth decay but actually rebuilds the teeth (Kirsch:35). [UW-Alfalfa]

Catnip: Applied locally, it gives a sense of warmth and partial anesthesia, for which reason it is used for toothache and other localized pain. [NL 6-2]

**Testimonials**

No Root Canal: After breaking a tooth from biting my fingernails, I had to have a crown put on one of my bottom front teeth. This tooth aches all the time. Sometimes it's from the weather, sometimes from eating something, and sometimes from headaches. My tooth was so sensitive I couldn't eat corn on the cob! When I complained about the pain, my dentist told me that if it keeps bothering me we might have to do a root canal. I started using Dr. Christopher's Herbal Tooth Powder to brush my teeth once or twice a week. As long as I remember to brush with the

tooth powder, my tooth doesn't hurt. Whenever I forget to use it, my tooth starts to hurt again. I love the tooth powder, because it helped me avoid a root canal.

## Throat

### Definition

Any ailment having to do with the throat such as sore throat, ulcerated or inflamed throat, thrush, etc.

### Cause

Sore throat is by no means pleasant. The causes are varied. The tonsils may be swollen from a clogged lymphatic system, or the throat can be sore and irritated from coughing. What we need here is instant relief from pain and something to soothe and heal the throat. [NL 4-1]

### Herbal Aids

General Instructions: For the serious sufferer who wants very quick relief, cayenne pepper taken in juice or water will bring great results. The stimulating effects of the cayenne will help increase the circulation in the throat area, minimizing the pain. Jethro Kloss, the self-educated healer and author of Back to Eden, states that pain results from poor circulation in an area of the body. Warm ginger tea is an excellent herbal aid for pain of sore throat. A hot fomentation of mullein and lobelia [[Mullein & Lobelia](#)] over the throat can also speed healing. It, too, increases circulation. The soothing demulcent such as slippery elm and marshmallow root tea can lessen throat irritation. Mullein is another valuable herbal aid. Sage tea has been used for centuries for helping with colds and sore throats. A few drops of the liquid antiseptic formula, consisting of oak bark, golden seal, capsicum, comfrey, garlic, and myrrh, can be dropped into the throat. This is one of our most wonderful formulas for the use on cuts and wounds. We have found that it also obliterates the irritation of sore throat for several hours. Because it is such a powerful herbal aid the taste is also very powerful. It needs to be used very sparingly. [NL 4-1]

Pomegranate: Sore Throat: Use the pomegranate fruit rind or flowers as a gargle. [SNH p.114]

Bayberry: Sore throat. Make a strong decoction solution (boil 2 ounces of the herb 15 minutes in 1 pint of water, strain and add sufficient glycerine to make up the pint, cool); spray the solution into the nose and throat every 1-2 hours during 1 day then gradually extend the time between applications. [SNH p.132]

Bayberry: Sore throat. Gargle the throat thoroughly with the decoction until it is clean, then drink a pint lukewarm to cleanse stomach. [SNH p.132]

Red Oak: Ulcerated and inflamed throat. Use the decoction as a gargle. [SNH p.139]

Red Raspberry: Sore mouth and throat, thrush, spongy gums. Use the strong infusion as a wash and gargle. [SNH p.143]

Gargle: Sore throat. See formula using raspberry leaves, cranesbill root, blackberry root and leptandra. [SNH p.149]

Cranesbill: Sore, inflamed, or irritated throat. Use the decoction of the root as a gargle. [SNH p.152] Decoction of cranesbill. See formula using cranesbill and distilled water. [SNH p.153]

Sore Throat (gargle). See formula using cranesbill root, bayberry bark, golden seal root, marshmallow root, wild indigo root and rosemary herb. [SNH p.156]

[Tumors](#)

Sumach: Sore throat. Infuse the berries for 1/2 hour in a quantity of water, strain and sweeten to taste with honey; mix with fresh pineapple juice; use as a gargle. [SNH p.158]

[Typhoid](#)

White Pond Lily: Apply a poultice of the fresh roots and leaves; also the strong decoction makes an excellent base for mixing other ingredients for application; the powder is often mixed equal parts with crushed flax seed (linseed) or powdered slippery elm. [SNH p.165]

[Ulcers](#)

Balm of Gilead: Sore throat. Gargle with an infusion of the buds. [SNH p.202]

[Uterus](#)

Ulcerated Throat: Use equal parts of the sage infusion and apple cider vinegar as a gargle. [SNH p.234] Infusion of garden sage. See formula using sage leaves, distilled water and glycerine. [SNH p.235]

[Varicose Veins](#)

Mullein Oil: Rub mullein oil in well, or apply on saturated cotton and cover. [SNH p.317]

[Vertigo](#)

Slippery Elm: Sore throat. Chew the bark. [SNH p.335]

[Vomiting](#)

Sore Throat: See formula using cayenne powder, red garden sage tea, apple cider vinegar, sea salt and honey. [SNH p.411]

[Warts & Moles](#)

[Antsp](#): Dr. Christopher's Anti-Spasmodic Tincture: Consists of skullcap herb, lobelia, cayenne, valerian root, skunk cabbage, gum myrrh, and black cohosh. Used historically in cases of convulsions, fainting, cramps, delirium tremors, hysteria, etc., also good for pyorrhea, mouth sores, coughs, throat infections, tonsillitis, etc. Dose 1/2 to one teaspoon to glass of steam distilled water as a gargle and use until throat clears, also take one teaspoon in steam distilled water morning and evening. [HHH p.195]

[Whooping Cough](#)

[B & B Tincture](#): Dr. Christopher's Nervous System Formula with Black Cohosh: Black cohosh, blue cohosh, blue vervain, skullcap, and lobelia. This is used to help aid in nervous conditions, sore throat, hiccups, and aid to restoring malfunctioning motor nerves and assisting in adjusting poor equilibrium and hearing, and a great blessing to epileptics. Massage into the medulla (base of skull), and upper cervicals, follow instructions in No. 14 formula, and take six to ten drops in a little water or juice two or three times a day. [HHH p.195]

[Worms](#)

[Chickweed Ointment](#): Dr. Christopher's Chickweed Ointment: This is made of chickweed herb and bees wax and oils. Excellent for eczema and/or other skin infections, sores, burning, itchy skin or genitals, swollen testes, acne, hives, also for ulceration of mouth and throat. This is a wonderful healing ointment. [HHH p.196]

[Yellow Fever](#)

Aloe Vera: A piece of the plant, held in the mouth and allowed to release its juice, clears the throat for singers and speakers. [UW-Aloe Vera]

Oak Bark: Gargle for sore throat. 1 oz. powdered oak bark simmered in 3 pints of water for about 30 minutes. Simmer to 2/3 of original volume. [NL 2-10]

Juices: Sore throat. Pineapple, celery, coconut, fig. [NL 3-5]

Sassafras: Inflamed throat. Give the mucilage of sassafras pith. [SNH p.79] Mucilage of sassafras pith: See formula using sassafras pith and distilled water. [SNH p.80]

Onion: The Onion is so powerful, he said, that once a medical doctor in the East had a patient with strep throat that nothing would touch and the patient was getting worse. The doctor thought he'd try an old-fashioned remedy that his grandpa had told him about. He just diced up a big dried onion, put it on a saucer, and placed it on a table by the man's bed, not where he could reach it or use any of it, but just inhale it. The next morning the strep throat was gone. Just from inhaling it! Just from breathing it! [UW-Onion]

## Thrush

### Definition

Fungi infection of the tissues of the mouth.

### Herbal Aids

Plantain: Make a decoction, simmering one ounce of seeds in one and one half pints of water and reducing to one pint; sweeten with honey and give one tablespoonful three or four times daily. [SNH p.53]

Bayberry: Spray mouth and throat with tea in atomizer. If too young or throat too sore to gargle, then drink 1 or 2 tablespoons each hour until relief. [SNH p.132]

Red Raspberry: Use the strong infusion as a wash and gargle. [SNH p.143]

Thrush Infection in Babies: If your baby has thrush, which you can determine from white spots on the sides of the mouth, a white tongue, or soreness during nursing, you can try several remedies. Dip a Q-tip in X-ceptic (an herbal extract) and swab the area several times per day, then give raspberry tea in a bottle. Other remedies may include washing the white parts with a Q-tip soaked in yogurt or, from a drugstore, purchase Gentian Violet, which is an inexpensive germicide, not necessarily an herb but an old-fashioned and effective remedy. With a Q-tip dipped into the liquid, don't soak but just coat the infected surfaces. Gentian Violet will stain anything it comes into contact with.

In order to get to the source of the problem, you need to help the baby feel no stress, make sure your own yeast infections are under control...and help restore the baby's proper bacteria composition in the intestine. Use acidophilus freely yourself, and give the baby acidophilus, either the liquid or a capsule dissolved in a little sterile water. [EWH p.94]

Blueberries: The Blueberry has a substance, myrtillin, which combats the bad bacteria in the intestinal tract. Because of this the berry is useful in bowel diseases and diarrhea. A tea made from the berries has been used in cases of thrush or other mouth and throat infections...A half of a cup of berries in a quart of water boiled to one pint will yield a solution that can be used internally or externally such as in cases of eczema or other skin disorders. [NL 5-1]

### Testimonials

1. Small Boy Quickly and Totally Healed of Thrush: We had an interesting case in Taylorsville, Utah. The patient was a little boy about 18 months of age. As I stepped into the house the stench of Thrush was so strong it nearly staggered me, yet the child was across the large living room from the entry.

Quickly we mixed oak bark tea and concentrated it down to half its original volume. With the little boy on my knee, an atomizer was used to spray oak bark tea into his mouth through his swollen lips, white sores and swollen tongue. Since he couldn't swallow well because of the sores and swelling in the throat, it was necessary to tip him over so that the liquid would run out of his mouth. This procedure was repeated several times. This child could swallow only small amounts of fluid that would seep down his throat. Instructions were given to the parents to give him only red raspberry tea to drink and as much oak bark tea as possible until he healed. I was called back the next day because of an injury to an older boy, and as I stepped in the house, the little boy who had been treated for Thrush came rushing over, threw his arms around my leg and looked up with

[Tumors](#)[Typhoid](#)[Ulcers](#)[Uterus](#)[Varicose Veins](#)[Vertigo](#)[Vomiting](#)[Warts & Moles](#)[Whooping Cough](#)[Worms](#)[Yellow Fever](#)

a big smile. His lips were down to normal size the white sores showed a healing pink. He was happy.

During a lecture, a student related the details of another case of Thrush in Flagstaff, Arizona. She told how two men took turns holding a little girl afflicted with Thrush 24 hours a day for two weeks to comfort her in her agony. Another woman told of her personal acquaintance with Thrush. She had suffered over six months with the disease of the gums, and her gums had been trimmed down to the bone. She has lost all her teeth and now was wearing dentures that were sitting on the bone of the jaws with no suction. Yet our little patient healed rapidly in less than 24 hours with herbs. [NL 2-10]

2. Bayberry and Thrush: An architect called his medical doctor about a child with mouth problems, which the M.D. diagnosed as thrush, sometimes called trench mouth or hoof-and-mouth disease. The physician was dubious about clearing the case at all, perhaps, he said, in several months, although the child might be in danger of losing his teeth. Unhappy with this news, the architect called Dr. Christopher, who lived about forty miles away.

When he arrived, Dr. Christopher nearly reeled from the stench in the house. The child, only eighteen months old, just stood there crying, with a mouth so full of sores that his tongue was sticking out, all swollen up. Dr. Christopher had asked the parents to boil some water, and he made bayberry tea, and, putting the child on his knee, sprayed some of it into the boy's mouth and let it run into a pan, as the child couldn't swallow. He continued this many times, and told the parents to keep doing it, adding that they should give him raspberry tea to drink later, as well as more bayberry tea to drink.

In less than twenty-four hours, instead of in months as the M.D. had predicted, the child was smiling and the case was nearly cleared up.

Bayberry is an astringent; it promotes greater density and firmness of tissues--as contrasted with laxatives, for instance, which open up tissues. Astringents cleanse mucus and lessen or arrest internal hemorrhages by coagulating the albumin. As in the case of thrush above, they contract and strengthen the tissues weakened by disease. [NL 5-5]

## Tonsillitis

### Definition

Tonsillitis is the inflammation of the tonsils, acute catarrhal infection, redness and swelling, the result of overworking them. Tonsils, many authorities say, are the first line of defense. Their job is to control the entrance into the body of large armies of germs--invited when the waste matters in the body accumulate too heavily.

Tonsils are the filtering system for the reproductive organs and are needed by the body, or the Creator would not have installed them in the first place. As a person goes from childhood into adulthood through the stage of puberty, the young people making this transition will be easier to live with if they still have their tonsils. The girls will have easier menstrual periods and the boys less chance for prostrate malfunction and will have a better teenage life.

We have ten fingers, but if we got infection in one of them, we would not cut it off until we tried to clear up the infection. As soon as the tonsils become swollen with infection the first thing we think of is to have the tonsils cut or burnt out, without trying to save them. Use our suggested program and keep the individual in a "whole state," as the Creator intended! [HHH p.192]

### Symptoms

Dr. Kloss describes the symptoms as follows: chilly feeling, fever, throat swollen, practically closed with soft palate hanging at the tongue. The throat and mouth are dry, and then soon lots of poisonous mucus accumulates. The tonsils are swollen and red in color. Small ulcers appear on the tonsils. Often the glands of the neck swell.

### Herbal Aids

General Information: With tonsillitis we use the same fomentation used for the glandular system, the three parts mullein and one part lobelia combination. (You may obtain this already made up in the Mullein & Lobelia Formula). In addition to drinking the mullein and lobelia tea (as well as applying the fomentation), use an abundance of red raspberry tea, as much as can be taken for three days. Use no foods on these days except unsweetened vegetable and fruit juices.

When the tonsils swell up and are sore and painful, the first thing we think of is "to remove them." We saw a picture recently of seven or eight children spread out on a king-sized bed, all with "wrapped-up throats." The caption explained that the family got a bargain by having them all operated on at once for "tonsillectomies."

Here was a group of children who had lost a very valuable organ the Lord put into the body--it was not put there by mistake or carelessness, but because it was needed. This organ is the filtering system for the body, and when removed leaves us with a weaker system (Dr. B. Jensen in *The Joy of Living*, Santa Barbara, California: J. F. Rowney Press).

A girl with her tonsils intact will have an easier time through puberty and her menstrual cycles than she will if they have been removed. Delivery of babies is much easier for women who still have their tonsils, because of less toxic waste in the body.

The young boy with his tonsils intact will have better seed for reproducing and less chance of prostrate problems because of a cleaner blood stream. To repeat, we have ten fingers and if we get infection in one of them we would not think of chopping it off without trying to heal the finger first. We only have two tonsils and, when there is a little infection in them, how foolish to cut or burn them out! As stated earlier, let's save these tonsils for better, stronger and more peaceful generations to come.

[Tumors](#)[Typhoid](#)[Ulcers](#)[Uterus](#)[Varicose Veins](#)[Vertigo](#)[Vomiting](#)[Warts & Moles](#)[Whooping Cough](#)[Worms](#)[Yellow Fever](#)

Make a fomentation of three parts mullein and one part lobelia, dip the flannel in the fomentation, wrap around the neck at night, and cover with plastic. Do this each night until the condition clears up. Drink 1/2 cup of the mullein and lobelia [Mullein & Lobelia] tea morning and evening and one cup or more of comfrey (leaf or root) tea each day, and, most specifically, use red root tea. [HHH p.193]

When the tonsils become enlarged or inflamed, clean up the bowels, go off solid foods, go on the three-day cleanse. [HHH p.157]

[Children's Laxative](#); Tonsillitis (Young children): See formula using senna leaves, red raspberry and pennyroyal. [SNH p.192]

[Antisp](#): Dr. Christopher's Anti-Spasmotic Tincture: Consists of skullcap herb, lobelia, cayenne, valerian root, skunk cabbage, gum myrrh, and black cohosh. Used historically in cases of convulsions, fainting, cramps, delirium tremors, hysteria, etc., also good for pyorrhea, mouth sores, coughs, throat infections, tonsillitis, etc. Dose 1/2 to one teaspoon to glass of steam distilled water as a gargle and use until throat clears, also take one teaspoon in steam distilled water morning and evening. [HHH p.195]

[Sage](#): For tonsillitis a strong Sage tea is made, two ounces to the quart of boiling water. It is allowed to steep for two hours. Strain, and then add a small bit of pulverized alum. One woman who tried this gargle wrote that her oldest boy had recurrent tonsillitis, so she prepared this Sage-alum tea and had him gargle with it several times a day. The next morning he got up without any tonsillitis although he had suffered for weeks with it previously and could not eat or sleep (Luc:Secrets:67). [UW-Sage]

[Mullein & Lobelia](#): Dr. Christopher's Glandular Formula: When the lymph system is showing signs of being over-loaded with toxic wastes, the intelligent thing to do is to start cleaning up this condition as soon as is possible. Beat this criminal "to the draw" by eliminating mucus-making materials (ofttimes it's hard to label some of the merchandise we eat as "food"), and use fresh fruit and vegetables, juices, and plenty of distilled water. During the "cleaning up period," it is good to use a special herbal food for the cleansing and feeding of the lymph system--a combination of mullein herb and a small part of lobelia herb (such as three parts mullein and one part lobelia). For instance, the adult dose for tonsillitis is a cup of the tea three or more times in a day, and for younger people it is a full-adult dose twelve years and up, one half dose eight to twelve years, one fourth dose four to eight years, and under that age in "careful proportion."

In addition to the oral use of the tea (infusion of one ounce of the combined herbs to a pint of boiling water, poured over the herbs, covered, and allowed to steep approximately twenty minutes), it is also to be used externally. After straining the herbal tea, soak flannel cloth (never man-made synthetic cloth) in the remaining tea and apply over the swollen gland areas (throat for tonsils, etc.). Cover the fomentation cloth with plastic to keep the moisture in. It is good to do this procedure at night and leave the fomentation on all night. Some cases take more than one application, but many see the finest results with the overnight program. [NL 1-9]

[Decoction of Oak Bark](#): (Used as external compress for hemorrhoids, dermatitis, as a gargle for tonsillitis, pharyngitis, and as an enema). 1 handful of pounded oak bark into a liter of water. [NL 2-10]

[Tincture of Cayenne](#): This tincture heals wounds, cuts through mucus, good for sore throats, and tonsillitis; milder solutions can be used in the nose, eyes, and ears for cleaning up microscopic "lounge lizards" in infections. Has been successfully used for resuscitation of newborn infants; a few drops administered orally. The best and safest stimulant known to man. [NL 3-2]

[B & B Tincture](#): Dr. Christopher's Nervous System Formula with Black Cohosh: Consists of black cohosh, blue cohosh, blue vervain, skullcap and lobelia. Helps in cases of motor nerve injury, epilepsy, hearing loss, warts and tonsillitis. [NL 3-5]

[Juice](#): Carrot, celery & parsley. [NL 3-5]

[Prevention](#): Maurice Messegue, a second generation French Herbalist, suggests winter prevention of tonsillitis by taking a nightly infusion of two pinches of thyme to a cupful of water. Thyme contains the powerful antiseptic thymol as the active ingredient. [NL 4-1]

### Testimonials

Dr. Christopher's Tonsils: I was born with a set of tonsils which, when infected, swelled almost up to the size of golf balls. My parents, following the advice of the standard medical opinion makers of the day ushered me off to the local hospital in Salt Lake City and paid to have my tonsils removed. As most of you know, the Good Lord left the plans and specifications for the regeneration of the human body. So, my tonsils, being faithful creations grew in again. I was very sickly as a child and tonsillitis set in regularly. My folks again took me in for procedural surgery. After the third set of tonsils grew in my parents (rather than becoming tonsil-poor) decided to let me live with the usual winter infections in the throat. To this day I have been remembered as one of the only kids on my block who grew in three sets of tonsils.

The surgeon looks upon the tonsils as the seat of bacterial infection and states that he can stop bacterial infiltration into the rest of the body by removing the tonsils. Actually, this procedure does nothing but make it possible for infection to settle in other lymph nodes. Clean up the whole system and you can avoid cutting out the affected part. [NL 4-2]

## Tuberculosis

### Definition

A long term grainy tumorous infection caused by an acid-fast bacillus. Exposure is usually by breathing in or eating infected droplets.

### Symptoms

Usually affects the lungs, although the infection of other organ systems by other ways of getting the disease occurs.

### Herbal Aids

Echinacea: Fine results have been obtained by using echinacea alone or in combination with elecampane root. [SNH p.89]

Garlic: Inhale the vapors of the freshly expressed juice that has been diluted with equal quantities of water. [SNH p.100]

Garlic Syrup; Give 2 teaspoons to 1 tablespoonful of the syrup 3-4 times daily between meals. [SNH p.100] Tincture-syrup (glycerine) of garlic: See formula using garlic cloves, apple cider vinegar, distilled water, glycerine and pure honey. [SNH p.102]

Dr. Coffin's Formula for Tuberculosis or Consumption: See formula using raspberry leaves, agrimony, barberry bark, cleavers, ground ivy, European centaury, horehound, cayenne and licorice. [SNH p.149]

Comfrey: Combine comfrey with garlic (add 1 tablespoonful of fresh garlic juice to every pint of mucilage of comfrey) and stir well. This is the best remedy ever discovered for this problem, according to Dr. Shook. [SNH p.310] Stir well or shake together. 1 wine glassful - 1 teacupful, every 4 hours. [SNH p.312]

Tuberculosis or Consumption Remedy (with hemorrhage and antipathy garlic): See formula using mucilage of comfrey, elecampane root, garlic juice and distilled water. [SNH p.314]

Strong Decoction (inflamed tissues, tuberculosis... pulmonary complaints): See formula using mullein leaves, distilled water and glycerine. [SNH p.317]

Use the "Asthma remedy" Formula, adding 1 teaspoonful of garlic juice; take 1 teaspoonful frequently, according to the severity of the case. [SNH p.335] Asthma remedy: See formula using slippery elm, horehound, garden thyme, red clover tops, yerba santa, lobelia, resin weed, cayenne, blackstrap molasses and glycerine. [SNH p.339]

General Body Nutritive, Flesh Builder, Tuberculosis, Whooping Cough, etc.: See formula using elecampane, sweet almond oil and comfrey mucilage. [SNH p.343]

Tuberculosis, with Severe Hemorrhage: See formula using elecampane, comfrey root, horehound, licorice root, Iceland moss, Peruvian bark, composition powder, cayenne, acacia, sugar, queen's delight tincture, and anti-spasmodic tincture. [SNH p.345]

Coughs, Consumption, Tuberculosis: See formula using cayenne, slippery elm, lemon and honey. [SNH p.410]

[Resp-Free](#): Dr. Christopher's Herbal Formula for Lungs and Respiratory Tract: This

[Tumors](#)[Typhoid](#)[Ulcers](#)[Uterus](#)[Varicose Veins](#)[Vertigo](#)[Vomiting](#)[Warts & Moles](#)[Whooping Cough](#)[Worms](#)[Yellow Fever](#)

combination of herbs in tea form or the powder in capsules is an aid to help relieve irritation in the respiratory tract, lungs and bronchials. This is an aid in emphysema as well as other bronchial and lung congestions such as bronchitis, asthma, tuberculosis, etc. This formula is extremely valuable in helping promote the strengthening and healing the entire respiratory tract. It helps promote the discharge of mucus secretions from the broncho pulmonary passages. Suggested amount for an adult is a cup two or three times a day, or two or three capsules two or three times a day with a cup of comfrey tea. For additional help in the program, it is good to add three to six drops of tincture of lobelia to each cup of tea.

This formula consists of comfrey root, mullein, chickweed, marshmallow root and lobelia. [HHH p.188]

Alfalfa: Dr. H. E. Kirschner, relating the research efforts of one of the pioneers of Alfalfa, Frank Bower, retold the story of a man who was very anemic. He was considered a borderline tuberculosis case and had no appetite at all. Bower supplied the landlady of the boarding house where both of them took their meals with a liberal amount of Alfalfa tea, to be taken at meals. All the boarders liked it, and after about two weeks, the sick man began to eat with gusto. They all ate so heartily that larger meals had to be prepared to meet their demands (Kirsch:28). [UW-Alfalfa]

Mullein: The herb was formerly used, before tuberculosis was so well-controlled, to relieve the cough of that ailment and facilitate expectoration (Coon:204). We do not know if modern medicine may someday be unavailable to us as the last days come upon us, so it is good to know that Mullein is considered, in Ireland, a specific for all lung troubles, especially tuberculosis, and that it is extensively cultivated there and kept on hand for that purpose. Mullein contains both potassium and calcium phosphate. These two organic minerals are absolutely necessary for the nervous system and bone structure. As the ravaging effect of tuberculosis is to feed on all the tissues of the body until they are literally wasted away, it is possible and probable that the presence of these two vital salts renders the Mullein so effective in checking this disease (ShoA:194-5). A simple infusion, sweetened with honey, is good for the beginning stages of the disease, as well as for hemorrhage of the lungs, stomach, intestines, or other internal parts. When the disease is more advanced, a strong decoction is more useful. It helps calm and quiet the nerves, soothing the inflamed tissues markedly. Shook said that tuberculosis has been cured in its earlier stages by this one herbal aid alone; in all stages it is said to help give prompt relief and help promote rest and sleep. Its narcotic principle is not well-known, but it is well known that it is non-poisonous.

Enormous amounts of it have been taken, and there is no case on record of injury or harm to patients who have taken as much as a quart a day (ShoA:195). Shook did recommend for advanced stages of tuberculosis a strong decoction of Mullein mixed with the mucilage of comfrey root, to help expectoration and to soothe, and a syrup of garlic, to stop the decay of cells in the body. This also helps with almost any serious condition of the body, he said, especially all diseases that show a marked deficiency of calcium and sulfur. It is indicated in all wasting diseases, and gives prompt relief to any pulmonary troubles. Since Mullein has been reputed to have some antibacterial properties, mild and inoffensive as the herb is, it is not surprising that it can help with these serious problems. [UW-Mullein]

### Testimonials

1. Dr. Christopher and Tuberculosis: Dr. Christopher recommended the use of Onion as an alternative to Garlic if it wasn't available. It works much the same, but is weaker in action. He said, however, that there is a specific use for onions, and here is the story he told.

He was practicing with a small band many years ago. He was going to travel to Europe, entertaining on board a ship. But as he would play his banjo, he had such a bad cough that he would cough in rhythm! The French dancer who was going with them said, "That's awful". "We can't continue this way." She went off into the kitchen in her apartment. When she came back to finish the practice, she brought him a bowl of onion syrup. Dr. Christopher had had this cough for four years. He had been working in a planing mill, running a three-gun sander and the sandings from the hardwood--mahogany and similar wood--came into his face. It was during the Depression and they couldn't afford a mask, so he had to contrive a mask himself. However, it didn't work, and he got his chronic cough. Medical doctors and his family physician, told him he had tuberculosis, which they said they couldn't treat or cure.

But after just a spoonful of this Onion syrup, Dr. Christopher had the first peace and ease he had

had in a long time.

Here is the way you make the syrup. Dice up big dried onions, whatever amount you want, and put them into a stainless steel, unchipped enamel, or Pyrex pan. Don't use aluminum. When you have about the amount you want, pour liquid honey over them until they are covered. Add nothing else. The honey extracts the Onion power, which is the greatest antihistamine known. This goes into the honey solution and provides a wonderfully effective cough syrup. [UW-Onion]

2. Distilled Water, Good Nutrition, Sunshine and Fresh Air and Exercise: I have met Paul C. Bragg and want to say that here was another great man (although now deceased) that did a lot for mankind, in teaching the use of distilled water for better health. As a teenager, Paul Bragg had tuberculosis and his doctors had told him there was no cure, that he was "not going to make it."

The little Swiss nurse was angry with the doctors and after they left she told him he could be cured in Switzerland. She took him back to Dr. August Rollier, and there in Switzerland he had a "rebirth" with just natural healing methods, no drugs of any kind-just distilled water, good nutrition, sunshine and fresh air (deep breathing) and exercise.

He became well and, as he put it, "strong as a young stallion." He studied two years in Switzerland and then he moved to London to study and prepare for his life's work. His landlord and his wife were very sick, so he started them on the use of distilled water and other simple aids, i.e., pure foods, etc., and performed a miraculous healing. At first these two had great difficulty in climbing the stairs but after a "cleaning out" could climb up and down the stairs within three weeks, something his landlord had not done in seven years. [NL 1-10]

## Tumors

### Definition

A swelling. An abnormal formation of parasitic, non-inflammatory cells or tissue arising from the cells of the host, yet progressive and independent in their growth. Tumors can be malignant or non-malignant, they can be fast-growing or slow-growing, and they can be in many parts of the body, such as the lymphatic glands or nodes, the urinary and genital areas, or the abdominal structure. [SNH p.45]

Brain Tumors: The most common tumors of the brain are the meningiomas, derived from the coverings of the brain, and the gliomas. Sarcomas and cancers do occur but are almost always derived from tumors in other parts of the body, for example, the breast and the bowel. Tumors of any size and duration produce certain general symptoms indicative of an increase in the intra cranial pressure, namely, headache, vomiting and optic neuritis or swelling of the optic nerve just as it enters the eyeball. Dizziness is another common symptom, and in the late stages mental changes may occur. In tumors of the frontal lobe mental changes are sometimes the earliest indication of the disease process. Tumors of the temporal lobe often produce a dreamy state, sometimes associated with hallucinations of smell. The position of the tumor may often be determined by noting the muscular and sensory abnormalities of various parts of the body and correlating the findings with what is known regarding the localization of function in the brain."

The brain must be properly nourished and kept free of inorganic materials that can cause this tremendous organ to malfunction. [NL 2-1]

### Cause

The inability to eliminate unhealthy material. [SNH p.46]

Hundreds of women have wondered why they have tumors and cysts in their bodies. The cause, according to Dr. Christopher, is potassium deficiency. When a patient takes plenty of potassium foods (not supplements) you can remove the cause of the cysts and tumors. Other foods, which are lower in potassium, must not be increased when you are trying to increase the potassium in the system. When patients go on the three-day cleanse and mucusless diet and take the female corrective formulas [Nu Fem], they receive nourishment which is high in potassium. Miraculous things happen to them. For even faster results, you can add to each cup of herb tea six to ten drops of elderberry tincture or six to ten drops of black walnut tincture, both of which are extremely high in potassium.

Cysts and tumors are like leeches, but they stay in places where there is a body deficiency. As soon as the body is balanced and well, the cysts and tumors have to go, because the material is too healthy for them to live on.

This is why so many patients brought Dr. Christopher cysts and tumors in various sizes that they had expelled from their bodies. There is not enough food, in the form of dying or deficient body materials, so they just decide to leave.

There are several ways to receive your potassium. Dr. Bernard Jensen sells a potassium broth made from dehydrated vegetables. Dr. Bronner makes a similar, excellent product. You can also make your own potassium broth by simmering equal parts of red potatoes, celery, carrots, onions, and herbs to taste. Raw vegetable and fruit juices also flood the system with potassium.

When cysts or tumors grow in places where they can be seen outside the body, often we react by having them cut out. This defeats healing by working on the effect instead of the cause. You can cut cysts out, tumors off, and burn warts off (which are also a potassium deficiency), or get rid of as many moles as you wish, but unless you go to the cause, they will grow back again, and you

Tumors[Typhoid](#)[Ulcers](#)[Uterus](#)[Varicose Veins](#)[Vertigo](#)[Vomiting](#)[Warts & Moles](#)[Whooping Cough](#)[Worms](#)[Yellow Fever](#)

may end up with as many or more cysts, tumors, moles as before. Different signs of potassium deficiency will keep popping out on the body because the condition that needs correcting is on the inside. You have to go into the cause, Dr. Christopher always insisted, which is the way we have been eating. [EWH p.125]

**Herbal Aids**

General Instructions: Rebuild tissue so the body can slough off the tumor accumulation. This is done by toning the body generally with alternatives. [SNH p.46]

Scrofulous Tumor: See formula using plantain leaves, fumitory herb, yellow dock root, white resin, olive oil and yellow beeswax. [SNH p.54]

Compound Poke Root Liniment: See formula using poke root, bayberry, sassafras oil, bay or laurel and tragacanth. Apply to affected parts 4-5 times daily. For tumors and enlargements, use plenty of friction or kneading. [SNH p.62]

Garlic Juice for Indolent Tumors. Apply the freshly expressed juice. [SNH p.101]

White Pond Lily: Apply a poultice of the fresh roots and leaves; also the strong decoction makes an excellent base for mixing other ingredients for application; the powder is often mixed equal parts with crushed flax seed (linseed) or powdered slippery elm. [SNH p.165]

Cleavers for Breast Tumors: Use the expressed juice mixed with linseed meal, and apply to the breast; take 1 teaspoonful of the juice while fasting in the morning. [SNH p.268]

Slippery Elm Pack (female genito-urinary problems, growths, tumors, etc.): Take the slippery elm powder and add sufficient water to make a bolus. Knead the bolus until it is quite stiff, 3 inches long, and the size of the patient's middle finger. Cut into 3 pieces, each 1 inch long and procure a fine sea sponge, sew a piece of silk thread firmly to the sponge, leaving 3-4 inches of the thread to the hand. Smear the sponge with equal parts of Vaseline and glycerine and set aside for use. Dip 1 piece of the slippery elm bolus into hot water and insert as far as possible into the vagina. Follow with the second and third pieces. Next, insert the smeared sponge into the vagina opening (which will hold the bolus in place) and leave for 2 days. Remove the sponge by pulling down on the silk thread, syringe thoroughly with a cleansing agent such as yellow dock (*Rumex-crispus*), and repeat the pack, or use our Vaginal Douche [[Yellow Dock Combination](#)]. [SNH p.339]

Bolus: ([V.B.](#)) One of the valuable procedures in the healing program for a woman is the vaginal bolus. The bolus is inserted into the rectal area. There are two types of bolus: one that dissolves at body temperature and the other acts as a poultice. The poultice-type is made with healing herbs to draw the poisons and toxins; and to break loose cysts, tumors, and cancerous conditions even as far up as the abdominal area as the bolus has a widespread influence, effecting not only the vagina, but also other organs, such as the bowel and the urinary tract. This drawing-type bolus generally consists of a group of herbs. [SNH p.503]

Castor Oil Fomentation: In order to get rid of hardened mucus in the body, which may appear as cysts, tumors or polyps, the following fomentation is to be used:

Soak a piece of outing flannel or baby's diaper in castor oil, squeeze slightly so it won't drip much, then place over entire frontal torso (neck to groin and side to side). Place a hot water bottle (over the castor oil application) over the liver area (the liver is on the right side just above the waist). It should be noted that a heating pad is not too highly endorsed here, unless a wet towel is placed between it and the skin--but even then, a wet heat (such as the hot water bottle) is best. Leave all this on for 1 1/2 hours; the hot water bottle may have to be refilled with hot water several times, because it cools rapidly. The next three days, over the same area covered by the outing flannel and castor oil, massage in circular motion toward the heart with olive oil for 5 to 10 minutes.

The seventh day is a day of rest, not only from the fomentation, but every part of the program, drinking only water the entire day -- and every seventh day thereafter will be done the same way. On the eighth day then, begin again with the castor oil for three days and so forth, along with the mucusless diet. the herbs, etc., until healing is accomplished. In the use of the fomentation, the castor oil goes through the skin into the liver area and lymph glands and starts drawing out the

poisons and flushing them out, while the olive oil goes in and heals and rebuilds new tissue. This procedure may have to be carried on between six weeks to six months to properly clean up the system, depending on the case. [SNH p.525]

[Incurables Routine](#): This program has been used for many different malfunctions with great success in nearly every case: multiple sclerosis, muscular dystrophy, stroke, deteriorating bones, curvature of the spine, locked arthritis joints, tumors and cysts in nearly all parts of the body. We have seen great improvement, reduction in pain and often complete healing in cases supposedly incurable. As you read each step taken in this program, analyze it and see if it can do anything but good. You will see that not one harmful thing is recommended. For much more information on the entire program see HHH p.85. [HHH p.85]

[V.B.](#): Dr. Christopher's Vaginal and Rectal Herbal Bolus: Here is another excellent aid for the woman (or rectal bolus for the man) who have problems in the reproductive areas. Boluses are made with healing herbs that help promote the following: (1) draw out the toxins and poisons, (2) aid (with herbal foods) in making the malfunctioning area healthy, so that cysts, tumors, and cancerous conditions will not have waste material to survive on or live in, because they are all scavengers. Herbalists have found that they will release and will be dispersed. Herbalists have found that some will come out through the orifices and others disperse into the blood stream and will be eliminated if the program is followed faithfully. (3) The bolus spreads its herbal influences widely from the vagina or bowel through the entire urinary and genital organs. The formula consists of one part each: squaw vine herbs, slippery elm bark, yellow dock root, comfrey root, marshmallow root, chickweed herb, golden seal root, mullein leaves. These herbs are all in powder form. Coconut butter should be melted down so that it will mix well with the herb powder. Mix a small quantity of this powder, and wet to pie dough consistency with coconut butter (which can be purchased from the drug store, health food store, or herb shop). Next, roll this mass between hands until you have a pencil-like bolus approximately the size of the middle finger and about inch-long pieces. Harden in a refrigerator. Then these are to be inserted into the vagina much the same as suppositories would be. It will be necessary to wear a sanitary napkin in order to hold the bolus up in the vagina (or rectum).

Insert upon retiring and leave in all night, six nights a week. The coconut butter melts at body temperature, leaving only the herbs, and these are easy to douche out. The following morning use the Slant board combination - number 12 below. [HHH p.191]

[Yellow Dock Combination](#): Dr. Christopher's Yellow Dock Combination: This is to be used in conjunction with number 11 above. As an aid in prolapsed uterus, bowel, or other organs, to assist in giving relief, make concentrated tea (simmer down to half its amount) of six parts oak bark, three parts mullein herb, four parts yellow dock root, three parts walnut bark or leaves, six parts comfrey root, one part lobelia, three parts marshmallow root. Inject with a syringe (while head down on slant board) into vagina, 1/4 to 1/2 cup or more; or rectum, one cup or more; for prolapsus or hemorrhoid problems and leave in as long as is possible before voiding. Dose suggested is one fourth to one cup, one or more times in a day, and drink one fourth cup in three fourths cup of distilled water three times a day. When the tea is injected into the abdominal area and while on the slant board, knead and massage the pelvic and abdominal area to exercise the muscles, so the herbal tea (food) will be assimilated into the organs. [HHH p.192]

[Black Ointment](#): Dr. Christopher's Black Ointment (an excellent drawing ointment): Used historically (externally) on old ulcers, tumors, boils, warts, skin cancers, hemorrhoids, excellent for burns and as a healing agent. This is made with chaparral, comfrey, red clover blossoms, pine tar, mullein, beeswax, plantain, olive oil, mutton tallow, chickweed, poke root. [HHH p.196]

[Is There a Natural Way to Eliminate Fibroid Tumors?](#) A question to Dr. Christopher in his newsletter. His answer is: Yes, there is. A tumor is a swelling, an abnormal formation of parasitic, non-inflammatory cells or tissue arising from the cells of the host, yet progressive and independent in their growth. Tumors can be malignant or non-malignant. They can be fast growing or slow growing and they can develop in many parts of the body such as the lymphatic glands or nodes, the urinary and genital areas or the abdominal structure. The cause of the tumors is an inability to eliminate unhealthy materials and this generally stems from a lack of organic potassium in the diet.

Begin by observing the procedure in the [Three Day Cleanse](#) and [Mucusless Diet](#), keep the

bowels free with the lower bowel tonic [[Fen LB](#)] and use the following procedure: drink one to three cups of potassium broth each day. Make the broth with potato peelings at least one half inch thick, comfrey leaves, celery leaves, cut-up celery stalks, a few carrot tops from the garden, not wild, beet greens, spinach greens, chopped onions and garlic and several whole, black peppercorns as a stimulant and digestant. Cover the mixture well with distilled water and slowly simmer. If possible, keep the temperature around 130 degrees for six to ten hours. Do not boil. After simmering, strain the preparation. Use this broth between meals as you might a tasty tea being sure to chew it well.

Besides using this broth we also suggest one cup or more per day of elderberry tea. If elder blossoms are being used for the tea in place of the berry add about a fourth part of peppermint leaves to avoid nausea.

Over the tumorous area use the comfrey combination also known as the bone, flesh and cartilage [[BF & C](#)] combination. The use of this combination was explained in the answer to the first question of this issue of the newsletter.

If the tumors are in the reproductive organs see the herbal combinations mentioned in the booklet [The Three Day Cleanse](#) and [Mucusless Diet](#). They are listed under various titles, "herbal aid for female reproductive organs" [[Nu Fem](#)], "herbal prostrate formula," [[Prospallate](#)] and "herbal aids to equalize hormones and estrogens" [[Changease](#)]. Also, be aware of the rectal and vaginal bolus [[V.B.](#)] and the [Yellow Dock Combination](#) tea also explained in that booklet. Whenever possible use the castor oil fomentation which you will find in the cleanse program as well. [NL 1-3]

Chaparral: The Kelly Research Foundation in Grapevine, Texas has been active in cancer research. The following is a statement concerning chaparral by Dr. William Kelly:

"I've found that chaparral is very effective in 7% of the cases of malignancy. The action is not as many researchers believe--a specific activity against the cancer cell, but rather an indirect one. In about 7% of the cases of malignancy, the pancreas and the liver as well as other tissue of the body are so congested with poisons such as medications, sprays, drugs, metallic poisons, and pollutants, that these tissues cannot carry on normal activity. This is basically an antagonist to the enzyme and vitamin and mineral metabolism that goes on in the body. In cancer specifically, we find that the pancreatic enzymes are locked with the antagonists and are rendered totally ineffective. By chelating these antagonists from the pancreatic enzymes, we find that normal activity takes place and the person's own cancer defenses take over and destroy the tumor in malignant conditions. It has been found further and should be seriously investigated by the Federal Government that Chaparral works well in chelating the toxins out of the bodies of those who have been drug addicts. We recommend taking two Chaparral tablets before each meal. This seems to be an effective way of chelating antagonists from the body that otherwise could not be accomplished." [NL 3-4]

Cancer - Tumors and Cleansing the Body: Just a word about cancer. It is a systematic disease. It depends on filth in the bowel and the blood stream. Our understanding of cancer is different from that of the surgeon's. We see the body being able to "clean up its act" and stop recycling the same old toxins around and around in the body. All channels of elimination (including the skin) must be functioning. The food intake must be pure.

Even though a person is operated upon for a cancerous tumor, there is no guarantee that the cancer will not return simply because the cause was not studied.

"Cancer" is a frightening word. The one we use is "cell deterioration." This explains the process in the body more clearly than the word, "cancer."

Sometimes, during an operation for a tumor, blood spills over into the rest of the body. This blood contains some of the tumor cells. The doctors sometimes say, "Oh, the body will take care of those." Mendelsohn suggests that surgery would be unnecessary if the body could take care of the cells by itself.

The medical alternative to cancer surgery, chemotherapy, presents side effects that sound like horrors out of an old Frankenstein movie.

Our program, "The [Incurables](#)," is a safe, nontoxic method to restore health and strength. It is not as easy as surgery, however, it involves retraining the little tyrants known as the tastebuds.

Remember the old Biblical statement from the Old Testament, "If the eye offends you, pluck it out!" This phrase seems to be the general rule in most allopathic treatment from tumors to tonsils.

We now view the old medical practice of bloodletting (to let out the bad blood) to be primitive. How much more primitive it is to exclude an entire organ from the body as punishment for its diseased condition. An automobile will not function without a carburetor. A faulty carburetor can be replaced, rebuilt, or cleaned out and the car will run again. The design of the auto makes it necessary for each part of the engine to be integral. Parts cannot expect to be ripped out of the system and still have good driving possibilities. Every human organ is functional and contributes to the smooth operation of the entire organism. It's erroneous to think that removal of an organ is standard procedure. Surgery is no replacement for cleansing and rebuilding the body. We need to work with Nature instead of trying to second guess it. [NL 4-2]

Tumors on the Pineal and/or Pituitary Glands: From a letter to Dr. Christopher about a person in a coma. At the end of his answer he mentions that this same program can be used successfully with someone with tumors on the pineal and/or pituitary glands. Here is the question: If a person were in a coma caused by some hemorrhaging in the brain stem area, how might this be approached herbally?

Dr. Christopher's answer: We have an herbal formula we call "bone, flesh and cartilage" [\[BF & C\]](#) that has been used successfully in these types of conditions. Make a tea of the following herbs: six parts oak bark (*Quercus alba*; Fagaceae; Cupuliferae), three parts marshmallow root (*Althea officinalis*), three parts mullein herb (*Verbascum thapsus*), Two parts wormwood (*Artemisia absinthium*), one part lobelia (*Lobelia inflata*), one part scullcap herb (*Scutellaria lateriflora*), six parts of comfrey root (*Symphytum officinalis*), three parts walnut bark (*Juglans nigra*) (bark or leaves), three parts gravel root (*Eupatorium purpureum*). Soak the combined teas in distilled water (at the rate of one ounce of combined herbs to each pint of distilled water), then soak four to six hours, simmer slowly thirty minutes, strain and then simmer the liquid down to one half its volume and add one fourth vegetable glycerine (if desired). Example: one gallon of tea simmered (not boiled) down to two quarts and add one pint of glycerine.

Soak flannel, cotton or any white material other than synthetics--never use synthetics. Wrap the fomentation (soaked cloth) around the head area (like a nightcap), tied under chin to hold in place, also down the spine to the shoulders. The fomentation down the spine should be about four or five inches wide. Put a shower cap over the head and a piece of wax paper, oiled silk or plastic down the spine area. Keep this fomentation on the area approximately twelve hours each day, either during sleeping hours or during the day--whichever is more convenient. Drink 1/4 cup of finished concentrated tea with three fourths cup of distilled water three or more times a day. Do this entire program six days a week, week after week until healed.

This routine has been used with cases of tumors on the pineal and/or pituitary glands, and these tumors have decreased--in one case over 65 percent in six weeks, then over another month was completely gone. This herbal formula will aid in rebuilding the hemorrhaging area with surprising results. [NL 1-6]]

Juices: Carrot, spinach, pineapple. [NL 3-5]

Organic Potassium: Cancerous tumors have a very difficult time growing when there is the presence of organic potassium in the body, so the tinctures of black walnut or elderberry or any other foods high in potassium can be helpful here, providing that the bowel is in good condition so that proper assimilation can take place. [NL 3-6]

[Mullein & Lobelia](#): Dr. Christopher's Glandular Formula and [Red Clover Combination](#): Dr. Christopher's Blood Purifying Formula and Breast Tumors: When there is any problem with the breast, and this should be noticed early, we use the fomentation of 3 parts mullein and one part lobelia over the affected area. It may be taken internally as well. Many Indian tribes have used a fomentation of poke root externally to draw out the cancer. As with all cancers, they begin in the blood stream and radiate out to other parts of the body where they are manifested. The Red Clover Combination can be used to help purify the bloodstream, the nutrient transport system of the body. Cysts and tumors will not grow in an atmosphere where there is enough potassium. Elderberry tincture can be taken for potassium increase along with foods that are high in potassium. [NL 4-2]

Tumor in the Ear: If a tumor in the ear has been diagnosed, the Bone, Flesh and Cartilage [\[BF & C\]](#) fomentation is necessary along with the [incurables program](#). Tumors will not form when the body has sufficient potassium. Organic forms of potassium can be found in black walnut and

elderberry tincture. Grape juice or green drink are good sources, too. [NL 4-6]

Cabbage Leaves: The leaves, when cooked and applied to chronic ulcers, modify and heal them, and aid the resolution of tumors and wounds." [NL 4-12]

Red Beet: Our common red beet is a highly nutritious plant, The root is an excellent appetite stimulant and is easily digested. ...One therapy for leukemia and tumors is to consume a couple of pounds of raw, mashed beets daily. [NL 4-12]

Figs: Contain an active ingredient called benzaldehyde which has been found to be a very effective carcinostatic agent for reducing certain kinds of tumors found in the neck, throat, and general lymphatic system particularly the adenoids. [NL 5-1]

The Flaxseed poultice is probably one of the most famous applications of the herb. The ground seed is mixed with boiling water until it is a thick mush. Other herbs may be added to it for specific conditions, such as hops, mullein, etc. This is one of the best poultices, according to Kloss, for old sores, boils, carbuncles, inflammations, and tumors. It is excellent for enlarged glands, joints, swellings, pneumonia, pleurisy, sprains, bruises, contusions, or inflammations of any part of the body, according to Dr. Shook (ShoA: 182). Apply as hot as possible; cover with waxed paper or plastic, and keep warm, reapplying hot poultices as needed. It allays irritation and pain and promotes suppuration; lobelia will help cure boils. It is commonly used for abscesses and other local affections (Gri:319). [NL 7-2]

### Testimonials

1. Passed Some Tumors, One Almost the Size of a Grapefruit, and Cysts as Well: When Dr. Christopher was traveling, using chiropractic offices and naturopath's offices, diagnosing, reading eyes, and helping with herbs a lady...came to see him. In addition to the prolapsed transverse colon infecting the entire reproductive system, it had impinged on the bladder, so that whenever she laughed, sneezed, or coughed, she would void her urine, a very embarrassing problem. In addition, one of her breasts was so infected that the doctors were urging her to have it removed. Dr. Christopher told her he could give her advice as to what to do, but that he was traveling and wouldn't be able to guide her or see her for several months. She agreed to follow his instructions, and asked to see him when he returned.

He put her on the full program. She was to clear the bowel with the lower bowel formula [[Fen LB](#)], to clean the bloodstream using the red clover combination, and to rebuild the reproductive organs with the female corrective [Nu Fem] and the hormone-estrogen formula [[Changease](#)]. She was to continue the whole program, six days a week.

When he returned to that city six months later, she had called and prearranged an appointment. She bounced in, looking years younger, all smiles. She said her urine loss was under control now, with no unwanted voiding. She had no pains in the ovaries; in fact, she had dropped some stones from the three-day cleanse. She had also passed some tumors, one almost the size of a grapefruit, and cysts as well. When she went to the family doctor for an examination, he was astounded, because her body was rebuilding itself. The breast they were going to cut off had healed itself, with no more infection. She felt that it was a new world, and that life was worth living again.

Although she healed rapidly and consistently, Dr. Christopher pointed out that herbs don't work all at once, but you have to apply yourself and be patient to wait for the results of your hard work. [EWH p.114]

2. Tumor from Leg Decreases: I want to tell you this because maybe it will help someone else. I have a tumor on my leg (almost gone). I've been putting the B & B cotton balls on it, with plastic and tape. My leg got so itchy I couldn't stand it, also the skin all around the tumor got lumpy. Anyway, I thought maybe it was the plastic but when I didn't use it, the B & B would dry so fast I was changing it all day long. This is how I solved it. I cut a slice of potato, big around, cut a groove in the slice to make room for the cotton balls soaked in B & B. I put the plastic on the back of the potato slice (none of it touching the skin) put the tape (I have a very good silk tape) on the other side of the plastic to make a little pad, none touching the skin, then a cloth wound around, holding the whole thing in place.

This was a good sized tumor. I was amazed when I would take the bandage off it would just squirt

all over. Well, I've had it getting bigger for 15 years, and now its almost gone. I'm so glad I didn't have to have my leg all cut up. Wow, wouldn't it have left a hole. I don't even think I'll have a scar. [NL 2-2]

3. Comfrey: Dr. Charles MacAllister, M.D., was interested in the use of comfrey as a healing agent. He had written a paper in the 1896 edition of the British Surgical Journal, Lancet. In it, he gave his philosophy concerning the bloodstream and irregular cell growth. Dr. MacAllister wanted to look up his paper and noticed an article in the same issue by a Professor William Thompson, President of the Royal College of Surgeons in Ireland. Thompson recorded a case of a man who had been diagnosed as having a malignant tumor on his face. The patient had undergone surgery of the palate in an attempt to remove the cancer.

A month later, the cancer returned. This time it ran rampant throughout the patient's head. They gave up on cutting it out. It had gone too far, and they sent him home. Three months later he returned to Thompson's office and was examined. Thompson noted that the cancer had completely disappeared. The patient told Dr. Thompson that he had been applying comfrey poultices to the swelling and that it had gradually disappeared. The patient had a custom-made palate to fill in the hole left by surgery of the hard palate. Thompson states in the report that although he knows nothing of the use of comfrey, he does not believe that it would remove a sarcomatous tumor.

MacAllister was inspired by that article of Dr. Thompsons and began to wonder if there was actually anything in comfrey that would control or stabilize cell growth. He began an extensive study of comfrey although he had never before heard of its use as a medicine. Beginning with old books on materia medica (substances used medicinally), MacAllister found that after the mid-nineteenth century, comfrey or Symphytum was referred to as obsolete as a healing aid. He then began to search through the ancient and medieval herbals which told the history of the use of comfrey. There were several varieties of the plant used, one was known to Turks and Saracens for use in healing battle wounds. [There is much more to read about the comfrey and the components that MacAllister discovered. To read more go to the source of newsletter 4-3.] [NL 4-3]

## Typhoid

### Definition

A bacterial infection usually caused by Salmonella Typhi and is carried by contaminated milk, water or food.

### Symptoms

An infectious affliction characterized by an enlargement of the spleen and the mesenteric lymph nodes and catarrhal inflammation of the intestinal mucous membrane. After two or three weeks incubation, there is weakness, headache, vague pains, tendency to diarrhea and nosebleed, and pronounced stupor. The stools have a peculiar pea-soup color. At times there is constipation, and usually there is slight congestion of the lung accompanied by a cough. On the seventh to ninth day, peculiar eruptions of small, slightly elevated, rose-colored spots appear on the chest and abdomen. Frequently there is a complication of intestinal hemorrhoids, peritonitis, pneumonia, nephritis and perforation of the bowel. [SNH p.46]

### Cause

The basic cause is contagious cleansing-organisms that are introduced through contaminated foods. [SNH p.46]

### Herbal Aids

General Instructions: With fevers, use moist heat to facilitate the cleansing and eliminate the toxic backlog in the system. Induce profuse perspiration by the use of hot yarrow or raspberry leaf tea and by soaking in a tub of hot water with up to a pound of ginger, and a teaspoon each of mustard and cayenne. Follow with the [Cold Sheet Treatment](#). [SNH p.46]

Echinacea: Drink sufficient of the hot tea to induce diaphoresis, and administer hourly thereafter until the system is relieved of stagnated wastage. [SNH p.89]

Compound Antiseptic Oil (a good substitute for Listerine): See formula using oil of thyme, thyme, eugenol, menthol, eucalyptol and olive oil. May be taken internally or used externally with amazing and beneficial results. Internally: 1 teaspoonful in 1 cupful of water, sweetened with 1 tablespoonful of honey 3-4 times daily; good for ... typhoid fever.... [SNH p.230]

[Antisp](#): Dr. Christopher's Anti-Spasmotic Tincture: See formula using lobelia, skullcap, skunk cabbage, gum myrrh, black cohosh and cayenne. (This is the same formula as Dr. Christopher's Anti-Spasmotic Tincture). Give 1 teaspoonful of Antispasmodic tincture (see Formulas) in a little warm water every 1/2 hour. Wash the body daily, with 2 parts of hot water and 1 part apple cider vinegar. Change bedclothes and sheets daily, and give the patient warm water every 2 hours. [SNH p.362]

Delirium of Typhoid: Add a little cayenne to the lady slipper tea. [SNH p.382] Infusion of lady's slipper: See formula using lady's slipper root and distilled water. [SNH p.383]

Low States of Typhoid Fever: Combine lady's slipper with a positive stimulant such as cayenne or golden seal. [SNH p.382] Infusion of lady's slipper: See formula using lady's slipper root and distilled water. [SNH p.383]

Boneset: It is a bitter herbal aid, and in addition to its use in fevers and infections it is taken to

improve digestion and assimilation. It was recommended during the Civil War to replace quinine in cases of malaria, as well as for typhoid pneumonia. [UW-Boneset]

**Bugleweed:** It has been used frequently to reduce the high temperatures of typhoid fever without apparently weakening the patient. [UW-bugleweed]

**Garlic:** It is very well known that garlic contains all the elements except Vitamin D. It is also known that garlic essence warms the body and promotes better circulation of the blood .... Aillin, an oily substance contained in garlic, diluted as much as 200 times can kill typhoid germs. [NL 2-9]

**Echinacea:** It is an intestinal antiseptic, although it may not have a direct chemical effect on bacteria, but destroys germs by building the resistance and cleansing the system so that the body itself can resist the germs. It therefore is excellent in the treatment of the serious fevers-typhoid, malaria, and the eruptive fevers, such as measles, chickenpox, and scarlet fever. It is similarly useful in influenza and la grippe. [NL 6-12]

## Ulcers

### Cause

Stomach and duodenal ulcers are caused by an excess of unneutralized digestive acids pouring into the delicate mucous membranes and literally eating a hole through them. A person could hemorrhage to death from ulcers. The causes can be numerous: the pancreas does not produce enough bicarbonate of soda to neutralize stomach acid; the gall bladder has been removed and there is nowhere to store bile which constantly drips into the duodenum; an over production of hydrochloric acid by the bottom third of the stomach from improper nerve impulse messages from the brain; worry and stress; drugs, alcohol; etc. [NL 3-10]

### Herbal Aids

**ULC:** Dr. Christopher's Ulcer Formula: Contains bayberry, chickweed, slippery elm, mullein. This formula is designed to help sooth the discomforts caused from stomach ulcers. It should be taken with hops or camomile tea. Please note, to help with an ulcer, take three teaspoons of cayenne pepper per day. This cayenne may be mixed in water or tomato juice. It is recommended that you start with only 1/8 teaspoon three times a day, and then gradually work up to the one teaspoon three times a day. [HHH p.197]

**Licorice:** The root tea can be used for treating stomach ulcers instead of the extracted principles; this has always been Dr. Christopher's recommendation, to use the entire herb instead of some isolate. It is best taken before the time when the pain is predictable, making a standard infusion. [UW-Licorice] Licorice root has also been known (and proven medicinally) to heal ulcers. This herb would be highly recommended. [NL 3-10]

**Plantain:** The fresh juice can be almost miraculous to treat stomach ulcers; it can be preserved with twenty-five percent vodka or ten percent grain alcohol, putting one teaspoonful into warm water before every meal until pain ceases. [UW-Plantain]

**Cayenne:** Dr. Christophers many Cayenne Combinations: Cayenne has been used for ages to aid stomach ulcer cases. We have seen some of the extremely painful cases given relief, and then healed by using cayenne faithfully each day over a period of weeks or months. It should be used until pains are gone and permanent relief is assured. [NL 1-2] We need to go to the cause of ulcers and eliminate those but we can begin by relieving the pain and healing the tissues. Cayenne pepper should be taken by the teaspoon (start with 1/4 tsp. three times a day and work up to 1 teaspoonful three times a day). The cayenne pepper will even cauterize a bleeding ulcer. [NL 3-10]

**Juices:** Carrot, carrot & coconut, papaya. [NL 3-5]

**Pumpkin Seeds:** Another good food for inflamed intestines, stomach ulcers and hemorrhoids is the Pumpkin. The pumpkin seed is much recommended for prostate problems, tape and other worm elimination and constipation. [NL 4-12]

**Slippery Elm:** The thick, mucilaginous infusion was drunk to reduce fever, to ease a sore throat, stomach ulcers and other stomach complaints. [UW-Slippery Elm]

**Tagamet Substitute:** The allopathic drug popular for "ulcer management" is Tagamet. This stops the production of hydrochloric acid by the stomach. We want to regulate the production of acid. Whether there is too much or not enough, this formula will be a great aid:

[Typhoid](#)[Ulcers](#)[Uterus](#)[Varicose Veins](#)[Vertigo](#)[Vomiting](#)[Warts & Moles](#)[Whooping Cough](#)[Worms](#)[Yellow Fever](#)

1 tbsp. raw honey

1 tbsp. apple cider vinegar in a glass of steam distilled water

Take this formula a half hour before meals. [NL 3-10]

### Testimonials

1. [Cayenne](#): A lady who had been attending Dr. Christopher's lectures over the years told the story of her husband who had a severe case of stomach ulcers. The doctor recommended that part of the stomach be removed, but the man preferred to suffer the pain rather than risk such an operation. But he also ridiculed his wife's recommendations to use Cayenne and other herbs. Whenever he would see Dr. Christopher in town, he'd bellow, "Hello, Doc! Killed anybody with Cayenne today?" Naturally, Dr. Christopher tried to avoid him, but one day he came directly to the Doctor--but this time without any sarcasm, instead being very apologetic, telling this story.

He had come home from work one night, so sick he wanted to die, with stomach ulcers. His wife was not home, but he was in such pain that he decided to commit suicide. When he looked into the medicine cabinet to find some kind of medicine poisonous enough to kill him, he discovered that his wife had discarded all the old bottles of pharmaceutical medicines. All he could find were some bottles of herbs and a large container of Cayenne pepper. He figured that a large dose of that would kill him, so he took a heaping tablespoon in a glass of hot water, gulped it down, rushed into the bedroom, and covered his head with a pillow so that the neighbors couldn't hear his dying screams.

The next thing he knew, his wife was shaking him awake the next morning. He had slept all night, the first time in years, instead of waking every half hour or so for anti-acid tablets. To his amazement, all his pain was gone. He continued using the Cayenne faithfully, three times a day, and never had any more trouble with ulcers. [NL 6-3]

2. Cayenne Again: Most medical doctors eliminate hot foods such as capsicum from the diets of ulcer patients and others with delicate digestion; as we have shown, this is directly opposite to that which is recommended by herbalists.

Their actions are influenced from medical research showing hemorrhaging occurring after introducing (mechanically) capsicum into the stomachs of persons prone to hemorrhages. Their observations are fact but tend to be inconclusive. Perhaps any substance introduced mechanically into the system could have caused hemorrhaging. From personal experience, I was very uncomfortable taking capsicum for my bleeding ulcers, but after one day of taking capsicum, in water, I never again experienced passing dark blood through my stools. Perhaps the immediate bleeding observed, by the researchers, would have been corrected through continued herb care. [NL 6-3]

3. Cayenne: I had symptoms of a stomach ulcer and I drank the Cayenne Pepper and now I have no more symptoms. Thank you again for your information on Cayenne and how it works for bleeding and heart attacks. [NL 4-7]

## Uterus

### Definition

The uterus or womb is the organ of gestation or pregnancy. [SNH p.275]

### Herbal Aids

Chaparral for Prolapsed Uterus: Use the infusion as a douche. [SNH p.71] Chaparral tea (not bitter): See formula using chaparral, elder flowers and peppermint. [SNH p.71]

Bayberry for Hemorrhage: Bayberry is an excellent tonic for the uterus (especially during pregnancy), and is a valuable agent for helping arrest hemorrhage of the uterus, bowels or lungs. When used with cayenne, it is very effective in reviving the heat in the body and in inducing diaphoresis. [SNH p.131]

Bayberry for Hemorrhage: Use the infusion or decoction alone, or in combination with suitable stimulants (cayenne, ginger, etc.). [SNH p.132] Decoction: See formula using bayberry root bark and distilled water. [SNH p.132]

Inflammation of the Uterus: See formula using raspberry leaves and myrrh. [SNH p.146]

Dr. Shook's Healing Douche for Prolapsed or Enlarged Uterus: See formula using raspberry leaves, sandalwood oil, Irish moss and glycerine. [SNH p.146]

Inflammation of the Uterus: See formula using White pond lily, comfrey root, slippery elm bark, uva ursi, wild yam root, licorice and cayenne. [SNH p.166]

Prolapsed Uterus, Flaccid Vagina and Uterus: See formula using uva ursi, squaw vine and dandelion root. [SNH p.261]

Hemorrhaging: A hemorrhage occurs in the lungs, stomach, uterus, or nose--flowing fast--just take a teaspoonful of cayenne in a glass of extra-warm water, drink it down, and by the count of ten the bleeding will stop. Instead of all the pressure being centralized, it is equalized, and the clotting becomes more rapid. Whether the bleeding is internal or external, a teaspoon of cayenne taken orally in a glass of hot water will stop the bleeding quickly. For the lungs, a vapor bath, along with the warm cayenne infusion will be very beneficial. [SNH p.409]

Jogging and a Prolapsed Uterus: All patients should do some jogging, which is a bouncing motion. This helps to improve circulation, tone the organs, and slough off the dead cell accumulations faster. Each person should work up to a mile of jogging a day, but start out with one-fourth mile or less. Never jog to the point of exhaustion because all the good that is done each day will be undone as a result of overexertion. If for some reason the jogging cannot be done outside, do it inside the house in front of an open window. This will especially vibrate the peristaltic colon muscle and give it tone, will revive the uterus from a prolapsed state in the female, and help heal the prostate in the male. [SNH p.526]

[Nu Fem](#): Dr. Christopher's Herbal Aid for Female Reproductive Organs: This is an amazing combination of herbs to help aid in rebuilding a malfunctioning reproductive system (uterus, ovaries, fallopian tubes, etc.). Over the years herbalists and patients have seen painful menstruations, heavy flowing, cramps, irregularity, etc., that have been helped and the patient now has a painless menstrual period, good menstrual timing, and a new outlook on life by using these aids to readjust the malfunctioning areas. The female corrective formula consists of golden seal root, blessed thistle, cayenne, cramp bark, false unicorn root, ginger, red raspberry leaves,

squaw vine, and uva ursi.

Recommended dosage is one cup or 2 capsules or tablets morning and evening or three times a day if desired, six days a week for as long as required to get results desired. We have seen many severe cases who have had many years of suffering cleared up in ninety to 120 days. Some get relief sooner, some take longer--no two cases are alike. This is a food to rebuild the malfunctioning organs. [HHH p.190]

[Yellow Dock Combination](#): Dr. Christopher's Yellow Dock Combination: As an aid in prolapsed uterus, bowel, or other organs, to assist in giving relief, make concentrated tea (simmer down to half its amount) of six parts oak bark, three parts mullein herb, four parts yellow dock root, three parts walnut bark or leaves, six parts comfrey root, one part lobelia, three parts marshmallow root. Inject with a syringe (while head down on slant board) into vagina, 1/4 to 1/2 cup or more; or rectum, one cup or more; for prolapsus or hemorrhoid problems and leave in as long as is possible before voiding. Dose suggested is one fourth to one cup, one or more times in a day, and drink one fourth cup in three fourths cup of distilled water three times a day. When the tea is injected into the abdominal area and while on the slant board, knead and massage the pelvic and abdominal area to exercise the muscles, so the herbal tea (food) will be assimilated into the organs. [HHH p.192]

Goldenseal: For prolapsed uterus and prolapsed rectum, a small injection of the infusion can give results. One should remember that taking it internally can cause uterine contractions, so it should not be used during pregnancy, except as aforementioned. [UW-Golden Seal]

Gravel Root: Gravel Root is said to help with problems in the genital tracts. When there is impotence, Gravel Root can help tone and heal the system. It controls chronic irritability of the womb and will help clear up atony of the womb. It can help prevent habitual abortion if it is due to a prolapsed, retroverted uterus or to debility resulting from chronic inflammation of the area (Felk:741). [UW-Gravel Root]

Kelp: Kelp, as might be expected, is also of use in the female organs. It will help tone up a weak uterus and help produce a more healthy baby, as the balanced minerals will be supplied fully with the use of Kelp. [UW-Kelp]

Squaw Vine: By far and away the most extensive use of this herb is to help assist in pregnancy and childbirth. Combined with red raspberry leaf tea, it is an excellent way to strengthen the uterus during pregnancy and facilitate, according to Kloss, "a wonderfully easy delivery" (Klo:316). It is especially useful taken several weeks before the baby is due. [UW-Squaw Vine]

Bayberry: Bayberry is reputed to positively influence the uterus and all the female functions. It is the one dependable herbal aid in uterine hemorrhages (Cly:60), whether due to abortion, miscarriage, or afterbirth. The tea may be taken internally and the uterus may also be packed with sterile cotton saturated with the decoction. A weak tea may be used as a douche for amenorrhea or atonic leucorrhoea, using the tea or the tincture internally as well (Felk: 1294) A douche similarly will help control vaginal discharge (Tie:79). Bayberry tea will strengthen and restore a prolapsed uterus, and will induce better contractions during childbirth. It will moderate the flow of lochia after birth (Cly:61 ). [NL 5-5]

### Testimonials

1. Tipped Uterus and Other Major Female Problems Solved: Dr. Christopher always checked his patients with iridology before advising them. A lady came to him, aged about 45, asking for a reading to help with her condition. He saw that she had a prolapsed transverse colon which had dropped to a point where it tipped her uterus and pinched her bladder, and she was having a very serious trouble there. She had problems with the ovaries, with infection in both of them, and she was troubled with vaginal drainage. In addition, she had one breast that was badly infected, which might necessitate having part of the breast removed if she had asked another doctor for treatment. After the reading, Dr. Christopher asked why she had come to him and what she wanted him to do. She said that she had just spent three days in a clinic, where they had verified everything he had read from her irises, but they wanted her to go to the hospital immediately and have the uterus removed and the bladder stitched up to the spinal cord area, and also have her breast removed.

She was frightened of all this cutting, so she wanted to find help in some other way.

She promised that she would stay on the program that Dr. Christopher advised. She took the female corrective [\[Nu Fem\]](#) and hormone-balancing combinations, [\[Changease\]](#) used the vaginal bolus [\[V.B.\]](#) six nights a week, flushing out each morning with the slant board routine, [\[Yellow Dock Combination\]](#) massaging 15 to 20 minutes a day on the abdominal and pelvic area while the tea was inside. She was also to use the [Three Oil Massage](#) over the abdominal area, and go on the three-day cleanse and mucusless diet. In addition, she was to drink a gallon of steam-distilled water a day, and plenty of red raspberry leaf tea. She kept her bowels clean with the lower bowel formula [\[Fen LB\]](#), and kept the bloodstream cleaned up with the red clover combination tea.

Dr. Christopher did not see her again for six months. When she came to see him this time, she bounced in, not dragging as she had before, a totally different woman, much happier and healthier. She had no operations, and yet her prolapsed transverse colon had gone back into place, and her uterus and bladder had gone back into position. She was feeling like a new woman, and she did indeed have a new system by following through with the entire herbal program. [EWH p.112]

2. Lady with a Multitude of Problems: A lady called Dr. Christopher in Salt Lake City from Provo, Utah, saying that her daughter had flown in from out of town, extremely ill. She was afraid that she was going to die, so she had come to her mother to take care of her. She asked if he would come and read the young woman's eyes. When he arrived, the young woman ridiculed him, and said she thought it was a bunch of crazy ideas that her mother had, and she wasn't going to let him look into her eyes. So Dr. Christopher bowed out and left.

Nearly a month went by, and the lady from Provo asked him to come again, that the daughter was so sick that she was frightened and would talk with him.

When he came, they told him that they had tried the best doctors they could find, but no one could help the girl (Dr. Christopher never said what the problem was, however). He gave her an eye reading and she would remark, "Who told you that!" Each thing he told her was the same thing that the doctors had diagnosed. When he finished, she said she was still dubious about the natural program, but that the reading was so accurate, he must have something good. She agreed to follow the natural program. She was too sick to even get up and walk.

So they started off gradually on the [Incurables program](#), using juices to rebuild the body. Before many weeks had passed, she came to Dr. Christopher's classes and became quite a faithful student. She even began to study iridology and became good at it. She watched her own eyes and could see the healing taking place. She had been told, though she had been married for some time, that she could never have a baby because of an immature pelvic area and an underdeveloped uterus, as well as other problems in her reproductive system. By using the mucusless diet and herbs to rebuild her body--the female corrective [\[Nu Fem\]](#) and the hormone-balancing combinations [\[Changease\]](#)--and doing the exercises they advised, even these problems began to heal.

Eventually Dr. Christopher got a call from her husband on the West Coast; he was angry. It was a call of abuse, accusing the Doctor of keeping his wife up in Utah when she should be down with him. He was an electrical engineer, with a very important job, and felt he needed her with him. Dr. Christopher told him his wife had been too sick to even sit up alone, but with the aid of the program and the mother's assistance, she was improving. He told the husband she would be home with him as soon as possible.

The man told Dr. Christopher he was one of the worst quacks there could possibly be, let out some abusive language, and slammed down the receiver.

The wife did heal eventually, and traveled home on her own, without anyone assisting her. She was an excellent housewife, and she showed so much improvement that the husband was astonished, because he figured she didn't have too much longer to live.

Best of all, she had two beautiful children, with natural childbirth, and although the husband was an electrical engineer with a high-paying job, he was so delighted with the results that he became a chiropractor. He delivered their two children. [EWH p.116]

## Varicose Veins

### Definition

A twisted, widened vein with incompetent valves.

### Cause

Sugars, pastries, soft and alcoholic beverages, breads, candies, etc., leach the calcium out of the body, causing varicose veins, cramps, Charlie horses, loss of teeth, nervous upsets, etc. [SNH p.531]

### Herbal Aids

Red Oak: Use the decoction as a wash, and bathe 3-4 times daily (dilute for open sores); also a fomentation may be wrapped around the affected part and covered well with flannel. [SNH p.139]

Tormentil: Apply the decoction as a fomentation, wrap with plastic bandage; when nearly dry, renew the application. Also drink the decoction internally. [SNH p.168]

Witch Hazel: Apply a lint bandage and keep it constantly wet with the fluid. [SNH p.171]

Comfrey Mucilage: Paint the part with pure olive oil to prevent sticking, then saturate a thick layer of cotton with comfrey mucilage and apply to the affected parts. Cover with plastic or waxed paper, bandage, and leave on until nearly dry. Make a fresh application by following the same process. If pus is present, paint the part with oil of garlic instead of olive oil and take 1 teaspoonful of the oil, internally. This will prevent or stop putrefaction and pus formation, which will hasten the healing process. Give fomentation wrung out of a strong decoction. [SNH p.310]  
Mucilage of comfrey root: See formula using comfrey root, distilled water, honey and glycerine. [SNH p.310]

Calc Tea: Dr. Christopher's Calcium Formula: A wonderful natural calcium capsule, tea or tablet made up of horsetail grass, oat straw, comfrey root and lobelia. As explained in the book "Biological Transmutations," the silica in horsetail grass converts to calcium, and the other herbs work in close conjunction with this master calcium herb. We need calcium for nerve sheath, vein and artery walls, bone, teeth, etc. This combination is all pure herbs. It is also helpful for cramps, "Charlie horses," and for all calcium needs in the body.

Children with crowded, crooked teeth who later must have the wisdom teeth pulled because of a too narrow jaw are lacking calcium in the body. The pregnant woman should increase her natural calcium intake now for two people, so as to build for the child a good wide jaw and tooth material. Sugars, pastries, soft and alcoholic beverages, breads, candies, etc., leach the calcium out of the body, causing varicose veins, cramps, Charlie horses, loss of teeth, nervous upsets, etc. [HHH p.185]

Oak Bark: Dr. Christopher would ask his patients to go on the mucusless diet, and he had wonderful results with the following treatment. He made a strong white oak bark tea, simmering it gently until it reduced by three-fourths. Then he soaked stockings of white cotton in this concentrated tea and asked the patient to wear them, covering them with plastic, all night. He would also paint the legs with the concentrate, if stockings were not available. Many women had their varicosities reduced miraculously this way. You can drink a small quantity of this tea as well, if desired. [EWH p.167]

[A - B](#)   [C - E](#)   [F - I](#)[J - P](#)   [Q - Z](#)[Quinsy](#)[Rheumatic Fever](#)[Rheumatism](#)[Shock](#)[Skin Problems](#)[Smallpox](#)[Snakebite](#)[Sour Stomach](#)[Spasms](#)[Sprains](#)[Stiff Neck](#)[Stroke](#)[Sty](#)[Syphilis](#)[Teeth](#)[Throat](#)[Thrush](#)[Tonsillitis](#)[Tuberculosis](#)[Tumors](#)

[Typhoid](#)[Ulcers](#)[Uterus](#)[Varicose Veins](#)[Vertigo](#)[Vomiting](#)[Warts & Moles](#)[Whooping Cough](#)[Worms](#)[Yellow Fever](#)

We find that it is best to use wet flannel or other kinds of non-synthetic cloth soaked in the fomentation. These should be left on all night. For the leg area, white cotton or wool socks or stockings soaked in the tea, pulled over the afflicted area and covered with plastic wrapping make good fomentation material. Cut the toe end off a stocking and it can be pulled up onto the knee or other parts of the leg area for more localized treatment.

To clean and feed the veinous structure internally as well as externally, one fourth cup of oak bark tea in three fourths cups of water (distilled is preferred) may be used three or four times a day. With each cup of tea, it is best to take one half teaspoon or more of cayenne to speed up the action. The cayenne may be taken in capsule form or mixed in half a glass of water. [NL 2-10]

Dr. Shook's Liniment of Peppermint: Dr. Shook recommended making Liniment of Peppermint. To do so, heat 1 pint of pure olive oil, and add to it 1 dram (teaspoonful) of oil of Peppermint, 1 dram, menthol crystals, and 1 dram of flowers of camphor. Mix in a warm jar or bottle, shaking until dissolved. Let stand until cool, then keep in a cool place (ShoA:258). This can also be used to reduce varicose veins, clear up acne, boils, abscesses, eczema, etc. [UW-Peppermint]

Bayberry: Externally, Bayberry can improve atony of the skin, where the tissues are loose and flabby (Cly:61). Nearly all sources recommend it for bleeding or spongy gums, applied as a strong decoction or as a tincture. For nasal stoppage or inflammation, or for nasal polyps, sniff the powder, only a small amount, carefully into the nostril, holding the other nostril closed (Hut:60). For a sore mouth or throat, especially a chronic sore throat, gargle the decoction or reduced infusion. To reduce the infusion, prepare as usual, one teaspoon to the cup of boiling water. After steeping three to five minutes, strain, and then simmer gently to half its original amount, this makes a tea three times as strong as the infusion, called three power. A fomentation (a cloth soaked in the warm preparation and applied to the affected area, afterwards covered) on varicose veins can relieve, cure, and even prevent this unsightly condition (Tie:79). [NL 5-5]

### Testimonials

1. [Cayenne](#): After purchasing your book 'School of Natural Healing' and learning the value of cayenne pepper, I have been taking it regularly since last December. I have had a heart problem 18 years and have had a pace maker for the last six years. I had been on digorin and inderol for seven years. With the use of the cayenne along with your health food program, my health has improved greatly. I no longer have to take any heart medication and my health in general is much improved. I am even rid of most of my varicose veins. [NL 1-12]

2. Oak Bark Cures Severe Varicose Veins: (See formula from # 6 above). One of our students in the Provo, Utah area visited a lady who was suffering from varicose veins so severely that she had difficulty walking or standing for even a few moments, or even sitting down with her feet on the floor. At night the throbbing and pain would be so intense that she would have to elevate her legs for relief; then, in 15 or 20 minutes, the throbbing and pain of the elevated legs would become so painful that she would have to lower her legs again. Consequently, this woman could get no more than 20 to 30 minutes of sleep at a time. Upon seeing such suffering, our student told her friend about the healing properties of oak bark tea, which she had recently learned about in a lecture. The friend said, "Use anything you have to help, this is unbearable." So our student went home, prepared the tea and applied it to the victim's afflicted limbs. Following instructions, she took gauze and daubed on the tea, allowing it to dry. Another coat was added to the entire area of both legs. She planned to apply the 10 or 12 coats recommend lightly bandaging the legs and allowing the oak tea residue to be absorbed into the skin. It has been found that this procedure would give relief, and oftentimes would lessen the dark vein and/or phlebitis color by 20%. However, after only six coats of tea, the patient said she was drowsy and would like to doze off a few minutes, and asked our student to return and finish later. The husband said, "Oh, she never sleeps but a few minutes, never over a half hour." Upon this, our student went home, with the agreement to return when her patient awakened. That was around 9:00 - 10:00 in the evening. To the surprise and joy of everyone, the woman slept all night and woke up the next morning feeling refreshed. She was given more treatments and received complete relief. [NL 2-10]

## Vomiting

### Definition

The forcible ejection or spewing of the stomach contents through the mouth. [SNH p.47]

### Cause

This may be either a voluntary body activity or it may be induced when it is necessary to cleanse the stomach of undigested food poison, and excess body waste. Enemas, fasting, the use of the lower bowel tonic [[Fen LB](#)], or mild herbal laxatives, will cleanse the stomach. The nerve action of fear or panic sometimes induces vomiting. [SNH p.47]

### Herbal Aids

General Instructions: Use some type of herb to calm the stomach area. This may be done simply by taking teas of peach, peppermint, or raspberry leaves, or by simply chewing cloves. For the more difficult advanced cases, turkey rhubarb will do a thorough job. [SNH p.47]

Red Oak: Drink a tea of the bark and powder of the cups. [SNH p.139]

Nausea, Vomiting (especially during pregnancy): See formula using turkey rhubarb, spearmint, cinnamon and cloves. [SNH p.187]

Vomiting and Nausea of Pregnancy: See formula using spearmint, cloves, cinnamon and turkey rhubarb. [SNH p.240]

Weak Stomach and Vomiting: A gruel of slippery elm is often well-received when all food is ejected. [SNH p.335] Slippery elm gruel (strengthening, soothing and healing of inflamed surfaces): See formula using slippery elm, raw milk, honey and cinnamon or nutmeg. [SNH p.336]

Wild Yam: Take 1 tablespoonful of the warm decoction every 30 minutes until relieved. [SNH p.403] Strong decoction of wild yam: See formula using wild yam, distilled water and glycerine. [SNH p.403]

General Instructions of Ways to Relieve Vomiting: The task here is not only to relieve the vomiting, but also to settle the nerves. Antispasmodic will give ease to the area and nervines will settle the nerves (often vomiting is caused from a nervous condition alone). A demulcent is used when soothing the stomach area, and hepatic herbs (such as barberry, etc.) when giving ease to the liver; it depends on the source of the nausea, of course. A cleansing laxative enema is always used to clean the bowel out, because there is less chance for the nauseated condition to persist when the bowel area is clean. [SNH p.505]

Boneset: In all cases of influenza, severe colds, chills and fever, the patient must be in bed warmly covered, and hot drinks of the infusion of boneset given in one half teacupful doses every half hour until a copious perspiration sets in. If it produces vomiting at first, so much the better. In that case wait until vomiting has completely subsided, then proceed until free perspiration is produced. [HHH p.55]

[Barberry LG](#): Dr. Christopher's Liver-Gallbladder Formula: To speed up the blood purifying process, it is good to have a good clean liver and gall bladder area. When the liver does not function properly, the bile does not excrete freely into the intestinal tract, and so it passes off into the blood stream and throughout the rest of the system, causing a toxic condition called cholemia,

[Typhoid](#)[Ulcers](#)[Uterus](#)[Varicose Veins](#)[Vertigo](#)[Vomiting](#)[Warts & Moles](#)[Whooping Cough](#)[Worms](#)[Yellow Fever](#)

causing indigestion, sluggishness, fatigue, constipation, upset stomach, chills, vomiting and fever. Why wait until it gets to this condition? A combination of barberry (or Oregon grape root), wild yam, cramp bark, fennel seed, ginger, catnip and peppermint--will help relieve this condition.

Suggested dose: 1/3 Cup or one or two capsules or tablets, 15 to 20 minutes before a meal. [HHH p.183]

**Your Baby Vomiting:** If your baby vomits, you must be very careful to maintain hydration. A baby dehydrates very quickly. You can prepare the Labourade [EWH p.78], using maple syrup instead of honey. You can give small enemas of catnip tea mixed with slippery elm. The trick is to make them small enough so that the child retains them. The slippery elm soothes the baby's tract and helps the enema be retained. You can try nursing the baby for less than a minute every twenty minutes. The baby will scream for more, but this procedure might help keep the milk down. A drop or two of tincture of lobelia in baby's mouth can relax the tense muscles that cause vomiting. Sometimes a thin gruel of slippery elm will stay down when nothing else will. Don't overlook the wonderfully hydrating effects of a good, long soaking bath with mother. Put in a gallon or so of strong comfrey or camomile tea for nourishment and relaxation. You can massage the baby (with olive oil) for nourishment and relaxation. I have found this combination--hot herb bath, cold sponge, and subsequent massage--a wonderful remedy for teething, fevers, flu, and almost every other baby ailment. [EWH p.105]

**Ready Peppermint Water:** Dr. Shook recommended making a "Ready Peppermint Water" to be mixed for instant use, such as helping relieve pain almost instantly, to cure nausea and vomiting, to calm the nerves and reduce inflammation in stomach and intestines, to act as a sleep-bringer, and to flavor nauseating medicines. To make this water, triturate 1/2 teaspoonful oil of Peppermint in 1/2 teaspoon purified talc and 1/2 teaspoon powdered sugar. Triturate for five minutes. Add 1 tablespoon glycerine and triturate again for five minutes. Add 2 ounces of distilled water and triturate. Pour through a filter paper into a glass container. Rinse out mortar without enough distilled water to gather the remainder of the ingredients. Pour into filter, stir, and allow to filter. If the first filtrate is not clear, add two ounces distilled water; and filter again. This is somewhat tedious, he says, but once the mixture is made, it will keep indefinitely, and will always be ready for use. This is extremely strong (1 part in 64), and can be used, taken in hot water in honey, as needed. It also mixes with alcohol or glycerine in any proportion (ShoA 258). [UW-Peppermint]

**Corn:** A cup of parched corn to two quarts of water lightly boiled for 20 minutes then strained and drunk has been found useful in cases of nausea and vomiting in many diseases. [NL 5-1]

**Cloves:** Cloves are useful for the digestive system, useful to allay nausea and vomiting, to relieve flatulent colic, to improve digestion, as a healthy stomachic and as an astringent, also valuable as an ingredient in compounds for the cure of diarrhea and dysentery. Clove oil stimulates peristalsis and thus relieves flatulence. The infusion is given to relieve colic pains, or the powdered or bruised cloves wet with alcohol may be applied between cloths upon the epigastrium to allay nausea or vomiting and expel gas, and upon the abdomen to relieve colic, but for these purposes the aromatic powder is preferable. [NL 2-2]

### Testimonials

1. **Kelp:** Dr. Powell's ...patient was a lady who had suffered from digestive trouble for many years, suffering pain from even the smallest meal, vomiting frequently. She had spasm of the pylorus as soon as food entered her stomach. After prolonged treatment and constant failure with various remedies, the doctor tried Kelp. She experienced gradual relief and is now in a fair state of health. [UW-Kelp]

2. **Changease:** Dr. Christopher's Herbal Hormone Formula and **Nu Fem:** Dr. Christopher's Herbal Aid for Female Reproductive Organs: My greatest pleasure has resulted in freedom from pain for my seventeen year old daughter during her menstrual period She has been hospitalized three times in the past year for vomiting which could not be stopped over a six hour lapse of time. The Hormonal Estrogen Combination [**Changease**] & Female Corrective Combination [**Nu Fem**] have truly given her a "new lease on life". [NL 2-2]

## Warts & Moles

### Definition

An elevation of the skin, more rarely of the mucous membrane, formed by hypertrophy of the papillae. [HHH p.120]

### Symptoms

Generally raised, darkened areas on the body. [HHH p.120]

### Cause

Warts and moles are usually the result of a nutritional deficiency and they should be treated internally, as well as externally. [HHH p.120]

Potassium deficiency. [EWH p.125]

### Herbal Aids

[Sassafras for Warts](#): Mix the oil (undiluted) with a thick sugar syrup and apply to the affected part. [SNH p.79]

[Tormentil for Warts](#): Apply the decoction as a fomentation, wrap with plastic bandage; when nearly dry, renew the application. Also drink the decoction internally. [SNH p.168]

[General Information for Warts and Moles](#): The warts, moles and skin blemishes are helped externally and are often cleared up by using the white milk from dandelions and/or from milkweed. Applying castor oil or garlic oil to the area several times a day and taping a piece of gauze soaked with this oil over the wart during the night will aid in clearing the condition. The use of a clove of garlic cut in half (or mashed or grated) and kept over the wart all night until it is gone has aided many. Black walnut tincture and the following combination tincture have been used with such success that a number of people swear by them. The combination tinctures consists of blue vervain, black cohosh, blue cohosh, skullcap and lobelia herbs [B&B Tincture] in equal parts, using 90 proof or stronger alcohol as a base. [HHH p.120]

[More General Information for Warts and Moles](#): Use the mucusless diet and add plenty of raw carrots, kelp, dulse, or sea weed and onions to the diet. [HHH p.120]

[Black Ointment](#): Dr. Christopher's Black Ointment: an excellent drawing ointment for warts: Historically used externally on old ulcers, tumors, boils, warts, skin cancers, hemorrhoids, excellent for burns and as a healing agent. This is made with chaparral, comfrey, red clover blossoms, pine tar, mullein, beeswax, plantain, olive oil, mutton tallow, chickweed, poke root. [HHH p.196]

[Aloe Vera for Warts](#): It has been used ...to help remove warts, the juice of the fresh leaf being applied daily over a period of weeks until the wart is reduced or removed. [UW-Aloe Vera]

[Onions for Warts](#): Warts have been said to disappear when treated perseveringly with raw onion dipped in salt. [UW-Onion]

[Wild Lettuce for Warts](#): The expressed juice is "much regarded as an application to boils, abscesses and carbuncles, and if put upon warts will cause them to drop off. [UW-Wild Lettuce]

[Garlic for Warts and Moles](#): Here is a very successful routine for removal of these unwanted

[Typhoid](#)[Ulcers](#)[Uterus](#)[Varicose Veins](#)[Vertigo](#)[Vomiting](#)[Warts & Moles](#)[Whooping Cough](#)[Worms](#)[Yellow Fever](#)

growths called moles, or warts. Take a button of garlic, slice or cut in two, and placed the cup area over a wart of mole. Tape it on, and as it dries out put a fresh piece. Many users have reported good results. [NL 2-9]

[Cashew Oil](#): The cashew oil, which must be used with great caution, is used as an application to warts, corns, ringworms, cancerous ulcers. [NL 5-1]

[Potassium Deficiency for Warts and Moles](#): When cysts or tumors grow in places where they can be seen outside the body, often we react by having them cut out. This defeats healing by working on the effect instead of the cause. You can cut cysts out, tumors off, and burn warts off (which are also a potassium deficiency), or get rid of as many moles as you wish, but unless you go to the cause, they will grow back again, and you may end up with as many or more cysts, tumors, moles as before. Different signs of potassium deficiency will keep popping out on the body because the condition that needs correcting is on the inside. You have to go into the cause, Dr. Christopher always insisted, which is the way we have been eating. [EWH p.125] Potassium sources: There are several ways to receive your potassium. Dr. Bernard Jensen sells a potassium broth made from dehydrated vegetables. Dr. Bronner makes a similar, excellent product. You can also make your own potassium broth by simmering equal parts of red potatoes, celery, carrots, onions, and herbs to taste. Raw vegetable and fruit juices also flood the system with potassium. [EWH p.125]

### Testimonials

**Cancerous Mole:** Most of the cancer research with chaparral has been done at the Universities of Nevada at Reno and Utah at Salt Lake City. (This does not include our success with hundreds of patients throughout the years). There is a well-known study by Dr. C. R. Smart, Dr. H. H. Hogle and others from the University of Utah College of Medicine Department of Surgery and College of Pharmacy at Salt Lake City. It involves an 85 year old man who had a recurring malignant melanoma (dark, cancerous skin growth) on his right cheek. The growth was associated with satellites of the original melanoma and a large tender mass in the right jaw and neck area. The man had lost much weight and was pale, weak, and lethargic. He had previously undergone three surgeries for removal of the melanoma and each time the mole grew back and increased in size. The fourth time the black mass of tissue measured about 3x4 cm, and the neck mass was about 5x7 cm. Surgery was again advised. The old man refused being repeatedly sacrificed to the same surgical specialist, declined any further treatment and went home. This was in October, 1967. In November of the same year, he began to take 2-3 cups of chaparral tea daily and faithfully on the advice of an Indian friend. By February, 1968, the cancerous growth had shrunk to 2 or 3 mm in diameter while the neck mass was entirely gone. His weight, color and general health had greatly improved. [NL 3-4]

## Whooping Cough

### Definition

An infectious catarrhal inflammation of the air passage with violent convulsive coughs (paroxysms), consisting of several expirations followed by a loud, sonorous whooping inspiration. This is generally a children's disease and begins with spasmodic coughing spells. The face reddens, and the eyes bulge. Sore throat, and often vomiting may occur. Advanced cases develop into bronchopneumonia. [SNH p.48]

### Cause

Whooping cough is a rapid accumulation of mucus in the throat, which causes choking and will cause death if not cleared. Eliminate the mucus as fast as possible. [SNH p.48]

### Herbal Aids

General Instructions: Lobelia herb or tincture used in fomentation, as well as a few drops internally every few minutes works well. To cut the phlegm, use a bayberry tea as a gargle (swallow after gargling). Use crushed garlic with cayenne and honey every few minutes to help clear the throat. [SNH p.48]

Red Clover: Drink the infusion freely. [SNH p.56]

Garlic: Inhale the vapors of the freshly expressed juice that has been diluted with equal quantities of water. [SNH p.100]

[Garlic Syrup](#): Where there is spasm, give 1 teaspoonful of the syrup with or without water every 15 minutes until the spasm is controlled, then give 1 teaspoonful every 2-3 hours for the rest of the day; thereafter give 1 teaspoonful of the syrup 3-4 times daily. Use the foot poultice; also, mix the freshly expressed juice with leaf lard and rub on the chest, throat, and between the shoulder blades. [SNH p.100] Foot Poultice: Remove the outer membranes of the cloves (small sections); chop finely a sufficient quantity to cover about 1/4 inch the bottom of each foot - mix this with Vaseline or lard, saturate the feet with olive oil (this is to prevent blistering), spread on the preparation; bandage each foot with soft cloth, place in plastic bags, then cover the feet with old socks to prevent the poultice from being kicked off during the night. Remove the poultice in the morning, or retain it longer if desired. [SNH p.101] Tincture-syrup of Garlic: See formula using garlic cloves, apple cider vinegar and yellow D sugar. [SNH p.101]

Thyme: Thyme is an old-time household herbal aid, with a very healing and antiseptic action. It is especially beneficial for respiratory, stomach, uterine and bowel problems, and it has a soothing sedative action on the nerves. It is powerful, yet harmless and non-poisonous, and it may be relied upon to help eliminate all infection, to help destroy worms, and help take away all foul odors. It will help restore health to children who are debilitated and exhausted by whooping cough. It forms the basis for the world-famous Listerine Antiseptic compound. There are over 60 varieties of thyme, but *Thymus vulgaris* is the best for both medicinal and culinary purposes. [SNH p.228]

Thyme: Mix 1 part of the infusion with 1 part honey (1 teaspoonful 1 tablespoonful); give when the cough is troublesome. [SNH p.229] Whooping cough: See formula using thyme and mistletoe. [SNH p.229]

See formula using hyssop, raspberry leaves, turkey rhubarb, bayberry bark and thyme. [SNH

p.233]

European Pennyroyal: Drink 1 teaspoonful - 1 tablespoonful of the fresh, sweetened juice. [SNH p.284]

Whooping Cough (specific): See formula using marshmallow root, thyme, yellow D sugar and distilled water. [SNH p.327]

Asthma Syrup (bronchitis, croup, whooping cough, etc.): See formula using slippery elm, boneset, licorice, flaxseed or linseed, and blackstrap molasses. [SNH p.337]

Asthma Remedy (also for bronchitis, chronic cough, whooping cough, lung trouble, cystitis, catarrh of bladder, poison ivy, burns, and tuberculosis): See formula using slippery elm bark, horehound, garden thyme, red clover tops, yerba santa, lobelia, resin weed leaves, cayenne, blackstrap molasses and glycerine. [SNH p.339]

Whooping Cough: See formula using black cohosh, red root, blood root and lobelia. [SNH p.401]

Onion Syrup: Dr. Christopher's onion syrup, described in the introduction, is an excellent syrup that has been used historically by herbalists for coughs and colds, bronchitis, croup, whooping cough, etc. He recommended adding licorice root powder, horehound and cherry bark to the syrup, and said to add 25% glycerine to the syrup if you plan to keep it. Keep it in a cool place or it will sour. [UW-Onion] Here is the way you make the syrup. Dice up big dried onions, whatever amount you want, and put them into a stainless steel, unchipped enamel, or Pyrex pan. Don't use aluminum. When you have about the amount you want, pour liquid honey over them until they are covered. Add nothing else. The honey extracts the Onion power, which is the greatest antihistamine known. This goes into the honey solution and provides a wonderfully effective cough syrup. [UW-Onion]

Garlic Juice: Another instance of the remarkable penetrating power of garlic is the fact that the expressed juice of fresh garlic mixed with olive oil and rubbed on the chest, throat, and between the shoulder blades gives great relief in whooping cough, asthma, bronchitis and dyspnea, according to an English physician who has used it with success for many years. ## Pleurisy

### Definition

Inflammation of the pleura (membrane covering the lungs).

### Symptoms

Usually accompanied by fever, painful and difficult respiration, cough, and mucoid exudation into the pleural cavity. [SNH p.40]

### Cause

The cause of pleurisy is mucus forming in a weak area caused by the failure to breath deeply. It is common where there is general debility of the body, especially in the lung area. [SNH p.40]

### Herbal Aids

General Instructions: Use of pleurisy root (a specific), slippery elm, comfrey root, hyssop, and vervain. [SNH p.40]

Pleurisy Root: Pleurisy root was considered by the North American Indians to be one of the "Great White Father's best gifts to the children of nature" because of its specific action for the lungs. And for all chest complaints, including "pleural bronchitis," etc., it is most valuable in assisting expectoration, subduing inflammation rapidly, reabsorbing exudation from the tissues and serious cavities, and exerting a general and mild tonic effect upon the whole system. It is one of Nature's very best therapeutic agents for pulmonary catarrh and difficult or suppressed expectoration, through its beneficial influence on the mucous membranes and serious tissues. Pleurisy root influences the skin and circulation by relaxing the capillaries, thereby relieving the heart and arteries of undue tension, and stimulating a slow and steady perspiration of the sudoriferous glands, wherein the excessive heat due to congestion in the skin is gradually eased. [SNH p.221] Pleurisy root is quite harmless in correct doses, but is not recommended for children because of its powerful action. Do not use this agent when the skin is cold and the pulse is weak, but use a more stimulating diaphoretic. [SNH p.222]

Pleurisy Root: Give hot infusion while the patient is closely-covered in bed; repeat the dosage every 30 minutes until free perspiration is produced; apply hot cloths externally, wrung out in the infusion. [SNH p.222]

See formula using pleurisy root, hyssop, comfrey root, vervain and cayenne. [SNH p.223]

Mullein: Rub mullein oil in well, or apply on saturated cotton and cover. [SNH p.317]

Lobelia: Add lobelia to a catnip enema. [SNH p.362]

Lobelia: Give lobelia and pleurisy root in an infusion. [SNH p.362]

Plaster: Make a compress or plaster of lobelia, of hops, bran, or lard. [SNH p.363]

Myrrh: After a vapor bath, when the patient is rubbed dry, washing the surface with a partially diluted tincture of Myrrh protects him against cold, and strengthens and improves the condition of the skin. This is especially useful in cases where the skin is relaxed and the patient feeble, such as chronic bronchitis, chronic pleurisy, asthma, chronic rheumatism, etc. (Cly:99). [UW-Myrrh]

Juices: Carrot & cucumber, carrot & spinach. [NL 3-5]

Slippery Elm: Slippery elm was used in cases of typhoid fever. The bark is also wonderful for any type of bronchial disorders. Maude Grieve gives a remedy for pleurisy: 2 oz. each of pleurisy root, marshmallow root, licorice root, and slippery elm bark. Simmer in three pints of water down to 1/2 the volume. Take 1/2 teaspoonful every half hour. The mixture should be ingested warm. Slippery elm is one of the herbs which should be stored for times of need. It is a concentrated food which can be handy for survival. [NL 4-7]

## Pneumonia

### Definition

A swelling of the lungs. Parts of the lungs become plugged with a fiberlike fluid.

### Herbal Aids

Garlic Syrup: Where there is spasm, give 1 teaspoonful of the syrup with or without water every 15 minutes until the spasm is controlled, then give 1 teaspoonful every 2-3 hours for the rest of the day; thereafter give 1 teaspoonful of the syrup 3-4 times daily. Use the foot poultice; also, mix the freshly expressed juice with leaf lard and rub on the chest, throat, and between the shoulder blades. [SNH p.100] Tincture-syrup of Garlic. See formula using garlic cloves, apple cider vinegar and yellow D sugar. [SNH p.101]

Pleurisy Root: Give hot infusion while the patient is closely-covered in bed; repeat the dosage every 30 minutes until free perspiration is produced; apply hot cloths externally, wrung out in the infusion. [SNH p.222]

Garden Sage: Clear the bowels, give 3-5 cupfuls of hot infusion 1/2 hour apart. Keep well covered in bed. [SNH p.234]

See formula using pennyroyal and elder flowers. [SNH p.285]

See formula using comfrey root, pleurisy, horehound and cayenne. [SNH p.313]

Mullein: Rub mullein oil in well, or apply on saturated cotton and cover. [SNH p.317]

Lobelia: Add lobelia to a catnip enema. [SNH p.362]

Plaster: Make a compress or plaster of lobelia, of hops, bran, or lard. [SNH p.363]

Hot and Cold Bath: The best procedure in either retaining or restoring skin vitality is to take a good hot bath, then a cold one to close the pores. "What's one man's meat is another man's poison," as far as how much bathing a person should do. There are some who feel that to wash their hair once a week, or to take a bath on Saturday night, is adequate. There are many like me, however, who do not feel the day has started off right without the early morning bath and meditation. As far as the hair is concerned, a woman with long tresses will have a more difficult time washing hair every day as a man with short hair does, but I personally wash my hair every day, and it always feels good and clean, and lends to clear thinking. The water acts as a good tonic to the skin, because it goes in, flushes and cleanses the skin, and in the process, much of this water will go right on into the blood stream. It is relaxing to have the right temperature of water, which would be tepid to slightly warmer, but water that is too hot is not relaxing. The heat expands the body tissue and brings toxic poisons to the surface, and after that is discharged and eliminated, then the cold water will contract the tissue, close the pores and cause the skin to be sealed again where it will not allow a cold, exposure, flu or pneumonia to set in. Our advice (where one is just starting to take cold baths) is to sponge the body with cold wash cloth, then go into a quick, cold shower, and eventually a longer one; then, if you want to really enjoy the bath properly, try lying in a cold tub of water after the hot bath. This will be very beneficial to the body if done gradually, but if done too soon, it will cause a shock to the heart. [SNH p.498]

Steam Baths: One of the most important procedures of water therapy are the steam or sweat baths, and these will bring the poisons out of the body wonderfully. There are various types of steam baths, and these are all very valuable, very invigorating and health giving. This therapeutic

[Nightmares](#)[Nipples](#)[Nosebleeds](#)[Obesity](#)[Osteoporosis](#)[Palpitations](#)[Paralysis](#)[Parasites and Worms](#)[Pleurisy](#)[Pneumonia](#)[Poison Ivy and Poison Oak](#)[Polyps](#)[Pregnancy](#)[Prostate](#)[Pyorrhea](#)

procedure is recommended for arthritis, asthma, bursitis, colds, flu, hay fever, neuritis, pneumonia, rheumatism, sinusitis, stiff joints, etc. Someday, I hope to see a steam cabinet in every home (not a chicken on every plate and a car in every garage). In sweat therapy, we also have the [Cold Sheet Treatment](#)--a positive remedy for colds, flu, and pneumonia--which can be effectively used even in advanced and chronic cases. [SNH p.502]

Henry Box Pneumonia Cure: The great herbalist, Henry Box of Plymouth, England, says: For colds, influenza, fevers, inflammation of the brain, pneumonia (inflammation of the lungs), stomach, bowels or any part, this is a certain cure. I have never known it to fail, even when given up, and at the point of death. It will not only save at the eleventh hour, but at the last minute of that hour. Besides, it is so safe and harmless that you cannot use it amiss. This wonderful, wise old man had been a physician of herbs for over sixty years and was known as one of the great doctors of all times.

The infusion for the tea is made as follows:

2 ounces elder flowers

2 ounces peppermint leaves (crushed)

1 1/2 pints boiling distilled water

Pour boiling water over herbs, cover and allow to steep (not boil) in a hot place 20 minutes. Strain and sweeten with honey, then drink the whole amount of tea as hot as possible while closely covered in bed. Cover a hot water bottle with a cloth or towel dipped in apple cider vinegar and place on the feet. In a few minutes there will be copious perspiration, and the pulse will slow down and the patient will sleep peacefully for hours...When taken alone, elder flowers are inclined to be emetic, and somewhat nauseous to some people. This effect can be prevented by combining them with peppermint (*Mentha piperita*). Peppermint is stimulant, nervine, calmative, and antiemetic, which helps offset the undesirable effects of the elder flower. This combination is world-famous as a great fever and cold remedy. [HHH p.53]

Onions: Roasted onions can be crushed for the same purpose (as a plaster); they have been used in pneumonia. Raw grated onions will also work but you must coat the skin with olive oil beforehand and check for blistering consistently. [EWH p.190]

### Testimonials

1. Water Cure - [Cold Sheet Treatment](#): An old story of the first written instances of the water cure is as follows: Many years ago a peasant was heading home on foot, with miles to go. He was racked with fever, colds, and lumbago. While crossing a stream, over a log for a bridge, he slipped and fell into the icy cold water and was drenched to the skin. It was a bitterly cold day and the man had to walk home in the cold in sloppy wet clothes. By the time he had arrived home, his clothes were nearly dried out. The fevers and heat in his body had been raised, while hurrying miles home, to a point of healing climax and was down to nearly normal at the end of his journey. The lumbago and fever were gone and he rejoiced! The next time he got lumbago and fevers he knew the cure--he would return to the stream, fall in and walk home again.

We are going to explain a procedure that will do the job at home without "falling into the stream" and this is a life saver, when pneumonia, colds, flu and fevers hit. It is called: The [Cold Sheet Treatment](#). [HHH p.70]

For detailed information on the [Cold Sheet Treatment](#): [HHH p.70]

2. Onion Syrup Cures Dr. Christopher's Pneumonia: Here is the way you make the syrup. Dice up big dried onions, whatever amount you want, and put them into a stainless steel, unchipped enamel, or Pyrex pan. Don't use aluminum. When you have about the amount you want, pour liquid honey over them until they are covered. Add nothing else. The honey extracts the Onion power, which is the greatest antihistamine known. This goes into the honey solution and provides a wonderfully effective cough syrup.

At one time he couldn't fly out of upper New York, but he had to be in Boston the next day to lecture for a three-day series. No planes were available, so he had to go on a train. He joked that he thought it must have been the same train that George Washington rode on. It was so drafty that

by the time he got to Boston, he had pneumonia, and was all choked up. It was close to midnight, and the hotel kitchen was closed. He asked, "Can you fix me something for an emergency?" They would. He had them chop up a big dried onion and pour honey over it, and he ate the whole thing. In fact, he said, he had an audience. All the hotel staff there--the clean-up people, cooks, waitresses and all--came to watch him eat that onion down. But the next day he lectured in Boston. [UW-Onion]

3. [Oil of Garlic](#) Saves Two Year Old with Double Pneumonia: I remember one time we were called out to a house in the wee hours of the morning. This call was to see a little boy, under the age of two years, that had double pneumonia. The physician on the case had informed the parents that nothing more could be done and he would come back in the morning to sign the child's death certificate. Seeing as it was well under forty degrees below zero and nearly fifty miles from ambulance service, the parents were told that the boy, if taken by car to a hospital, would surely die. These parents tried to get other doctors, but at that time of night, and in such a remote area, no one would offer help. A friend told them about us, then living in Evanston, Wyoming, and to try to call us. Having been told of the boy's condition we went expecting to give him the cold-sheet treatment. Upon arriving there we found that the plumbing was frozen and there was not running water in the house. We found enough in the toilet tank above the bowl to give the little chap an enema. We were not able to give the [Cold Sheet Treatment](#) (no water) so only the garlic paste was made up and applied. This was done after a complete massage of the body and the feet. After oiling the feet up to the ankles, thoroughly, and massaging the olive oil in well, a half-inch thickness of the garlic paste was applied to the soles of his feet. (This is put on only the soles and not up onto the sides). Then gauze was placed over to cover the paste, bandages to hold it into place, and a loose white cotton sock was pulled over the bandages to hold them securely.

Garlic paste is made by taking freshly peeled buttons of garlic and garlic about half and half with Vaseline. This amount can vary, according to the toughness of the feet, more Vaseline for tender feet, less for thicker skin. Many of the health minded readers will be shocked by our using a low-vibration ointment like Vaseline instead of using anhydrous lanolin or some lighter more organic type. The reasoning for this is that the lighter type ointments will penetrate more quickly into the skin, but the Vaseline will hold the garlic on the ointment form. This will also keep the garlic from blistering as easily. (A garlic blister looks bad, but does not hurt and heals back quickly.) The little boy was running an extremely high fever and was delirious when he was covered and put back into bed. (This was well after 2:00 a.m.). We assured the parents the child would be all right and would get well. A few days later we were called again by these parents. They told us that the doctor came back to sign the death certificate that next morning, but the little boy was sitting in his high chair, drinking some juice and breathing normally as if nothing had happened the night before. The doctor became so angry and demanded to know the name of the other doctor who had taken over the case before it had been released by him. He wanted a hearing by "the board" to have the other doctor thrown out of practice for going "against procedure" by taking over a case without written release. The parents asked if his "release" was the death of their child? He probably changed his mind because we were not brought before a hearing.

I had forgotten this case until nearly twenty years had passed. One evening, after a lecture in another state, a fine-looking young fellow in his early twenties came up to the podium and shook my hand vigorously, saying he had always wanted to meet me. His mother had told him of our long trip in sub-zero weather at night to their house, of using the natural methods on, and saving his life. He stated that he enjoyed living so much he had been looking forward to meeting me.

That paid off for a cold night out on a house call by far more than the small fee that was charged. [NL 2-9]

## Poison Ivy and Poison Oak

### Definition

Skin contact with poison ivy and poison oak resulting in an allergic reaction with skin swelling.

### Herbal Aids

[Sassafras](#): Give the infusion internally and use it often externally as a wash. [SNH p.79]

[Infusion of Sassafras](#): Apply the infusion on saturated cotton to the affected area, cover with plastic and bandage, or use as a wash; also drink the infusion internally. See formula using sassafras bark, glycerine and distilled water. [SNH p.80]

[Poison Ivy](#): Apply the "[Comfrey-Mullein-Garlic](#): Dr. Christopher's Asthma Formula" as a fomentation locally to the affected parts and allow to remain 1 hour. Wash off with biodegradable soapy water and rinse. Reapply until all itch and symptoms disappear. [SNH p.336] [Asthma remedy](#): See formula using slippery elm, horehound, garden thyme, red clover, yerba santa, lobelia, resin weed, cayenne, blackstrap molasses, and glycerine.[SNH p.339]

[Virginia Snake Root](#): Nettle rash or poison ivy. Apply a wash of fluid extract. [SNH p.417]

[Virginia Snake Root](#): Nettle rash or poison ivy. Give infusions as freely as the patient can take it for a few hours, then stop: keep patient off of any mucus-forming foods. [SNH p.417]

[Wheat Grass](#): Poison oak. Place a poultice of freshly crushed wheat grass pulp on the afflicted area and cover with thin gauze. [SNH p.545]

[CMM](#): Dr. Christopher's Healing Ointment: Made of comfrey, marshmallow, marigold, bee's wax, and oils, this is an antiseptic to be helpful with lesions, eczema (dry), poison ivy, inflamed surfaces, abrasions, burns, hemorrhoids, for bruises and swellings. Good to have on hand at all times. [HHH p.196]

[General Instructions for both Poison Ivy and Poison Oak](#): Dr. Christopher used to say that the remedies for these plants grow right near the site of infestation. Burdock leaves and plantain leaves, as well as jewel weed where it grows, can help neutralize the poison. Mullein, houndstongue and lilac leaves will counter the irritation. A poultice of comfrey root, marshmallow root, slippery elm, aloe vera, and witch hazel, as many as you have available and in equal parts, can help heal the rash once it starts. Immersion in cold water is very effective. Internally, you can take blood-cleansing and -building herbs, such as chaparral, yellow dock, and echinacea, to help stop the reaction. Internally, lobelia and valerian or catnip or camomile can stop the pain. [EWH p.162]

[Aloe Vera](#): It has been used to reduce the itch of insect bites, the itching and burning of poison ivy. [UW-Aloe Vera]

[Mullein](#): It is also an excellent remedy for poison ivy or poison oak, etc. Dr. Christopher said that if you run into a patch of these plants, or perhaps stinging nettle, if you will look around the area, within view will be Mullein, plantain, or hound's tongue. Take only one of these leaves, bruise it, and rub it over the area. You will get immediate relief from the plant "sting" and not have to suffer for weeks with it. [UW-Mullein]

[Chickweed Ointment](#): Dr. Christopher's Chickweed Ointment: Use chickweed ointment, plantain ointment, or mullein ointment to help promote the relief of the itching and help aid in

neutralizing the poisons. [NL 3-1]

[CMM](#): Dr. Christopher's Healing Ointment: Comfrey, Marigold, and Marshmallow Root ointment: Another soothing and healing ointment for poison ivy, oak, etc. [NL 3-2]

[Burdock](#): The newly crushed leaves of burdock help alleviate the pain and swelling and itching of poison oak or poison ivy or stinging nettle (Herbalist: April, 1977:125). Interestingly, Burdock usually grows nearby wherever these poisonous plants grow, as do Mullein and Plantain, both also specifics to relieve poison oak or ivy. The old rhyme goes Nettle in, dock out, dock rub nettle out. [NL 5-12]

### Testimonials

1. Eraser on the Pencil: One man said that his little six-year-old was helping him in the garden and all of a sudden he ran into a stinging nettle. He let out a yip as he started to dig. He said, "I'll take care of it, Dad". He walked over to where some Mullein was, bruised it in his hand, rubbed it over the affected area, and smiled. "There it is," he said. "How did you know that?" his dad asked. "Well, you know, you told me when I was five last year about that. I remembered. I know what Mullein is and I know what stinging nettle is." Dr. Christopher said that the herbs will automatically neutralize the poison; the Lord has put an "eraser on the pencil." [UW-Mullein]

2. I Have Had a Long History of Poison Oak. I would get it from my children's clothing, our dog, or sitting on a couch the dog managed to get on for a short time. Once it went internal and I was in bed six weeks because I could not take cortisone, being in first six weeks of pregnancy. Once I got it, it just got worse and worse until I took cortisone. The doses became larger and larger. Large doses of Vitamin C and Niacin help a few times, then no longer helped, as did other things I tried. Twice I got blood poisoning in my arm from poison oak. I was desperately searching for a cure when someone led me to herbs and Naturalife. It took me about three years to find the cure but I did. As soon as I realize I have poison oak, I start taking licorice root, which is a natural cortisone and use Dr. Christopher's CMM Ointment. This dries it up in just a few days. I usually take rose hips for good measure. As for the blood poisoning, the first time my poison oak went into blood poisoning, I took penicillin. The second time, my arm was swollen, big red swollen, full of fever and painful. I put chickweed ointment [[Chickweed Ointment](#)] on a bandage, taped it on my arm over the affected area and went to bed. In the morning the swelling was gone, the pain was gone, the fever was gone, and the large red area was gone. This has really been exciting to me to find natural cures. [NL 1-8]

## Pregnancy

### Definition

The process of growth and development within a woman's body of a new person.

### Herbal Aids

Nausea, Vomiting (especially during pregnancy): See formula using turkey rhubarb, spearmint, cinnamon and cloves. [SNH p.187]

Strong Decoction of Wild Yam for Nausea of Pregnancy: See formula using wild yam, distilled water and glycerine. [SNH p.403]

Homemade Ginger Ale for Morning Sickness: We have discovered a wonderful recipe for Ginger Ale which is not only delicious, but it helps the nausea of pregnancy as well. Fortunately, it is a very pleasant remedy. Bring 2 gallons of water to a boil with 1 tablespoon ground Ginger. Allow to cool to lukewarm and strain. Add two cups of honey to the water-Ginger mixture and stir well. Add the juice of four lemons and just 1/4 teaspoon of dry baking yeast (wine yeast would work even better but is less available). Put into absolutely clean gallon jars and cover lightly. Allow to stand for two days. It should be nice and sparkly by now. If it gets too sparkly, refrigerate. This drink is popular with the whole family as well as a lady with morning sickness, and it is surely more wholesome than the sugared varieties purchased at stores. [NL 7-3]

Cramps from Pregnancy, Uterine Pains, or any Nervous Troubles During Pregnancy: See formula using cramp bark, squaw vine, wild yam and blue cohosh. [SNH p.333] Wild yam relaxes the muscular fibers, soothes the nerves, and gives positive relief from pains, especially those associated with bilious colic, gall stones, and uterus. It is of great value in nervousness, restlessness, nausea, and pains that are common to pregnancy. Wild yam has a potent tonic effect on the uterus when taken throughout the period of pregnancy. It is excellent for helping to promote the relief of cramps during pregnancy (especially during the latter stages), and will help greatly assist in preventing a miscarriage. Wild yam helps relieve flatulence of the stomach and bowels, and soothes any abdominal and intestinal irritations and spasms. [SNH p.402]

False Unicorn & Lobelia: Dr. Christopher's Anti-Miscarriage Formula: False Unicorn, 3 parts, and Lobelia, one part, constitute this combination. Unless otherwise specified, teas are always made with one teaspoon of herbs to a cup of distilled water (if obtainable). If hemorrhaging starts during pregnancy, stay in bed, use a bed pan when needed, and use 1/2 cup of this tea each 1/2 hour until bleeding stops, then each waking hour for one day, while in bed as much as possible and then three times in a day for three weeks. If bleeding continues instead of decreasing, see a doctor. [SNH p.532]

Pre-Natal Tea: Dr. Christopher's Pre-Natal Tea: Using this tea (or two or three capsules or tablets) morning and evening is an aid in giving elasticity to pelvic and vaginal area and strengthening the reproductive organs for easier delivery. Should be used only in the last six weeks before time of birth. These are the herbs used: Squaw Vine, Holy Thistle, Black Cohosh, Pennyroyal, False Unicorn, Raspberry Leaves, Lobelia. [SNH p.532]

Red Raspberry is a great agent for cleansing a canker condition of the mucous membranes in the alimentary tract, leaving the tissue toned. In pregnancy the infusion, when taken regularly, will quiet premature pains, and will produce a safe, speedy and easy delivery. Raspberry leaves stimulate, tone and regulate (both the leaves and fruit are high in citrate of iron which is the active alterative, blood-making, astringent and contractive agent for the reproductive area) before and

[Nightmares](#)[Nipples](#)[Nosebleeds](#)[Obesity](#)[Osteoporosis](#)[Palpitations](#)[Paralysis](#)[Parasites and Worms](#)[Pleurisy](#)[Pneumonia](#)[Poison Ivy and Poison Oak](#)[Polyps](#)[Pregnancy](#)[Prostate](#)[Pyorrhea](#)

during childbearing, assisting contractions and checking hemorrhage during labor, relieving after-pains, then strengthening, cleansing, and enriching the milk of the mother in the post-delivery period. [HHH p.4] Dr. Christopher recommended taking at least a daily cup of Red Raspberry tea throughout pregnancy. He said that in addition to its good effects on the uterus it is also anti-nausea. A woman who was expecting her ninth child often experienced nausea during pregnancy. When she suspected that she might be pregnant again she began taking the tea even before she began to feel morning sickness. She never experienced any discomfort so she wondered if it might just be an unusual or unhealthy pregnancy, so she discontinued the tea. Not long after she began to feel nausea! She quickly began to take the tea again and felt no discomfort since then. [UW-Red Raspberry]

[Pregnancy Green Drink](#): Interestingly the [Red Raspberry] berries are said to provide many of the medicinal factors of the leaves. We have been encouraged by midwives to eat freely of the berries, if possible, for the same good effect during pregnancy--a lovely medicine! Since some people never get used to the taste of the tea a good way to use the leaves (aside from capsules or tablets) is to make a green drink. Our "pregnancy green drink", to which we have grown so accustomed that we can hardly imagine pregnancy without it, is made thus: To a cup or more of pineapple juice in a blender container, add a handful of Red Raspberry leaves, a handful of comfrey leaves and a few alfalfa leaves. Blend until the fibers of the leaves are broken down and drink immediately. You can add a couple of ice cubes or a little cold water if you want an icy or thinner drink. [UW-Red Raspberry]

[Nu Fem](#): Dr. Christopher's Herbal Aid for Female Reproductive Organs and [Changease](#): Dr. Christopher's Herbal Hormone Formula: If the female organs are in a questionable condition, it is well before and during pregnancy (also in the post-delivery period) to use our female corrective formula [Nu Fem] (an herbal food to strengthen and rebuild the entire reproductive area) and the estrogen hormone combination [Changease] (herbal aid) to assist in supplying needed hormones and estrogens in the correct amount. The human body is computerized to a point that it will take from an herbal formula such as this one the different types of estrogens and hormones it needs, and easily discard the ones not used. These herbs can be not only accepted into the body, but assimilated when needed and eliminated when not required. [HHH p.5]

[Nu Fem](#): Dr. Christopher's Herbal Aid for Female Reproductive Organs: This is an amazing combination of herbs to aid in rebuilding a malfunctioning reproductive system (uterus, ovaries, fallopian tubes, etc.). Over the years herbalists and patients have seen painful menstruations, heavy flowing, cramps, irregularity, etc., that have been helped and the patient now has a painless menstrual period, good menstrual timing, and a new outlook on life by using these aids to readjust the malfunctioning areas. The female corrective formula consists of three parts of golden seal root and one part of each of the following: blessed thistle, cayenne, cramp bark, false unicorn root, ginger, red raspberry leaves, squaw vine, and uva ursi.

Recommended dosage is one cup or 2 capsules or tablets morning and evening or three times a day if desired, six days a week for as long as required to get results desired. We have seen many severe cases who have had many years of suffering cleared up in 90 to 120 days. Some get relief sooner, some take longer--no two cases are alike. This is a food to rebuild the malfunctioning organs.

[Changease](#): Dr. Christopher's Herbal Hormone Formula: Here are herbs that are an aid to assist the function of developing the hormone and estrogen balance in both female and male. This combination consists of the following herbs: black cohosh, sarsaparilla, ginseng, blessed thistle herb, licorice root, false unicorn root and squaw vine. Adult suggested amount is one to three number 0 capsules morning and evening, as desired. As an aid to youth going into puberty, for expecting mothers, as well as at menopause times.

These two combinations, the female corrective [Nu Fem] and the hormone-estrogen combinations [Changease] can be used during the entire time of pregnancy (and also before and following), as it is an herbal food like any other food and "is there to be used, if needed," but can do no harm in any way.

If there is yeast infection and or Herpes Simplex before or during pregnancy, add also, the [V.B.](#): Dr. Christopher's Vaginal and Rectal Herbal Bolus and the slant board routine [[Yellow Dock Combination](#)] included herein. These are very beneficial and yet are harmless to the mother and child-to-be. [HHH p.7]

**Calc Tea:** Dr. Christopher's Calcium Formula: Another way to have a healthy child (one that is not a worry because of repeated sicknesses), a mother-to-be should use a good calcium formula during the entire pregnancy and also during the lactation period. There is a good herbal formula that we use which is strictly an assimilable vegetable (herbal) type combination. It consists of six parts horsetail grass, four parts comfrey root, three parts oat straw and one part lobelia. The horsetail grass is almost pure silica but by biological transmutation, so says renowned scientist Professor Louis C. Kervran, the human body is able to make the molecular change to transform the silica into assimilated calcium. To aid this we have a number of trace minerals in the comfrey that speeds up the transformation.

It is a known fact that there is a lack of adequate calcium in the diet of the average adult today. One reason, of course, is the use of processed "foods" which have been robbed of much of the calcium they originally had. The next cause of calcium deficiency is the use of so much inorganic sugars and starches (the starches turn to sugars). This sugar leaches out the calcium from the body of the mother. The fetus is drawing on the calcium for self preservation, as well as leaching out by sugars of more and more calcium. The young mother-to-be then wonders why the varicose veins (breaking and darkening of veins), the loss of teeth during pregnancy, and the "Charlie horses" (cramps) and muscle weakness, etc. etc.! [HHH p.11]

**Alfalfa:** Many people consider Alfalfa an important herb to take throughout pregnancy. If an expectant mother is suffering from morning sickness, she can eat Alfalfa sprouts in her diet and can take from eight to sixteen tablets of Alfalfa until the condition is under control, then she can reduce the dosage (Mal:252). Many people consider that a daily green drink consisting of Alfalfa, comfrey and fresh red-raspberry leaves is an excellent pregnancy drink; it is preferred to a tea made of the same substances. After the birth, Alfalfa is sometimes taken to prevent hemorrhages. Some women have eaten Alfalfa tablets after their births like candy in order to shorten the postpartum bleeding time. Alfalfa is also thought to dramatically help bring the milk in for the nursing mother. It certainly enriches the quality of the milk and is much preferable to other hot beverages, such as regular tea, which can pollute the breast milk. It can be flavored with mint, orange peel, and honey. [UW-Alfalfa]

**Irritable Bladder of Pregnancy:** When the mother-to-be needs to urinate every few hours due to irritation and pressure; often when a mother sneezes or coughs or even walks, urine is expelled. Gravel Root will help alleviate this condition, as long as it does not result from actual fetal pressure on the bladder itself. [UW-Gravel Root]

**Toxemia and Kelp:** Kelp, as might be expected, is also of use in the female organs. It will tone up a weak uterus and help produce a more healthy baby, as the balanced minerals will be supplied fully with the use of Kelp. Some women who had lost babies in childbirth and others who had not been able to carry babies were helped by the use of Kelp by Dr. Powell's prescription of Kelp to carry healthy babies full term. Especially when toxemia threatens during the last stages of the pregnancy, Kelp, being a carrier of important minerals and a toner and an antiseptic, can help clear up an otherwise dangerous condition. [UW-Kelp]

**Onions:** To help build the blood or to help prevent obesity, to help provide strength during pregnancy or to help prevent toxemia, take Onions three times a week cooked, two times a week raw. [UW-Onions]

**Heartburn during Pregnancy:** Many women experience indigestion and heartburn, and sometimes gas, during pregnancy. This may be caused by the stomach having less room to do its work, nervous tension which inhibits good digestion, too many stomach acids, or a relaxed stomach, which allows foods to back up. Be sure that you do not take antacids during pregnancy. They further inhibit digestion, and they may cross over the placenta into the baby. To deal with these symptoms, Dr. Christopher first emphasized that we must chew our food. Many of us just gulp it down, and the large particles cause gas, fermentation, and pain. Chew well; even juices should be swished in the mouth to mix them with saliva and begin digestion. Don't drink with your meals; water or other liquids dilute the digestive fluids; you may, however, want to take broth or juices with the meal, but you should "chew" these, too. Increase your B-vitamin foods, including whole grains, brewer's yeast, wheat germ, yogurt, perhaps acidophilus. Don't smoke or drink tea or coffee; these irritate the stomach and increase heartburn. Eat small meals frequently; if you must be away from home, take juice, fruit and nuts with you to prevent your blood sugar going down and stomach acids overproducing. Papaya can aid digestion--fresh, dried or in tablets.

Some women take tablets of activated charcoal to absorb gases in the system. Slippery elm gruel will alleviate heartburn and absorb gases and toxins. [EWH p.41]

### Testimonials

1. Scars from Caesarean Section Almost Prevent From Having More Children: A lady who had had three children by Caesarean section came to Dr. Christopher because she was "baby hungry." Medical doctors had told her that her scars were so bad that if she dared become pregnant again, the strain on her system would kill both her and her baby. Another section, they insisted, was totally impossible; one doctor crudely said that they couldn't even crochet her back together again if she attempted another pregnancy.

But she wanted another child. Dr. Christopher advised her to begin the usual program with [Dr. John R. Christophers "Three Day Cleansing Program"](#) once monthly, [Dr. John R. Christophers "Mucusless Diet"](#), the hormone-balancing [\[Changease\]](#) and female corrective formulas [\[Nu Fem\]](#). In addition, he told her to do the [Three Oil Massage](#), which is detailed in our section on Hair Loss, [EWH p.136]. The lady was to sunbathe as well, and to exercise.

Time passed, and Dr. Christopher had pretty much forgotten about this case. But the lady came to him with a baby in her arms. The scar tissue had begun to soften, and eventually became healthy tissue. She had an easy home birth vaginally, with no complications. This lady went on to have other children, grateful to Dr. Christopher for her healing with herbs. [EWH p.114]

2. [Pre-Natal Tea](#): Dr. Christopher's Pre-Natal Tea: Amateur herbalists, after reading that Pennyroyal must not be taken during pregnancy because it is an abortive, criticized Dr. Christopher for including it in his five-week formula which is taken by expectant mothers during the last five weeks of their pregnancy to facilitate an easy labor and delivery. Dr. Christopher explained that the Pennyroyal is included there to help prepare the uterus for easy delivery and that the quantity is quite small compared to the rest of the formula. Also during the last five weeks his small amount acts as a tonic and regulator rather than a strong abortive. He told many stories of how women received great relief during their labors because of the use of the five-week formula. One woman who had had two very difficult and long labors before was questioning whether she wanted to have another baby. The ordeal seemed to her too difficult. She began to take the five-week formula for the third pregnancy and to her delight her labor was just a few short hours and the delivery extremely easy.

Another woman took the formula routinely with each of her pregnancies preceding the last five weeks with daily doses of red raspberry, comfrey, and alfalfa. Her labors were extremely short and easy. The first baby came within two hours, the second within an hour, the third within a half hour, and so on!

Pennyroyal is not a particularly trustworthy herb. It only works a quarter of the time anyway, and could cause problems with a fetus if it were taken during the first part of a pregnancy. Recently a woman took a large dose of Pennyroyal in order to induce an abortion and died, although it was found later that she intended to commit suicide. Instead of taking the herb, she took the essential oil, which contains the very concentrated medicinal factors. Three women were involved in this case. Two ingested a quarter ounce each and lived, while the third consumed a full ounce of the herb oil and died painfully. It was thought that all three women were trying to induce abortion although a subsequent investigation revealed that the woman had been despondent and had talked of suicide and that she probably knew from her former experience with herbs that the ounce of the oil would be lethal. However, the story was widely published and prompted the director of the Rocky Mountain Poison Control Center to label the health food industry "murderers". Many people take herbs without knowing the full risk. In all cases they should follow the advice of Dr. Christopher who recommended that we do not generally take herbs in extracted or concentrated forms but that we take the herb in its natural form or at the most, in a tincture, so that we have the balanced elements needed for proper use. [UW-Pennyroyal]

3. Red Raspberry: Dr. George Zofchak reported that almost forty years ago he and his wife had their first son and after a few years they decided they wanted more children. But his wife Irene had trouble carrying the babies and there were several miscarriages. Finally Dr. Zofchak learned

that Red Raspberry leaves helped a woman in many ways throughout her pregnancy, strengthening the attachment of the fetus and easing delivery at the time of the birth. Although he had been selling herbs for some years he had overlooked the use of the Raspberry leaf tea. When his wife became pregnant again she began drinking a few cups of the tea during the pregnancy, which proceeded normally even though ten years had passed since the birth of their first son. They had two other children through the use of the Red Raspberry leaf tea (Bri:233). [UW-Red Raspberry]

4. Sickly Girl Gets Well and is Able to Get Pregnant: The Female Corrective Formula [[Nu Fem](#)] will strengthen the reproductive system of the female, while the Prostate Formula [[Prospallate](#)] will help the prospective father. Both parents will benefit by the Hormone and Estrogen Formula [[Changease](#)]. Both parents should begin these detoxification procedures before conception. During pregnancy, the mother should drink plenty of red raspberry leaf tea; approximately one quart a day. One may find a more detailed discussion on preparation for pregnancy in the volume Childhood Diseases, by John R. Christopher. People could do much to correct high risk pregnancies with the Creator's available remedies if only they would take the time to learn about how to care for the body.

I well remember an incident a number of years ago, of spending some time counseling with a young lady and her boy friend. They had brought the girl's parents with them. They were deeply in love and wanted to get married. However, the girl, as much as she loved this young man, had begged him not to pressure her to marry him because of her present physical condition. Her whole system was in such a deplorable condition that there was no menstrual cycle to be detected in any accuracy at all. The menstrual period would start; then shortly she would stop flowing and in several days might start again and continue for several weeks of heavy flow. Other times she would go six or eight weeks, or more, without another menstrual period. When her mother had come to see me a few days earlier, the girl had menstruated for so many weeks, she was anemic. Her period had been so long and frequent that she was so weak and run down, she spent much of her time in bed. This weak condition was so bad, she had been told by her doctor that she could never have children if she did get married or planned to; but she would be better off to remain single.

Her fiance insisted that they should get married and he would take care of her throughout her life, not worrying whether or not she could bear him children. But, she did not want to spend the rest of her life a sickly woman.

I advised them to follow a blood rebuilding program and both assist and encourage each other. The program started with [three-day cleansing cycles](#) and then included a mostly vegetarian (and [mucusless](#)) diet with lots of fresh fruits and vegetable salads, pure fruit and vegetable juices (especially carrot) and the use of Dr. Christopher's Female Corrective herbs [[Nu Fem](#)] as well as our special formula for the glands. (Read his book "[The Incurables](#)" as well as "[Three Day Cleanse](#)" pamphlets, etc.) We promised that if they would cooperate and follow instructions, her bloodstream could be rebuilt and her system strengthened before the year was over.

They got married and he nursed her at home, watching her diet carefully, and helped her step by step to follow the mucusless diet and to use various herbs to assist in the rebuilding of her reproductive organs. They watched her blossom out over the next few months. In a little over a year of married life, the young lady became the proud mother of a healthy baby boy. How much nicer it is to be a healthy happy mother instead of an invalid! This couple proved that an "ounce of prevention" is better than a "pound of cure." [NL 2-5]

5. Rh Factor: Up in the Brigham City, Utah area I had an extremely interesting case come to our study group to see if we had a program that could be of some assistance. The lady wanting help had had three children and all three had Rh negative factor problems. (Each of the three children had to have their blood drained out and different blood filled in). All had a difficult time pulling through the ordeal and staying alive.

Any mother having this condition Rh factor, and having three children, one right after the other with the same problem, if she is an average woman, would say "no more"! But the good Lord made brave women from the beginning for a lot of us to have as valiant mothers who love holding and caring for another new baby so much that they will still take the chance! Anyway, to add

insult to injury, this lady did not only have the Rh factor problem, but had just had open heart surgery. The obstetrician warned her that if she became pregnant again, she and/or the baby could die. But she wanted a large family.

The first thing we had her do was go on the "basics"; for instance, to use the lower bowel formula [[Fen LB](#)] and clean out the bowels, and drink a gallon of steam distilled water each day to keep flushing the system. She drank no less than a quart of red raspberry leaf tea, using two capsules of [Red Clover Combination](#): Dr. Christopher's Blood Purifying Formula and followed [Dr. John R. Christophers "Three Day Cleansing Program"](#) and [Dr. John R. Christophers "Mucusless Diet"](#).

This woman's program was watched carefully during the entire nine months and the progress was excellent. When the next baby came it was with no Rh factor problem (no blood pumped out and replaced).

This woman and her husband became parents of two more babies born a few years later, and both of them were free of this Rh negative factor.

It has been very satisfying to the parents, as well as to us who helped guide them, to know that this serious condition can be cured if we will but do something about it "naturally" as explained herein.

Good common sense, knowledge of right foods, and the Lord's good herbs can make life better for all of us if we will just use these methods. [NL 2-5]

## Prostate

### Definition

The prostate consists of 3 lobes which manufacture seminal fluid. The tube which empties the bladder passes over the middle lobe. In later life, the prostate gland often becomes enlarged and causes problems by closing off the exit of urine from the bladder. This urine retention often starts by a decrease in the force of the stream of urine leaving the body. Prostate blockage of the flow of urine because of infection or cancer can be very serious --- even to the point of causing uremic poisoning within the body. The cause of enlargement of the prostate gland is the collection of mucus and sediment in the gland. Often the male hormones produced by the body are not enough to keep the prostate gland functioning well. The nitrates and nitrites in processed meats, hot dogs, baloney, and other cold cuts have a particularly important role in the formation of cancer of the prostate in the male. [NL 3-6]

### Herbal Aids

General Instructions: Before (or instead of) arriving at the decision to submit to the knife and have the prostate gland surgically removed, may we offer the following suggestions: In any form of cell-deterioration, the Red Clover Combination should be used to help clean up the blood stream. Of course the bowel must be cleared up first and foremost. Then, as a specific aid to the prostate area the following formula has aided in removing infection, sediment and the like.

[Prospallate](#): Dr. Christopher's Prostate Formula, [Cayenne](#), ginger, golden seal root, gravel root, juniper berries, parsley root or herb, uva ursi herb, and ginseng root. These capsules can be taken in the morning and at night, and they are best taken with parsley tea. Change the diet to the mucusless diet, and drink plenty of distilled water and fruit and vegetable juices. Cancerous tumors have a very difficult time growing when there is the presence of organic potassium in the body, so the tinctures of black walnut or elderberry or any other foods high in potassium can be helpful here, providing that the bowel is in good condition so that proper assimilation can take place. The [Changease](#): Dr. Christopher's Herbal Hormone Formula will help the body produce the necessary hormones for proper functioning of the glands. It consists of Black cohosh, Sarsaparilla, ginseng, licorice, false unicorn, blessed thistle and squaw vine. Don't worry if the formula contains estrogens as well as hormones. The body will select the substances it needs and will discard the rest in a natural formula such as this. [NL 3-6]

Gravel Root is used principally as a therapeutic agent for the urinary-genital areas, influencing the kidneys, liver, bladder, prostate gland and uterus. It relaxes moderately, stimulates, and tones the pelvic viscera and mucous membranes (helping to cast off any sediments that have settled on surfaces). It is good when used alone, or in combination with other herbs. Its popularity (note the name) has been due to its powerful solvent effect on stony deposits in the kidneys (here it can do the work alone, but its effects are improved with other herbal agents in combination). Gravel root is one of the greatest herbs to use for any kidney and urinary problem, and it is also great as a tonic and stimulant. As a nervine, it is reputed to influence the entire sympathetic nervous system. [SNH p.254]

Prostate Urinary Troubles: See formula using gravel root, marshmallow, parsley, juniper, lobelia, cayenne and golden seal. [SNH p.256]

Herbal Kidney Aid: See formula using cayenne, ginger, golden seal, gravel root, juniper berries, marshmallow, parsley and uva ursi. This will dissolve the stones that are in the kidneys, as well as clean out other sedimentation and infection in the prostate. Mix the powders and place

[Nightmares](#)[Nipples](#)[Nosebleeds](#)[Obesity](#)[Osteoporosis](#)[Palpitations](#)[Paralysis](#)[Parasites and Worms](#)[Pleurisy](#)[Pneumonia](#)[Poison Ivy and Poison Oak](#)[Polyps](#)[Pregnancy](#)[Prostate](#)[Pyorrhea](#)

in No. 2 capsules and take two morning and night. [SNH p.524]

[Prosallate](#): Dr. Christopher's Prostate Formula: (This is the same as in # 3 but already made into capsules). In case of malfunction we suggest this combination to help assist the male: cayenne, ginger, golden seal root, gravel root or queen of the meadow root, juniper berries, marshmallow root, parsley root or herb, uva ursi leaves. This will help dissolve the stones that are in the kidneys, as well as help clean out other sedimentation and infection in the prostate. Mix the powders and place in No. 0 capsules and take two or more morning and night, with parsley tea when possible. [HHH p.191]

[Alfalfa](#): Frank Bower conducted many interesting experiments with Alfalfa. Three hundred soldiers at Sawtelle, California, used the Alfalfa tea with remarkable improvement in bladder, prostate and other problems. [UW-Alfalfa]

[Kelp](#): Kelp is also recommended to tone the prostate gland. It improves the nutrition of the organ and the circulation of the blood through the tissues. It is necessary to take the herbal aid over a period of time to get the results, however. A seventy year old man was saved having a prostate operation through the persistent use of Kelp. [UW-Kelp]

[Processed Meat and the Prostate](#): The preservatives which are put into the hot dogs, baloney, and corned beef, are potassium nitrate and similar compounds which destroy the prostate gland in 55% of the male population of the world. At one time, these chemicals were used in black powder and rocket fuel, and to decrease the sexual libido of mental patients. Now men pay for it in their canned beef. Then they pay to have their prostate gland surgically removed. [NL 2-6]

[Zinc](#): In a youngster, normal growth and sexual maturity cannot proceed without sufficient zinc. If you are having muscle cramps, slow healing of wounds, poor absorption in the small intestine, or prostate gland disorders, you may have a zinc deficiency.

Chaparral is a great way to obtain manganese, copper and zinc in a concentrated form. When the Creator ordained herbs for the use of man, it was to eliminate unnecessary guesswork and laboratory work with regard to the needs of the human body. [NL 3-4]

[Pumpkin Seeds](#): The pumpkin seed has given much relief to prostate problems. [NL 5-1]

### Testimonials

1. [Cleanser of the Urinary Tract](#): About a year ago, we had the case of a man who was to be sent back to the Mayo Clinic for a prostate operation. It was serious enough that the doctors there wanted to handle it. We had to put the catheter in to get the liquid to flow at all and the man was in great pain; And even with this mechanical assistance, the pumping was very slow. This man was agreeable to do anything, so we changed his diet, and that was the roughest "medicine" we could have given him, as he was a big eater of the orthodox foods. But we changed his diet and put him on the gravel root herb (the "pelvic trouble" formula). Not more than six weeks had gone by before he happily told me, "I now have the fountain of youth." And he continued "This is the happiest that any man could ever be. It has been many, many years-since I've had this freedom and no pain." He was so enthusiastic about this miracle taking place within him that he said, "I would think that I can go on straight raw food now that I've got started that it will go faster." But we counseled, "No, please don't, because the mucus will break loose here so fast that we need to slow it down, so at least 1/3 of your foods should be baked or steamed." Well, he went ahead with the raw diet anyway. The mucus came fast and furious, and one string of mucus from the urinary tract was so long and painful that he thought he was going to have triplets with all that he went through. [SNH p.257]

2. [Parsley for Pressure of the Prostate](#): One doctor who made a trip to Holland was surprised to see medical doctors prescribing Parsley tea for kidney stone and other kidney and related complaints, including pressure of the prostate. He returned to his practice at home and began prescribing the same remedy with the same good results (Luc:Herbal:89). Parsley taken with boiled onions is said to be good to remove gallstones although some writers prescribe juniper berries instead of the onions which would also be a great specific for the urinary tract (Coon:154). [UW-Parsley]

3. Parsley to Help Urinate: One gentleman in his sixties was in great distress because he was unable to urinate. The doctor catheterized him several times and told him that he would have to undergo an operation. It was then discovered that the man had sugar in his urine and the operation was deemed too dangerous until the diabetes was under control. The patient's osteopath finally prescribed Parsley tea. The results were astonishing. Not only was he able to urinate freely but every trace of sugar disappeared from his urine. After first drinking the tea a lot of offensive substance came away in his urine. But it soon became normal and the patient was soon playing his normal rounds of golf with enjoyment and with no further thoughts of an operation (Luc:84). To void urine Dr. Christopher specifically recommended combining the Parsley with Juniper berries. [UW-Parsley]

4. [Juni-Pars](#): Dr. Christopher's Kidney Formula and [Prospallate](#): Dr. Christopher's Prostate Formula: First, I want to thank you for making your herbs and combinations and knowledge available! My husband was suffering from kidney/prostate troubles and had gone to the urologist after the local P.A. was unable to help him. The urologist had him on a sepra which made his health seem to improve for a couple of weeks--then he had the same symptoms all over again and a lot worse. So much so, he stayed home from work for four days, sleeping and very uncomfortable. When he went back to the urologist and had x-rays they weren't able to find anything, told him to go off the medicine and that the urologist felt he would just have to "live with it." He must of thought my husband was off upstairs or something, maybe. So we went to the health food store for help. Through reading material and the lady there he started on distilled water and KB [White Mallow] and PR [Prospallate]. He is much better and has been able to do heavy work again. Thank you greatly. [NL 3-4]

## Yellow Fever

### Definition

An acute, infectious, often fatal, febrile affliction of the tropical and sub-tropical regions of America, characterized by jaundice, hemorrhages, vomiting, etc.

### Symptoms

The affliction begins with a chill and pain in the head, sudden onset of fever (103-105 degrees F), vomiting, constipation, scanty and albuminous urine. A period of diminution (remission) occurs, another fever attack, jaundice develops, and the vomit becomes darkened from the presence of blood. The disease is often fatal, occurring in the typhoid state or from uremia. [SNH p.49]

### Cause

A thick and sluggish blood stream. Mucus clogs the body to the point that a fever takes over (without which it cannot clear itself). Yellow fever or other forms of fever do not occur when the body is in a healthy condition. The clogged condition is triggered by an organism carried by a mosquito. [SNH p.49]

### Herbal Aids

Work the Fever Out through the skin by the use of diaphoretics, vapor baths, heat baths and [cold sheeting](#) and change the diet. [SNH p.49]

Cayenne (Capsicum): It is especially valued there for the deadly fevers, especially yellow fever, of which the native people have no fear as long as they have a goodly supply of Capsicum (Ibid.) [NL 6-3]

## Adrenetone

### Adrenals Formula

---

#### Usages

Adrenals Formula: As this formula helps promote the correction of any imbalance in the adrenal gland it also compensates for any stress placed on the heart.

Relaxation, meditation, recreation, or some form of stress reducing activity will certainly help the cause of exhausted adrenals. We should wish to eliminate hate, anger, fear, and other negative emotions as they take their toll on the physical body. Listening to relaxing music has proven to be wonderful in easing hostile attitudes.

#### Dosages

This formula may be taken as capsules or as a tea. It may safely be given to a person suffering from hypertension. For those who wish to rebuild the adrenals and do not have the sodium retention problem, Licorice root can be used as a supplement the above formula in tablets, capsules, extract, or as a tea. The suggested dosage is one #0 capsule daily - six days each week.

#### Ingredients

Contains mullein, licorice, Siberian ginseng, gotu kola, hawthorne berries, lobelia, cayenne, and Ginger.

***Mullein and lobelia: the perfect glandular foods.***

***Siberian Ginseng: Successfully used in the Soviet Union to ease stress in everyday situations and tend endurance to athletes under great strain during training.***

***Gotu Kola: Known to help promote the stimulation of the brain and relieve fatigue when given in small amounts. Wonderful for the functioning of the pituitary in disorders of the adrenal system when used in conjunction with other herbs.***

***Hawthorn Berries: A celebrated cardiac tonic for many centuries. Under conditions of stress, the heart often "works overtime." Hawthorn berries can help in treatment of high or low blood pressure, tachycardia, and arrhythmia. It is also anti-spasmodic, sedative, and soothing to nerves, especially in nervous insomnia.***

***Cayenne: Nature's finest stimulant; source of calcium and vitamin A. Aids in circulation of blood which brings oxygen and other nutriment to cells in need of repair.***

***Ginger***: A stimulant and a 'lead sheep' herb, bringing the other herbs in the formula into the abdominal area. Ginger differs from cayenne as a stimulant, in that the cayenne stimulates the heart, arteries, veins and then the capillaries. Ginger starts its stimulating effect in the capillary, flushing out the "constipated" capillary, driving these wastes into the veins for disposal.

## Ant-Plg

Anti-Plague Formula

---

### Usages

1. This is a good formula to help with car, plane, or boat sickness; in fact, for most any motion sickness. It is also for nausea from pregnancy, etc.
2. Historically speaking this formula has been used to help clear up flu, earache, eruptive diseases, car-sickness, etc.
3. The best insurance in the world against the "predicted coming plagues" and "killing diseases" is to have the body in a good healthy condition. Disease germs are merely scavengers and can only live on toxins, mucus and residue from junk foods. They cannot and will not be damage healthy cell structure. Therein lies the key! Have a healthy, clean body and disease germs will by-pass you--wanting nothing to do with your body, because it would be "obnoxiously clean" (in their language) and no filth for them to live on.  
If the plague, or some other epidemic hits before you are in a good healthy condition, it is good to have an aid for a fast cleaning.
4. Nausea: Tendency to vomit, sickness of the stomach. Use the anti-nausea formula...You may also use the anti-plague formula.

### Dosages

Dosage is as follows: 1 tsp. 3 times a day; or 1 tablespoon every 1/2 hour if infected.

### Ingredients

Anti-Plague contains the following herbs.

- Fresh garlic**
- apple cider vinegar**
- pure vegetable glycerine**
- U.S.P.**
- honey**
- garlic juice**
- fresh comfrey root**
- wormwood**
- lobelia**

This has also been called Four Thieves. The origin of the name "Four Thieves" is as follows. "It in Marseilles, a garlic-vinegar preparation known as the Four Thieves was credited with protecting many of the people when a plague struck that city. Some say that the preparation originated with four thieves who confessed that they used it with complete protection against the plague while they robbed the bodies of the dead. Others claim that a man named Richard Forthave developed and sold the preparation, and that the "medicine" was originally referred to as Forthave's. However, with the passing of time, his surname became corrupted to Four Thieves."

### Testimonials

1. Garlic Wormwood Soup: From a letter to Dr. Christopher's newsletter. We have been making and giving the "anti-plague" remedy all last winter and spring, and I must say, I am amazed at its power! There hasn't been a case of acute respiratory or gastrointestinal illness that hasn't responded favorably, and quickly! It tastes like broth to me so I call it "garlic-wormwood soup". [NL 1-8]

2. Dr. Christopher's First Anti-Plague: (Ant-Plg) While lecturing in Snowflake, Arizona one night, one of the group asked if we had an anti-plague formula, and I was prompted to give them a "certain combination" of herbs to use.

The people there were very impressed to go right to work and prepare this liquid, having it read for use. We had told them that plagues come at unexpected times and it could be tomorrow or maybe even years away, but expect the unexpected and be ready now. If the formula was still unused, from "no need" years later, we could all be happy but "TIS BETTER SAFE THAN SORRY".

These good people made it up in gallon lots and had it on hand. Months later while speaking in Tucson, Arizona, someone asked for the "anti-plague remedy." I was surprised and asked where they had heard of it, as we had only given it out once. We were informed that a plague-like condition or flu had hit the Snowflake area and when other aids failed, this combination of herbs in liquid form performed its job with amazing speed.

At our next series of lectures in Snowflake, some time later, we heard one testimony after another about the many different types of ailments that were given quick relief by using this formula. The formula has now spread in many areas from coast to coast and is being used with good results. A man picked us up at an airport on the west coast a short time ago, and on the floor of his car was a bottle with liquid in it. When asked what it was he said, "oh, that's your anti-plague remedy, we never travel without it as it works good on about any sickness that comes up while we are traveling. We are also never without a bottle of it at home." [NL 2-9]

3. Dr. Christopher said that the tea of the leaves is a perfect remedy for colds and flu. He said to take no foods or other liquids but to drink large amounts of Red Raspberry leaf tea. His son, David, used this method when he came down with a cold and became well so fast that he and his wife went out to eat that night before the cold was completely cleared. His cold returned and so he decided to repeat the Red Raspberry treatment but it would not work the second time. He had to use the anti-plague formula which is somewhat nasty but effective. [UW-Red Raspberry]

### Antispasmodic Formula

---

#### Usages

1. Croup: As an aid for croup.
2. Apoplexy: The suddenness with which apoplexy comes necessitates the fastest therapeutic action. [Cayenne](#) pepper (one teaspoon to the cup) may be administered quickly; tincture of lobelia (three drops to one-half teaspoon, according to the size and age of the individual) should be given regularly; the antispasmodic tincture is excellent.
3. Asthma: Another helpful method is to take a vapor bath twice a week, inhaling steam from a decoction of cudweed ragwort, wormwood, or a decoction of the following herbs, taken warm, (equal parts) will prove very beneficial: elecampane root, horehounds, hyssop, skunk cabbage root, vervain, wild cherry bark (and to this preparation add tincture of lobelia or antispasmodic tincture).
4. Cough: It is very beneficial to massage the chest and across the back with antispasmodic tincture and to take six drops or more of the antispasmodic tincture several times each hour with a little distilled water. In addition, give a fourth cup or more of tea made of equal parts of wood betony, spearmint, peppermint, and catnip. (Give this two or three times a day.)
5. Earache: Place a few drops of tincture of lobelia (warmed) into each ear and plug with cotton. Substitute antispasmodic tincture or Black Cohosh Tincture Combination [B & B Tincture](#) if needed.
6. Hiccoughs: Relaxation is the most important thing, so drinking a mild nervine tea will help. Drinking a little orange juice is also helpful or take a teaspoon of onion juice. A few drops of antispasmodic tincture taken internally and rubbed on the chest area will often help promote relief, as will a cayenne poultice on the chest area or black or blue cohosh tea.
7. General Uses: This formula has been used historically in cases of convulsions, fainting, cramps, delirium tremors, hysteria, etc., also good for pyorrhea, mouth sores, coughs, throat infections, tonsillitis, etc.
8. Indigestion: Peppermint tea can help promote the soothing of the digestive tract and eliminate gas. Add six to ten drops of lobelia or antispasmodic tincture.
9. Babies Convulsions: For baby convulsions, place a drop or two of the tincture on the tip of a clean finger and place it in the baby's mouth. This should help stop the spasms immediately.
10. Rheumatism: The antispasmodic tincture is often applied externally for swellings and rheumatism.

#### Dosages:

Dose 1/2 to one teaspoon to glass of steam distilled water as a gargle and use until throat clears, also take one teaspoon in steam distilled water morning and evening.

#### Ingredients:

 skullcap herb

 lobelia

### Testimonials

**1. Epilepsy:** I just received your newsletter, and in reading the information on epilepsy I found that you didn't mention your antispasmodic tincture.

I have epilepsy and have followed your program with the [B & B Tincture](#) and [Oil of Garlic](#) and I'm sure this is effective over a period of time; but the antispasmodic tincture will stop the seizure in the process. I have used it successfully--even during home childbirth. This is a very good test, as epileptics could tell you, as childbirth always causes seizures.

I have also given the tincture to a friend for her baby. They had just spent almost \$1,000 on tests and medication the "AMA Way" and were having no success in stopping the seizures. They say this tincture has changed their lives. Having experienced epileptic seizures, I know that is no exaggeration.

I have never read or heard of this tincture being used for epilepsy, but was led by the Spirit to use it. I hope this might be of help to others who are suffering. God bless you.

**2. Croup and Coughing:** I'm very interested in learning more about herbs and one day studying it so I would feel more confident using them as I do, medicinally. I've used lobelia tincture for my son's teething problems and on insect bites and rubbing on body for fever, etc. I've used antispasmodic tincture for his croup and coughing. It works great!! I wish the medical profession would accept this miracle remedy for croup and get off their high horse!

**3. Fever:** My main reason for my letter is: My neighbor's little son of 3 ½ had a fever of 104 F. for three days. I brought him one cup of honey-cider vinegar and water and the antispasmodic tincture. He drank ½ cup of the mixture (1 tsp. of each) took ½ dropper of the tincture and in three hours the fever was broken--his mother thought it was a miracle. So do I.

### AR-1

Arthritis/Rheumatism Formula

---

#### Usages:

Here is a combination of herbs that helps promote detoxification; help act as a solvent for the accepted but not assimilated calcium deposits; herbs that help promote the relief of pain; herbs rich in new acceptable organic calcium that can be assimilated and useful; herbs that kill fungus and infection and that have the ability to help promote wonderful relief. Historically speaking this relief is not immediate because here is a long rebuilding job--gradual relief can come, and full healing, if the program is followed faithfully:

#### Dosages:

A cup two or three times a day (two capsules in Brigham tea or steam-distilled water).

Use as a hot fomentation over extremely painful or crippled areas (in addition to this formula), formula called bone, flesh and cartilage [BF & C](#).

Also drink 1 or 2 quarts of kidney bean pod tea daily. In addition for relief, an external application of formula Antiseptic Tincture [X-Ceptic](#) is recommended. Even though one uses these aids yet continues on with improper diet, one may get some help but not as much as going all the way. Remember the teachings for years have been--"No healing in this condition." We are giving people hope if they will follow through with these formulas and the mucusless diet

## AT-GS

Anti-Gas Formula

### Usages:

This formula was designed to help promote the relief of flatulence.

### Dosages:

To make tea, take one teaspoon in a cup of boiling water.

### Ingredients:

- fennel
- wild yam
- catnip
- ginger
- peppermint
- spearmint
- papaya
- lobelia

### Testimonials:

One particular woman was worried that she was dying of a heart attack. Dr. Christopher checked her eyes and told her that there wasn't anything wrong with her heart; in fact, it was in excellent condition. He wished his own heart were as good as hers! He assured her that she was not having a heart attack.

She was somewhat belligerent: "Well, don't tell me, I should know, it's me that's having them. I can be washing dishes and all of a sudden, my heart will stop beating and I fall on the floor and pass out. Or I'll be walking down the street, shopping, and pass out. They rush me to the hospital, and I always come to before anything is done, like operations. "Dr. Christopher told her she hadn't any heart problems at all, but that she did have a condition on her descending colon, where she had a bowel pocket, a gas pocket, and whenever she got gas in that, it pushed up against her heart valves and cut the heart off. That is why the heart would stop, because of the gas pressure. She said that she was having a heart pain right then and that the heart was constantly troubling her. She was afraid she would pass out.

He told her to hang on, and he called on the intercom to the laboratory, where they always had hot water ready. He had them mix up a teaspoon of wild yam and a cup of hot water. Within a very short time he strained out a cup of wild yam tea for the woman. She was just about ready to pass out. She took a couple of drinks of the tea and started to burp. Finally the gas was completely relieved.

After taking Dr. Christopher's advice and not gulping her food, but chewing more thoroughly, using wild yam as she needed, she got over this problem and never had another attack.

## B & B Tincture

### Nervous System Formula

#### Usages:

Ear infection, epilepsy, vertigo, to aid M.S., swimmers ear, stop hiccups and is great to use by drops in the ear with [Oil of Garlic](#) to clear up earaches, and has even restored hearing in some cases. Helps in cases of motor nerve injury, epilepsy, hearing loss, warts and tonsillitis.

#### Dosage:

1. Ear Infection: If your baby gets an ear infection, try home remedies before you take him or her to the doctor. Two drops of [garlic oil](#) followed by two drops of tincture of lobelia or Dr. Christopher's *B&B tincture*, plugged with a bit of cotton, often removes the pain and the congestion. You can rub the lymph glands below the ears with the same preparations, or with oil of [Mullein & Lobelia](#). Ear infections can be a result of a systemic infection, or they can point to dietary problems, either allergies or too many mucus-forming foods in the other. Examine your own condition carefully when your baby gets sick. If the infection remains acute, take the baby to a doctor you trust. Even if you do not purchase the prescription he offers, he will be able to tell you the exact condition of the ears. Some parents have purchased earscopes with which they can examine their own children's ears.
2. Epilepsy: Putting it into the ears, giving it internally, massaging the back of the neck.
3. Vertigo may result from disease of the middle ear (Menere's disease), from cardiac, gastric, or ocular disorders, from some peripheral irritations (as laryngeal vertigo) as a precursor on an epileptic fit, in hysteria, from toxemia (as Bright's disease), from an organic brain disease, and from unrecognized causes (essential vertigo).

Use *B & B Tincture* as follows: place four to six drops of oil of garlic in the ear with our eyedropper and follow this with four to six drops of *B & B* in ear, then plug ear with cotton. Turn the other ear up and do the same as with first ear-plug this one also and leave in all night, or night and day if desired, and flush ears on the seventh day. This is done by using a small ear syringe and flush with warm apple cider vinegar and distilled water (half and half) then continue on. Apply [garlic oil](#) and *B & B tincture* this same way week after week until desired effects are acquired.

Have the patient drink six to ten drops of the *B & B tincture* three or more times a day. (This could be done each hour in severe cases.) Massage *B & B tincture* on the cords back of the ears down the neck area and on the base of the skull (medulla area) several times a day.

4. Hearing Loss: We generally put four to six drops of [oil of garlic](#) into the ears first (with an eye dropper) then follow this with four to six drops of this special nerve tincture (more or less according to the size of the ear, that is, age of patient). It is best to do this procedure at night, plugging the ears with cotton and leaving it in all night, removing the cotton the next morning. Do this routine six days a week and on the seventh day of each week flush out the ears with a small ear syringe. The liquid used (to flush) is warm apple cider vinegar and distilled water--half and half. Use a small ear syringe (most drug stores carry them) but do not use heavy pressure, just an easy rinse. This program is done week after week until results are obtained. With some folks we have seen the hearing restored and hearing aids discarded in just a few months. In other cases, this program must be followed for far longer periods of time before results are noticed. No two people heal alike, so be patient and follow instructions, then see what happens!

1. M.S.: Don is in his middle 30's and has had M.S. for approximately 10 years. He has been through the whole gambit of the medical field to ease his condition but to no avail. Don was always a very active person and to be stricken in the prime of life to a crutch and many times a hospital bed was his heaviest burden. In February of this year I started working with him after some study in natural healing which included Dr. Christopher's book "The [Incurables](#)." Don and I decided on a modified program as outlined in the book. He received twice a week treatments of B & B tincture rubbed into the spine and nape of the neck, foot reflexology, total body deep massage and meridian stroking. Daily he gave himself a garlic and catnip enema, a dry brush massage, and at night *B & B tincture* and oil of garlic drops were placed in his ears. He also took daily [red clover](#) and [Relax-Eze](#) herb combination. His diet consisted of demineralized water, increased raw fruits and vegetables and many whole grains. He avoided products which were refined and had additives.

Don is now walking without a crutch. He can stand alone whereas before it was impossible. He feels the muscles in his thighs, buttocks and lower back developing and he has strength to do many things to his amazement. This is only the beginning after only four months of treatments. Many thanks are given for the pioneer work done in natural healing to make this success story in progress possible. [NL 1-12]

2. Tumor: I want to tell you this because maybe it will help someone else. I have a tumor on my leg (almost gone). I've been putting the *B & B* cotton balls on it, with plastic and tape. My leg got so itchy I couldn't stand it, also the skin all around the tumor got lumpy. Anyway, I thought maybe it was the plastic but when I didn't use it, the *B & B* would dry so fast I was changing it all day long. This is how I solved it. I cut a slice of potato, big around, cut a groove in the slice to make room for the cotton balls soaked in *B & B*. I put the plastic on the back of the potato slice (none of it touching the skin) put the tape (I have a very good silk tape) on the other side of the plastic to make a little pad, none touching the skin, then a cloth wound around, holding the whole thing in place.

This was a good sized tumor. I was amazed when I would take the bandage off it would just squirt all over. Well, I've had it getting bigger for 15 years, and now its almost gone. I'm so glad I didn't have to have my leg all cut up. Wow, wouldn't it have left a hole. I don't even think I'll have a scar. [NL 2-2]

3. Swimmers Ear: I have used...your combination of [Oil of Garlic](#) and *B & B Tincture* for swimmers ears all with equal success. [NL 2-2]

4. Epilepsy: A boy 12 years old, was brought to me as a patient several years ago, who was having severe epileptic seizures and these had started after the child had received head injuries in an automobile accident. I have had success treating epileptic patients up to this time, by using our basics; bowel cleaning and blood purification, as well as using antispasmodic herbs. However, none of the procedures I had used over the years so successfully, worked at all with this new 12 year old patient.

One night I sat alone in my office, after all my patients had left for the day, wondering why I was not getting the results with this boy as I had with others with the same condition. I realized that I needed "help" and so I prayed earnestly that something could be done for this child and after

some time of praying and meditating an "idea" for a "formula" of herbs for nerves came to my mind. I quickly wrote down: blue cohosh, black cohosh, blue vervain, scullcap, and lobelia in a 90 proof tincture. I immediately went to the lab we had out in back of the office, and made up the tincture. When this formula was given to the epileptic boy patient, there was an immediate reaction, and before long, he showed great improvement. [NL 2-11]

## Barberry LG

### Liver-Gall Bladder Formula

#### Usages:

If the liver is particularly congested, we suggest the liver-gall bladder formula which contains the herbs barberry, wild yam, cramp bark, fennel seed, ginger, catnip and peppermint. This combination will aid in purifying the blood stream. For if the bile does not flow freely into the intestinal tract, it goes directly into the blood stream and circulates throughout the system causing a toxic condition known as cholemia, producing indigestion, sluggishness, fever, fatigue, constipation, upset stomach, chills, and vomiting, among some of the symptoms. In addition to the above formula, the castor oil fomentation may be used over the liver. This will open the constipated capillaries within the liver.

Excesses in eating and drinking should be avoided. If gallstones are present and the ducts are blocked, bile may be forced back into the liver and enter into the bloodstream. The skin may take on a jaundiced color. Ultimately, the bile is excreted through the urinary tract. The urine is often dark red or amber color and is very concentrated. Clay color stools are another symptom. During a time of a gall bladder inflammation, heavy eating should not be done. Fruit and vegetable juices are recommended along with the liver-gallbladder herbal formula. The bowels should be kept open and unconstipated through the use of the lower bowel formula [Fen LB](#). Olive oil (2 tablespoons, 3 times a day) should be taken to lubricate the bile ducts. Our hydrangea root formula, made with 1 quart of apple juice and one ounce of hydrangea root soaked together for three days in a cool place and taken in two ounce doses during the three day cleanse, is capable of dissolving stones anywhere in the body. Light, more frequent meals are preferred over large heavy ones.

#### Dosages:

Suggested dose: 1/3 Cup or one or two capsules or tablets, 15 to 20 minutes before a meal.

#### Ingredients:

 **barberry** **wild yam** **cramp bark** **fennel seed** **ginger** **catnip** **peppermint**

1. Liver Transplant Avoided: A 45 year old man scheduled for a liver transplant took 6 capsules of the *Barberry LG* combination three times a day and drank 1/2 gallon of carrot juice each day while waiting for the operation. Four weeks later after a medical exam, he was removed from the waiting list because of his marked improvement (others needed the transplant more than he did.) -R.C., Provo, UT [D. Christopher]

2. Polymyalgia: H.M. of Martha's Vineyard developed Polymyalgia (pain and stiffness of the muscles) later in life, after her doctor put her on drugs. Doctor's put her on prednisone to ease pain. However, after two years on this drug, she couldn't walk. She started taking herbs, trying to find relief. She took Dr. Christopher's *Barberry LG* formula, with Marshmallow and Astragalus for two and half weeks and started feeling better. She started walking again, and her sedimentary rate (lab work) dropped from 74 to 11. Two years later she only has problems with her knees. [D. Christopher]

## BF & C

Bone, Flesh, & Cartilage Formula

### Usage:

1. The bone, flesh, and cartilage combination, does wonders in restoring flesh and internal healing of bones and cartilage.

It can be taken in any of its forms, capsules, syrup, tea (internally and externally as a fomentation) and topically in a salve. All will do the job. The choice of how you take it depends on what the problem is.

2. This formula has done miraculous things with broken backs, legs, hips, etc. This formula has been used on curvature of the spine, polio, multiple sclerosis, and muscular dystrophy, stroke and arthritis of the bone. This formula is used externally as well as orally and has brought tremendously fast results.

This formula is a "power house" and has been used on (and restored to health) cancer of the spine, arthritis and polio, and has helped rebuild torn cartilage and sinews, fractures, etc. etc.

### Dosage:

1. BF&C Salve is an ointment using an olive oil and beeswax base.

2. BF&C Capsules or tea may also be taken daily: either two or three capsules three times daily or three cups of the tea.

3. BF&C Fomentation: Soak the combined teas in distilled water (at the rate of one ounce of combined herbs to a pint of distilled water), then soaking four to six hours, simmer thirty minutes, strain and then simmer the liquid down to 1/2 its volume and add 1/4 vegetable glycerine (if desired). Example: One gallon of tea simmered (not boiled) down to two quarts and add one pint of glycerine.

Soak flannel, cotton, or any white material other than synthetics--never use synthetics. Wrap the fomentation (soaked cloth) around the malfunctioning area and cover with plastic to keep it from drying out. Leave on all night six nights a week, week after week, until relief appears.

4. BF&C Fomentation: Another method. To make and use a fomentation: This is applying herbs to convey heat, moisture, and medicinal aid in order to relieve pain, to reduce inflammation, and to relax affected areas. Soak a Turkish towel or gauze or similar material in hot tea, lightly wring (just enough that the liquid will not run off the body), and place as hot as possible without causing blistering. Generally keep the fomentation moist and warm by placing plastics, oilcloth, etc., over fomentation. Dosage: Wet enough that the moisture will not run off the body, cover entire malfunction area, keep damp and change periodically.

5. Tea for Severe Cases: Drink 1/4 Cup of finished concentrated tea with 3/4 cup of distilled water three times in a day.

6. Stiff Neck: The following explanation of our "bone, flesh, and cartilage" formula is the most complete program for this condition of a stiff neck. The fomentation as it penetrates into the area will relax the muscles and feed the nerves so the bone structure (vertebra) will adjust itself. At the same time it will build up the blood circulation to carry off waste materials as well as feed the painful area with herbal food to put it into a healthy state of self healing. Soak flannel, cotton, or any white material other than synthetics--never use synthetics. Wrap the fomentation (soaked cloth) around the malfunctioning area and cover with plastic to keep it from drying out. Leave on all night six nights a week, week after week, until relief appears.

1. Movement in Body after 15 Years Immobility: While sitting in his family restaurant that used to be located in the University Mall, across the hall came the most grotesquely-built wheelchair the Doctor had ever seen; it was all out of shape, having been built for someone deformed. And sitting in the chair was one of the most deformed people he had seen. The lady's arms and legs and back were twisted out of shape. She was being pushed by a young lady, who took her right up to Dr. Christopher.

"I am surprised to see you, Dr. Christopher," the lady in the chair said, "I just had to stop and thank you; you have done so much for me."

He began to wonder what the thank-you could be, because she was terribly malformed.

She said that she had been like a vegetable for nearly fifteen years, having to be fed and given liquid to drink. She couldn't even raise a hand or leg. She started on the [Incurables program](#), with some people helping her, and they put the *BF & C* fomentation down her crooked back and over other parts of her body--and she said, "Just look at me now."

She was moving her hand, and she raised it off the wheelchair a little bit. She did the same with the other hand. She could turn her head and move her shoulders. She could even move her back a little, although it had not moved for those fifteen years previous. Grateful for her new life, she felt that she would live to get up out of that wheelchair and walk. She was so grateful for the formula. And Dr. Christopher said it would be a wonderful day when this young lady could walk and be on her own after fifteen years. [EWH p.116]

2. Scabs All Over Body: Here is an unusual case where Dr. Christopher used the *BF & C formula* on a young girl. He was lecturing in the Safford region of Arizona, and a man, who sponsored the lectures there, wished something could be done for his daughter, a teenager. They hated to sit down at the table with her, because she always scratched and picked at her head, digging the scabs out. The man brought her to the baths where the lecture series was located so Dr. Christopher could take a look at her.

The girl had red hair, but there wasn't much of it. You could see her scalp, covered with sores which could not be cleared up. Dermatologists and other specialists could do nothing to stop the irritation on her head.

Dr. Christopher had her use the *BF & C* combination as a fomentation on her head. She soaked a cotton stocking cap--white, he emphasized, as herb combinations should never react with dye--with the concentrated *BF & C* formula tea, wearing this at night with a bathing cap over it.

[Oil of Garlic](#)[Panc Tea](#)[Pre-Natal Tea](#)[PreTrac™](#)[Prospallate](#)[Red Clover Combination](#)[Relax-Eze](#)[Resp-Free](#)[Sen Sei Balm](#)[Sha Tea](#)[Smoke Out](#)[ULC](#)[V.B.](#)[VF Syrup](#)[Vitalerbs](#)[Wild Lettuce and Valerian](#)[X-Ceptic](#)[Yellow Dock Combination](#)

This would be left on all night, six nights a week.

After three months, Dr. Christopher lectured in the area again, and the girl came to show him that the scabs were all gone. Within the first week the itching stopped, and the sores healed up. But the hair that had been so thin was thickening, and by the time Dr. Christopher came back, she had a good head of hair, beautiful red and full as it had been years before. [EWH p.12]

3. Grandmother's Face Hits Cement: "The main reason for writing to you was to tell you what happened to my husband's 92 year-old grandmother who was visiting with us late July. While she was sweeping our porch off, her shoe loosened and she was climbing a short flight of cement stairs. She tripped and fell flat on her face. Her daughter, my mother-in-law, heard her face hit the cement, very loud crack. Grandma was taken care of--for the first aid part--by my husband (who teaches first aid and advanced courses for the Red Cross) and she rested. Grandma did not want any ice of the face for fear of catching a cold, so only cool towels could be used. She rested and claimed she was feeling fine -- but oh, did she look terrible.

Almost immediately her face turned purple. She is a spry lady and she went on being her chipper self, even after the accident. The rest of the family had the hard time -- looking at grandma and feeling so bad for her. THEN -- tada -- my shipment from the Herb Shop came with the *BF&C* syrup, the very next day. I convinced my mother-in-law to try some syrup on grandma's face -- to (hopefully) take the bruise away. Grandma had scraped her face on her nose and forehead, and the syrup felt immediately good, so the rest of her face was covered with it. The syrup is so simple to use, too.

The day the shipment came, grandma went to the doctor to make sure nothing had broken or was damaged that was not obvious to us. He assured her that everything was fine, but that the purple would change to green, yellow -- the whole schmeer! Also, her face would be swollen upon rising in the morning, but not to worry. Four days after the beginning application (2-3 times a day) her face was almost completely back to normal color. There had been no swelling in the morning, as the doctor predicted either. By the fourth day she was with her daughter in Hawaii for a visit and she called to tell me that her mother was feeling fine -- and looking back to normal." [NL 2-5]

4. Physical Injuries: Any physical injury to the kidneys, bladder, etc., can be remedied by the use of the *BF&C* fomentation to the outside of the body. [NL 3-6]

5. Bone Spurs from Arthritis: I have tried your comfrey herb combination for dissolving calcified bone spurs (caused by arthritis when a teenager). My metatarsal arch in left foot was in such bad shape, it had become very painful to walk. The herb began bringing results immediately. [NL 3-7]

6. Broken Toe: I would like to relate the experience that I had with Dr. Christopher's *BF & C*. I was working in a kitchen when I dropped a #10 can on my large toe. The bone was crushed and even after proper care, it didn't set straight. Even though this was an old injury, I believed that Dr. Christopher's formula would help, even if it was only to relieve the discomfort. I made an ointment of the formula using olive oil as the base. I applied this ointment liberally on my toe, but after several weeks, to my surprise, my toe lost all structural support. I was naturally quite concerned, so I called Dr. Christopher, who wasn't very surprised, but told me to keep applying the ointment. I did and to my amazement, the cartilage formed, hardened into bone and now you can't even tell that it had been deformed. [NL 3-7]

7. Spinal Disorders and Backaches: Serious diseases such as degenerative arthritis account for less than 5% of back pain. We treated a lady once who had such a disease. One of her vertebrae was degenerated and the doctors had given up on healing her. The bone had holes eaten through. She refused to change her diet in any way but she agreed to try some herbs. A friend persuaded her to use the *BF & C* spinal formula as a nightly fomentation. in about six months the woman had grown a new vertebrae--that is, the old one was completely restored and regenerated. The ...formula is truly one of nature's herbal miracles and can be used wherever there is damage along the spine. Where tumors are present, one would want to add the elderberry tincture or some other form of high potassium food as an internal supplement.

Although we always want to work on the cause of backache, we can relieve the symptoms by using the cayenne heating balm. This consists of cayenne pepper, wintergreen oil, pure mint crystals, and other essential oils in a base of olive oil and untreated beeswax--apply sparingly to sore places. We have found that the [BF & C Ointment](#) works well together with the cayenne ointment. One takes the other into the skin more quickly and brings relief. [NL 3-12]

8. Severe Cases of Skin Diseases: For the most severe cases of skin diseases in the advanced

stage, use ... combination, internally and externally. Soak the combined herbs in distilled water (at the rate of one ounce of the combined herbs to the pint of distilled water) for four to six hours, simmer thirty minutes (do not boil), strain and then simmer the liquid down to one-half its volume. Example: One gallon of tea simmered down to two quarts of tea, which is called "concentrated" tea.

Soak flannel, cotton, or any white material other than synthetic--never use synthetic--wrap fomentation (soaked cloth) around the malfunction area and cover with plastic or wax paper, leave on all night six days a week and for as many weeks as needed until relief appears. Then continue a week or two for severe cases. Drink one fourth cup of finished concentrated tea with three-fourths cup of distilled water three times or more each day. [HHH p.68]

9. Scales/Psoriasis: After a lecture, a woman came to ask Dr. Christopher to help her daughter, about fourteen years old, who tried to commit suicide. This girl required constant adult supervision to prevent her from harming herself. She had a skin disease diagnosed as being worse than psoriasis or anything else the doctors had seen. Scales covered her arms from the elbows down, her legs from the knees down, and her neck and face, with secondary bleeding. Having suffered with this for so many years, the girl could not attend school any longer, and was isolated at home. She gained tremendous excess weight, because in order to pacify herself, she would eat all day. Her mother called her a fat blob! And because she was getting worse and worse, she tried to kill herself.

As usual when presented with a difficult problem, Dr. Christopher offered a quick prayer, asking for guidance. The formula for the *BF & C* came to him, step by step, and he told the woman to write it down. She wrote down all the herbs he mentioned, as well as the directions on how to put them together. ... After soaking one ounce of the combined herbs in a pint of distilled water for four to six hours, she would simmer the mixture for thirty minutes, strain, and then simmer the liquid down to half its original volume. This could be made in larger amounts, whatever was needed. The mother would dip cotton flannel in this tea, or white cotton or wool stockings to cover the legs, with other long stockings to cover the arms. After covering all affected parts with these soaked cloths, she should wrap the arms and legs with plastic bags. This should remain on the girl all night, every night, until the morning. After a period of fresh air each day, the process would be repeated.

The mother tried this, and her daughter was very cooperative. The program began on a Tuesday, and although this disease had been worsening for many years, by Friday of that week all the scales had dropped off, and the skin was pink, healing.

After six months, when Dr. Christopher lectured in that city again, he learned that this young lady was back in high school, participating as a cheerleader, being very active. She was on the three-day cleanse and mucusless diet, as well as the red clover combination tea, the blood cleansers. Staying with this, she went from a large fat blob into a slender, well-shaped girl, overcoming her weight problem as well as the skin infection. [EWH p.10]

10. Finger Regeneration: Once, when at a convention in the Northwest, a beautiful young lady came up to Dr. Christopher and his son, David. "How do you like my fingers?", she asked. They were well taken care of and the nails were done nicely. Dr. Christopher said, "Fine," and she asked, "Can you tell which finger has been cut off?" They couldn't tell. She showed him the finger that had been cut off; she used the *BF & C*, and the knuckle grew back, and the bone and flesh grew back in. The nail, which had been completely gone, grew back on, as pretty as the others. This was a truly unusual case of healing. [EWH p.11]

11. Cervical Arthritis: From a question to Dr. Christopher in his Newsletter. What could be done in a case where cervical arthritis is present, where X-rays show a narrowing of the interspace between C-5, C-6 and C-7, and where anterior and posterior spurs, heading for spondylosis, are present? Is there any way whereby the calcium deposits can be removed, extracted or eliminated to free the body from its painful burden?

We have seen numerous cases of the condition described in this question in most areas of the spine all the way from the Atlas Axis down to the tail base. After beginning the therapy with cleaning and mucusless dieting, they followed this procedure: make a fomentation of a tea combination which we call ... "comfrey combination"... Soak the combined teas in distilled water at a rate of one pint of distilled water to one ounce of combined herbs. Continue the soaking from four to six hours and then simmer the preparation for thirty minutes followed by a straining. After

the straining, simmer the tea down to one half of its volume. If desired, a volume of natural vegetable glycerine equivalent to one fourth the volume of the tea may then be added. For example, if there is a gallon of the tea after the straining, simmer it down to two quarts and add one pint of the vegetable glycerine. Soak some flannel, cotton or other material except for synthetics which should never be used and wrap the soaked cloth fomentations around the malfunctioning area and then cover with plastic, oil paper or oiled silk. In turn cover the area with toweling and leave on all night. Repeat this for six nights a week until relief is accomplished and the calcified deposits disappear. Also, drink 1/4 cup of the finished tea, with or without the glycerine, but diluted with 3/4 cup of distilled water. This should be done three times a day for six days of each week until relief occurs. [NL 1-3]

12. Hemorrhaging in the Brain Stem: Question to Dr. Christopher in his Newsletter. If a person were in a coma caused by some hemorrhaging in the brain stem area, how might this be approached herbally?

[See dosage # 3 above]...Wrap the fomentation (soaked cloth) around the head area (like a nightcap), tied under chin to hold in place, also down the spine to the shoulders. The fomentation down the spine should be about four or five inches wide. Put a shower cap over the head and a piece of wax paper, oiled silk or plastic down the spine area. Keep this fomentation on the area approximately twelve hours each day, either during sleeping hours or during the day--whichever is more convenient. Drink 1/4 cup of finished concentrated tea with three fourths cup of distilled water three or more times a day. Do this entire program six days a week, week after week until healed.

This routine has been used with cases of tumors on the pineal and/or pituitary glands, and these tumors have decreased--in one case over 65 percent in six weeks, then over another month was completely gone. This herbal formula will aid in rebuilding the hemorrhaging area with surprising results. [NL 1-6]

13. Hernias: A hernia commonly refers to the escape of some part of the intestine from the abdominal cavity, through an opening in the abdominal wall. The intestine is pushed out from the inner body, often to a point just below the surface of the skin. When it reaches this point, we have a visible hernia. At first it is about the size and shape of a marble, and grows larger as more and more of the intestine escapes.

A number of patients with hernias and ruptures have used the *BF & C* formula with great success. This formula, ... is applied over the afflicted area as a fomentation a day and night, using a truss or pad to hold in place. Then soak some flannel in this tea and apply. It can also be obtained in a concentrated liquid form or as an ointment. Use whichever type is best in your case. It is also helpful to take the formula internally as a tea, or in capsule or tablet form--two or three of these three or more times per day. [NL 1-8]

14. Wrinkles: I must say the comfrey ointment is fabulous. You probably already know that there isn't any equal to it for getting rid of wrinkles. I had deep wrinkles around my eyes (crow's feet) when I attended your seminar, I started using the comfrey ointment day and night. In a few short weeks, they were gone. Glory to God! A few months ago a friend of mine asked me to try some "wrinkle oil" she sells, I finally agreed to try it. I used it only under my left eye and in about 2 weeks the wrinkles started coming back. I then asked her which eye looked the best, she naturally picked the right eye (it was obvious). Now she uses the comfrey ointment instead of the oil she sells... [NL 4-6]

15. Open and Draining Abdomen: "An open and draining abdomen, caused by extensive massive surgery, totally healed within 7 days time by using comfrey poultices and by taking *BF & C*. A special thanks to you. The abdomen was draining for three years!" [NL 3-7]

## Black Ointment

Skin Formula

### Usages:

An excellent drawing ointment. For use externally on old ulcers, tumors, boils, warts, skin cancers, hemorrhoids, excellent for burns and as a healing agent.

### Dosages:

Use as desired.

### Ingredients:

chaparral

comfrey

red clover blossoms

pine tar

mullein

beeswax

plantain

olive oil

mutton tallow

chickweed

poke root

### Testimonials:

1. Skin Cancer: "We have used your *Black Ointment* with great results--I had skin cancer on my forehead--in six weeks it healed up Beautifully." [NL 2-12]
2. Skin Cancer: A few years ago, about 2, I wrote to tell you that I used the black ointment for skin cancer and got perfect results. The Hershey Medical Center doctor wanted to refer me to a Skin Cancer Specialist, but I told him I was going to try the home remedy that an Herbalist Doctor recommended. Needless to say, he was persistent, and wanted me to go to the Specialist,

but I was also persistent and told him it was my body and I would try the remedy you recommended, first. Praise the Lord-in 6 weeks it was all cleared up and that was over 2 years ago. My husband is presently using the *Black Ointment* on his nose for Skin Cancer. [NL 4-7]

3. Skin Cancer: I just wanted you to know that the *Black Ointment* I bought from your Herb Shop has really helped my husbands skin cancer. He has not had to visit a Doctor or have any spots cut out since using it. [NL 4-10]

## Black Walnut Tincture

### Fungus Formula

#### Usages:

1. This is one of the best known remedies for fungus. Use externally and apply frequently.
2. Black walnut tincture can be applied on itching skin. This works especially well if the irritation is due to a fungus or similar invasion.
3. Lice.
4. Build up potassium as for cysts and tumors.

#### Dosages:

1. Lice: For quick relief, bathe the head or body parts with straight apple cider vinegar, oil of garlic, or black walnut tincture or tea.
2. Fungus Such as Impetigo, Contagiosa: This is a contagious disease, caused by staphylococci masked by flat vesicles that become pustular and then crusted. The best aid that can be given to clear up a fungus condition is the use of black walnut tincture as a fomentation externally and 6-10 drops three or more times a day taken orally in liquid (fruit juices or herbal teas).

#### Ingredients:

Black walnut and alcohol.

#### Testimonials:

1. Fungus: Then the fungus that my husband gets when he goes into or near the woods, the [Red Clover Combination](#) plus *Black Walnut Tincture* 6-10 drops taken orally and that has helped him a great deal. We live in the woods so it's difficult not to pick up a condition of the fungus. However, it's not as bad as it was and again we say "Thank-You." [NL 4-11]
2. Dr. Christopher Cures Jungle Rot During WW II: It's one of the greatest herbs, according to Dr. Christopher. He told the story of the time he enlisted in the army in World War II:
 

"I was stationed at Fort Lewis, Washington. I wanted to help people, so I went into the Army as a conscientious objector because I didn't believe in taking life. I said that I would do anything I could, even go out to the front lines with a stretcher, but that I would not kill people. Because of my status as conscientious objector I couldn't get any rank; I couldn't go any higher than a buck private."

"They had given me a dispensary, one of eight in North Fork, Fort Lewis, Washington. Officers and enlisted men alike came to be treated for their ailments. I was in charge of several people, including a special helper and a clean-up-man."

"One Monday morning, during the time we had our regular meetings, Major Shumate, who was over all eight of the dispensaries, brought in a soldier suffering from a case of impetigo contagiosa. Major Shumate discussed the case: 'I've been a consulting dermatologist, and have my own clinic in New York, as you know, which is being run for me while I am here, so I am quite experienced in skin disorders, but I have never seen a case like this.' The soldier had three-quarters of an inch of scab over the entire hair area; the hair had been clipped as close to the scalp as possible and the scab covered the entire hair area. This man had been hospitalized at one of the largest hospitals in the Northwest, in fact, in the largest Army hospital in the West. He had

[CSK](#)[CSR](#)[Deep Heating Balm](#)[DRI](#)[Ephedratean](#)[False Unicorn & Lobelia](#)[Fen LB](#)[Garlic, Rosehips, and Parsley](#)[Hawthorn Berry Syrup](#)[Herbal Composition](#)[Herbal Cough](#)[Herbal Eyebright](#)[Herbal Tooth Powder](#)[Immucalm](#)[INF Combo](#)[Juni-Pars](#)[Jurassic Green](#)[Kelp-T-Comb](#)[Kid-E-Mune](#)[Kid-E-Soothe](#)[Master GL](#)[Mem](#)[MindTrac™](#)[Mullein & Lobelia](#)[Nose Ointment](#)[Nu Fem](#)

been hospitalized nine times in all, treated with ammoniated lead and mercury and such things. The disease would subside somewhat in thirty to thirty-six days, but never completely clear. They would release him to go back into service, but in a few days, the impetigo would pop back out again. He had gone through this procedure nine times."

"The Army wanted to release him on a medical discharge. The patient said to Major Shumate, 'I don't want a medical discharge. I came into the Army a clean man and you left me with this dirty stuff to take back to my family. I don't want to go.'"

"Shumate said, 'I've brought all sorts of specialists in from all over the United States and nobody can help you. There's nothing that can be done. So you've got to take a discharge.'

" 'He can be healed,' I said."

"Shumate whirled around to me and said, 'some of your blankety-blank herbs!'"

"'Yes, with some of my herbs,' I said calmly. I had been through this so often, people ridiculing me, that I didn't let it upset me."

"'I don't care if he puts horse manure on my head,' said the soldier. 'If it'll heal me, do it!'"

"One of the other fellows who headed one of the clinics said sarcastically, 'When's the unveiling going to be?'"

" 'Seven days from today,' I snapped back. Now this man had been hospitalized thirty to thirty-six days at a time and nothing had worked. Here I said that in seven days the man could be cured. When they left, the dispensary heads asked if they could come back the following Monday to have the meeting in my dispensary, instead of meeting at one of the others. Major Shumate agreed."

"The patient had to sign two papers before he was turned over to me: one stated he was no longer a member of the United States Armed Forces, and the other said he was no longer a United States citizen, but a foreigner, an isolated individual there at Fort Lewis under treatment. The Army could have been sued, otherwise, if anything happened to him.

"I called Salt Lake, where I knew a man who had a Black Walnut tree in his yard; he was a professor at the University of Utah. I asked him if he had some husks from the outside of the nuts. He said, 'Oh, yes, we've harvested this year, but the husks are under two feet of snow.'"

"'Will you go out and dig up that pile of husks and send me a big sack of them up to Fort Lewis? Can you get them on the plane tonight so I can have them the following morning?' He did, and I had those husks the following morning in Fort Lewis."

"I made up a gallon of tincture of Black Walnut using rubbing alcohol. In the Army, the dispensaries were not allowed to handle 90 proof or any other proof grain alcohol; if we had, had it we could have used the tincture internally as well as externally. So I had to use rubbing alcohol, but never before and never since have I used rubbing alcohol for a tincture! The gallon of tincture was ready in two days. The usual time to make a tincture is fourteen days. but I was under a lot of pressure there, so this one was ready in two days and I credit the Lord for giving the tincture its potency.

"We made up a night cap that covered the man's head like a football helmet. It was made of layer after layer of gauze till it was very thick. It was covered with adhesive tape and we taped it to hold it down. At the crosses where the tape didn't cover, there was room to insert a syringe filled with the tincture into the gauze to keep it wet. Because I lived off the base, I was only there so many hours in the day. When I left, I instructed the next shift to keep this man under observation twenty-four hours a day. The man was also kept under guard as he now had the status of a foreigner."

"He spent four days, Thursday through Sunday, with the fomentation on his head. Monday morning came, and for the first time all the dispensary heads were there on time, sitting on the edges of their chairs, waiting for the show."

"The two MP's brought the soldier in, sat him down, and Major Shumate said, 'Let's see the case.' So I loosened the adhesive tape where it was holding the headpiece down and took it off. Inside the helmet was three-quarters of an inch of horrible-looking scar tissue and scab. But his head was clean as a baby's. There was no sign of impetigo at all. There had been some secondary infection where the scalp had bled, and that was healing. The men had all gasped when I took the bandages off. Major Shumate used a few words I wouldn't repeat, but then he said, 'I have been a dermatologist for years and I have never seen a case as horrible as this--and never have I seen anything heal as rapidly as what you've used.' In front of the men who were either lieutenants,

majors, or captains, Major Shumate sanctioned me to treat all patients brought in to me with herbs. He officially made me an herbal doctor in the United States Army, the only one known in World War II. I brought back into the dispensary cases that I had, had to use the 'skull and crossbones' medicines on, with no success, and I treated them with herbs-and they were healed. We got quite a name for ourselves. Men from all over Fort Lewis, even generals, came over because I had the only formula, Black Walnut tincture, that would heal jungle rot. The only one! And so we were very busy herbalists." [NL 4-11]

## BPE

Blood Circulation Formula

### Usages:

1. This formula is given to assist blood purifying teas to work more efficiently and to also aid the clearing up of allergies, etc. This group of herbs feeds cayenne (a stimulant) and ginger (stimulant) into the circulatory system where the cayenne works from the bloodstream to the heart and arteries, out into the veins. The other herbs in the formula assist these two herbs and work together to equalize the blood pressure (whether high or low) and to bring it to a good systolic over the diastolic reading. Blood flow is life itself
2. To speed (up the healing process after an injury) it is very good to see that the blood stream is flowing properly to carry food to the cells and to carry off the toxins and waste material. The blood circulation combination *BPE* will do this job effectively.

### Dosages:

Two capsules three times a day.

### Ingredients:

**Cayenne**

**Parsley**

**Ginger**

**Golden Seal**

**Siberian Ginseng**

**Garlic**

### Testimonials:

Dr. Christopher's B.P. combination regulated a severely fluctuating blood pressure (up one day, down the next, etc.) in a woman in her late seventies who had been confined to bed for many weeks. The B.P. combination was effective within a week! Within a month she was strengthened and no longer bedridden. Hallelujah! -MS, Michigan

## Bugleweed Combination

Pollutant Extraction Formula

Heavy Mineral Formula.

### Usages:

This is the herbal combination for combating pollution, both external and internal. It helps draw out minerals, drugs, and other pollutants trapped in our systems.

### Dosages:

The dosage is take two #0 capsules daily in conjunction with 6 #0 chaparral capsules, this should be done three times a day. Also, every other day bathe in 1 to 3 pounds of Epsom salts in a tub of hot water. The bathing routine should continue for three weeks then rest a week, but continue taking the herbs.

### Ingredients:

bugleweed

yellow dock

lobelia

### Testimonials:

Irritability and Lethargy: Several years ago I was experiencing a number of minor health problems not the least of which were irritability and lethargy. I presumed they were caused by a build up of heavy metals leaking from my teeth that had been recently filled with amalgam. I turned to the book I consider my herb bible School of Natural Healing and found a combination for heavy metal poisoning. I began taking the *bugleweed combination* Dr. Christopher's *Heavy Metal Formula* in a tea form and with the very first dosage gained a surge of energy and emotional clarity. The joy of having sufficient energy stayed with me for several days. The herbs in this combination really stimulated a cleanse for my entire body. -G.W., Mesa, AZ

## Calc Tea

Calcium Formula

### Usages:

1. We need calcium for nerve sheath, vein and artery walls, bone, teeth, etc. This combination is all pure herbs. It is also used for cramps, "Charlie horses" and for all calcium needs in the body.
2. Children with crowded crooked teeth, and later the wisdom teeth are pulled because of not enough room, is caused by a narrow jaw from not having enough calcium in the body. The mother carrying the baby before birth should increase her natural calcium intake, now for two people, her and the baby, so it will be built with good wide jaw and tooth material.
3. Sugars, pastries, soft and alcoholic beverages, breads, candies, etc., leach the calcium out of the body, causing varicose veins, cramps, Charlie horses, loss of teeth, nervous upsets, etc.
4. Allergy to milk is quite common, symptoms including asthma, nasal congestion, skin rash and various chest infections plus other, less noticed, symptoms such as irritability and fatigue. Milk also causes allergies, by diminishing hydrochloric acid necessary to digesting protein, causing the undigested protein to enter the bloodstream and promote allergic reactions. The calcium in milk does not metabolize properly, either; Dr. Ellis recommends eating green vegetables, sesame butter and sardines to obtain calcium.
5. Dr. Christopher feels that Calcium is the way to help a teething child get a tooth to come through easily. Fevers work in several ways. One is to raise enough temperature to move the body-building materials from one part of the body to a malfunctioning area. A good example of this is when a baby is trying to cut teeth. The tooth bud appears, becomes swollen and red, painful and irritating; but there is not enough calcium in the mouth area to help get the tooth through. When there is no surplus calcium available, the fever goes higher and higher, and the infant often goes into convulsions. Time after time we have seen the fever drop quickly as organic calcium has been given to the child. The convulsion stops, and the child falls asleep (from fatigue). In a short time the tooth or teeth start "popping through." If the parent uses medication to lower or suppress the fever and nothing else is done, he is merely working on the effect, and not going into the cause. In other words, he is stopping the attempt of a building process without assisting it to accomplish what the body is trying so hard to do.
6. Osteoporosis: "I would advise women to start calcium and Vitamin D supplements at age 30, or perhaps 25," says Dr. Jennifer Jowsey of the Mayo Clinic. With the average American diet, there's apparently a long term gradual loss of bone mineral exceeding the rate of mineral uptake and bone formation. In later years, when hormonal changes increase the susceptibility to osteoporosis, the skeleton has already lost a good deal of its substance. By then, because of previous loss, the rate of bone formation must not only equal the rate of bone demineralization (the normal condition) but must exceed it if bone strength is to be restored. It is far more difficult, Dr. Jowsey warns, to induce new, compensatory bone formation that it is simply to slow down bone demineralization. Adequate calcium and Vitamin D in the diet will go far to accomplish the latter. But preliminary finds, the Mayo scientist says, indicate that lost bone will not be automatically restored by such dietary correction.
7. Cortisone Users: How many people who are taking cortisone--all those several million of them--are aware that the drug can cause brittle bones? And how many doctors are going to tell their patients that it is a good idea to get substantially more calcium and Vitamin D into their diets before they begin splintering their bones
8. The Difference Between Organic and Inorganic Calcium. It has been mentioned in this article the difference between organic and inorganic calcium, and other minerals. The inorganic minerals

[CSK](#)[CSR](#)[Deep Heating Balm](#)[DRI](#)[Ephedratean](#)[False Unicorn & Lobelia](#)[Fen LB](#)[Garlic, Rosehips, and Parsley](#)[Hawthorn Berry Syrup](#)[Herbal Composition](#)[Herbal Cough](#)[Herbal Eyebright](#)[Herbal Tooth Powder](#)[Immucalm](#)[INF Combo](#)[Juni-Pars](#)[Jurassic Green](#)[Kelp-T-Comb](#)[Kid-E-Mune](#)[Kid-E-Soothe](#)[Master GL](#)[Mem](#)[MindTrac™](#)[Mullein & Lobelia](#)[Nose Ointment](#)[Nu Fem](#)

are the ones that can be accepted into the body, but not assimilated. The inorganic minerals are accumulative, lie in deposits in weakened or injured parts of the body, to later give side effects or after effects.

Often times in purchasing calcium, potassium, phosphorus, iron, zinc, etc., we buy minerals of the inorganic type that has not gone through plant life and by osmosis made organic and given life so it can be assimilated. The type that can be assimilated is from herbs, fruits, vegetables, grains, nuts and seeds.

These are non-toxic, non-poisonous and non-habit forming, if chosen by one who knows assimilable herbs. We have been using a calcium formula for years to aid our patients and students in regaining a more perfect body structure.

9. A lack of calcium may be signified by headaches and/or leg cramps.

10. Colitis: In this disorder, the lower bowel is inflamed. There is often a connection between colitis and stress. We see diarrhea, pain, cramps, and even in the later stages, bleeding and dehydration. Calcium deficiency is common. Treatment include the mucusless diet, the lower bowel tonic [Fen LB](#), slippery elm and comfrey tea and plenty of distilled water. An herbal calcium and nervine supplement will be beneficial.

#### Dosages:

1. Broken Bone: After the doctor has set a bone, drink three or more cups of comfrey tea [BF&C] each day--the more the better. With each cup of tea take the calcium *Calc Tea* combination. For children old enough to take capsules, use two #00 capsules or more, three times in a day. As suggested, take these capsules with the comfrey tea. Mix the powder with blackstrap molasses, if it is hard to swallow the capsules.

2. Migraine Headaches: For a really severe migraine headache, apply cold packs to the neck and head while the patient soaks in a very hot tub or whirlpool. Be sure to drink lots of feverfew tea and water, take copious amounts of *Calc Tea* and try to enjoy the bath.

#### Ingredients:

*Calc-Tea* is made of horsetail grass, oat straw, comfrey leaves and lobelia. As explained in the book "Biological Transmutations" the silica in horse tail grass converts to calcium, and the other herbs work in close conjunction with this master calcium herb.

#### Testimonials:

1. Tooth Grows Back: My oldest daughter age 13 now, had a dental cavity at age 7 (the only dental cavity among our six children). We had the cavity drilled out and a filling put in by our local dentist. Two years later, the filling came out and a hole was left in her tooth. Nothing more was done about it except the herbal calcium formula *Calc Tea* that you recommend in your book, School of Natural Healing, made up of: comfrey, horsetail, oatstraw, and lobelia. This combination of herbs has been used very consistently by the entire family over the last two years. We have recently discovered that the hole where the filling was is now completely grown over and is absolutely unnoticeable even under close inspection. [NL 1-9]

2. Insomnia Cured: I have found great relief by taking Dr. Christopher's calcium formula and thyroid formula through the night which was recommended in his "How Important is Calcium" newsletter. I have recommended this treatment to others and to my mother and they all have found it helps their insomnia also. -A.R., Williston, ND [D. Christopher]

## Catnip & Fennel

Infant Health Formula

### Usages:

A blessing for infants. A fine combination for colic, biliousness, flatulence, spasms, etc.

The *catnip and fennel* tincture works wonders in a colicky baby, and it is so mild that you can feel confident in giving it as needed. If you are uncomfortable with the alcohol content, drop the dose into a spoonful of boiled water and let the alcohol evaporate; then give the dose by spoon. In ten minutes or so the cramping should cease and the baby cheer up.

*Catnip and fennel* extract massaged into the gums help take off the edge.

### Dosages:

Use a few drops, or as much as needed, when desired.

### Ingredients:

[Catnip herb](#)

[fennel seed](#)

[grain alcohol base](#)

## Cayenne

### Cayenne Salve

Joints, Muscles, Neck, Headache Formula

---

Cayenne

Cayenne Salve (Red Sun Balm)

and Cayenne Tincture

---

#### Usages:

1. Heart Attacks: In 35 years of practice, and working with the people and teaching, I have never on house calls lost one heart attack patient and the reason is, whenever I go in--if they are still breathing--I pour down them a cup of cayenne tea (a teaspoon of *cayenne* in a cup of hot water, and within minutes they are up and around). This is one of the fastest acting aids we could ever give for the heart, because it feeds that heart immediately. Most hearts are suffering from malnutrition because of processed food we are eating, but here it gets a good powerful dose of real food and it's something that has brought people in time after time. This is something that everyone should know how great it is, because a heart attack can come to your friends or loved ones any time. And even yourself. The warm tea is faster working than tablets, capsules, cold tea, because the warm tea opens up the cell structure--makes it expand and accept the *cayenne* that much faster, and it goes directly to the heart, through the artery system, and feeds it in powerful food.
2. Sterilize and Stop Bleeding: The old herbalists claimed that *cayenne* pepper (Capsicum or red pepper) should be poured directly into a fresh wound, to sterilize and stop the bleeding.
3. Menstrual Cramps: If a young woman has menstrual problems, she can suspect that her female organs might not be in good condition. Although it should be needless to say, we should avoid drugs in managing our menstrual cramps. In order to treat the symptoms, some people favor red raspberry tea, peppermint tea, camomile tea, or catnip tea. You can take a capsule of cayenne with any of these to help warm the internal organs. If the cramps are really severe, you can use cayenne ointment externally on the abdomen to act as a counter-irritant, but be sure to cover the application with gauze, as it can stain your underthings.
4. Eyes and Ulcers: See testimonials.
5. Tincture of Cayenne heals wounds, cuts through mucus, good for sore throats, and tonsillitis; milder solutions can be used in the nose, eyes, and ears for cleaning up microscopic "lounge lizards" in infections. Has been successfully used for resuscitation of newborn infants; a few drops administered orally. The best and safest stimulant known to man.
6. Cayenne Salve: Deep Heating Balm: It is excellent for stiff necks, sore muscles, headaches, pain, stiff joints, arthritis, etc.

#### Dosages:

1. Stop Bleeding: A wound, external or internal, will stop bleeding if the individual will drink a cup of water (preferably hot) with a teaspoon of *cayenne* pepper (red pepper) stirred into it. The bleeding will stop generally by the time a person can count up to ten after drinking the *cayenne* tea. The *cayenne* equalizes the blood pressure from the top of the head to the feet. This keeps the

[CSK](#)[CSR](#)[Deep Heating Balm](#)[DRI](#)[Ephedratean](#)[False Unicorn & Lobelia](#)[Fen LB](#)[Garlic, Rosehips, and Parsley](#)[Hawthorn Berry Syrup](#)[Herbal Composition](#)[Herbal Cough](#)[Herbal Eyebright](#)[Herbal Tooth Powder](#)[Immucalm](#)[INF Combo](#)[Juni-Pars](#)[Jurassic Green](#)[Kelp-T-Comb](#)[Kid-E-Mune](#)[Kid-E-Soothe](#)[Master GL](#)[Mem](#)[MindTrac™](#)[Mullein & Lobelia](#)[Nose Ointment](#)[Nu Fem](#)

pressure from the hemorrhage area so it will clot naturally, which it cannot do with heavy blood pressure pumping the blood rapidly at the hemorrhage area.

2. Nosebleeds: A teaspoon of *cayenne* in a cup of water (hot preferred) taken internally will stop most nosebleeds quickly. In an emergency such as this we use cayenne. As mentioned a teaspoon of cayenne pepper in a glass of water and drunk right down will stop a nosebleed in nearly every instance, by the time you can count to ten. This is not a miracle; it is the principle of the cell stimulant cayenne traveling through the entire blood stream and regulating the pressure so the pressure of the flow is the same in the feet as in the head or any other part of the body. This takes the heavy pressure off the hemorrhaging area and allowing a quick coagulation. [HHH p.110]

3. Salve: Deep Heating Balm: As needed topically.

#### Ingredients:

**Pure cayenne is the only ingredient in the powdered cayenne.**

**Salve Deep Heating Balm ingredients are Olive Oil, African Birdpepper (Cayenne), Oil of Wintergreen, pure distilled mint crystals and beeswax.**

**The tincture consists of cayenne and alcohol.**

#### Testimonials:

1. Eyes: *Cayenne* is also used for eyes, however extreme that might sound. Dr. Christopher recalled a student of his standing in front of a lecture and throwing a pinch of cayenne into one eye. Dr. Christopher was sure the student had lost his senses! But in a few moments the eye stopped watering, and it became clear, bright and healthy-looking. (This is why Dr. Christopher has Cayenne in his [Herbal Eyebright](#) formula).

2. Deep Cut: A person in our audience told how he had cut deeply with a sharp instrument the inside of his hand, fingers and palm. The blood spurted out in streams. He poured a large amount of *cayenne* pepper into the wound, and within seconds the blood flow slowed down to congealed dripping and the bleeding stopped entirely before many seconds had passed. With a goodly amount of *cayenne* covering the wound, he then wrapped it. He was so excited about the rapid results he could hardly wait for the regular herb meeting. But, as he said, the "punch line" was lost, because instead of a nasty ragged scar to show how severely he had been hurt, the area was healed and there was no scar.

3. Ulcers: A lady had been attending our herbal lecture series for some time. One day she told us about her husband's severe case of stomach ulcers. The recommendation from their doctor was to have part of his stomach removed, but he said he would rather suffer the pain than risk such an operation. He also refused his wife's suggestion to try *cayenne*, ridiculing her studies. When he would see me in town, he would bellow, "Hello, Doc! Killed anybody with cayenne, today?" He became so obnoxious, I avoided him when I could. Months went by and one day I saw him coming down the street toward me. I tried to avoid him but he came "head on." This time I was amazed because there were no cutting remarks or sarcasm. In fact, he was very apologetic and asked if he could talk to me for a minute, and then told me this story: He had come home from work one night, "sick enough to die," with stomach ulcers. His wife was not home. He was in such pain he wanted to commit suicide. He went to the medicine cabinet to find some kind of medicine poisonous and deadly enough to kill him. But he discovered his wife had thrown out all the old bottles of pharmaceutical medicine. All that was left in the medicine cabinet were some herbs and a large container of *cayenne* pepper. He was so angry that, upon seeing the *cayenne*, he figured it in a large dose would kill him by burning him up. He took a heaping tablespoon of *cayenne* in a glass of hot water, gulped it down and rushed into the bedroom. He fell upon the bed and covered his head with a pillow so the neighbors couldn't hear his "dying screams." The next thing he knew, his wife was shaking him awake the next morning. She told him he had slept all night (instead of being up every half-hour for anti-acid tablets). To his amazement he discovered that the pain was gone, for the first time in months. He continued using *cayenne* three times a day

[Oil of Garlic](#)[Panc Tea](#)[Pre-Natal Tea](#)[PreTrac™](#)[Prospallate](#)[Red Clover Combination](#)[Relax-Eze](#)[Resp-Free](#)[Sen Sei Balm](#)[Sha Tea](#)[Smoke Out](#)[ULC](#)[V.B.](#)[VF Syrup](#)[Vitalerbs](#)[Wild Lettuce and Valerian](#)[X-Ceptic](#)[Yellow Dock Combination](#)

faithfully.

4. Blood Pressure - Dr. Christopher's Own Story: I had hardening of the arteries, during my 20 and 30 year span, to a point that it was very severe. No insurance company at this time, would even take me for a \$1,000 policy. So you can tell how bad of a condition I was in. I was quite concerned about it, and started using *cayenne*. I worked up to a teaspoon three times a day, and I continued on from the time I was thirty-five and am still using it. It was amazing! By the time I was forty-five years of age, ten years after I had started using cayenne, a group wanted me to have a \$100,000 policy to insure them on a business deal we were working out. I went for the examination. Being this large a policy, the insurance company required two medical doctors, each to give two physicals at various times (being four times to have physicals with these two doctors). I took the examination and one medical doctor when he got through, said, "Well, this is astounding. I see your age is forty-five years, but you have the venous structure of a teenage boy." He said, "This is excellent," and he gave me a clean bill of health. I went to the other doctor and on his second examination he did the blood pressure test on my arm. He pumped his equipment up five different times and my arm was getting irritated by it, and I was getting a little perturbed, and I said, "What's the matter, doesn't your equipment work?" "Oh yes, it always has up till now, but I keep looking at your chart and it says you are 45 years of age and yet your systolic over your diastolic is absolutely perfect. I cannot comprehend it." I said, "That's correct. It is perfect." And he also gave me a clean bill of health. So I passed at 45 years of age for a \$100,000 policy with a good blood pressure showing, thanks to the *cayenne*.

I have been told by medical doctors, that because of my arthritis, hardening of arteries, stomach ulcers and some auto accidents that banged me up pretty badly, that I couldn't live past my 40th year. Yet, at 45 years I was pronounced in good condition. This, to me, was one of my biggest sales points on cayenne. If it could help me, it could help anybody. I have seen it used so many times over the years with such success, that I feel that it is one of our great herbs.

Herbal Hormone Combination (hormone balancer)

### Usages:

1. Produce Milk: Dr. Christopher reminded us that it requires a certain balance of hormones--estrogens and progesterones--to produce milk. If a woman doesn't seem to be making enough milk, she should balance up her hormones by taking a few capsules of this formula.
2. Rebuilding Weak and Malfunctioning Areas: These are natural herbal foods that are needed by both men and women at all ages. Being "natural" herbs, the human body can accept, assimilate and use those materials that are needed to produce estrogens and other hormones naturally. This formula will assist in rebuilding the weak malfunctioning areas and help keep the organs healthy so they can supply the proper amounts of hormones and estrogens themselves. Herbs are a natural food, so they do not have "side effects" and "after effects" as are so evident in man-made and synthetic drugs.

Whenever malfunction shows in either woman or man, in the reproductive areas, it is good to use the two formulas together, i.e., [Nu Fem](#) and *Changease* and for women and Dr. Christopher's [Prospallate](#) and *Changease* for men.

3. Youth, Expecting Mothers and Those in Menopause: This combination, called *Changease*, helps youths going into puberty, expecting mothers whose hormones sometimes cause problems (one husband says that when his wife is pregnant her "hormones are raging"), women going through the change of life and men, too.

### Dosages:

Two capsules three times a day. This dosage may be doubled or tripled as needed.

### Ingredients:

**black cohosh**

**sarsaparilla**

**ginseng**

**licorice**

**false unicorn**

**holy thistle**

**squaw vine**

### Testimonials:

1. Rh Problem Solved Without Transfusion: Dr. Christopher worked during pregnancies to heal women with serious problems, and his results seem to us miraculous. One of his students from northern Utah had had three children with the Rh problem; in each case, they had to have a complete blood transfusion, having their blood completely drained out of them. This lady was told that because of her advanced Rh problem, she was not to have any more children. In addition to the Rh problem, she would require open heart surgery, and another pregnancy might kill not only her, but the child. She asked Dr. Christopher for help. He could promise her nothing, but tried to help her cleanse her blood. She took the [Red Clover Combination](#) tea in order to cleanse the blood, the female corrective formula [Nu Fem](#) and hormone-balancing formula, *Changease* and plenty of red raspberry leaf tea. After a lecture some time later, the lady approached Dr. Christopher with a new baby, born naturally with no Rh problem whatsoever. The lady had several children since that time, with no more trouble. This shows that the Rh factor stems from a problem of toxicity inside the mother, which can be overcome with herbs and diet. [EWH p.50]

2. Surgery on Uterus, Bladder and Breast Avoided: Dr. Christopher always checked his patients with iridology before advising them. A lady came to him, aged about 45, asking for a reading to help with her condition. He saw that she had a prolapsed transverse colon which had dropped to a point where it tipped her uterus and pinched her bladder, and she was having a very serious trouble there. She had problems with the ovaries, with infection in both of them, and she was troubled with vaginal drainage. In addition, she had one breast that was badly infected, which might necessitate having part of the breast removed if she had asked another doctor for treatment. After the reading, Dr. Christopher asked why she had come to him and what she wanted him to do. She said that she had just spent three days in a clinic, where they had verified everything he had read from her irises, but they wanted her to go to the hospital immediately and have the uterus removed and the bladder stitched up to the spinal cord area, and also have her breast removed. She was frightened of all this cutting, so she wanted to find help in some other way.

She promised that she would stay on the program that Dr. Christopher advised. She took the female corrective [Nu Fem](#) and hormone-balancing combinations *Changease*, used the vaginal bolus [V.B.](#) six nights a week, flushing out each morning with the slant board routine, massaging 15 to 20 minutes a day on the abdominal and pelvic area while the tea was inside. She was also to use the [Three Oil Massage](#) over the abdominal area, and go on the three-day cleanse and mucusless diet. In addition, she was to drink a gallon of steam-distilled water a day, and plenty of red raspberry leaf tea. She kept her bowels clean with the lower bowel formula [Fen LB](#), and kept the bloodstream cleaned up with the [Red Clover Combination](#) tea.

Dr. Christopher did not see her again for six months. When she came to see him this time, she bounced in, not dragging as she had before, a totally different woman, much happier and healthier. She had no operations, and yet her prolapsed transverse colon had gone back into place, and her uterus and bladder had gone back into position. She was feeling like a new woman, and she did indeed have a new system by following through with the entire herbal problem. [EWH p.111]

3. Doubting Husband and Wife Lives Changed by Dr. Christopher: A lady called Dr. Christopher in Salt Lake City from Provo, Utah, saying that her daughter had flown in from out of town, extremely ill. She was afraid that she was going to die, so she had come to her mother to take care of her. She asked if he would come and read the young woman's eyes. When he arrived, the young woman ridiculed him, and said she thought it was a bunch of crazy ideas that her mother had, and she wasn't going to let him look into her eyes. So Dr. Christopher bowed out and left.

Nearly a month went by, and the lady from Provo asked him to come again, that the daughter was so sick that she was frightened and would talk with him.

When he came, they told him that they had tried the best doctors they could find, but no one could help the girl (Dr. Christopher never said what the problem was, however). He gave her an eye reading and she would remark, "Who told you that!" Each thing he told her was the same thing that the doctors had diagnosed. When he finished, she said she was still dubious about the natural program, but that the reading was so accurate, he must have something good. She agreed to follow the natural program. She was too sick to even get up and walk.

So they started off gradually on the [Incurables program](#), using juices to rebuild the body. Before many weeks had passed, she came to Dr. Christopher's classes and became quite a faithful student. She even began to study iridology and became good at it. She watched her own eyes and

[Oil of Garlic](#)[Panc Tea](#)[Pre-Natal Tea](#)[PreTrac™](#)[Prospallate](#)[Red Clover Combination](#)[Relax-Eze](#)[Resp-Free](#)[Sen Sei Balm](#)[Sha Tea](#)[Smoke Out](#)[ULC](#)[V.B.](#)[VF Syrup](#)[Vitalerbs](#)[Wild Lettuce and Valerian](#)[X-Ceptic](#)[Yellow Dock Combination](#)

could see the healing taking place. She had been told, though she had been married for some time, that she could never have a baby because of an immature pelvic area and an underdeveloped uterus, as well as other problems in her reproductive system. By using the mucusless diet and herbs to rebuild her body--the female corrective [Nu Fem](#) and the hormone-balancing combinations *Changease*--and doing the exercises they advised, even these problems began to heal.

Eventually Dr. Christopher got a call from her husband on the West Coast; he was angry. It was a call of abuse, accusing the Doctor of keeping his wife up in Utah when she should be down with him. He was an electrical engineer, with a very important job, and felt he needed her with him. Dr. Christopher told him his wife had been too sick to even sit up alone, but with the aid of the program and the mother's assistance, she was improving. He told the husband she would be home with him as soon as possible.

The man told Dr. Christopher he was one of the worst quacks there could possibly be, let out some abusive language, and slammed down the receiver.

The wife did heal eventually, and traveled home on her own, without anyone assisting her. She was an excellent housewife, and she showed so much improvement that the husband was astonished, because he figured she didn't have too much longer to live.

Best of all, she had two beautiful children, with natural childbirth, and although the husband was an electrical engineer with a high-paying job, he was so delighted with the results that he became a chiropractor. He delivered their two children. [EWH p.116]

4. Decrease Nerves, Eases Menopause and No Hot Flashes: "Several years ago I started having female problems with excessive flow; and the doctor I was going to suggested that I would be in for a hysterectomy. I did some herbs or vitamins at first, and got it semi-under control. When I hit 40, I started into the change. The vitamin therapy just didn't take care of the whole problem. I started with this for several years and I went to work for an herb company where I was introduced to Dr. Christopher's formula, *Changease*. I began taking this formula and there were several things that happened that were very important to me and to my health. I had been very, very nervous and that's the first thing I noticed, that my nerves calmed down. I had a lot of back pain and that was eased. My disposition improved considerably because of my nerves being able to be calmed down. I had more strength and more energy, the periods were regulated and the flow decreased. I did not have hot flashes as many women complained of; I would sometimes feel a little bit warm, but not anything that was so terribly uncomfortable. After a couple of years of taking the *Changease* Formula, my periods have completely stopped and I have not had any really traumatic problems as many women do when they go through the change. I have been very, very grateful for this formula and for the help it has given to me; and I appreciate all that Dr. Christopher has done in this area." [D. Christopher]

## Chickweed Ointment

Eczema / Skin Ointment

### Usages:

1. Excellent for eczema and/or other skin infections, sores, burning, itchy skin or genitals, swollen testes, acne, hives, also for ulceration of mouth and throat. This is a wonderful healing ointment.
2. Poison Oak and Poison Ivy or Stinging Nettle: Whenever you feel the sting from poison oak, poison ivy or stinging nettle, there will be, within eyesight, one or more of the following herbs growing; mullein, hounds tongue, plantain or lilac leaves. Bruise the leaves of any of these and apply over the irritated areas and it generally gives quick relief. Use *chickweed ointment*, plantain ointment, or mullein ointment to relieve the itching and aid in neutralizing the poisons.

### Dosages:

1. Hemorrhoids and Rectal Cancer: Bathe the area 2-3 times daily with the decoction, infusion, or diluted tincture (as warm as possible), then apply chickweed ointment.
2. Inflamed Surfaces, Skin Diseases, Skin Eruptions, Cancerous Sores, Itching Dermatitis, and Hives: Drink burdock seed tea (as a diaphoretic to open skin pores and glands from the inside), and wash the affected parts with a strong decoction 2 or more times daily (more often for local eruptions). Apply chickweed ointment, or a chickweed bath is also excellent.
3. Erysipelas: No matter how bad the pain and swelling, make a decoction from a handful or two of fresh chickweed. Bathe the surface every 1/2 hour and apply chickweed ointment (the pain and swelling will be gone in a few hours).
4. Swollen Testicles, Burning and Itching Genitals: Bathe the area with a strong decoction of chickweed and apply chickweed ointment.

### Ingredients:

This is made of chickweed herb and bees wax and oils.

### Testimonials:

1. Blood Poisoning from Poison Oak: As for the blood poisoning, the first time my poison oak went into blood poisoning, I took penicillin. The second time, my arm was swollen, big red swollen, full of fever and painful. I put chickweed ointment on a bandage, taped it on my arm over the affected area and went to bed. In the morning the swelling was gone, the pain was gone, the fever was gone, and the large red area was gone. This has really been exciting to me to find natural cures. [NL 1-8]
2. Dog Story: The next story is about my large black dog. I did something dumb -- put some chemical anti-itch stuff on him to keep him from itching. Well, the next morning my husband said for me to check Chip's mouth, it seemed swollen. (He had licked it all off during the night - yuk!) I knew what had happened and said, I would, turned over and went back to sleep.

When I did see him (about one hour later) I was glad my husband had said to check him out. His pour mouth and lips were swollen out to the size of his head -- about 3 times the normal size. Poor baby. I was concerned about getting the swelling down, but also that his throat might swell up and he would not be able to swallow, or breathe. His tongue seemed okay and so did his throat. I put

the [BF & C](#) syrup on the outside of his mouth -- he turned his face right after that so I could reach the other side. Then I gave him some yellow dock tablets to keep him from scratching. Also, he ate about 1½ jars of chickweed ointment. It seemed to soothe his mouth while the poison went out. We discovered he liked the [CMM](#) for poison oak -- he would lick it off my husband, given the chance. Strange dog. However, since we gave him the jars of chickweed, his appetite for it diminished to zero. The next morning Chips was fine -- in fact a few hours later the swelling was down dramatically. A happy ending to a dumb beginning. I'm learning. [NL 2-5]

### Healing Ointment

---

#### Usages:

This is an antiseptic to be used on lesions, eczema (dry), poison ivy, soothes inflamed surfaces, abrasions, burns, hemorrhoids, for bruises and swellings. Good to have on hand at all times.

#### Dosages:

Hemorrhoids and Rectal Cancer: Bathe the area 2-3 times daily with the decoction, infusion, or diluted tincture (as warm as possible) of chickweed, then apply [Chickweed Ointment](#) or Dr. Christopher's Healing Ointment *CMM*.

#### Ingredients:

**comfrey**

**marshmallow**

**marigold**

**bee's wax**

**oils**

#### Testimonials:

1. I Have Had a Long History of Poison Oak. I would get it from my children's clothing, our dog, or sitting on a couch the dog managed to get on for a short time. Once it went internal and I was in bed six weeks because I could not take cortisone, being in first six weeks of pregnancy. Once I got it, it just got worse and worse until I took cortisone. The doses became larger and larger. Large doses of Vitamin C and Niacin help a few times, then no longer helped, as did other things I tried. Twice I got blood poisoning in my arm from poison oak. I was desperately searching for a cure when someone led me to herbs and Naturalife. It took me about three years to find the cure but I did. As soon as I realize I have poison oak, I start taking licorice root, which is a natural cortisone and use Dr. Christopher's *CMM* Ointment. This dries it up in just a few days. I usually take rose hips for good measure. As for the blood poisoning, the first time my poison oak went into blood poisoning, I took penicillin. The second time, my arm was swollen, big red swollen, full of fever and painful. I put [Chickweed Ointment](#) on a bandage, taped it on my arm over the affected area and went to bed. ## Comfrey-Mullein-Garlic

Asthma Formula

---

### Usages:

An excellent asthma syrup. Can be used for sore throats and mucus. Excellent for fighting toxins.

### Dosages:

Recommended use--a teaspoon or more, as required, as often as needed.

### Ingredients:

**comfrey**

**mullein extracts**

**garlic syrup**

**vegetable glycerine**

### Testimonials:

Cough and Cold Helped: When my little girl Hanann came down with a cough and cold we struggled to get her to take some herbal remedies but she refused because of their taste. Then we tried the *Comfrey-Mullein-Garlic* syrup and hit a home run. The runny nose, lung congestion, and sore throat quickly diminished and she was up and going in no time. Her cousin of the same age who lives next door came down with the same thing and required 2 additional weeks to get over it (they don't use herbs). Hanann now has her own bottle of *Comfrey-Mullein-Garlic* syrup and she goes to the fridge to take it when she needs it. -L.M., Mapleton, UT [D. Christopher]

## CSK

Anti-Obese Herbal Food Combination

### Usages:

Combine this anti-obese aid to the mucusless diet and you have a winner. This is not a crash program of fast loss of weight, but graduated and accurate loss, without robbing the body of needed nutrients that so many fad diets do. This acts as a blood purifier, aids kidneys in relieving excess fluids, feeds the body for relief from nervous tension generally caused by diets, appeases the appetite, feeds the thyroid and other malfunction glands and thus gains a healthier state for holding weight control.

### Dosages:

Take two or three capsules three times in a day with a cup of chickweed tea.

### Ingredients:

**Chickweed**

**Saffron**

**Burdock**

**Kelp**

**Licorice**

**Fennel**

**Parsley Root**

**Echinacea**

**Black Walnut**

**Papaya**

**Hawthorn Berries**

**Mandrake**

Licorice is used here because it decreases the desire to overeat while it gives energy to the body.

[CSK](#)[CSR](#)[Deep Heating Balm](#)[DRI](#)[Ephedratean](#)[False Unicorn & Lobelia](#)[Fen LB](#)[Garlic, Rosehips, and Parsley](#)[Hawthorn Berry Syrup](#)[Herbal Composition](#)[Herbal Cough](#)[Herbal Eyebright](#)[Herbal Tooth Powder](#)[Immucalm](#)[INF Combo](#)[Juni-Pars](#)[Jurassic Green](#)[Kelp-T-Comb](#)[Kid-E-Mune](#)[Kid-E-Soothe](#)[Master GL](#)[Mem](#)[MindTrac™](#)[Mullein & Lobelia](#)[Nose Ointment](#)[Nu Fem](#)

The licorice root actually feeds the adrenal glands. Every 5 hours or so, the adrenal glands need a "meal", that is, some sort of nourishment. Many people try to fill this need by filling their intestines with empty calories. Licorice root provides this lift for the adrenals and thereby can sustain an individual's stamina without them having to eat a large meal for energy.

## Deep Heating Balm

Pain Relief Formula

### Usages:

This penetrating salve is excellent for stiff necks, sore muscles, headaches, pain, stiff joints, arthritis, etc. Although we always want to work on the cause of the pain, we can relieve the symptoms by using the cayenne heating balm. We have found that the BF & C Ointment works well together with the cayenne ointment. One takes the other into the skin more quickly and brings relief. [NL 3-12]

### Dosage:

1. Apply sparingly to sore places.
2. First apply BF & C Ointment. Then apply the Deep Heating Balm. Work the two ointments into the skin; the deeper they seep into the skin, the greater the relief will be.

### Ingredients:

 Olive oil Cayenne Oil of wintergreen Pure distilled mint crystals Other herb oils Beeswax

### Testimonial:

My husband had a spot between his shoulder and neck that would repeatedly get a knot in it. It would take days for the pain to go away. One day I decided to try a combination of the [BF & C](#) massage oil and the Deep Heat Balm. My husband did not think that it would work, but I said "Let's just try it." I put some [BF & C](#) on the spot, rubbed it in, and then put some Deep Heat Balm on him, and rubbed that in. I repeated that order several times, and then worked the ointments in as best I could without hurting him. The next morning the pain was gone, and he was a believer. Whenever the pain returns, we do the same thing and the pain goes away immediately.

Bed Wetting Formula  
(Incontinence)

---

### Usages:

For more severe cases of incontinence, enuresis (bedwetting, etc.), a formula we have used a long time is *DRI*. This formula is a specific for controlling or overcoming bedwetting and to strengthen the entire urethral canal, kidneys, bladder, etc.

### Dosages:

Recommended dosage two #0 capsules three times a day with a cup of parsley tea. Upon retiring at night fasten about a six- or eight-inch ball of yarn or string or cloth onto night clothes in the middle of the back. This is for the purpose of preventing the individual from lying on the back, as this is generally the time the valves release to void urine.

### Ingredients:

 parsley root

 juniper berries

 marshmallow root

 white pond lily

 gravel root

 uva ursi

 lobelia

 ginger root

 black cohosh root

### Testimonials:

1. Incontinence: We drink your [Red Clover Combination](#) tea all the time and have for months. I have been using your [Herbal Eyebright](#) on my eyes and also take the capsules every day. My eye doctor says I was beginning to form cataracts in my eyes, so I read about your eyebright and have been using it ever since. I am also using your herb capsules called *DRI* which helps me a lot. You can see how much you are helping people.

2. 5 Years of Incontinence Cured: E. B. of Jonesborough, CA had suffered with incontinence for

over 5 years and had tried everything. She used three capsules of Dr. Christopher's *DRI* formula three times a day and cleared up the problem in 1 1/2 weeks. [D. Christopher]

## False Unicorn & Lobelia

### Anti-Miscarriage Formula

#### Usages:

We offer you a formula here for those who have indication of aborting. This combination should always be on hand because this emergency can appear so quickly that it is shocking and frightening.

This combination of *false unicorn and lobelia* will stop the bleeding as explained in the instructions--if the fetus is in a good healthy condition. If the fetus is dead, in many cases, the dead fetus is aborted with ease. Without this help, the fetus, when dead, will rarely abort, lying in the womb and causing infection.

*False Unicorn & Lobelia*, which helps nourish the reproductive system supplying hormone building nutrients that can help to sustain pregnancy.

#### Dosages:

Unless otherwise specified, teas are always made with one teaspoon of herbs to a cup of distilled water if obtainable. If hemorrhaging starts during pregnancy, stay in bed, use a bed pan when needed, and use 1/2 cup of this tea each 1/2 hour until bleeding stops, then each waking hour for one day, while in bed as much as possible, and then three times in a day for three weeks. If bleeding continues instead of decreasing, see a doctor.

#### Ingredients:

The anti-miscarriage formula consists of these two herbs: false unicorn and lobelia.

#### Testimonials:

1. Couple Able to Conceive: Dr. Christopher had many successes helping couples conceive. One young married man came to see him about his wife, because he felt she was going to lose her mind. She wanted to have a baby so badly that she would hug her pillow at night. They had been married for some years without any success at conception. Dr. Christopher advised them to do the following: they should both begin to use the mucusless diet. In addition, they were to take two tablespoons of wheat-germ oil three times a day (this contains natural vitamin E, among other constituents, which helps the reproductive system). They were to take two capsules three times daily of false unicorn and lobelia combination. If they were faithful with this program, the Doctor promised that they would conceive.

And they did! They brought the little baby in to see Dr. Christopher, and the new mother was absolutely glowing with health and joy at the baby in her arms. This couple had other children as well after following the simple herbal program. [EWH p.23]

2. Dead Fetus Evacuated Naturally and Easily: Lobelia is also an important herb in the anti-miscarriage formula. It will do such wonders as seal up a tear in the bag of waters in an instance of a threatened miscarriage. It will also help to expel, without complication, a fetus that is already dead. One lady who was about five and one half months along in her pregnancy began to show signs of bleeding, as if a miscarriage was about to occur. Some women who were assisting her gave her one-half cup of the tea every half hour, while the pregnant woman remained in bed. The women noticed that the bleeding had not subsided after several hours, so they packed her off to the hospital. No sooner had she arrived in the emergency room and was about to be

examined by the doctor, when she expelled a fetus that had been dead for several weeks, unbeknownst to her. The doctor was amazed, and questioned the attendants about the events leading to this spontaneous abortion. The women told him about the *false unicorn and lobelia*. The doctor commented, "Never in all my years of practice have I seen a dead fetus evacuated from the womb in such a clean manner. Usually we have to surgically remove particles of the placenta which adhere to the uterine walls. The herbs you have used are miraculous. I wish I could use them in my practice--but my hands are tied". [UP-Lobelia]

3. Unaborted Baby Later Thanks Dr. Christopher: Dr. Christopher was lecturing in a large city when a young man came up to the podium to shake his hand; he nearly shook the Doctor's hand off! He said he had been trying to catch up with the Doctor for a long while. His mother had told him that one night, when the weather was fifty below zero, the Doctor had traveled forty miles to their home. The mother was aborting, ready to lose her baby. The Doctor had given her some herbs and saved the baby--and the young man was that baby! He was about twenty-five years old. He said, "I enjoy life. I love you, sir, and I had to thank you". ### Fen LB

Lower Bowel Formula

---

#### Usage:

In most cases, improper diet has caused the peristaltic muscles of most people to quit working, and it will take six to nine months with the aid of the lower bowel tonics for the average individual to clean out the fecal matter and to rebuild the bowel structure sufficiently to have the peristaltic muscles work entirely on their own.

Most people have pounds of old dried fecal matter that is stored in the colon which is toxifying the system and keeping the food from being assimilated.

#### Dosage:

Over ninety percent of all diseases and malfunctions of children's bodies (as with adults) stem from the unclean intestinal tract, constipation (Latin constipatio meaning crowding together), with infrequent or difficult evacuation of the feces, retention of the feces, and lack of coordination in the nerve and muscle functions of the colon and bowel.

The Lower Bowel Tonic, *Fen LB* is a CORRECTIVE FOOD for the intestinal tract. In bowel movements no two people are alike, and often a person will taper down on the lower bowel tonic over a period of time to one capsule three times daily, then to a single capsule a day--then all of a sudden, the herb is getting to the outside walls of the intestines and breaking loose some of this hard fecal matter, and it goes down the intestines and begins to clog you up.

So during your cleansing cycles--when the body is throwing off more of its accumulated wastage, or when the Lower Bowel Tonic is getting to the outside of the intestinal tract and breaking loose some of this hard fecal matter from the walls and with subsequent intestinal congestion--you should remember to accentuate or intensify your use of the Lower Bowel Tonic and take the necessary quantity (up to maybe 8, 10, 15 and even 20 capsules a day) to break it loose; and when that is accomplished, then taper back down again.

#### Ingredients:

- 1 part Barberry bark (*Berberis vulgaris*)**
- 2 parts Cascara sagrada bark (*Rhamnus purshiana*)**
- 1 part Cayenne (*Capsicum minimum*)**
- 1 part Ginger (*Zingiber officinale*)**
- 1 part Golden seal root (*Hydrastis canadensis*)**
- 1 part Lobelia herb and/or seeds (*Lobelia inflata*)**
- 1 part Red raspberry leaves (*Rubus idaeus*)**

1. Chronic Colitis Cured: It's been a long time since I have written you and I feel that I must tell you that I have gotten rid of the colitis I had for years and the doctors diagnosed as a nervous stomach and prescribed tranquilizers, which of course I didn't take. At that time I came across an article written by you, entitled, "Does Your Colon Feed or Poison You." I immediately started to take [Red Clover Combination](#) plus Naturalax 2 *Fen LB*, it took about six months but it finally went. The pain was very bad but all I heard from doctors was "you have a nervous stomach." but I knew it had to be more than that. I thank GOD and you. Dr. Christopher for cure that I have had due to that wonderful pamphlet that came my way, just when I needed it most. [NL 4-11]

2. Polyps: I am taking your Naturalax 2 *Fen LB*. I had surgery two years ago for polyps, they removed two large ones. Now not quite two years, they found another one thru x-ray. I started on your lower bowel cleaner *Fen LB*. It is helping very much. I think I passed that polyp the other day, so I am doing all this cleaning and take another x-ray in February. Also, I just purchased your book, School of Natural Healing. My husband and I like it best of all the books we have ever purchased. [NL 4-12]

3. Child Born with Constipation-Cured: My friend has a granddaughter about seven years old. Her parents told me she was born with constipation. She had one bowel movement a week, (all of her life). For two days each week before her bowel movements, she could not eat because she was in so much pain. They had spent hundreds of dollars to physicians trying to help her. They were told not to worry. One bowel movement a week was normal for her granddaughter.

They changed the granddaughter's diet and put her on cleansing herbs *Fen LB* and [Red Clover Combination](#). In two or three weeks she was having three bowel movements a week. They then added Cascara Sagrada, and in another two weeks, the granddaughter was having three bowel movements a day. [NL-2-1]

4. Gas and flatulence Relieved: I must tell you why I am subscribing to your newsletter. My confidence in you arose from the most remarkable help I received in the use of your Naturalax II *Fen LB* (incidentally, I am 73 years old).

For years I have suffered from gas and flatulence to an extreme degree--with no answer or relief from my own physician nor a specialist to whom he referred me. After the first day of use of your herbal formula, I had relief which has continued consistently for the month I have been taking it. I feel like a new human being--and needless to say, I am most grateful to you! [NL 2-2]

5. Pain Eased: I have a friend who had had eight major surgeries. She lived in constant pain, very seldom was she able to go places and her physician had told her there was nothing more they could do.

She went on Dr. Christopher's Three Day Cleanse and Mucusless Diet. She started on herbs to cleanse the colon, [Fen LB] the blood ([Red Clover Combination](#)) Cayenne, [Calc Tea](#), Yucca AR [AR-1](#), [Herbal Eyebright](#), etc. In a matter of about three weeks, her pain was gone. She was able to start living again. In about 3 or 4 months her arthritis left her.

She had had glaucoma for 13 years. Her glaucoma medicine was making her ill, so she went to her eye specialist. He tested her and said there is not even a trace of glaucoma left. there is virtually no cure for glaucoma, how did you do it. Her reply was thru herbs and diet. She was told whatever it is, don't stop it. He took her off her glaucoma medication, and a special pair of glasses. She now tells me her eyes have improved so much that she can now watch TV without glasses, which she never before had done. She started on this program less than a year ago. Her dark brown eyes are now turning green. She has a ways yet to go, but she is really living again. She is a composer and this past holiday season, had a Christmas Album published. [NL 2-2]

## Hawthorn Berry Syrup

Heart Formula

### Usages:

The heart is our life pump, and when it is not properly fed (with wholesome foods) it suffers malfunction (weakness and heart attacks) causing the heart failure condition that is one of the world's greatest killers. The mucusless diet used over a period of time can rebuild a heart to a good strong condition, but if the heart, its valves, and other working parts are in a weakened condition and need quick help we use a great "heart food or tonic" to assist it back to health. This food is the hawthorn berry... This natural drug is claimed to be a curative remedy for organic and functional heart disorders such as dyspnea, rapid and feeble heart action, hypertrophy, valvular insufficiency sufficiency, and heart oppression."

Also used to treat leakage of the heart...lesions left by former heart attacks... cardiac dropsy, hypertrophy, and other functional and congenital heart disorders. There are several hundred types of heart diseases known to the medical profession, but the good thing about *hawthorn berry syrup* is that it will heal all of them, including 'broken hearts'.

### Dosages:

Recommended dosage is one half teaspoon three times in a day.

### Ingredients:

Hawthorn berry syrup is made with hawthorn berry juice concentrate using grape brandy and glycerine as aids and preservatives.

### Testimonials:

1. Heart Attack: One doctor who had learned the formula for *Hawthorn berry syrup* from Dr. Christopher raised his hand after a lecture to tell the following story. He had gone on a house call in response to a call about a heart attack, one so serious that the family was afraid that death was imminent. The doctor had no cayenne in his bag and the family had no cayenne; the doctor began to panic. He remembered that he had a bottle of *Hawthorn berry syrup* with him. The usual dose is a half-teaspoonful, but the doctor thought a little more might help, so he gave the patient a full tablespoonful. The patient drank it down, sat right up, and said, "Well, I feel okay". The doctor checked him with the stethoscope and the heart sounded alright. As the doctor said, "Talk about quick relief!" [UW-Hawthorn]

2. Heart Leakage Healed: During the second World War a man had been accepted to work in a large chemical depot. The firm had hired him because he was physically unfit for military service--he had a heart leakage--and they were short of manpower. They placed him in their construction division without a physical examination when he was sixty-two years of age, and he worked for them until he was sixty-five years old. He had begun using this heart tonic when he was sixty years old, using it faithfully because, according to him, it tasted good. Now he was sixty-five years old and the war came to an end. He was called into the company's main office, where they complimented his work record and asked him if he would remain as an employee. He wanted to, but feared the necessary physical examination. He finally agreed to take the examination.

You may imagine his surprise when he found that he had been given a clean bill of health. He

[CSK](#)[CSR](#)[Deep Heating Balm](#)[DRI](#)[Ephedratean](#)[False Unicorn & Lobelia](#)[Fen LB](#)[Garlic, Rosehips, and Parsley](#)[Hawthorn Berry Syrup](#)[Herbal Composition](#)[Herbal Cough](#)[Herbal Eyebright](#)[Herbal Tooth Powder](#)[Immucalm](#)[INF Combo](#)[Juni-Pars](#)[Jurassic Green](#)[Kelp-T-Comb](#)[Kid-E-Mune](#)[Kid-E-Soothe](#)[Master GL](#)[Mem](#)[MindTrac™](#)[Mullein & Lobelia](#)[Nose Ointment](#)[Nu Fem](#)

asked the doctor, "What about my heart leakage?" The doctor replied, "I wish I had a heart as good as yours. You should never worry about dying from a heart attack; in fact, if you don't get hit by a truck or lightning you will probably die quietly in your sleep from old age and won't even muss up the covers." This man worked several more years at the plant, retired, and then lived on until he was in his eighties. On a July evening in 1970, he went to the rodeo with his family and enjoyed the evening like a kid as he watched his son ride and perform. The next morning one of his sons came over to his home and found his father lying peacefully in his bed. He had passed away with his hands folded over his chest and, just as the doctor had predicted, the covers were not even mussed up. No heart attack, just the final sleep of old age. [UW-Hawthorn]

3. Edema: Hawthorn is also known for its specific action on edema. During one of Dr. Christopher's lectures, a young man asked if he could relate an experience of his mother's. He said that his mother had had such edema in the ankles that they were so swollen you couldn't even see the bones. Many remedies prescribed by various doctors had made no difference at all. The young man asked his mother to come up to the front of the lecture hall and stand on a chair so the audience could see her feet. She now had well-defined ankle bones after less than a week of using the syrup. [UW-Hawthorn]

4. Heart Operation: .... I called your friend J.D. about eight times the last part of February, as I had a close friend in the hospital that had two heart attacks and the team of doctors told his wife that his heart was not worth a by-pass.

J.D. gave me B.W.'s phone number, then she rushed me a pint of the (hawthorn berry) syrup. This gentleman had his second heart attack on a Thursday night. The doctors told her the sad news Friday, that they could not do anymore for him, as his heart was not worth a by-pass. I received the pint of syrup late Friday, so I called his wife early Saturday morning telling her that I was bringing the hawthorn syrup to her with a plastic spoon and a sheet on the story and history of the syrup, so she could read it to him before she gave it to him.

When she got to the hospital Saturday morning at 11 a. m. the nurses had just removed the tube from his mouth, so that helped. She read the paper to him, but the problem was he wanted to take it but the doctors and nurses were always in the room. Her quick thinking saved his life. She went to the water cooler and got a paper cup and put the syrup into the cup. Right in front of the doctors she kept giving him a sip every little while. They thought she was giving him water. She did that until 10 p.m.

The next day was Sunday when the doctors examined him again. They could not believe and never did figure out how his heart improved so fast. Now his heart was worth a by-pass.

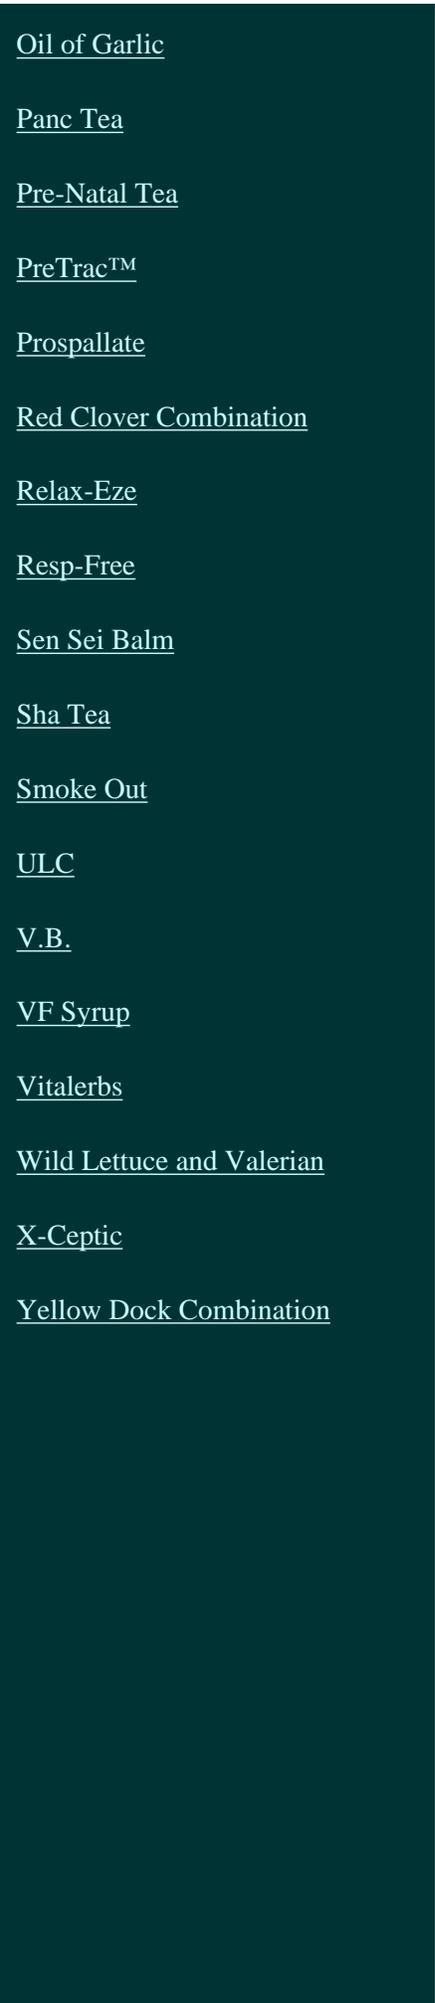

Monday they gave him a brain scan to learn that the blood was not reaching the brain like it should. Tuesday they operated on that through his arm. By Thursday he had an infection where the tube entered .... he also got an infection in his bladder. They had to let all of his infections heal while he suffered. Finally March 16th he received his by-pass and went home, on March 25th. Now he is doing fine. [NL 3-9]

5. Off Oxygen: .... Monday afternoon we took a bottle over to my 85 year old sister-in-law who has been in and out of hospitals for years with a bad heart and a bundle of other ailments. She kept a large oxygen tank in her living room, as she had trouble with breathing spells. Believe it or not, after the first ½ teaspoon of hawthorn berry syrup she never used oxygen again, in fact, they had Medicare pick up the tank last month. Then they charged her \$240 rental. [NL 3-9]

6. Moves Easier: "I am so much better--I am 66 years old and I couldn't pick up anything the least bit heavy. I couldn't bend over. Now I can pick up things and I can almost run. My dad is 92. He can walk without getting so tired and giving out. It is wonderful to know I can get the hawthorn syrup." [NL 3-11]

7. Angina: "Several people have scoffed at the story I have told that after 4 months on the *Hawthorn Berry Syrup*, my angina attacks have dwindled to almost zero and my premature ventricular contractions have been reduced to almost zero as well. For the first time in 10 years my cardiac blood tests have returned with results placing me in the protected shelter group whereas I had always been in the high risk group. The people who scoff at this insist that it is the 12% alcohol content that relaxes the heart muscles when I take it. It would be interesting to ask a cardiologist if a 12% solution of alcohol taken 3 times a day in ½ teaspoon dosages could accomplish the results I have achieved." [NL 3-11]

## Herbal Composition

Herbal Composition Powder

### Usages:

1. Fevers, flu, hoarseness, sluggish circulation, colic, cramps, colds, etc.
2. As Dr. Nowell, our instructor at the Dominion Herbal College, Let. of Vancouver, British Columbia gave in our textbook, quote:

"We have made and used composition powder for over forty years. When we state we regularly mixed it in batches of sixty pounds the student will readily see that we have had at least some experience with it. As a remedy in colds, beginning of fevers, flu, hoarseness, sluggish circulation, colic, cramps, etc. We believe it has done more good than any other single preparation ever known to man. If this compound were kept in every home, and used as the occasion arose, there would be far less sickness. Give it freely in your practice and your patient will bless you. Look over the ingredients, and consider how it will clear canker, ease cramps and pains in the stomach and bowels, raise the heat of the body equalizing the circulation, and remove congestions. It is safe. It is effective. We have on numberless occasions given a cup of composition tea every hour as warm as the patient could drink it, until the patient has perspired freely, and after four or five doses have seen our patient in a free perspiration, thereby removing colds and febrile trouble."

3. Composition Powder is safe for anyone, children and adults alike; its especial value is for breaking up colds, flu, etc. Brigham Young, the great Mormon prophet and colonist, used composition tea regularly, and recommended it to be used, weak, for children coming down sick, with a little cream and sugar added, instead of loading the child's stomach with heavy foods.

### Dosages:

1. After-Pains (childbirth); Uterine Hemorrhage, Miscarriage, Preventive: Drink the raspberry leaf tea with a little Composition Powder in it.
2. Where there has been a recent cold which has resulted in congestion, a relaxing diaphoretic may be all that is required, and often only a few doses of composition powder are needed to remove a cold and the resultant congestion.

## Herbal Eyebright

### Herbal Eyewash Combination

#### Usages:

This formula is excellent for brightening and healing the eyes, and it is known to remove the cataracts and heavy film from the eyes.

#### Dosages:

1. Make this into tea form and put into a glass eye cup. There will be a slight burning sensation when using the [cayenne](#) in the eye at first, but there is nothing to be concerned about. Tip head back and apply the eye cup to eye. Exercise eye while doing this as though you were swimming under water. Do this three to six times a day. Drink 1/2 cup a.m. and p.m.
2. From a question to Dr. Christopher: "I have been using the herbal eyebright for several months now. I have followed the instructions exactly. Is there anything else I can do to help speed this along?"

Answer: In order for any herbal combination to be effective, the body must be in good working condition. This would include using the lower bowel combination [Fen LB](#) and strictly following the mucusless diet. In addition it is also important to improve the circulation to the head area. This can be accomplished by laying your head down on a slant board each day. Gradually work up to 20 minutes twice a day. There is also a tendency for the eyesight to seem to worsen for a while. This is due to the toxins being released from the system and coming to the surface of the eye to be washed away. This also indicates that the lower bowel formula [Fen LB](#) should be used as a means for keeping the eliminative channels open.

#### Ingredients:

One part each

bayberry bark

eyebright herb

golden seal root

red raspberry leaves

1/8 part cayenne

#### Testimonials:

1. Glaucoma: I have a friend who had had eight major surgeries. She lived in constant pain, very seldom was she able to go places and her physician had told her there was nothing more they could do.

She went on Dr. Christopher's Three Day Cleanse and Mucusless Diet. She started on herbs to cleanse the colon,... the blood ... [Cayenne](#), [Calc Tea](#), [AR-1](#), [Herbal Eyebright](#), etc. In a matter of

about three weeks, her pain was gone. She was able to start living again. In about 3 or 4 months her arthritis left her. She had had glaucoma for 13 years. Her glaucoma medicine was making her ill, so she went to her eye specialist. He tested her and said There is not even a trace of glaucoma left. There is virtually no cure for glaucoma, how did you do it? Her reply was thru herbs and diet. She was told whatever it is, don't stop it. He took her off her glaucoma medication, and a special pair of glasses. She now tells me her eyes have improved so much that she can now watch TV without glasses, which she never before had done. She started on this program less than a year ago. Her dark brown eyes are now turning green. She has a ways yet to go, but she is really living again. She is a composer and this past holiday season, had a Christmas Album published. [NL 2-2]

2. Cataracts: I have cataracts in both eyes, and my wife has one in one eye.

Since I have been using it by eyecup and orally by capsules, I can now see all the license plate numbers equally in both eyes! (I could not see license plate numbers or highway signs with my left eye. They looked 'foggy'. Also, at night, all lights had 'halos' around them as a fog. Now the left eye has equally as good vision as my right eye.) Further, without my glasses, I can see each individual brick in condos across our green belt, approximately 250 feet away, which I never could before. My eye doctor, a year ago, said I had cataracts in both eyes, and the worst in my left eye. Six months ago, on a check-up, they were no worse, but I had to come back in six months.

Two days ago, the doctor was amazed and delighted how my cataracts had shrunk (VERY RARE, he said) and he said my eyes were so good I need not come back for a whole year.

I'm nearsighted normally, and had slightly more negative corrections every change. Now I can see as good with my older (less strong) glasses, and my eyes feel great. The herbal eyewash still smarts for a few seconds, but my eyes feel so good afterward. I use the eyecup 3 times a day, and 3 capsules. I'm 62 years old. My wife, 61 years old, does not take the capsules saying they cause a slight diarrhea which I had not experienced. She's using the eyecup twice daily. We've been on Dr. Christopher's Herbal Eyebright now for over 3 months, and will stick on it for the next year, and let you know then." [NL 2-8]

3. Pain & Squishy Feeling in Eyes: "My husband has had a great deal of improvement in his eyes since using the herbal eyebright formula, both internally and as an eyewash. He formerly had a lot of pain in his eyes, and mentioned a "squishy feeling" around the eyeballs. Lots of mucus has come out of his eyes in the mornings after using the eyewash the previous night. He can see better now and has no more pain. He took the eyebright capsules, 2 at breakfast and 2 before retiring." [NL 2-8]

4. Glaucoma: I have had glaucoma for twelve years now. The eye pressure was so high, I had to have surgery to rechannel the waterway. I have had a little sight, not any the last years, in my left eye, due to kidney stone surgery years ago.

I have been using the Herbal Eyebright capsules internally, from another company in Utah that a friend told me about. I had not heard about Dr. Christopher's herbs, health newsletters, etc. until this winter while visiting in Southern California.

Now I have been using Dr. Christopher's Eyebright combination eyewash formula. And I can see a little more light. To my amazement, the other night, I looked at the typewriter keyboard, and was able to distinguish each letter on the keys. Newspaper headlines, the letters are too close together, I can not see them, but I'm going to keep on using the Herbal Eyewash and hope for good results in the future. [NL 3-6]

5. Staph Infection in Eyes: Dr. Christopher has spoken several times in Cincinnati and my wife and I have been privileged to hear him. By way of personal testimony, I have had a staph infection in my eyes for at least four years and have tried many different treatments. But I have now found that taking two tablets per day of your Herbal Eyebright formula has greatly relieved the situation. I am now in the middle of my second bottle and with the improvement that I have noted already I expect that in a short period of time this infection will be completely eliminated. [NL 3-6]

6. Cataracts: Your Herbal Eyewash really works miracles! After reading Healthview Newsletter's report about it, I sent some to an elderly friend who was told she must have a cataract operation. She used it religiously and noticed a change quickly. When she told the surgeon she was postponing the operation he said she was crazy, but if it happened to work, she should let him know, and they'd both make a fortune. Her reply to that was, "What do you mean, 'we'?"

After only ten days on the capsules and the eyewash, her vision improved sufficiently for her to

drive without glasses--for the first time in 25 years! She's thrilled and is confident that she's beaten the surgeon. [NL 3-6]

7. Glaucoma and Cataracts: Thank you for the Healthview Newsletter on Dr. Christopher's Herbal Eyebright combination. I have been getting the Newsletter ever since it started and Dr. Christopher's herbal formula is one of my favorites.

I went on it just as a preventative against Glaucoma and Cataracts, and I have bought about 10 copies for friends.

It really works--A friend, age 81, had Glaucoma for years and was getting no better--after just six months no more Glaucoma and her Cataracts are almost gone. She just can't praise the formula enough--but most of her friends just don't believe it as their doctor didn't recommend it. [NL 3-6]

8. Eyelashes and Clearer Eyes: ...The *herbal eyebright* formula is another of my favorites. I use it twice every day. My eyes are clearer, I have better vision and would you believe my eye lashes are growing like crazy. I have people stop and ask me if I wear false eyelashes, and what brand are they? Can you believe it? [NL 4-6]

9. Glasses Thrown Away: Some time back in 1980 I learned about your *Herbal Eyebright* formula. I purchased my first bottle July 8, 1980, and am at present finishing my 21st bottle.

Today I am 64, I started wearing glasses when I was 18. As of my last eye examination, I do not wear glasses anymore, but still have to use 2.25 (purchased at the drug store) for reading. [NL 4-10]

10. My mother, who has had eyeglasses since before I can remember, began having trouble with inherent macular degeneration a year or two ago. Her father lost his sight to this. I told her to start using the [herbal eyebright](#) eyewash. She was using it only one time a day last summer when I went to visit her. She said it had kept the blind areas from getting any worse, but they had not healed completely. I explained, again, that she needed to go through the procedure at least 3 to 6 times a day with her condition, and to be sure to drink the tea. When we visited together during the recent holiday, she felt that her eyes had not only healed, but that she no longer needed glasses. She said she only kept them because her drivers liscence required them.

Tomorrow is her 69th birthday. She went to renew her drivers liscence and then called to tell me that she no longer needs glasses to drive. She no longer needs glasses at all.

Natalie from Mapleton, UT

## Herbal Tooth Powder

Herbal Tooth Powder

---

### Usages:

This formula is used to help strengthen the gums (bleeding and pyorrhea-type infections of the gums), and assist in tightening loose teeth. This type tooth powder will brighten the teeth's luster and make for a healthier mouth.

### Dosages:

For severe cases place this powder combination between the lips and gums (up and lower) around entire tooth area and leave on all night, six nights a week (as well as brushing regularly) until improvement is evident. Then continue on with regular tooth brushing with this herbal food combination.

### Ingredients:

oak bark

oat straw

comfrey root

horsetail grass

lobelia

cloves

peppermint

### Testimonials:

Loose Teeth Made Tight and Didn't Have to be Pulled: I was lecturing at our former Herb Shop on South State Street in Salt Lake City, a few years ago, during a bad snow storm. We were just starting to discuss loose teeth and pyorrhea when the door opened and a lady in a snow covered hat and coat stepped into the lecture hall. She had brushed off the snow and just stood there. We asked her to come up front, as there was an empty seat but she shook her head and remained where she was, obviously just wanting to warm up before leaving. We went on with the discourse telling of using oak bark powder between the gums and lips during the night to tighten the teeth.

When I had finished, the lady opened the door, and with a blast of cold air, she left. Two weeks later, on the same night of the week this lady came again and asked to speak. Not recognizing her and thinking maybe she wanted to tell about someone leaving their car lights on or something, I told her to go ahead. She told us that she was from a small town and her teeth were all coming loose. Her dentist said it was pyorrhea and that there was no cure, and that he would send her to

Salt Lake City, as he was not prepared to do this type of job. He "consoled" her with the knowledge that after the teeth were pulled, she could have temporary dentures put in immediately. She was sick at heart, as she had perfect teeth with no cavities or fillings and how she would have to lose them. She had hoped that in the larger city some dentist would show her a cure; but it was the same story. That night she went to the hotel, but was so worried and upset that she could not sleep. She decided to dress and go for a walk in the snow storm, hoping to tire herself enough to return to the hotel and obtain some rest. It was dark, and she was cold and crying, however, she was led by the Spirit to our store. There was a light and the store looked warm, so she stepped inside just as we started on the subject of teeth and the gums. The next morning, she went to a health food store, got some oak bark powder and started to use it. In two weeks her teeth became tight, and the gums were firm. She proudly showed us her beautiful teeth which she could now keep. When she said goodbye, it was with tears of happiness for finding a good healing tooth powder. Here is a good tooth powder for everyone. (Although she used just the oak bark alone, it is the largest ingredient in the Herbal Tooth Powder, so this product would do the same.) [NL 2-10]

## INF Combo

Infection Formula

---

### Usages:

This formula can be made up in tea form, or as tincture, syrup, or ointment, as can most of our formulas. This wonderful formula kills infection, clears toxins from the lymph system, and is a natural infection fighter.

### Dosages:

Two to three capsules between meals.

### Ingredients:

plantain

black walnut

golden seal root

bugle weed

marshmallow root

lobelia

## Juni-Pars

Kidney Formula

---

### Usages:

Approximately 80% of the body is liquid, and much of this fluid must be pumped, filtered, etc., through the urinary system of the individual. We generally do not take the best care of this delicate tract. Through it circulates irritating and clogging-type materials, i.e., tea, coffee, soft drinks, hard water, alcohol, etc.

Over the years we have used a formula of herbs with people who have been afraid to be out in public because of lack of control over the urinary tract and unknowingly voiding urine. After using this formula, many people have found relief from this condition and are living normal lives again.

### Dosages:

Suggested use is 2 or 3 capsules between meals, or a cup of tea morning and evening taken with a cup of parsley tea.

### Ingredients:

**Juniper Berries**

**Parsley Root**

**Marshmallow Root**

**Golden Seal Root**

## Kelp-T-Comb

Thyroid / Gland Formula

### Usages:

This is a thyroid and assisting glandular aid. This herbal group assists in controlling metabolism and gives herbal feeding to the thyroid glands to do their job more efficiently. This is a very fine glandular aid.

### Dosages:

Two capsules, 1 or 2 times daily as needed.

### Ingredients:

**kelp**

**watercress**

**mullein**

**parsley**

**nettle**

**Irish moss**

**Iceland moss**

**sheep sorrel**

### Testimonials:

Insomnia Cured: I have found great relief by taking Dr. Christopher's calcium formula and thyroid formula through the night which was recommended in his "How Important is Calcium" newsletter. I have recommended this treatment to others and to my mother and they all have found it helps their insomnia also. -A.R., Williston, ND [D. Christopher]

## Kid-E-Soothe

### Immune Calming Formula

---

This is designed to calm yet strengthen the body's immune responses. Many times we believe that we are allergic to certain foods, plants or animals, but in reality our immune system may be just overreacting. This simple combination of marshmallow root and astragalus has made life easier for those who suffer from allergies, hayfever, asthma, rheumatoid arthritis or any hyperactive immune response.

### Pituitary Gland Formula

---

This formula is for the malfunctioning pituitary gland. It consists of carrot leaf for stimulation of the gland, gotu kola for nourishment, ginkgo for increased circulation, mullein for cleansing, Oregon grape to influence both pituitary and liver, and lobelia as an overall catalyst for the formula.

## MindTrac™

Emotional Clarity Herbal Formula

MindTrac is an Alternative to drugs for:

**Depression**

**Anxiety**

**Hyperactivity**

MindTrac will benefit:

**Adults**

**Adolescents/Children**

**Seniors**

## Take Control of Your Mind

MindTrac™ contains properties similar to its drug counterparts without harmful chemicals.

Psychiatric drugs are far more dangerous to take than people realize. They have negative side effects including addiction, and they can produce withdrawal symptoms that are emotionally and physically distressing or even life-threatening. The herbs in MindTrac are formulated to support and heal the body naturally in response to stress. Drugs are used to treat the symptoms, NOT to cure the problem.

### Cleanses

Science continues to show that the mind and the body are connected. Stress creates biochemicals which circulate along with the blood. Because the liver is already burdened by pollutants, these "stressful" by-products are less likely to be eliminated quickly. To reduce the burden on the liver, MindTrac contains three herbs - Sarsaparilla, Dandelion and Oregon Grape Root - to cleanse the blood and to stimulate liver detoxification.

### Nourishes

A food base of Jurassic Green™ (flash dried Alfalfa, Barley, and Kamut) supplies the body with essential vitamins and minerals in an all natural form. B vitamins, Chlorophyll, Calcium, Magnesium, and Potassium help regulate nerve transmission and muscle response.

### Stimulates

St. John's Wort has been proven in scientific studies to mimic the effects of antidepressant drugs. It is so effective that we strongly advise against combining this herb with any antidepressant drug. To transition safely from prescription medicine to natural healing, check out our product called [PreTrac™](#).

MindTrac contains two additional stimulants, Gotu Kola and Ginkgo Biloba, to synergize the St. John's Wort herb! By improving the blood flow and oxygen circulation to the head, these herbs

have been used traditionally to improve memory, nerve response and mental alertness.

### Calms

Scullcap and Valerian root are both nervine sedatives and antispasmodics. Besides their calming nature on the nerves and muscles, these herbs promote regular and restful sleep. Mullein and Lobelia are antispasmodics as well as cleansers. They help cleanse the blood by assisting the lymph and the glandular systems.

### Dosage:

Take 2 capsules three times a day as a tonic dose or as needed. Children: 1/2 - 2/3 of adult dosage or Kid-e-Bright.

### Ingredients:

**Valerian Root**

**Scullcap**

**Ginkgo Biloba**

**Oregon Grape Root**

**St. John's Wort**

**Mullein**

**Gotu Kola**

**Sarsaparilla**

**Dandelion**

**Lobelia**

**Jurrasic Green.**

*There are serious consequences to using or discontinuing prescription drugs. Withdrawal from psychiatric drugs should be done slowly and only with professional guidance.*

### Testimonials on MindTrac® & ProTrac®:

1. "I've been carrying ProTrac® in the Herb Shop for a year. This is a wonderful product! It's packed full of herbs for nutrition and calming. It has helped one lady's hyperactivity, a man with sever temperamental mood swings, and a customer to quit substance addiction. We call this our Herbal Prozac®. Thank you very much for ProTrac®." -T. Dawber, Charlotte Harbor, FL.
2. "I have an 8 year old child with Down's Syndrome who is very hyperactive. After only one week of taking ProTrac®, he is noticeably calmer and much more attentive than before. We are so happy and we are telling friends and family about ProTrac®." -Name Withheld, TX.
3. "After being diagnosed with Clinical Depression, I spent 1 1/2 years on antidepressant

medication. It basically ruined my health and relationships with other people. After deciding the medication was the cause, I quit the drugs and began the healing process. I started taking ProTrac® and it really helped me. My mind cleared up. I started sleeping at night, and best of all, I feel like my normal self again." -B Pearson, UT.

4. A worried mother of a hyperactive 9 year old boy tried ProTrac® instead of Ritalin® as the doctor suggested. She could not believe that in only three days he was calmer, more relaxed, and able to focus on daily activities. He's even sleeping better! She is ecstatic to see his old personallity return after two years of turmoil, and is introducing ProTrac® to her friends.  
-Delightful Foods Inc., Canada

## Mullein & Lobelia

### Malfunctioning Glands Formula

---

#### Usages:

This can be used as an aid to relieve mastitis, thyroid malfunction, etc., etc.

The Mullein and lobelia will reduce the swelling of mumps and the swollen palate, Dr. Christopher taught. It is also an excellent remedy for poison ivy or poison oak, etc. [UW-Mullein]

#### Dosages:

1. Tonsillitis: The tonsils are the tail end of the lymphatic system. They swell up with pus and infection when the body is overloaded with toxic material. When the system is overloaded with waste that an inactive lymphatic system cannot eliminate, the tonsils become enlarged and sore. They are a safety valve of the body - a warning system, if you wish. They should never be removed from the body. The lymphatic system can be cleared through exercise. The lymph system has no pump such as the bloodstream has the heart. Exercise can activate the lymph system to carry waste products from the cells. The glandular formula of 3 parts mullein and one part lobelia can be taken internally as a tea or capsules and externally as a fomentation around the neck covering the affected glands. Of course the tonsils will diminish in size and infectious content with adherence to the correct principles of nutrition contained in the mucusless diet. [NL 4-2]

2. Any Swollen Gland: Through the accumulation of toxic waste in the body from improper diet, poor blood stream and sluggish circulation of the blood system the glands become congested and infected, and swell up to cause much pain and misery. (There are glands that swell on the neck, breast, groin, under arm pits, etc.) Make a tea of three parts mullein and one part lobelia herb and use as a fomentation over swollen or malfunctioning glands. Leave on all night (covering fomentation with plastic), six days a week until relief is obtained. Use a fresh fomentation as warm as possible each night. This can be used as an aid to relieve mastitis, thyroid malfunction, etc., etc. In addition to the external fomentation, also drink a cup of this tea two or three times in a day or take two of the capsules or tablets with a cup of steam-distilled water.

3. Malfunctioning Thyroid: "The thyroid, through the hormone thyroxine determines growth, controls body temperature, regulates the metabolism or the burning of food in the body and influences, to a great extent, mental and emotional balance. Also, it is of special importance for the proper functioning of the reproductive system. The inter-relationship between reproductive functions and thyroid functions is very complex and not entirely understood, but it is known that various changes, especially in girls and women, are apt to cause changes in thyroid functions. For instance, a slight enlargement of the thyroid gland is common at puberty, during pregnancy and menopause.

"When the thyroid gland is functioning properly, we are hardly aware of its existence. It stores practically all of the body's supply of iodine, releases thyroxine into the blood stream at intervals and regulates all the bodily functions we have mentioned above. Disorders of the thyroid gland are apparently caused by two conditions:

(One) lack of sufficient iodine in the diet, so that the thyroid cannot obtain enough to manufacture thyroxine, or (two) some disorder of the body which creates a demand for more thyroxine than the gland can manufacture."

Our recommendations to aid the thyroid are in two parts. First we need to strengthen the deficiency of the gland by using Dr. Christopher's glandular formula *Mullein & Lobelia* as a

[CSK](#)[CSR](#)[Deep Heating Balm](#)[DRI](#)[Ephedratean](#)[False Unicorn & Lobelia](#)[Fen LB](#)[Garlic, Rosehips, and Parsley](#)[Hawthorn Berry Syrup](#)[Herbal Composition](#)[Herbal Cough](#)[Herbal Eyebright](#)[Herbal Tooth Powder](#)[Immucalm](#)[INF Combo](#)[Juni-Pars](#)[Jurassic Green](#)[Kelp-T-Comb](#)[Kid-E-Mune](#)[Kid-E-Soothe](#)[Master GL](#)[Mem](#)[MindTrac™](#)[Mullein & Lobelia](#)[Nose Ointment](#)[Nu Fem](#)

fomentation around the throat at the thyroid area. This formula is made up of mullein and lobelia in a combination that is beneficial in aiding and strengthening the glands of the body, in this case, the thyroid gland. It would also help to use two capsules of our gland formula *Mullein & Lobelia* three or more times a day.

Second, take Dr. Christopher's thyroid combination as an herbal food aid to this gland. It consists of the following herbs - parsley, watercress, kelp, Irish moss, romaine lettuce, turnip tops and Iceland moss. This herbal group assists in controlling metabolism and gives herbal feeding to the thyroid glands to do their job more efficiently.

These two aids will assist the thyroid to function properly whether it be underactive or overactive. [NL 3-4]

4. Undescended Testicle: Oftentimes, through some factor of heredity, one of the testicles will not descend in the fetus and the child is then born with an undescended testicle. If, during early childhood the testicle does not descend of its own accord, the child is sometimes made to undergo painful and unnecessary surgery to bring it down. We know of one case where the testicle was operated upon and then never developed later in life. That is, it atrophied, and remained almost imperceptible upon examination.

Here is where we would use the wonderful glandular formula *Mullein & Lobelia* of three parts mullein and one part lobelia. We apply this as a fomentation, that is, we make a tea of the herbs (one ounce to the pint) and concentrate it down to one half its original volume. A flannel or cotton cloth is dipped into the solution and put on the area, perhaps keeping the area warm with Turkish towels. The tea or capsules can be used internally as well.

#### Ingredients:

**Three parts mullein**

**One part lobelia herb.**

#### Testimonials:

1. Crushed Scrotum: He told the story of a boy and his friend playing by a two-wheeled trailer, the tongue of which was balanced on a log. The little fellow was sitting cross-legged by the trailer; the tongue dropped from the log and hit him between the legs, mashing the testicles and splitting the scrotum open. When his parents rushed out to see what all the screaming was, he was in a really serious condition. They called their family doctor, who said, "Bring him right up here and I'll castrate him". That wasn't what the father wanted, though, so he called Dr. Christopher, who rushed over. Since the testicles are glands and Mullein is the basis for the glandular herbal aids, Dr. Christopher told him to make a strong tea of Mullein and Lobelia, making a fomentation and applying it to the crushed scrotum, removing the old and providing a fresh fomentation when needed, always keeping it wet. The scrotum as well as the testicles were healed with no scar. The boy grew up normal. Dr. Christopher mentioned that this fomentation, together with drinking the tea, has been used for enlarged swollen testicles and also for those that have dropped down into the scrotum. [NL 3-4]

2. Mastitis: A woman in Roy, Utah, had mastitis; she was a nursing mother. Her breast was double its regular size, with red streaks. Anyone experiencing mastitis knows that it is terribly painful, and accompanying symptoms resemble flu. A mastitis fever is really uncomfortable. Her baby had nursed from the other side, but the mother couldn't let it get near the inflamed breast, which sometimes can relieve the pain and swelling if possible. The baby was crying from hunger; the mother was crying from pain; what misery for the two of them! The Doctor made a fomentation of three parts of Mullein and one part of lobelia. Plastic was put over the fomentation, and the mother was told to drink half a cup of the tea each half hour until time to sleep, then a half cup each hour the next day if needed, which the Doctor did not think would be necessary.

The next morning she called Dr. Christopher, happy to tell him that the swelling was all gone, as well as the soreness and flu symptoms, and the baby was nursing happily again on that side. [UW-Mullein]

[Oil of Garlic](#)[Panc Tea](#)[Pre-Natal Tea](#)[PreTrac™](#)[Prospallate](#)[Red Clover Combination](#)[Relax-Eze](#)[Resp-Free](#)[Sen Sei Balm](#)[Sha Tea](#)[Smoke Out](#)[ULC](#)[V.B.](#)[VF Syrup](#)[Vitalerbs](#)[Wild Lettuce and Valerian](#)[X-Ceptic](#)[Yellow Dock Combination](#)

3. Swollen Glands Behind Ears and on Backs of Necks: You may recall the story of the two children with swollen glands behind their ears and on the backs of their necks. If you have ever seen these on your children, you will know how distressing they are. Most doctors will tell you that the child cannot eliminate wastes fast enough, so that the lymphatic system stores them until the body can eliminate them. They say that the swollen glands will do no harm, yet we have seen the child debilitated and sickly because of this condition. Dr. Christopher recommended the same Mullein-Lobelia fomentation.

The stronger child, a robust boy of ten, experienced the reduction of the gland and the absorption and elimination of the poisons through his system. The weaker child, also ten years old, couldn't support that many toxins going through his system; his gland continued to swell, though with no pain, until it came to a head and broke open. Nearly a cup of infectious pus poured out and continued to drain a day or so longer; the mother considered that this saved the child's life. [UW-Mullein]

## Nose Ointment

Nose Ointment

---

### Usages:

This is a natural anti-histamine.

### Dosages:

Apply to the inside of nose when it is congested, dry, sensitive or chapped.

### Ingredients:

Made with spearmint, peppermint and Vaseline.

### Testimonials:

You need to put the Nose Ointment in a smaller container so I can carry it around. It works!  
When I'm stuffed up and can't draw any air up my nose, I use my finger to put the nose ointment inside my nostrils and in the air goes and WOW, instant relief! -W.C., Spanish Fork, UT [D. Christopher]

## Nu Fem

Herbal Aid for Female Reproductive Organs

### Usages:

This is an amazing combination of herbs to aid in rebuilding a malfunctioning reproductive system (uterus, ovaries, fallopian tubes, etc.). Over the years herbalists and patients have seen painful menstruations, heavy flowing, cramps, irregularity, etc., that have been helped and the patient now has a painless menstrual period, good menstrual timing, and a new outlook on life by using these aids to readjust the malfunctioning areas.

In addition, you can take the female corrective formula *Nu Fem* and the hormone-estrogen formulas [Changease](#) to work out problems in the feminine tract. These formulas can correct almost any problem you might have; they are non-specific and they are mild, so you can take them over a prolonged period of time without any problems.

If you exercise well in addition to following the above suggestions, eventually your PMS should disappear. For coping with the problem while you are healing, hot peppermint, catnip or camomile tea can relieve some of the pressure; try Dr. Christopher's nervine combination. Foods containing good B-vitamins, such as sprouted wheat and brewer's yeast, and those containing C, such as lemons and rose hips, are excellent for balancing the system.

These two combinations, the female corrective *Nu Fem* and the hormone-estrogen combinations [Changease](#) can be used during the entire time of pregnancy (and also before and following) as it is an herbal food like any other food and "is there to be used, if needed," but can do NO harm in any way.

### Dosages:

Recommended dosage is one cup or 2 capsules or tablets morning and evening or three times a day if desired, six days a week for as long as required to get results desired. We have seen many severe cases who have had many years of suffering cleared up in 90 to 120 days. Some get relief sooner, some take longer--no two cases are alike. This is a food to rebuild the malfunctioning organs.

### Ingredients:

The female corrective formula consists of three parts of golden seal root, and one part of each of the following:

**blessed thistle**

**cayenne**

**cramp bark**

**false unicorn root**

**ginger**

1. Ten Dollars of Herbs Cure Ten Year Old Problem: One woman in American Fork, Utah, was having difficult periods. These had started in puberty, and she had spent the whole of her adult life traveling from coast to coast, averaging a cost of over \$1,000 a year for ten years, paying medical doctors to tell her what was wrong. She suffered vicious menstrual cramps and extremely long periods. No one was able to help; she was very discouraged; but one of her neighbors said, "Why don't you go to the next town, to Orem, where a man called Dr. Christopher lives? He could give you some help."

When she arrived, Dr. Christopher read her eyes, noting that she did have problems with the reproductive organs. He told her to start on the female corrective formula *Nu Fem* and the hormone and estrogen formula [Changease](#) (which consists of black cohosh, sarsaparilla, ginseng, blessed thistle, licorice root, false unicorn root, and squaw vine). He promised her that if she would follow through, within 90 to 120 days she would get results. Within 120 days, she came back, saying that she was on a 28 day cycle, with no menstrual pains. She was delighted! Where she had spent over \$10,000 traveling from doctor to doctor, it cost her approximately \$10 for the herbs to cure her. [EWH p.16]

2. Rh Factor: Dr. Christopher worked during pregnancies to heal women with serious problems, and his results seem to us miraculous. One of his students from northern Utah had had three children with the Rh problem; in each case, they had to have a complete blood transfusion, having their blood completely drained out of them. This lady was told that because of her advanced Rh problem, she was not to have any more children. In addition to the Rh problem, she would require open heart surgery, and another pregnancy might kill not only her, but the child. She asked Dr. Christopher for help. He could promise her nothing, but tried to help her cleanse her blood. She took the red clover combination tea in order to cleanse the blood, the female corrective formula *Nu Fem* and hormone-balancing formula [Changease](#), and plenty of red raspberry leaf tea. After a lecture some time later, the lady approached Dr. Christopher with a new baby, born naturally with no Rh problem whatsoever. The lady had several children since that time, with no more trouble. This shows that the Rh factor stems from a problem of toxicity inside the mother, which can be overcome with herbs and diet. [EWH p.50]

3. No More Caesarean Sections: A lady in Springville, Utah, came to Dr. Christopher's office in Evanston, Wyoming. She had had three children, and her doctor told her the only way she could bear children was by Caesarean section, because she had a pelvic area that was rather immature. She had so much scar tissue on the abdominal area that the doctors said she could not be cut again. She wanted another baby very much so she came to Dr. Christopher to see what he might be able to do. He put her on the three-day cleanse and mucusless diet. She was to drink at least a quart of red raspberry leaf tea a day, to drink a gallon of steam-distilled water a day, and to use the [Three Oil Massage](#) over the abdominal area. That would be two days of castor oil massaging the area, two days of olive oil, and two days of wheat germ oil, and a day of rest. Dr. Christopher felt that if she would follow this program, she would heal rapidly. She also was to take the female corrective formula *Nu Fem* and the estrogen-hormone formulas [Changease](#) internally, and to keep her bowels clean with the lower bowel formula [Fen LB](#). She visited Dr. Christopher every week, beginning to feel much better. The hardness of her abdomen had softened so that it became pliable. The scar tissue began to show signs of new life.

During this time, Dr. Christopher moved into his offices in Salt Lake City, Utah, and Dr. Loretta Foote, who took care of all the obstetric cases, came in one day and said she would be gone for a couple of days, because she was going to assist a lady in delivery down in Springville, a patient of Christopher's. She reminded him of the lady who had had three Caesarean births, who was planning a home delivery. Dr. Foote returned to help the mother for about ten days (in those days it must have been easier than today!). The woman who was told that she could only have C-sections now had natural childbirths at home with ease. Many years later, this lady came up

[Oil of Garlic](#)[Panc Tea](#)[Pre-Natal Tea](#)[PreTrac™](#)[Prospallate](#)[Red Clover Combination](#)[Relax-Eze](#)[Resp-Free](#)[Sen Sei Balm](#)[Sha Tea](#)[Smoke Out](#)[ULC](#)[V.B.](#)[VF Syrup](#)[Vitalerbs](#)[Wild Lettuce and Valerian](#)[X-Ceptic](#)[Yellow Dock Combination](#)

after the lecture, and trailing her were four teenage children; she informed Dr. Christopher that all four of these were born after she'd been told she'd lose her life and her baby's if she dared another birth. She was a very happy woman. [EWH p.50]

4. Young Woman Gets Well Enough to Marry: Dr. Christopher told story after story about sick women he helped with simple remedies, simple treatments. For example, a man and his wife brought their daughter to Dr. Christopher's office in Salt Lake. This young lady was the sickest, saddest-looking person he had seen in a long while. She had met a young man who came to love her very much, and he wanted to marry her. But she refused, saying it wasn't fair to him, being in her condition, so anemic and sickly. He told her that he loved her enough to marry her and take care of her under any circumstances.

She was in a very serious condition, so they put her on the three-day cleanse and mucusless diet. She took extra cups of red clover combination tea, and drank a minimum of one pint of grape juice a day, chewing each mouthful. When she could, she took even more. She also ate plenty of raisins and grapes in addition to the juice. She used the yellow dock as a tea, and soon she began to show improvement. She exercised adequately, being careful not to overdo it, and changed her diet from mucus-forming food to the mucusless diet, having lots of salads and fruits, emphasizing as much raw as possible. She used the female corrective *Nu Fem* and hormone-estrogen formulas [Changease](#), and she also used the vaginal bolus [V.B.](#) and [Yellow Dock Combination](#) in the slant board routine. She showed improvement from the very beginning.

The parents had brought her to Dr. Christopher in the spring, and by fall they sent him an invitation to her wedding, because she had cleaned up her system and was very happy to get married. She was menstruating regularly and had gotten over her case of anemia. She was living a new life, healing it herself by following through on Dr. Christopher's instructions. [EWH p.111]

5. Myriad of Problems Cleared: Dr. Christopher always checked his patients with iridology before advising them. A lady came to him, aged about 45, asking for a reading to help with her condition. He saw that she had a prolapsed transverse colon which had dropped to a point where it tipped her uterus and pinched her bladder, and she was having a very serious trouble there. She had problems with the ovaries, with infection in both of them, and she was troubled with vaginal drainage. In addition, she had one breast that was badly infected, which might necessitate having part of the breast removed if she had asked another doctor for treatment. After the reading, Dr. Christopher asked why she had come to him and what she wanted him to do. She said that she had just spent three days in a clinic, where they had verified everything he had read from her irises, but they wanted her to go to the hospital immediately and have the uterus removed and the bladder stitched up to the spinal cord area, and also have her breast removed. She was frightened of all this cutting, so she wanted to find help in some other way.

She promised that she would stay on the program that Dr. Christopher advised. She took the female corrective *Nu Fem* and hormone-balancing combinations [Changease](#), used the vaginal bolus [V.B.](#) six nights a week, flushing out each morning with the slant board routine, massaging 15 to 20 minutes a day on the abdominal and pelvic area while the tea was inside. She was also to use the [Three Oil Massage](#) over the abdominal area, and go on the three-day cleanse and mucusless diet. In addition, she was to drink a gallon of steam-distilled water a day, and plenty of red raspberry leaf tea. She kept her bowels clean with the lower bowel formula [Fen LB](#), and kept the bloodstream cleaned up with the [Red Clover Combination](#) tea.

Dr. Christopher did not see her again for six months. When she came to see him this time, she bounced in, not dragging as she had before, a totally different woman, much happier and healthier. She had no operations, and yet her prolapsed transverse colon had gone back into place, and her uterus and bladder had gone back into position. She was feeling like a new woman, and she did indeed have a new system by following through with the entire herbal problem. [EWH p.112]

6. Woman Helped: When Dr. Christopher was traveling, using chiropractic offices and naturopath's offices, diagnosing, reading eyes, and helping with herbs, another lady with a similar problem as the above came to see him. In addition to the prolapsed transverse colon infecting the entire reproductive system, it had impinged on the bladder, so that whenever she laughed, sneezed, or coughed, she would void her urine, a very embarrassing problem. In addition, one of her breasts was so infected that the doctors were urging her to have it removed.

Dr. Christopher told her he could give her advice as to what to do, but that he was traveling and wouldn't be able to guide her or see her for several months. She agreed to follow his instructions,

and asked to see him when he returned.

He put her on the full program. She was to clear the bowel with the lower bowel formula [Fen LB](#), to clean the bloodstream using the red clover combination, and to rebuild the reproductive organs with the female corrective *Nu Fem* and the hormone-estrogen formula [Changease](#). She was to continue the whole program, six days a week.

When he returned to that city six months later, she had called and prearranged an appointment. She bounced in, looking years younger, all smiles. She said her urine loss was under control now, with no unwanted voiding. She had no pains in the ovaries; in fact, she had dropped some stones from [Dr. John R. Christophers "Three Day Cleansing Program"](#). She had also passed some tumors, one almost the size of a grapefruit, and cysts as well. When she went to the family doctor for an examination, he was astounded, because her body was rebuilding itself. The breast they were going to cut off had healed itself, with no more infection. She felt that it was a new world, and that life was worth living again.

Although she healed rapidly and consistently, Dr. Christopher pointed out that herbs don't work all at once, but you have to apply yourself and be patient to wait for the results of your hard work. [EWH p.113]

7. Spider Cancer Comes Out of Woman: A lady came to Dr. Christopher because she was having trouble with her reproductive organs. He asked her to follow the full female routine. One day, some months later, she came back to see him. She said, "This morning when I woke up, I thought, 'Look, I have been in this program for months now. I have taken the herbs orally, I have used the vaginal bolus [V.B.](#), and the [Yellow Dock Combination](#), and after so many months I am sick and tired of this.'"

She hadn't seen much change in her system, although she felt a little better, but not enough to continue. While she was thinking this, she was sitting on the toilet. And when she got up, she happened to turn around and glance into the bowl. And there was something about the size of a half dollar, with legs on it, swimming around in the water. This something had dropped out of her!

She screamed, and her husband came in. They put it into a bottle and took it right over to the family doctor. He examined it under the microscope and said, "I have never seen one of these whole like this. They have to cut them out of a person; it is a spider cancer. They never give up and leave by themselves." He was simply amazed that it had just come out of her. The reason was that her body had now become so healthy that the spider cancer didn't have any waste materials to maintain itself.

When this lady saw the spider cancer, she determined that even if it took six months or years she was going to continue with the program. Sometimes it takes shorter or longer with certain people than with others, but Dr. Christopher encouraged everyone to keep with the program, if they are doing everything properly. [EWH p.113]

8. Young Woman Healed of Ailments: A lady called Dr. Christopher in Salt Lake City from Provo, Utah, saying that her daughter had flown in from out of town, extremely ill. She was afraid that she was going to die, so she had come to her mother to take care of her. She asked if he would come and read the young woman's eyes. When he arrived, the young woman ridiculed him, and said she thought it was a bunch of crazy ideas that her mother had, and she wasn't going to let him look into her eyes. So Dr. Christopher bowed out and left.

Nearly a month went by, and the lady from Provo asked him to come again, that the daughter was so sick that she was frightened and would talk with him.

When he came, they told him that they had tried the best doctors they could find, but no one could help the girl (Dr. Christopher never said what the problem was, however). He gave her an eye reading and she would remark, "Who told you that!" Each thing he told her was the same thing that the doctors had diagnosed. When he finished, she said she was still dubious about the natural program, but that the reading was so accurate, he must have something good. She agreed to follow the natural program. She was too sick to even get up and walk.

So they started off gradually on the [Incurables program](#), using juices to rebuild the body. Before many weeks had passed, she came to Dr. Christopher's classes and became quite a faithful student. She even began to study iridology and became good at it. She watched her own eyes and could see the healing taking place. She had been told, though she had been married for some time, that she could never have a baby because of an immature pelvic area and an underdeveloped

uterus, as well as other problems in her reproductive system. By using the mucusless diet and herbs to rebuild her body--the female corrective *Nu Fem* and the hormone-balancing combinations [Changease](#) -- and doing the exercises they advised, even these problems began to heal.

Eventually Dr. Christopher got a call from her husband on the West Coast; he was angry. It was a call of abuse, accusing the Doctor of keeping his wife up in Utah when she should be down with him. He was an electrical engineer, with a very important job, and felt he needed her with him. Dr. Christopher told him his wife had been too sick to even sit up alone, but with the aid of the program and the mother's assistance, she was improving. He told the husband she would be home with him as soon as possible.

The man told Dr. Christopher he was one of the worst quacks there could possibly be, let out some abusive language, and slammed down the receiver.

The wife did heal eventually, and traveled home on her own, without anyone assisting her. She was an excellent housewife, and she showed so much improvement that the husband was astonished, because he figured she didn't have too much longer to live.

Best of all, she had two beautiful children, with natural childbirth, and although the husband was an electrical engineer with a high-paying job, he was so delighted with the results that he became a chiropractor. He delivered their two children. [EWH p.116]

9. Woman Gets Off of Commercial Hormones: Dr. Christopher recalled the case of a lady in Vancouver, B.C. She was climbing the wall with nervous tension due to menopause. Her hot flashes were driving her almost insane. When she would throw off the covers at night, her husband would get cross, and she was keeping him awake at night as she would get up and down with discomfort of hot flashes. She was using estrogen, but she felt it was doing her more harm than good, so she asked Dr. Christopher for help.

He put her on the three-day cleanse and mucusless diet, and she suffered for a time from extreme withdrawal symptoms from taking the commercial hormones. She took the female corrective formula *Nu Fem*, two or three capsules, three times a day, and the hormone-estrogen formula [Changease](#), using those three capsules, three times a day. After a short time, she came to Dr. Christopher and said that her whole life had changed. She could sleep all night, without throwing the covers off. She didn't have the nervous screaming jags as she had before, and her husband fell in love with her again. She felt that it was worth the dietary change and the effort to take the herbs to make this difference. [EWH p.171]

10. Letter to Dr. Christopher: In the past 20 years I have had a history of nine miscarriages. I have three children ages 20, 19, & 14. All the miscarriages took place in the 2nd and 3rd months. Also with the three children I have, I was in bed most of the first 3 months with spotting and threatened miscarriage.

Since I have been taking female corrective herbs *Nu Fem* and others for general building of health, I have become pregnant again. I am now 5½ months along and have not been down at all. The first 3 months if I felt any cramping I took the False Unicorn, Lobelia combination and the problem went away.

Also, during the first trimester of this pregnancy, we did quite a lot of traveling, attending 2 conventions in the mountains where I did a good amount of hiking which I never could have done. Because of my age of 41, I am at a disadvantage, but thanks to the herbs I feel better than I ever have.

I had a miscarriage last Spring just before I knew about the [False Unicorn & Lobelia](#) combination. I started taking the combination during the miscarriage and had the easiest miscarriage that I ever had.

Thank you very much for sharing your knowledge in this field. I know of many others that are being helped by the natural method that God has given to us. [NL 2-2]

11. Freedom from Menstrual Pain: My greatest pleasure has resulted in freedom from pain for my seventeen year old daughter during her menstrual period She has been hospitalized three times in the past year for vomiting which could not be stopped over a six hour lapse of time. The Hormonal Estrogen Combination [Changease](#) & Female Corrective Combination *Nu Fem* have truly given her a "new lease on life". [NL 2-2]

## Oil of Garlic

Hearing Loss &amp; Earache Formula

### Usages:

When this procedure is used as explained here, it can be an aid in assisting an improvement of poor equilibrium, failure of hearing, aiding the motor nerve, etc.

### Dosages:

With an eye dropper put into each ear at night four to six drops of oil of garlic and four to six drops of the herb tincture listed below [B & B Tincture](#), plugging ears overnight with cotton, six days a week, four to six months, or as needed. On the seventh day, flush ears with a small ear syringe using warm apple cider vinegar and distilled water half and half.

## Panc Tea

Aid for the Pancreas

### Usages:

Pancreas and other glands: Aid for pancreas and other affiliated glands that through malfunction cause high or low blood sugar (namely diabetes or hypoglycemia).

Many reports came in about heavy insulin users who continue using the insulin but by watching litmus paper or other types of diabetic checking have gradually tapered down on the insulin; and many, within a year of using two to three or more three times a day, six days a week of the pancreas formula tablets or capsules, have found complete relief. Of course, the closer a person stays on [Dr. John R. Christophers "Mucusless Diet"](#) and eliminates from the diet the unnatural sugars, soft drinks, candies, pastries, bread, etc., the quicker the results. [HHH p.185]

Almost everyone suffers from some sort of pancreatic disorder. Eating processed foods is one of the main causes of degeneration of the pancreas. In addition to producing insulin, the pancreas also produces its own natural bicarbonate of soda which is sent into the digestive tract to neutralize excess acids. Both "hypo" and "hyper" glycemia stem from the breakdown of the pancreas. This overactive or underactive pancreas affects the amount of bicarbonate of soda the pancreas produces. When there is not enough, the digestive tract can become overacid, thus leading to ulcerations. Dr. Christopher suggested his Pancreas Formula [Panc Tea] which included cedar berries to correct this disorder. other herbs in the formula are golden seal, uva ursi, cayenne, mullein, and licorice root. [NL 4-8]

### Dosages:

This combination has assisted many that have had hypoglycemia after six months or more of using two to three capsules or tablets three times in an day six days a week. (All herbal aids give faster results in six days a week instead of seven, using the same day of the week of each week.) They have had a glucose tolerance test with a clean bill of health on the pancreas area. [HHH p.185]

### Ingredients:

cedar berries

golden seal

uva ursi

cayenne

licorice root

mullein

**Testimonials:**

1. Pancreas formula helps with energy. During a trip to San Francisco, a black minister came up to Dr. Christopher and just hugged him, thanking him for the Pancreas formula *Panc Tea*. He said he could preach with more enthusiasm than ever before, and had much more energy and ability to work.[NL 6-4]

2. Brother and Sister Cured. Dr. Christopher emphasized that both diabetes and hypoglycemia stem from the same problem--a weak pancreas. One time, he was visited by a brother and sister, both in their middle years, each with pancreas problems that they had inherited as part of their family physical structure. The man had hypoglycemia, and the woman had diabetes.

The man's hypoglycemia was so severe that the family planned to have him institutionalized. He would go into raving fits if he got hungry--the family thought they could not live with him anymore. The lady, on the other hand, was using more than ninety units of insulin a day, which she had done for years. Dr. Christopher taught them about the three-day cleanse and the mucusless diet and gave them the Pancreas formula *Panc Tea*.

Within six months, the man took a glucose tolerance test and received a clean bill of health. The lady, in less than a year, was using no insulin at all. The same formula and the same program healed the pancreas in both cases.

When the pancreas is healed in this manner, it can last you for life. [NL 6-4]

3. How Dr. Christopher Discovered a Formula for the Pancreas. One day a man visited him with a kidney problem; he couldn't void his urine. Dr. Christopher told him to use juniper berries to quickly clear up the case. The man was happy about that--he had juniper berries in his own back yard, and so he went home to gather some for his kidney problem.

A few weeks later, the man came back and said, "Your juniper berries didn't do anything for me; they didn't help at all!" Dr. Christopher said that it was impossible, that juniper berries always work to clear up kidney problems. "Well, I've got some in my pocket; here they are."

"That's not a true juniper berry," said Dr. Christopher. "That's a monostone Cedar berry, from a Cedar tree, such as we commonly have in this area. The juniper berry has three stones and even seven stones, but the Cedar berry is a mono-stone; it's a cherry-stone type. Let me get you some juniper berries." He brought the man some, and showed him that it was a true juniper berry; the Cedar berry is in the same family, but it's just a "kissing cousin."

"Fine," said the man, "I'll go home and take some, but I'm going to keep using the Cedar berries, too."

"Why bother, if they aren't going to do you any good?" asked Dr. Christopher.

"It's an amazing thing," said the man, "but since I've been using them, I don't have to take as much insulin."

Dr. Christopher asked further into the effects of the berries. He asked the man to take six berries three times a day and to report his results.

After a few months, the man didn't have to use any insulin at all. From being a typical diabetic, dependent on insulin to monitor his blood sugar, he had to use no insulin at all. [NL 6-4]

## Pre-Natal Tea

Prenatal Formula

### Usages:

Using this tea (or two or three capsules) morning and evening is an aid in giving elasticity to the pelvic and vaginal area and strengthening the reproductive organs for easier delivery. Should be used only in the last six weeks before time of birth. [EWH p.11]

### Dosages:

Using this tea (or two or three capsules) morning and evening. Should be used only in the last six weeks before time of birth. [HHH p.193]

### Ingredients:

 Squaw vine holy thistle black cohosh pennyroyal false unicorn raspberry leaves lobelia

### Testimonials:

1. Much Easier Second Delivery: We have had, just recently, a report come to us about a young mother-to-be for the second time who had never heard of the "pre-natal combination" [Pre-Natal Tea] and her previous labor was very severe (lasted around 30 hours). After she became pregnant the second time she heard about this pre-natal combination, so got some, used it the last week before delivery, and cut the labor time down to about four hours. She just recently had her third baby with a very short labor and more ease than she had dreamed possible, after using the pre-natal formula for the last six weeks. Many people believe the change from difficult to easy delivery results from using red raspberry leaf tea (and squaw vine tea) throughout the nine months of pregnancy and using the pre-natal combination during the last six weeks. Of course, one of the main reasons one can have a healthy baby is when the mother is faithful with the mucusless diet and the three-day cleanse. This cleanse should be used at least once each month during pregnancy as well as later (during the time of lactation). [EWH p.11]
2. Breech Baby Turns: A naturopathic physician told this story at one of Dr. Christopher's lectures. He had had a patient for three pregnancies. Two times she had carried the baby breech,

and the doctors had taken them Caesarean. The third time, she happened to be carrying the baby breech, the same pattern as before, and she expected she would have to be operated on again. She began to take Dr. Christopher's pre-natal formula [Pre-Natal Tea] and began to assure herself that the baby would be born normally. The doctor said that it was impossible; no matter how good the formula is, it cannot work. When labor began, the baby was still in the breech position. The doctor said to put the lady on the table to prepare to operate, but she said, "No, when it's ready to come, it will turn and come out right." The doctor said, "That's ridiculous!" He had put on one rubber glove; the lady screamed, "Here it comes!" Before the doctor got the other rubber glove on, the baby came, head first, having previously flipped over. He had to catch it with one hand while the nurse was putting on the other glove. The doctor confided to this naturopath that he thought this could never happen. But with the use of the prenatal tea the baby came out normal. [EWH p.77]

## PreTrac™

Detoxification and Transition Herbal Formula

---

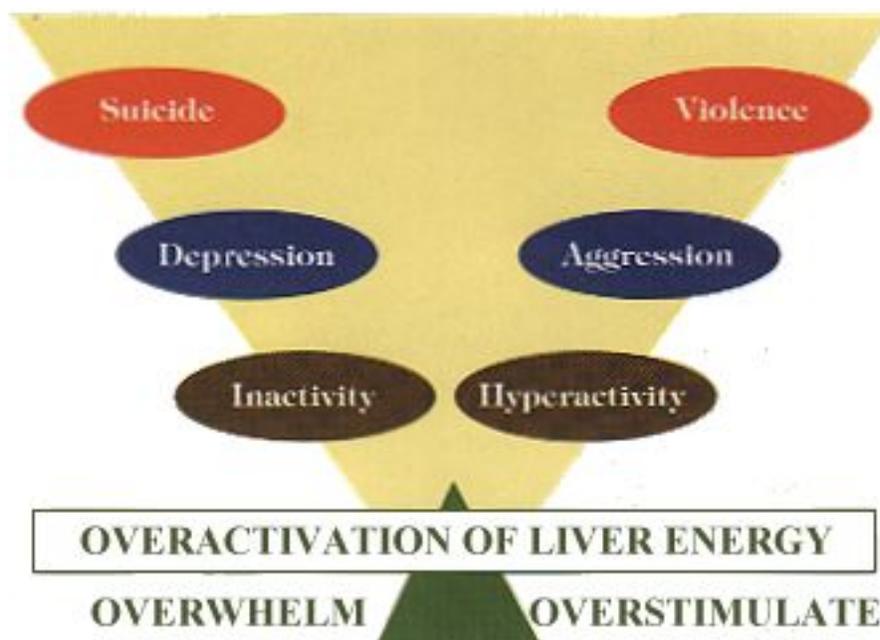

Balances the negative extremes in the body with herbs to cleanse, nourish, stimulate and calm your mind during the chemical detoxification process.

## Choose to go Natural

PreTrac™ aids in chemical detoxification.

The currently accepted therapy for "chemical imbalance" is to prescribe more chemicals. These drugs can cause negative side effects for children and adults - in both the short and long-term.

Two organs for detoxification, the liver and kidneys, are already working as hard as they can to keep up with the daily burden. *Why add to the Problem?* To overstimulate can result in an overload. Below is a behavioral spectrum depicting over-activated liver energy:

[Cayenne](#)[CC](#)[Changease](#)[Chickweed Ointment](#)[CMM](#)[Comfrey-Mullein-Garlic](#)[CSK](#)[CSR](#)[Deep Heating Balm](#)[DRI](#)[Ephedratean](#)[False Unicorn & Lobelia](#)[Fen LB](#)[Garlic, Rosehips, and Parsley](#)[Hawthorn Berry Syrup](#)[Herbal Composition](#)[Herbal Cough](#)[Herbal Eyebright](#)[Herbal Tooth Powder](#)[Immucalm](#)

PreTrac is for use before [MindTrac™](#). PreTrac is for the transition process of detoxification. Once the transition is complete, MindTrac is an alternative to drugs for emotional clarity. Usually, the detoxification process lasts one or two months, but each individual is different.

**The focus of PreTrac is to help the body eliminate toxins by supporting the efforts of detoxification. These toxins are accumulated not only from using prescription and/or recreational drugs, but also from the risk of living in a polluted environment.**

#### **Cleanses:**

The blood is our source of life, but it is also the root cause of all disease. Since the liver is the organ most responsible for cleaning the blood, PreTrac uses four herbs that act as tonics for the liver. Oregon Grape Root and Milk Thistle stimulate the liver in its effort to detoxify. Wild Yam Root supports both the liver and kidneys. Finally, Rosemary works as both liver cleanser and nervous calmate.

#### **Nourishes:**

Our life blood is our soil. It is our terrain. It is NOT our philosophy to eat inorganic multi-vitamins and minerals of "rocks". It is better to build a body with plants that grow from the rocks. For this reason, we include [JURASSIC GREEN](#), flash-dried and organically grown Alfalfa, Barley, and Kamut. This nutrient dense supplement nourishes our body with trace minerals, essential B vitamins, life-giving enzymes, and oxygen from the plant's equivalent to human blood - chlorophyll.

[INF Combo](#)[Juni-Pars](#)[Jurassic Green](#)[Kelp-T-Comb](#)[Kid-E-Mune](#)[Kid-E-Soothe](#)[Master GL](#)[Mem](#)[MindTrac™](#)[Mullein & Lobelia](#)[Nose Ointment](#)[Nu Fem](#)[Oil of Garlic](#)[Panc Tea](#)[Pre-Natal Tea](#) **PreTrac™**[Prospallate](#)[Red Clover Combination](#)[Relax-Eze](#)[Resp-Free](#)**Stimulates:**

To help sustain the body through a potentially tiring detoxification process, PreTrac includes two stimulating herbs, Korean Ginseng and Ginkgo Extract. Both of these activating ingredients promote increased circulation of blood and energy to the head and the body.

**Calms:**

To balance the stimulating herbs, PreTrac provides two calmative herbs, Rosemary and Scullcap. Both herbs act as sedatives and antispasmodics to relieve restlessness, anxiety, and nervousness - symptoms which commonly occur during drug withdrawal.

**Ingredients:** **Korean Ginseng** **Rosemary Leaves** **Ginkgo Extract** **Oregon Grape Root** **Milk Thistle Extract** **Wild Yam Root** **Scullcap** **Jurassic Green.**

*There are serious consequences to using or discontinuing prescription drugs. Withdrawal from psychiatric drugs should be done slowly and only with professional guidance.*

**Testimonials on MindTrac® & ProTrac®:**

1. "I've been carrying ProTrac® in the Herb Shop for a year. This is a wonderful product! It's packed full of herbs for nutrition and

[Sen Sei Balm](#)[Sha Tea](#)[Smoke Out](#)[ULC](#)[V.B.](#)[VF Syrup](#)[Vitalerbs](#)[Wild Lettuce and Valerian](#)[X-Ceptic](#)[Yellow Dock Combination](#)

calming. It has helped one lady's hyperactivity, a man with severe temperamental mood swings, and a customer to quit substance addiction. We call this our Herbal Prozac®. Thank you very much for ProTrac®." -T. Dawber, Charlotte Harbor, FL.

2. "I have an 8 year old child with Down's Syndrome who is very hyperactive. After only one week of taking ProTrac®, he is noticeably calmer and much more attentive than before. We are so happy and we are telling friends and family about ProTrac®." -Name Withheld, TX.

3. "After being diagnosed with Clinical Depression, I spent 1 1/2 years on antidepressant medication. It basically ruined my health and relationships with other people. After deciding the medication was the cause, I quit the drugs and began the healing process. I started taking ProTrac® and it really helped me. My mind cleared up. I started sleeping at night, and best of all, I feel like my normal self again." -B Pearson, UT.

4. A worried mother of a hyperactive 9 year old boy tried ProTrac® instead of Ritalin® as the doctor suggested. She could not believe that in only three days he was calmer, more relaxed, and able to focus on daily activities. He's even sleeping better! She is ecstatic to see his old personality return after two years of turmoil, and is introducing ProTrac® to her friends. -Delightful Foods Inc., Canada

## Prospallate

An Aid for the Prostate

---

### Usages:

1. In case of malfunction we suggest this combination to assist the male. This will dissolve the stones that are in the kidneys, as well as clean out other sedimentation and infection in the prostate. [HHH p.191]
2. To strengthen the reproductive system of the male take the Prostate Formula [Prospallate]. Both parents will benefit by the Hormone and Estrogen Formula [[Changease](#)]. Both parents should begin these detoxification procedures before conception. [NL 2-5]
3. Gonorrhea: [NL 3-10]

### Dosages:

Take two or more morning and night, with parsley tea when possible. [HHH p.191]

### Ingredients:

- Cayenne**
- ginger**
- golden seal root**
- gravel root or queen of the meadow root**
- juniper berries**
- marshmallow root**
- parsley root or herb**
- uva ursi leaves**
- siberian ginseng root**

### Testimonials:

Kidney and Prostate Problems: First, I want to thank you for making your herbs and combinations and knowledge available! My husband was suffering from kidney / prostate troubles and had gone to the urologist after the local P.A. was unable to help him. The urologist had him on a sepra which made his health seem to improve for a couple of weeks--then he had the same symptoms all over again and a lot worse. So much so, he stayed home from work for four days, sleeping and very uncomfortable. When he went back to the urologist and had x-rays they weren't able to find

anything, told him to go off the medicine and that the urologist felt he would just have to "live with it." He must of thought my husband was off upstairs or something, maybe.

So we went to the health food store for help. Through reading material and the lady there he started on distilled water and [Juni-Pars](#) and Prospallate. He is much better and has been able to do heavy work again. Thank you greatly. [NL 3-4]

## Red Clover Combination

### Blood Purifying Formula

#### Usages:

1. An Aid to Assist in Purifying the Blood Stream, same type formula as used by Hoxey for years [SNH p.527]
2. The blood stream is life itself and it is our job to keep it clean and pure so that we can have a good circulatory system for delivering food to the body properly and, in addition, to carry off the waste materials. [EWH p.195]
3. This herbal blood builder is made up of herbs that are cleansers, but also herbs that give astringency, others aid in removing cholesterol, kill infection, or build elasticity in the veins and to strengthen the vein and artery walls. [EWH p.195]
4. Acne and Boils: Dr. Christopher emphasized that we need to know the source of our problems. Perhaps our toxic condition begins with a poorly functioning bowel which should be taken care of with [Fen LB](#) the Lower Bowel Formula. But suppose a person has a case of boils or acne. The Red Clover combination should be used about three times a day, six days a week for six weeks. Then you can switch to another blood purifier such as burdock or chaparral or Brigham tea. Then switch back to the Red Clover combination. [UW-Red Clover]
5. Cancer: For many years Dr. Christopher taught that cancer is not an isolated problem in the body. If the cancer breaks out in a place where we have an old injury or a weakened portion in the body it only indicates that the cancer is in the bloodstream. It only accumulates, like a boil or an ulcer, in a weakened area and drains the poisons in the area. The medical profession cuts it out and says, "Well, the cancer's all gone!" The cancer breaks out in another place. The bloodstream must be cleaned. The Red Clover combination or even Red Clover alone has a powerful alternative effect to clean the bloodstream. [UW-Red Clover]
6. Rh Factor: See testimonial # 2.
7. A very fine herbal remedy for allergies, hay fever and sinus conditions. [HHH p.131]

#### Dosages:

1. General: These herbs are now in tablet form and the recommended adult daily use is two or three tablets three times in a day. It is suggested to take kelp or dulse tablets with these herbal blood purifying combinations as an additional aid. [SNH p.527]
2. Acne: In cases of acne, a six-week course of three cups of Red Clover tea a day, alternated with two weeks of burdock root tea, will bring good results in even the most stubborn cases. [UW-Red Clover]
3. Lupus: Lupus stems from a toxic condition in the system and we must attack the problem from several points: purifying the bowel, purifying the bloodstream, and maintaining a proper diet. To cleanse the bowel, the lower bowel tonic [Fen LB](#) is recommended in conjunction with a blood-purifying tea such as our Blood Purifying combination [Red Clover Combination]. This tea is made up of red clover blossoms, chaparral, licorice root, poke root, peach bark, Oregon grape root, stillingia, prickly ash bark, burdock root, and buckthorn bark. Drink one cup of tea three times a day or take two or three capsules of the combined herbs if you wish. In each cup of tea take six to ten drops of black walnut tincture. Three fifteen-grain chaparral tablets should also be taken along with the tea and tincture. [NL 1-4]
4. Renew the Body and Add Years to Life: A good blood purifier in teamwork with a bowel

cleansing and rebuilding formula makes a wonderful combination. These two, with a good mucusless diet, can renew the body and add years to a healthy life. [HHH p.182]

5. Use with Dr. Christopher's Lower Bowel Tonic: [[Fen LB](#)] Perhaps our toxic condition begins with a poorly functioning bowel which should be taken care of with the Lower Bowel Formula. But suppose a person has a case of boils or acne. The Red Clover combination should be used about three times a day, six days a week for six weeks. Then you can switch to another blood purifier such as burdock or chaparral or Brigham tea. Then switch back to the Red Clover combination. [UW-Red Clover]

6. Question to Dr. Christopher on Arthritis: Can something be done besides just working on the effect of arthritis? Can't something be done to eliminate arthritis instead of just bringing temporary relief of pain?

Answer: Yes. Many people have had permanent relief from arthritis, not just temporary. When we speak of arthritis we speak of a general term. Actually there are over forty different forms of this disease. They all stem back to a toxic condition of the body. The treatment of this condition must be from the point of reversing the cause by rebuilding the entire body to a higher non-toxic condition, as mentioned in the article on rebuilding and cleaning the bowel. It is inevitable that when an arthritic is badly constipated, the stiffness and pain are worse. The procedure is: (1) clean the bowel, and (2) detoxify the body by clearing the blood stream of poor blood, and have a good powerful flow of healthy blood coursing through the body to deliver food to the area and carry off toxic waste. This is done by using a good blood purifying tea, high in organic copper, such as Burdock Root, [Ephedra](#) (Brigham Tea), Chaparral, our arthritis formula [[AR-1](#)] and our Blood Purifying formula [Red Clover Combination] ...The tea should be used in proportions of one cup three times in a day, six days a week, week after week as needed to get relief, then continue on until no traces of this condition are evident. (Very important: always make herbal teas with distilled water!) It is best to change the type of tea each six weeks to another kind, then come back to a former one. The effect of this change of type of tea, we have found with patients over the years, has speeded up the process. To each cup of tea it is beneficial to add six to ten drops of tincture of Lobelia.

[Cayenne](#) should be used six days a week, each week of program. This herb is, as are the others, a food and not a drug. Work up to a teaspoon of Cayenne three times a day.

Apple cider vinegar and blackstrap molasses are also beneficial. Use a tablespoon of each in a glass of distilled water three times each day. Take a tablespoon or more of wheat germ oil three times a day.

Remember to drink no less than one gallon of pure steam-distilled water for a person 130 lbs. or over, every day (less or more, one ounce of distilled water to each pound the person weighs).

For severe and painful joints or areas, the use of the [Comfrey](#) combination tea is good (the same as was recommended for problems in questions 2 and 3 of this issue). The reaction on arthritis is this: the Oak Bark is an astringent and tones up the area, and it is also high in Potassium Chloride to keep the fibrin in motion and not allow further deposit accumulations. The Mullein and Lobelia [[Mullein & Lobelia](#)] work on the glands and lymph system to keep the area clear and ready to carry off unwanted debris; Wormwood relieves pain; the Scullcap keeps the spinal cord alert and working smoothly to assist in body motion; Comfrey Root is a cell proliferant, causing the good cells to grow rapidly and push off the dead cells and unwanted accumulations; Walnut Bark is high in iodide and is one of the few plants specific in clearing fungus and is extremely high in Potassium Chloride for the blood and lymph, Potassium Sulfate for skin and mucous membrane, and Potassium Phosphate for the brain and nerve food. The Gravel Root is a solvent to leach off the inorganic calcification (from tap water and processed foods, etc.) and make place for the organic calcium derived from the Comfrey, Oak Bark, and some of the other herbs used in this combination.

We use this formula [[BF & C](#)] as a fomentation over the painful areas, and if the case is severe, follow the fomentation procedure as outlined in "The [Incurables](#)." Some of this tea, a cup or more daily, is taken internally with good results.

To make the fomentation stronger simmer the strained tea down to 1/2 its original amount (called 3 power) or simmer down to 1/4 its original amount (called 7 power). If you wish to drink some of the concentrated tea, dilute it with distilled water. Drink a cup or more of this tea each day.

There are many other aids to help, but space does not allow more to be given to this subject.

[CSK](#)[CSR](#)[Deep Heating Balm](#)[DRI](#)[Ephedratean](#)[False Unicorn & Lobelia](#)[Fen LB](#)[Garlic, Rosehips, and Parsley](#)[Hawthorn Berry Syrup](#)[Herbal Composition](#)[Herbal Cough](#)[Herbal Eyebright](#)[Herbal Tooth Powder](#)[Immucalm](#)[INF Combo](#)[Juni-Pars](#)[Jurassic Green](#)[Kelp-T-Comb](#)[Kid-E-Mune](#)[Kid-E-Soothe](#)[Master GL](#)[Mem](#)[MindTrac™](#)[Mullein & Lobelia](#)[Nose Ointment](#)[Nu Fem](#)

[Oil of Garlic](#)[Panc Tea](#)[Pre-Natal Tea](#)[PreTrac™](#)[Prospallate](#) **Red Clover Combination**[Relax-Eze](#)[Resp-Free](#)[Sen Sei Balm](#)[Sha Tea](#)[Smoke Out](#)[ULC](#)[V.B.](#)[VF Syrup](#)[Vitalerbs](#)[Wild Lettuce and Valerian](#)[X-Ceptic](#)[Yellow Dock Combination](#)

Never use dry heat for arthritis, always use moist heat such as a hot water bottle wrapped with a damp towel, fomentations, etc. Dry heat solidifies the inorganic minerals into place, while moist heat aids in dispersing them. [NL 1-1]

7. Prostate Cancer: Prostate blockage of the flow of urine because of infection or cancer can be very serious --- even to the point of causing uremic poisoning within the body. The cause of enlargement of the prostate gland is the collection of mucus and sediment in the gland. Often the male hormones produced by the body are not enough to keep the prostate gland functioning well. The nitrates and nitrites in processed meats, hot dogs, baloney, and other cold cuts have a particularly important role in the formation of cancer of the prostate in the male. Before (or instead of) arriving at the decision to submit to the knife and have the prostate gland surgically removed, may we offer the following suggestions: In any form of cell-deterioration, the Red Clover Combination should be used to clean up the blood stream. Of course the bowel must be cleared up first and foremost. Then, as a specific aid to the prostate area the [Prostate formula known as [Prospallate](#)] has aided in removing infection, sediment and the like...These capsules can be taken in the morning and at night, and they are best taken with parsley tea. Change the diet to the mucusless diet, and drink plenty of distilled water and fruit and vegetable juices. Cancerous tumors have a very difficult time growing when there is the presence of organic potassium in the body, so the tinctures of black walnut or elderberry or any other foods high in potassium can be helpful here, providing that the bowel is in good condition so that proper assimilation can take place. The hormone and estrogen formula [[Changease](#)] will help the body produce the necessary hormones for proper functioning of the glands...Don't worry if the formula contains estrogens as well as hormones. The body will select the substances it needs and will discard the rest in a natural formula such as this. [NL 3-6]

8. Herpes is a result of toxic filth in the system so the blood stream should be kept clean by using the Red Clover Combination along with the avoidance of reinfestation by careful personal hygiene. [NL 3-10]

9. Breast Cancer: When there is any problem with the breast, and this should be noticed early, we use the fomentation of 3 parts mullein and one part lobelia [[Mullein & Lobelia](#)] over the affected area. It may be taken internally as well. Many Indian tribes have used a fomentation of poke root externally to draw out the cancer. As with all cancers, they begin in the blood stream and radiate out to other parts of the body where they are manifested. The Red Clover Combination can be used to purify the bloodstream, the nutrient transport system of the body. Cysts and tumors will not grow in an atmosphere where there is enough potassium. Elderberry tincture can be taken for potassium increase along with foods that are high in potassium. [NL 4-2]

10. An infection in the inner ear will affect a person's balance. Symptoms may include vertigo, dizziness, nausea, vomiting, loss of balance, etc. Inner ear diseases may occur because of diseased germs in the adjoining tissues of the body. In this case, the blood stream needs purification. The red clover combination is recommended. It is also necessary for all the eliminative channels to be functioning properly. [B & B Tincture](#) and [Oil of Garlic](#) should be used for inner ear problems. A fomentation of Bone, Flesh and Cartilage [[BF & C](#)] should be placed over the ears at night to repair and rebuild the delicate structures within the ear. [NL 4-6]

#### Ingredients:

**Red clover blossoms**

**chaparral**

**licorice root**

**poke root**

**peach leaves**

**Oregon grape root**

**stillingia**

**prickly ash bark**

**burdock root**

**buckthorn bark**

### Testimonials:

1. Many Have Same Formula: To keep the blood vessels healthy we must follow [Dr. John R. Christophers "Mucusless Diet"](#), including [Dr. John R. Christophers "Three Day Cleansing Program"](#) once a month. We can also use blood cleansing teas. One of the best is Red Clover. Dr. Christopher made it into a combination which is a superior blood cleanser and purifier. Dr. Christopher thought for years that he had an exclusive formula in his Red Clover combination. People with malfunctions of all kinds, including cancer, got excellent results using this combination. Eventually, one of the people using his combination went to the Hoxy Clinic just to see how the cancer was coming along and they were informed that Christopher's formula was almost identical to the Hoxy formula! Neither one knew that the other had the formula! Chief Sundance from Idaho Falls would chat with Dr. Christopher exchanging formulas, and during one of these conversations they found that they had the same blood purifying formula. Dr. Christopher said that the good Lord put it into various people's hands because each had different kinds of people coming to them. In this formula is featured Red Clover which is an alterative. Most of the other herbs in the formula are also alteratives, concentrating on certain organs of the body. [UW-Red Clover]

2. Rh Factor: A woman came to Dr. Christopher asking if he could help her with an Rh factor problem. She had had three children and each of them had to have a blood transfusion at birth because of the Rh incompatibility. In addition the woman had had open heart surgery so she had a serious Rh problem herself. The Doctor put her on the mucusless diet, the three-day cleanse and the Red Clover Combination. He didn't hear from her for a while, but a couple of years later at a lecture she walked up to the podium with a darling little baby in her arms. She just wanted to show Dr. Christopher the miracle baby who hadn't had to have his blood drained out of him and, although she had had the open heart surgery, she bore the baby just fine thanks to blood purification. [UW-Red Clover]

3. Cancer: A man at eighty years old was diagnosed with cancer throughout his body. The family gave him carrot and celery juice along with the blood cleansing formula [Red Clover Combination] in capsule form. They would alternate the carrot and celery juice with grape juice. In four months' time the doctors could not find any cancer cells. They didn't believe it was the same man. [UW-Red Clover]

4. Meat Eater Nearly Dies of Undulant Fever: For example, many years ago, I had a housecall to the residence of a well-known veterinarian in the city of Olympia, Washington. This man was sickly for years, but now he was helpless and bedridden. He had to be rolled on a sheet to even be turned over. This man had contracted undulant fever (Bang's disease in animal life) while working at the slaughter house, where he was a meat inspector. All he had to do for the past fourteen years was to inspect the carcasses of cattle, sheep, pigs, etc., and if they past inspection, he would "stamp" the "U.S. Stamp of Approval" on the visible skin of the meat. This man had picked up the undulant fever from some of the infected animals he had to reject. After a few years, this veterinarian's illness had become so serious that the government brought in special doctors to try to help him. There were numerous tests, and examinations, medicines and therapies, yet he still became worse.

Then he was told he had only a day or two at the most left to live, as there was nothing else to be done to help him.

When he called me, he said that an unorthodox "health doctor" seemed to be his "last chance" to get help in clearing up the undulant fever, because no other "known" program was offered that promised any results. This patient agreed to follow instructions which was that he drink at least a gallon of steam distilled water each day, take his lower bowel capsules [[Fen LB](#)] faithfully, also

drink the Red Clover Combination blood purifying tea faithfully and stay with the mucusless diet. Before too long, he experienced the feeling of the peristaltic action operation again in the bowel and a new feeling of life returning. Within six weeks, this man was out mowing his lawn, surprising friends who thought he would never leave his sick bed.

This experience shows how one could discontinue the use of meats, which had been used in such an abundance, and watch the body throw off disease by following a proper diet, using herbs, fruits, vegetables, grains, nuts and seeds. [NL 2-6]

5. **Skin Disease Worse than Psoriasis:** After a lecture, a woman came to ask Dr. Christopher to help her daughter, about fourteen years old, who tried to commit suicide. This girl required constant adult supervision to prevent her from harming herself. She had a skin disease diagnosed as being worse than psoriasis or anything else the doctors had seen. Scales covered her arms from the elbows down, her legs from the knees down, and her neck and face, with secondary bleeding. Having suffered with this for so many years, the girl could not attend school any longer, and was isolated at home. She gained tremendous excess weight, because in order to pacify herself, she would eat all day. Her mother called her a fat blob! And because she was getting worse and worse, she tried to kill herself.

As usual when presented with a difficult problem, Dr. Christopher offered a quick prayer, asking for guidance. The formula for the bone, flesh and cartilage combination [[BF & C](#)] came to him, step by step, and he told the woman to write it down. She wrote down all the herbs he mentioned, as well as the directions on how to put them together. She was to make a tea of six parts oak bark, three parts marshmallow root, three parts mullein herb, two parts wormwood, one part lobelia, one part skullcap, six parts comfrey root, three parts walnut bark (or leaves), and three parts gravel root. After soaking one ounce of the combined herbs in a pint of distilled water for four to six hours, she would simmer the mixture for thirty minutes, strain, and then simmer the liquid down to half its original volume. This could be made in larger amounts, whatever was needed. The mother would dip cotton flannel in this tea, or white cotton or wool stockings to cover the legs, with other long stockings to cover the arms. After covering all affected parts with these soaked cloths, she should wrap the arms and legs with plastic bags. This should remain on the girl all night, every night, until the morning. After a period of fresh air each day, the process would be repeated.

The mother tried this, and her daughter was very cooperative. The program began on a Tuesday, and although this disease had been worsening for many years, by Friday of that week all the scales had dropped off, and the skin was pink, healing.

After six months, when Dr. Christopher lectured in that city again, he learned that this young lady was back in high school, participating as a cheerleader, being very active. She was on the three-day cleanse and mucusless diet, as well as the red clover combination tea, the blood cleansers. Staying with this, she went from a large fat blob into a slender, well-shaped girl, overcoming her weight problem as well as the skin infection. [EWH p.11]

6. **Young Woman is Able to get Married:** Dr. Christopher told story after story about sick women he helped with simple remedies, simple treatments. For example, a man and his wife brought their daughter to Dr. Christopher's office in Salt Lake. This young lady was the sickest, saddest-looking person he had seen in a long while. She had met a young man who came to love her very much, and he wanted to marry her. But she refused, saying it wasn't fair to him, being in her condition, so anemic and sickly. He told her that he loved her enough to marry her and take care of her under any circumstances.

She was in a very serious condition, so they put her on the three-day cleanse and mucusless diet. She took extra cups of red clover combination tea, and drank a minimum of one pint of grape juice a day, chewing each mouthful. When she could, she took even more. She also ate plenty of raisins and grapes in addition to the juice. She used the yellow dock as a tea, and soon she began to show improvement. She exercised adequately, being careful not to overdo it, and changed her diet from mucus-forming food to the mucusless diet, having lots of salads and fruits, emphasizing as much raw as possible. She used the female corrective [[Nu Fem](#)] and hormone-estrogen formulas [[Changease](#)], and she also used the vaginal bolus [[V.B.](#)] and yellow-dock combination in the slant board routine. She showed improvement from the very beginning.

The parents had brought her to Dr. Christopher in the spring, and by fall they sent him an invitation to her wedding, because she had cleaned up her system and was very happy to get married. She was menstruating regularly and had gotten over her case of anemia. She was living a

new life, healing it herself by following through on Dr. Christopher's instructions. [EWH p.111]

7. **Woman's Multitude of Problems Healed:** Dr. Christopher always checked his patients with iridology before advising them. A lady came to him, aged about 45, asking for a reading to help with her condition. He saw that she had a prolapsed transverse colon which had dropped to a point where it tipped her uterus and pinched her bladder, and she was having a very serious trouble there. She had problems with the ovaries, with infection in both of them, and she was troubled with vaginal drainage. In addition, she had one breast that was badly infected, which might necessitate having part of the breast removed if she had asked another doctor for treatment. After the reading, Dr. Christopher asked why she had come to him and what she wanted him to do. She said that she had just spent three days in a clinic, where they had verified everything he had read from her irises, but they wanted her to go to the hospital immediately and have the uterus removed and the bladder stitched up to the spinal cord area, and also have her breast removed. She was frightened of all this cutting, so she wanted to find help in some other way.

She promised that she would stay on the program that Dr. Christopher advised. She took the female corrective [[Nu Fem](#)] and hormone-balancing combinations [[Changease](#)], used the vaginal bolus [[V.B.](#)] six nights a week, flushing out each morning with the slant board routine, massaging 15 to 20 minutes a day on the abdominal and pelvic area while the tea was inside. She was also to use the [Three Oil Massage](#) over the abdominal area, and go on the three-day cleanse and mucusless diet. In addition, she was to drink a gallon of steam-distilled water a day, and plenty of red raspberry leaf tea. She kept her bowels clean with the lower bowel formula [[Fen LB](#)], and kept the bloodstream cleaned up with the red clover combination tea.

Dr. Christopher did not see her again for six months. When she came to see him this time, she bounced in, not dragging as she had before, a totally different woman, much happier and healthier. She had no operations, and yet her prolapsed transverse colon had gone back into place, and her uterus and bladder had gone back into position. She was feeling like a new woman, and she did indeed have a new system by following through with the entire herbal problem. [EWH p.112]

8. **Woman Gets Rid of Addictions:** In Evanston, Wyoming, a lady came to see Dr. Christopher for help. She was a registered nurse in the Evanston General Hospital, but she was about to give up. She came to Christopher's as a last resort.

She had started out drinking coffee, and then went on to cigarettes, smoking very heavily. Soon she started to drink. She had become an alcoholic, but alcohol didn't feed the craving she was feeling, so she began taking heavy drugs. She knew that she was fairly well saturated and that it would be hard for her to stop. She had no other way to turn, and was afraid she would lose her job at the hospital because of the bad effects of all these things she'd been taking.

Dr. Christopher told her that the program would not be easy, that it would take time and patience. When he asked her if she would follow it, she said she would do anything they asked her to do.

First, she was to clean her bowels with the lower bowel tonic [[Fen LB](#)], and she was very badly constipated. Step two was the red clover combination tea to cleanse her blood stream, to get some of the toxic poisons and wastes from them. Then she was to stick strictly with the three-day cleanse and mucusless diet, going on the three-day cleanse at the beginning of every two weeks. After three months, she reduced the three-day cleanse to once monthly. She was to drink a gallon of steam-distilled water every day, and to stop the use of coffee, tea, tobacco, alcohol, and drugs. The withdrawal period was very terrible, but she went through it, and at the end of less than a year, she had blossomed out into a different person entirely, a likeable and enjoyable person who could keep her job as long as she liked, because people loved her. [EWH p.130]

9. **Seborrhea on Scalp and Face:** Question to Dr. Christopher in his Newsletter. Is there a natural way to treat seborrhea on the scalp and face? Answer: This condition indicates that the body must be cleansed from the inside out. Follow a good mucusless diet. Avoid all dairy products, bread, eggs, sugar, red meats & refined foods. Stick with fresh fruits and vegetables, grains nuts and seeds. Along with these dietary changes, use the [Fen LB](#) and Red Clover combination. Also use a facial skin brush. Be sure to drink distilled water, using about one ounce for every pound of body weight. [NL 4-10]

10. **Colitis and Fungus:** It's been a long time since I have written you and I feel that I must tell you that I have gotten rid of the colitis I had for years and the doctors diagnosed as a nervous stomach and prescribed tranquilizers, which of course I didn't take. At that time I came across an article

written by you, entitled, "Does Your Colon Feed or Poison You." I immediately started to take Red Clover Combination plus [\[Fen LB\]](#) it took about six months but it finally went. The pain was very bad but all I heard from doctors was "you have a nervous stomach." but I knew it had to be more than that. I thank GOD and you Dr. Christopher for cure that I have had due to that wonderful pamphlet that came my way, just when I needed it most.

Then the fungus that my husband gets when he goes into or near the woods, the Red Clover Combination plus [\[Black Walnut Tincture\]](#) 6-10 drops taken orally and that has helped him a great deal. We live in the woods so it's difficult not to pick up a condition of the fungus. However, it's not as bad as it was and again we say "Thank-You. [NL 4-11]

## Relax-Eze

Nerve Herbal Food Combination

### Usages:

Here is a formula we have used with great success for well over thirty years. It is used for relieving nervous tension and insomnia; it is mildly stimulating and yet lessens the irritability and excitement of the nervous system and also lessens or reduces pain. This formula contains herbs that feed and revitalize the motor nerve at the base of the skull (medulla area and upper cervicals), and also herbs that help rebuild or feed the spinal cord. This group of herbs will also rebuild the frayed nerve sheath, the nerve itself, and its capillaries. The herbs in this combination are food for your valuable--and in many cases, shattered-- nerves. [HHH p.187]

Dr. Christopher said that we usually bring on our nervous problems ourselves because the sheaths of the nerves have been worn or eaten away by the calcium having been leached off with the sugars that we take so much in beverages, candies, pastries and from the many breads that turn to sugar in the body. When the sheaths are thus worn off the nerves lose their energy and their power. It can be so bad that we wind up in the asylum. Dr. Christopher said that when we find ourselves becoming nervous wrecks, we wonder why the Lord has done this to us! The nerves become so frayed that they become like uninsulated electric wires, finally shorting out and that is what causes our nervous problems. When there is a stressful argument, our nerves cannot take the load and give out. Dr. Christopher said that we have to feed the nerves. They are usually robbed of the foods that they need. Dr. Christopher's *Relax-Eze* formula was a specific herbal food to rebuild the nerves. [UW-Valerian]

### Dosages:

The suggested amount for an adult's use would be one to three cups of the tea, or two or three capsules or tablets three times in a day, taken with a cup of celery juice or steam-distilled water. [HHH p.187]

### Ingredients:

 **Black cohosh** **capsicum** **hops flowers** **lobelia** **skullcap** **valerian** **wood betony**

## mistletoe

[CSK](#)[CSR](#)[Deep Heating Balm](#)[DRI](#)[Ephedratean](#)[False Unicorn & Lobelia](#)[Fen LB](#)[Garlic, Rosehips, and Parsley](#)[Hawthorn Berry Syrup](#)[Herbal Composition](#)[Herbal Cough](#)[Herbal Eyebright](#)[Herbal Tooth Powder](#)[Immucalm](#)[INF Combo](#)[Juni-Pars](#)[Jurassic Green](#)[Kelp-T-Comb](#)[Kid-E-Mune](#)[Kid-E-Soothe](#)[Master GL](#)[Mem](#)[MindTrac™](#)[Mullein & Lobelia](#)[Nose Ointment](#)[Nu Fem](#)**Testimonials:**

1. Woman Who Can't Sleep More than 30 Minutes at a Time Sleeps All Night: Dr. Christopher often told the story of the high school teacher who couldn't sleep more than twenty or thirty minutes at a time. The family was ready to commit her to an asylum and she was nearly ready to go. Her students couldn't put up with her explosions either. The husband called Dr. Christopher for help and he prepared his *Relax-Eze* Tea for her, which contains Skullcap in combination with other nervine herbs. She began to feel drowsy and went to bed. Dr. Christopher didn't wait at the home, but left. The next morning the man called Dr. Christopher, sure that he had doped his wife with narcotics, as she had slept the whole night through. The Doctor assured him that he had only given her herbs, mild enough to give a little baby. The Skullcap and other herbs works remarkably on a distraught system. [UW-Skullcap]

2. Epilepsy; A young boy with epilepsy was taken to Dr. Christopher, as his well-to-do parents had exhausted the medical profession's ability to treat the boy. With this formula he was made better and able to join his age mates in school without difficulty. [UW-Skullcap]

3. [Vertigo](#): From a question to Dr. Christopher in his Newsletter. Is there help for [Vertigo](#)? Answer: Yes, it can be helped.

This condition of vertigo is, to most people, a frightening condition....Vertigo is a sensation as if the external world were revolving around the patient (objective vertigo) or as if he himself were revolving in space (subjective vertigo). The term is sometimes erroneously used as a synonym for dizziness. Vertigo may result from disease of the middle ear (Menere's disease), from cardiac, gastric, or ocular disorders, from some peripheral irritations (as laryngeal vertigo) as a precursor on an epileptic fit, in hysteria, from toxemia (as [Bright's Disease](#)), from an organic brain disease, and from unrecognized causes (essential vertigo).

Use [B & B Tincture](#) as follows: place four to six drops of oil of garlic in the ear with our eyedropper and follow this with four to six drops of B & B in ear, then plug ear with cotton. Turn the other ear up and do the same as with first ear-plug this one also and leave in all night, or night and day if desired, and flush ears on the seventh day. This is done by using a small ear syringe and flush with warm apple cider vinegar and distilled water (half and half) then continue on. Apply garlic oil and [B & B Tincture](#) this same way week after week until desired effects are acquired.

Have the patient drink six to ten drops of the [B & B Tincture](#) three or more times a day. (This could be done each hour in severe cases.) Massage [B & B Tincture](#) on the cords back of the ears down the neck area and on the base of the skull (medulla area) several times a day.

The program as given above has aided many having problems with their equilibrium and locomotion. When more severe, in addition use the "bone, flesh and cartilage" [BF & C](#) formula over the skull area above eyes and ears area soaking and sponging out a cap made of flannel, cotton or wool and leave on the head area overnight, as before, six days a week, week after week until results are received. This fomentation should not only cover the skull area front and sides but also down the back to cover the medulla and down over the upper cervicals to cover the motor nerve area.

This type of a patient with vertigo should also use the nerve herbal food *Relax-Eze* combination. [NL 1-12]

## Resp-Free

Lungs & Respiratory Tract Formula

### Usages:

This combination of herbs in tea form or the powder in capsules or tablets is an aid to relieve irritation in the respiratory tract, lungs and bronchials. This is an aid in emphysema as well as other bronchial and lung congestions such as bronchitis, asthma, tuberculosis, etc. This formula is extremely valuable in strengthening and healing the entire respiratory tract. It promotes the discharge of mucus secretions from the broncho pulmonary passages. [HHH p.188]

Bronchitis: there are ways of clearing the condition up. This condition is the dilatation of bronchi due to an inflammatory or degeneration process; usually associated with chronic suppuration (the formation of pus). [NL 1-9]

### Dosages:

General: Suggested amount for an adult is a cup two or three times a day, or two or three capsules or tablets two or three times a day with a cup of comfrey tea. For additional help in the program, it is good to add three to six drops of tincture of lobelia to each cup of tea. [HHH p.188]

### Ingredients:

**comfrey leaves**

**mullein**

**chickweed**

**marshmallow root**

**lobelia**

### Testimonials:

I contracted T.B. at age 15 and now 30 years later, calcification has collapsed my left lung. I take dilation medication and need oxygen to sleep at night. I started Dr. Christopher's Lung Formula *Resp-Free* and it immediately started helping. It makes it so much easier to get out the mucus. P.S. It is also helping my brother-in-law who has emphysema. -O.R., San Antonio, TX [D. Christopher]

## Sha Tea

Allergies, Sinus and Hayfever Formula

### Usages:

This is an aid for clearing up these malfunctions, a "natural and herbal help" working as a decongestant and natural antihistamine to dry up the sinuses and expel from the head and broncho-pulmonary tubes and passages the offending stoppage and mucus. [HHH p.185]

### Dosages:

To speed up this cleansing procedure, use the following combination in addition to the above: blend fresh, chopped-up horseradish roots mixed with apple cider vinegar into a thick pulp and chew thoroughly before swallowing. Take 1/3 teaspoon three times in a day. Each three days increase this amount from 1/3 teaspoon up to one teaspoon, increasing the amount 1/3 teaspoon each three days. [HHH p.185]

### Ingredients:

 Brigham tea marshmallow root golden seal root chaparral burdock root parsley root lobelia cayenne

### Testimonials:

J.V. of Lafayette, LA had hives for years and the doctors haven't been able to help her. She has used the *Sha Tea* formula for 5 days and it cleared up. *Sha Tea* has also helped her granddaughter with the same thing. [D. Christopher]

Ulcer Formula

### Usages:

This formula is designed to sooth the discomforts caused from stomach ulcers. [HHH p.197]

### Dosages:

It should be taken with hops or camomile tea. Please note, to cure an ulcer, take three teaspoons of cayenne pepper per day. This cayenne may be mixed in water or tomato juice. It is recommended that you start with only 1/8 teaspoon three times a day, and then gradually work up to the one teaspoon three times a day. [HHH p.197]

### Ingredients:

V.B.

Herbal Bolus

**Usages:**

Here is another excellent aid for the woman (or rectal bolus for the man) who have problems in the reproductive areas. Boluses are made with healing herbs that (1) draw out the toxins and poisons, (2) aid (with herbal foods) in making the malfunctioning area healthy, so that cysts, tumors, and cancerous conditions will not have waste material to survive on or live in, because they are all scavengers. Herbalists have found that they will release and will be dispersed. Herbalists have found that some will come out through the orifices and others disperse into the blood stream and will be eliminated if the program is followed faithfully. (3) The bolus spreads its herbal influences widely from the vagina or bowel through the entire urinary and genital organs. [HHH p.191]

**Dosages:**

These herbs are all in powder form. Coconut butter should be melted down so that it will mix well with the herb powder. Mix a small quantity of this powder, and wet to pie dough consistency with coconut butter (which can be purchased from the drug store, health food store, or herb shop). Next, roll this mass between hands until you have a pencil-like bolus approximately the size of the middle finger and about inch-long pieces. Harden in a refrigerator. Then these are to be inserted into the vagina much the same as suppositories would be. It will be necessary to wear a sanitary napkin in order to hold the bolus up in the vagina (or rectum). Insert upon retiring and leave in all night, six nights a week. The coconut butter melts at body temperature, leaving only the herbs, and these are easy to douche out. The following morning use the Slant Board Combination and [Yellow Dock Combination](#). [HHH p.192]

**Ingredients:** squaw vine herbs slippery elm bark yellow dock root comfrey root marshmallow root chickweed herb golden seal root mullein leaves

1. Cervical Cancer: A young Englishwoman named Claire suffered from multiple sclerosis so severely that she was confined to a wheelchair. She began to use the mucusless diet, and was miraculously healed and able to walk and work vigorously. Five women, each suffering from cervical cancer, diagnosed by doctors, came to Claire asking for help. Using nutrition and the *V.B.* therapy, four of the cases were completely cleared and one was in remission. [EWH p.16]

2. Spider Cancer: Sometimes it takes time and patience for these herbal aids to truly work. For example, a lady who had come to Dr. Christopher began the full routine as described above. A number of months later she began to think, "Look, I have been on that program for months now; I have taken the herbs orally; I've used the vaginal bolus *V.B.*, including the yellow dock combination, and I am getting sick of this!" She felt somewhat better but didn't notice much change, so she was going to quit that day. That very morning she made the decision, as she was at home, sitting on the toilet. When she got up, she happened to turn around and glance into the bowl, and there was something about the size of a half dollar, with legs on it, swimming around in the water. This something had dropped out of her! She screamed, and her husband came in. They put it in a bottle and took it right over to the family doctor. He examined it under the microscope, and said he had never seen one of these whole like this, because they have to cut them out of a person. This was a spider cancer. They never give up and leave by themselves; usually they must be cut out. The doctor was amazed that it had come out of her. It had done so because her body was now so healthy that the spider cancer didn't have any waste materials to work on. When she saw that cancer, she vowed to continue the program, even if it took six months or years. Dr. Christopher reminded us that some people heal quickly, but sometimes it takes a long time. If we know we are on the right track, we should just continue. [EWH p.16]

3. Young Woman Able to Get Married: Dr. Christopher told story after story about sick women he helped with simple remedies, simple treatments. For example, a man and his wife brought their daughter to Dr. Christopher's office in Salt Lake. This young lady was the sickest, saddest-looking person he had seen in a long while. She had met a young man who came to love her very much, and he wanted to marry her. But she refused, saying it wasn't fair to him, being in her condition, so anemic and sickly. He told her that he loved her enough to marry her and take care of her under any circumstances.

She was in a very serious condition, so they put her on the three-day cleanse and mucusless diet. She took extra cups of red clover combination tea, and drank a minimum of one pint of grape juice a day, chewing each mouthful. When she could, she took even more. She also ate plenty of raisins and grapes in addition to the juice. She used the yellow dock as a tea, and soon she began to show improvement. She exercised adequately, being careful not to overdo it, and changed her diet from mucus-forming food to the mucusless diet, having lots of salads and fruits, emphasizing as much raw as possible. She used the female corrective [Nu Fem](#) and hormone-estrogen formulas [Changease](#), and she also used the vaginal bolus *V.B.* and [Yellow Dock Combination](#) in the slant board routine. She showed improvement from the very beginning.

The parents had brought her to Dr. Christopher in the spring, and by fall they sent him an invitation to her wedding, because she had cleaned up her system and was very happy to get married. She was menstruating regularly and had gotten over her case of anemia. She was living a new life, healing it herself by following through on Dr. Christopher's instructions. [EWH p.111]

Herbal Aid for Eliminating Intestinal Parasites (worms, etc.)

---

### Usages:

This combination is to act as a vermifuge (a combination that will cause expulsion of worms from the body) and/or a vermicide (herbal agent that destroys worms in the body). [HHH p.188]

### Dosages:

Recommended dosage is to take one teaspoon each morning and night for three days. On the fourth day drink one cup of senna and peppermint tea (1/2 and 1/2). Rest two days and repeat two more times. [HHH p.188]

### Ingredients:

**Wormwood**

**American wormseed**

**tame sage**

**fennel**

**male fern**

**papaya**

## Vitalerbs

Vitamin & Mineral Formula

Nature balanced, whole food vitamin and mineral supplement. This combination of Jurassic Green™, dandelion, kelp, purple dulce, spirulina, Irish moss, rose hips, beet, nutritional yeast, cayenne, blue violet, oatstraw, ginger barley and flash-dried wheat grass juices an organic source of vitamins and minerals that are easy to assimilate because they are whole foods.

### NATURE BALANCE VITAMINS & MINERALS

#### *Whole foods -vs- Vitamins*

Only whole foods can provide the energy needed to assist our bodies to reach optimum health.

Harvey and Marilyn Diamond, state in their book, Fit For Life, Far better than taking manufactured dolomite would be to sprinkle the mineral dolomite (like lime) in your garden, and then grow leafy green lettuce that will provide you with plenty of usable organic calcium!"<sup>1</sup>

According to Dr. Vicki G. Hufnagel, "We are just learning what harm they (vitamins) can do to a small embryo. Vitamins are drugs"<sup>2</sup>. Dr. Ralph C. Cinque, Ph.D says, "All vitamins and mineral supplements, because they are fractionated, are treated as toxic waste in the body."<sup>3</sup>

Vitalerbs is 100% whole foods, not fractionated.

Hundreds of studies have shown that our bodies need whole foods. Only whole foods can provide all the proper elements needed to assist in total health.

Since time began, herbs have been utilized for their nutritional value. We have combined some of earth's most beneficial, nutrient dense herbs into *Vitalerbs*.

To increase the potency of Vitalerbs, Jurassic Green™ (which consist of alfalfa, barley, and Kamut grass) has been added to the formula. These three ingredients are organically grown in nutrient dense soil, harvested at peak times, juiced, and instantly flash dried using a new process that keeps the temperature below 90 degrees, retaining live the vitamins, minerals, amino acids, and enzymes needed for good health.

So instead of taking a dead, fractionated vitamin that your body treats as waste - Take an all natural 100% whole vitamin and mineral food that will help you reach optimum health. Take *Vitalerbs*.

#### Ingredients:

## Wild Lettuce and Valerian

Minor Pain Formula

---

### Usages:

It is a natural sedative, quiet and soothing to the nerves. [HHH p.195]

The migraine-type headache that people often experience is due to the impaction of the transverse colon. Headache can often be alleviated by taking some tincture of *wild lettuce and valerian* or nervine herbs for pain. [NL 4-1]

The combination of *wild lettuce and valerian* root, used as a tincture, or capsules, can relieve headache, stress, neuralgia, etc. [NL 4-5]

### Dosages:

It is to be taken orally or massaged externally as relief of minor pain. [HHH p.195]

### Ingredients:

This is a tincture or tea consisting of *wild lettuce and valerian*. [HHH p.195]

## X-Ceptic

First Aid Formula

### Usages:

This tincture is good for infection, both externally or internally. [HHH p.196]

An excellent formula for pyorrhea is *X-ceptic*. [EWH p.140]

For wounds with the chance of infection, apply *X-ceptic*. [EWH p.159]

The herbal antiseptic tincture *X-Ceptic* is a certain cure for sore throat pain, but only very brave souls can tolerate the taste. [NL 4-5]

A toothache can be devastating. We have used ... a few drops of the herbal antiseptic tincture *X-Ceptic*. Of all the temporary treatments, the herbal antiseptic tincture works best...We have had cases where the toothache was dispelled after one application. [NL 4-5]

### Dosages:

Thrush: If your baby has thrush, which you can determine from white spots on the sides of the mouth, a white tongue, or soreness during nursing, you can try several remedies. Dip a Q-tip in *X-ceptic* and swab the area several times per day, then give raspberry tea in a bottle. [EWH p.94]

### Ingredients:

oak bark

golden seal root

garlic

comfrey

myrrh

capsicum

### Testimonials:

#### X-Ceptic Keeps Cold Germs at Bay

Brent came home one day with a sore throat and a cough after being around his brother who had a cold. He took one dropperful of X-Ceptic, and the next day he went to work feeling fine. Every time he would do something with his brother, he would start to feel sick, so he would come home and take another dose of X-Ceptic. After two weeks of this, his brother finally asked what was going on. "Every day your throat gets scratchy and you start to cough," he said, "but the next day you are perfectly fine. What is the deal?" Brent explained that he was taken an herbal formula called X-Ceptic to help combat infection. His brother had been taking over-the-counter medications, and had gone to see an allergist to get an antibiotic to take care of the sickness. He

was sick for almost a month! All Brent had to do was take a few dropperfuls of X-Ceptic, and he stayed perfectly healthy! His brother said that maybe he should go get a bottle of X-Ceptic to keep on hand.

### **Clear Skin an Unexpected Side Effect**

One morning I work up feeling absolutely horrible. I could tell I had some form of a cold/flu. As soon as I was able to manage getting up out of bed, I grabbed the bottle of X-Ceptic and started downing 1 dropperful every half an hour. The next morning I woke up feeling fine. I continued to take X-Ceptic for the next week, just for good measure. One day I realized that my skin had cleared up! I have been fighting with acne for years, using all kinds of different face washes and medications. And when I wasn't trying to do anything but get well enough to show up for work the next day, and I stumble into something that cleared my face up beautifully. Apparently, X-Ceptic works great to clear up bacterial infections causing acne. It's great to have something new to add to my acne fighting arsenal.

## Yellow Dock Combination

Prolapse Formula

### Usages:

1. As an aid in prolapsed uterus, bowel, or other organs, to assist in giving relief. [HHH p.192]
2. Pregnancy: If there is yeast infection and or Herpes Simplex before or during pregnancy, add to the [Nu Fem](#) and [Changease](#), the vaginal-rectal bolus combination [V.B.](#) and the slant board routine *Yellow Dock Combination* included herein. These are very beneficial and yet are harmless to the mother and child-to-be. [HHH p.7]
3. For the Father-To-Be: If his reproductive organs are in a good clean healthy condition the seed for conception will be an improvement over seed of questionable quality. The slant board routine *Yellow Dock Combination* following the rectal bolus [V.B.](#) at night will also, along with the prostate combination [Prospallate](#), proper mucusless diet and reproductive organ rebuilding will be an asset to the future family and another aid in preventing childhood diseases. [HHH p.8]
4. Fibroid Tumors: A question to Dr. Christopher in his newsletter. Is there a natural way to eliminate fibroid tumors?

Yes, there is. A tumor is a swelling, an abnormal formation of parasitic, non-inflammatory cells or tissue arising from the cells of the host, yet progressive and independent in their growth. Tumors can be malignant or non-malignant. They can be fast growing or slow growing and they can develop in many parts of the body such as the lymphatic glands or nodes, the urinary and genital areas or the abdominal structure. The cause of the tumors is an inability to eliminate unhealthy materials and this generally stems from a lack of organic potassium in the diet.

Begin by observing the procedure in [Dr. John R. Christophers "Three Day Cleansing Program"](#) and [Dr. John R. Christophers "Mucusless Diet"](#), keep the bowels free with the lower bowel tonic [Fen LB](#) and use the following procedure: drink one to three cups of potassium broth each day. Make the broth with potato peelings at least one half inch thick, comfrey leaves, celery leaves, cut-up celery stalks, a few carrot tops from the garden, not wild, beet greens, spinach greens, chopped onions and garlic and several whole, black peppercorns as a stimulant and digestant. Cover the mixture well with distilled water and slowly simmer. If possible, keep the temperature around 130 degrees for six to ten hours. Do not boil. After simmering, strain the preparation. Use this broth between meals as you might a tasty tea being sure to chew it well.

Besides using this broth we also suggest one cup or more per day of elderberry tea. If elder blossoms are being used for the tea in place of the berry add about a fourth part of peppermint leaves to avoid nausea.

Over the tumorous area use the comfrey combination also known as the [bone, flesh and cartilage combination](#). ...If the tumors are in the reproductive organs see the herbal combinations ...[Nu Fem](#), [Prospallate](#) and [Changease](#). Also, be aware of the rectal and vaginal bolus [V.B.](#) and the *yellow dock combination* tea also. Whenever possible use the castor oil fomentation which you will find in the cleanse program as well. [NL 1-3]

5. With severe gynecological problems involving infection, cysts, tumors, the herpes simplex, prolapsed transverse colon, tipped uterus, swollen glands under arms and on breast, yeast infection, etc., the vaginal and rectal bolus [V.B.](#) may be employed. We suggest using the slant board routine *Yellow Dock Combination*. [NL 1-3]
6. Pregnancy Anemia: Anemia may be caused by iron deficiency or other problems. Iron supplements are commonly given to expectant mothers, yet these are usually made of ferrous

[CSK](#)[CSR](#)[Deep Heating Balm](#)[DRI](#)[Ephedratean](#)[False Unicorn & Lobelia](#)[Fen LB](#)[Garlic, Rosehips, and Parsley](#)[Hawthorn Berry Syrup](#)[Herbal Composition](#)[Herbal Cough](#)[Herbal Eyebright](#)[Herbal Tooth Powder](#)[Immucalm](#)[INF Combo](#)[Juni-Pars](#)[Jurassic Green](#)[Kelp-T-Comb](#)[Kid-E-Mune](#)[Kid-E-Soothe](#)[Master GL](#)[Mem](#)[MindTrac™](#)[Mullein & Lobelia](#)[Nose Ointment](#)[Nu Fem](#)

sulphate and cannot be utilized by the body. Being inorganic, they are absorbed but not assimilated and can cause problems in the system. In addition, they destroy vitamin E that may be taken at the same time. You can build up the iron in your system by taking yellow dock or the *Yellow Dock Combination*. [EWH p.40]

### Dosages:

Make a concentrated tea (simmer finished tea down to half its amount) ... Then inject this tea with a syringe into the vagina while on a slant board (head down, of course), or use one cup or so into the rectum. This is to be used to flush out the vaginal/rectal bolus [V.B.](#) inserted the night before and to give nourishment to the cell structure within the area that can use this excellent herbal food for prolapses and/or hemorrhoid problems. Leave this liquid in the area as long as possible before voiding. Also, while lying on the slant board, knead and massage the pelvic and abdominal area to exercise the muscles, so the herbal tea (food) will be assimilated more readily.

The tea we have just given ... should be used orally as well. Drink one fourth of the concentrated tea in three-fourths cup of steam distilled water--three times a day. [NL 1-7]

### Ingredients:

white oak bark

comfrey leaves

yellow dock root

mullein herb

walnut leaves

marshmallow root

lobelia

### Testimonials:

1. Spider Cancer: Sometimes it takes time and patience for these herbal aids to truly work. For example, a lady who had come to Dr. Christopher began the full routine as described above. A number of months later she began to think, "Look, I have been on that program for months now; I have taken the herbs orally; I've used the vaginal bolus [V.B.](#), including the yellow dock combination, and I am getting sick of this!" She felt somewhat better but didn't notice much change, so she was going to quit that day. That very morning she made the decision, as she was at home, sitting on the toilet. When she got up, she happened to turn around and glance into the bowl, and there was something about the size of a half dollar, with legs on it, swimming around in the water. This something had dropped out of her! She screamed, and her husband came in. They put it in a bottle and took it right over to the family doctor. He examined it under the microscope, and said he had never seen one of these whole like this, because they have to cut them out of a person. This was a spider cancer. They never give up and leave by themselves; usually they must be cut out. The doctor was amazed that it had come out of her. It had done so because her body was now so healthy that the spider cancer didn't have any waste materials to work on. When she saw that cancer, she vowed to continue the program, even if it took six months or years. Dr. Christopher reminded us that some people heal quickly, but sometimes it takes a long time. If we know we are on the right track, we should just continue. [EWH p.16]
2. Young Woman is Able to Marry: Dr. Christopher told story after story about sick women he helped with simple remedies, simple treatments. For example, a man and his wife brought their daughter to Dr. Christopher's office in Salt Lake. This young lady was the sickest, saddest-looking person he had seen in a long while. She had met a young man who came to love

[Oil of Garlic](#)[Panc Tea](#)[Pre-Natal Tea](#)[PreTrac™](#)[Prospallate](#)[Red Clover Combination](#)[Relax-Eze](#)[Resp-Free](#)[Sen Sei Balm](#)[Sha Tea](#)[Smoke Out](#)[ULC](#)[V.B.](#)[VF Syrup](#)[Vitalerbs](#)[Wild Lettuce and Valerian](#)[X-Ceptic](#)[Yellow Dock Combination](#)

her very much, and he wanted to marry her. But she refused, saying it wasn't fair to him, being in her condition, so anemic and sickly. He told her that he loved her enough to marry her and take care of her under any circumstances.

She was in a very serious condition, so they put her on the three-day cleanse and mucusless diet. She took extra cups of [Red Clover Combination](#) tea, and drank a minimum of one pint of grape juice a day, chewing each mouthful. When she could, she took even more. She also ate plenty of raisins and grapes in addition to the juice. She used the *yellow dock* as a tea, and soon she began to show improvement. She exercised adequately, being careful not to overdo it, and changed her diet from mucus-forming food to the mucusless diet, having lots of salads and fruits, emphasizing as much raw as possible. She used the female corrective [Nu Fem](#) and hormone-estrogen formulas [Changease](#), and she also used the vaginal bolus [V.B.](#) and *yellow dock combination* in the slant board routine. She showed improvement from the very beginning.

The parents had brought her to Dr. Christopher in the spring, and by fall they sent him an invitation to her wedding, because she had cleaned up her system and was very happy to get married. She was menstruating regularly and had gotten over her case of anemia. She was living a new life, healing it herself by following through on Dr. Christopher's instructions. [EWH p.111]

3. Woman with Multiple Problems Healed: Dr. Christopher always checked his patients with iridology before advising them. A lady came to him, aged about 45, asking for a reading to help with her condition. He saw that she had a prolapsed transverse colon which had dropped to a point where it tipped her uterus and pinched her bladder, and she was having a very serious trouble there. She had problems with the ovaries, with infection in both of them, and she was troubled with vaginal drainage. In addition, she had one breast that was badly infected, which might necessitate having part of the breast removed if she had asked another doctor for treatment. After the reading, Dr. Christopher asked why she had come to him and what she wanted him to do. She said that she had just spent three days in a clinic, where they had verified everything he had read from her irises, but they wanted her to go to the hospital immediately and have the uterus removed and the bladder stitched up to the spinal cord area, and also have her breast removed. She was frightened of all this cutting, so she wanted to find help in some other way.

She promised that she would stay on the program that Dr. Christopher advised. She took the female corrective [Nu Fem](#) and hormone-balancing combinations [Changease](#), used the vaginal bolus [V.B.](#) six nights a week, flushing out each morning with the slant board routine *Yellow Dock Combination*, massaging 15 to 20 minutes a day on the abdominal and pelvic area while the tea was inside. She was also to use the [Three Oil Massage](#) over the abdominal area, and go on the three-day cleanse and mucusless diet. In addition, she was to drink a gallon of steam-distilled water a day, and plenty of red raspberry leaf tea. She kept her bowels clean with the lower bowel formula [Fen LB](#), and kept the bloodstream cleaned up with the [Red Clover Combination](#) tea.

Dr. Christopher did not see her again for six months. When she came to see him this time, she bounced in, not dragging as she had before, a totally different woman, much happier and healthier. She had no operations, and yet her prolapsed transverse colon had gone back into place, and her uterus and bladder had gone back into position. She was feeling like a new woman, and she did indeed have a new system by following through with the entire herbal problem. [EWH p.112]

## 1. Blood Pressure / Circulation

---

### **Definition:**

The pressure exerted by blood upon the walls of the arteries, depending upon the force of the heart beat, the elasticity of the vessel walls, the resistance of the capillary network and the volume and viscosity of the blood.

### **Herbal Combinations:**

[BPE](#), [Hawthorn Berry Syrup](#).

### **Recommendations:**

BPE; Take 2-3 capsules between meals. BPE Extract; 15 drops between meals. Hawthorn Berry Syrup; 1/2 teaspoon 3 times a day.

### **Single Herbs:**

Cayenne, Hawthorn Berries, Alfalfa, Garlic, Siberian Ginseng, Parsley.

### **Diet:**

Follow [Dr. John R. Christophers "Mucusless Diet"](#) and [Dr. John R. Christophers "Three Day Cleansing Program"](#). Drink carrot, beet and apple juice. Drink [Jurassic Green](#).

## 4. Bruises / Sprains / Tendonitis

---

### **Herbal Combinations:**

[BF & C](#), [BF & C Ointment](#), [Calc Tea](#), Deep Heating Balm.

### **Recommendations:**

BF&C; take 2 capsules three times a day. BF&C Fomentation; apply the fomentation to the effected area. BF&C Salve; apply salve to the effected area generously (use during the day instead of a fomentation). Calc Tea; take 2-3 capsules between meals. Calc Tea extract; take 15 drops between meals. Deep Heating Balm; rub in affected area as much as needed.

### **Single Herbs:**

Comfrey Root or Leaf, Dandelion Root, Alfalfa Leaves, Kelp, Cayenne, Horsetail Grass.

### **Diet:**

Take [Vitalerbs](#), eat carrots, apricots, spinach, drink rose hip tea. Avoid protein and starches

## 5. Colds / Flu

---

### **Definition:**

A disorder in the respiratory tract resulting from exposure with catarrh and invasion of microbial cleansers.

### **Symptoms:**

An inflammation of the upper respiratory tract, marked by an acute catarrhal condition of the nasal mucous membrane, a slight rise in the temperature, chilly sensations and general indisposition.

### **Herbal Combinations:**

[Garlic, Rosehips, and Parsley](#), [Herbal Composition](#), [Herbal Cough](#) (Cough Syrup), [Ant-Plg](#).

### **Recommendations:**

Garlic, Rosehips and Parsley; take 2 or more capsules 6 or more times a day.

### **Herbal Composition:**

Take 2-3 capsules between meals. Cough Syrup; take 1 teaspoon or more, as much as needed. Ant-Plg; as a tonic, 1 tablespoon a day; if there is infection, 1 tablespoon every hour. Ant-Plg extract; 15 drops or more as much as needed.

### **Single Herbs:**

Garlic, Red Raspberry Leaves, Parsley Leaves, White Willow Bark.

### **Diet:**

No food during the period or a juice fast using only apple juice or lemon and water. Drink Red Raspberry tea.

### **Also See:**

## 6. Cough

---

### **Definition and Symptoms:**

A sudden, violent expulsion of air from the lungs.

### **Herbal Combinations:**

[Resp-Free](#), [Herbal Cough](#) (Cough Syrup), [X-Ceptic](#).

### **Recommendations:**

Resp-Free; 2-3 capsules three or more times a day. Resp Free extract; 15 drops 3 or more times a day. Cough Syrup; take 1 teaspoon or more, as many times a day as needed. X-ceptic; a dropperfull as many times a day as needed.

### **Single Herbs:**

Garlic, Yarrow Flowers, Alfalfa Leaves, Chickweed Herb, Cayenne.

### **Diet:**

Raw fruit and distilled water or juice fast for few days. Brewer yeast.

## 8. Digestion

---

### **Herbal Combinations:**

[Herbal Composition](#), [Barberry LG](#), [AT-GS](#).

### **Recommendations:**

Herbal Composition; take 2-3 capsules between meals. Barberry LG; take 1 -2 capsules 15-20 minutes between meals. Barberry LG extract; a dropperfull 1/2 hour before meals.

### **Single Herbs:**

Papaya Leaves, Fennel, Catnip, Comfrey Leaves, Chamomile Flowers.

### **Diet:**

Eat slow and chew foods, relax at eating time. Follow [Dr. John R. Christophers "Mucusless Diet"](#).

## 9. Diuretic / Water Retention

---

### **Symptoms:**

Abnormal and excessive accumulation of lymph fluid in the body tissues. Often accompanied by swelling, scanty urine, poor appetite, sluggishness, and debility. The swelling usually occurs in the feet and ankles and proceeds up the legs towards the abdomen.

### **Herbal Combinations:**

[Juni-Pars](#), [CSK](#).

### **Recommendations:**

Juni Pars; take 2 capsules mornings and nights. Juni Pars extract; 15 drops two times a day. CSK; take 2-3 capsules mornings and nights.

### **Single Herbs:**

Parsley, Juniper Berries, Marshmallow Root, Dandelion Root, Kelp, Garlic, Alfalfa Leaves.

### **Diet:**

Follow [Dr. John R. Christophers "Mucusless Diet"](#), eat watermelon juice and seeds. It is very important to avoid soft drinks.

## 10. Earache

---

### **Definition:**

Pain or aching in the ear.

### **Symptoms:**

Little babies rubbing and pulling on their ears.

### **Herbal Combinations:**

[Oil of Garlic](#), [B & B Tincture](#).

### **Recommendations:**

With an eardropper put 4-6 drops of Oil of Garlic and 4-6 drops of B&B into each ear, plug ear overnight with cotton, continue 6 days a week, or until condition clears up.

Drink orange or diluted lemon juice until infection and pain is gone.

## 11. Glands

---

### **Herbal Combinations:**

[Barberry LG](#), [INF Combo](#), [Mullein & Lobelia](#), [Adrenetone](#).

### **Recommendations:**

Barberry LG; take 1 -2 capsules 15-20 minutes before meals. Barberry LG extract; a dropperfull 1/2 hour before meals. INF; take 2 capsules three times a day. Mullein and Lobelia; take 2 capsules three times a day. Adrenetone; take 2-3 capsules between meals.

### **Diet:**

Follow [Dr. John R. Christophers "Mucusless Diet"](#) and [Dr. John R. Christophers "Three Day Cleansing Program"](#).

## 17. Insomnia

---

### **Definition and Symptoms:**

Repeated sleeplessness night after night.

### **Herbal Combinations:**

[Relax-Eze](#), Nit-e-Nite.

### **Recommendations:**

Relax Eze; take 2-3 capsules three times a day. Relax-Eze extract; take 15-30 drops three times a day. Nit-e-Nite; in a cup of tea three times a day.

### **Single Herbs:**

Valerian Root, Hops Flowers, Passion Flowers.

### **Advice:**

Walk in the grass barefoot to induce sleep.

## 18. High / Low Blood Sugar

---

### **Herbal Combinations:**

[Panc Tea](#), [Barberry LG](#), [Adrenetone](#).

### **Recommendations:**

Panc Tea; take 2-3 capsules three times a day. Panc tea extract; take 15-30 drops three times a day. Barberry LG; take 1-2 capsules 15 to 20 minutes before meals. Barberry LG extract; a dropperfull 1/2 hour before meals. Adrenetone; take 2-3 capsules between meals.

### **Single Herbs:**

Cedar Berries, Garlic, Siberian Ginseng Root, Cayenne, Licorice Root, Golden Seal Root, Dong Quai Root.

### **Diet:**

Follow the [Dr. John R. Christophers "Mucusless Diet"](#) and [Dr. John R. Christophers "Extended Herbal Cleanse" Routine](#).

## 27. Skin Blemishes

---

### Herbal Combinations:

ACN Tea, [BF & C](#), [Barberry LG](#), [Red Clover Combination](#), [Changease](#).

### Recommendations:

ACN; Simmer this tea on 16 oz of distilled water for 10 minutes. Pour onto chamomile flowers, cover and let it cool. Wash your face with this tea. The remaining tea add honey and drink. BF&C; take 1 -2 capsules between meals. Barberry LG; take 1 -2 capsules 15-20 minutes before meals. Barberry LG extract; one dropperfull 1/2 hour before meals. Red Clover Combination; take 2 capsules three times a day. Red Clover Combination extract; take 5-15 drops three times a day. Changease; take 2-3 capsules between meals. Changease extract; 5-30 drops between meals.

### Single Herbs:

Burdock Root, Dandelion Root, Echinacea Aug. Root, Kelp, Alfalfa Leaves.

### Diet:

Follow [Dr. John R. Christophers "Mucusless Diet"](#), [Dr. John R. Christophers "Three Day Cleansing Program"](#) and [Dr. John R. Christophers "Extended Herbal Cleanse" Routine](#).

## 28. Stiffness / Aching Joints

---

### **Herbal Combinations:**

[AR-1](#), [AR#2](#), [BF & C Ointment](#), Deep Heating Balm, Arthritic Liniment.

### **Recommendations:**

AR-1; take 3 capsules three times a day with a cup of Brigham Tea. AR#2; a teaspoon in a cup of hot distilled water. Take as much as needed. BF&C ointment; use as much as needed topically. Deep Heating Balm; apply after BF&C ointment for better penetration. Arthritic Liniment; apply externally on painfull area.

### **Single Herbs:**

Devil's Claw, Chaparral Leaves, Brigham Tea, Black Cohosh Root, Comfrey.

### **Diet:**

Follow [Dr. John R. Christophers "Mucusless Diet"](#), and [Dr. John R. Christophers "Three Day Cleansing Program"](#).

## 29. Tiredness / Lack of Energy

---

### **Herbal Combinations:**

[Bee Power](#), [Adrenetone](#), [Barberry LG](#), [Vitalerbs](#), [Panc Tea](#). Follow [Dr. John R. Christophers](#) "[Extended Herbal Cleanse](#)" Routine.

### **Recommendations:**

Bee Power; take 3 capsules three times a day during meals. Adrenetone; take 2-3 capsules between meals. Barberry LG; take 1 -2 capsules 15 to 20 minutes before meals. Barberry LG extract; 1 dropperfull 1/2 hour before meals. Vitalerbs; take 2-6 capsules three times a day. Panc tea; take 2-3 capsules three times a day. Panc tea extract; take 15-30 drops three times a day.

### **Single Herbs:**

Cayenne, Yellow Dock Root, Siberian or Korean Ginseng Root, Licorice Root, Garlic.

## Disclaimer, Biological Individuality, Important Notice

---

### **DISCLAIMER**

In the event the reader of this volume uses the information without the approval of a health care provider, he/she is prescribing for himself/herself and assuming full responsibility for it. This is his/her right to do so, but Herbal Legacy.com assumes no responsibility for his/her actions.

### **BIOLOGICAL INDIVIDUALITY**

It should not be misconstrued to mean, imply or indicate that the product or programs described here will cure anything, as no such claims are made. Only the body can heal itself. These nutritional suggestions are not offered as a cure, rather, as aids to the body in reestablishing normal functions. The human body is very complex. Although each person is similar in general structure and function, each is also uniquely different, responding differently to similar stimuli, therapies and conditions. What may help one person in a certain circumstance or condition, may not help another. This is also true with foods. A particular food that may be nourishing to a healthy person may cause an allergic reaction in another. Each condition may also be unique. Although thousands have had help from the natural methods described here, there have been and will be cases where destructive pathological changes are so severe, and the bodies own healing mechanisms so weakened, that the process of healing could be an extended process. Persevere, and your hard work will be amply rewarded.

### **IMPORTANT NOTICE**

Herbal Legacy.com does not diagnose or prescribe. It is not the purpose of Herbal Legacy.com to replace the services of your health care provider.

We offer this information and suggested programs to those who want to, and are willing to share responsibility for their own health with their health care provider.

Even though none of the products mentioned at Herbal Legacy.com contain drugs, you should use them only as directed by your health care provider. Do not self-diagnose.

Do not attempt to treat yourself for any serious condition. Consult your health care provider. Show him or her this material and undertake a program of treatment under supervision. However, if your health care provider says that nutrition is not important and attempts to treat you only with drugs, we suggest that you obtain a second opinion from a diet conscience health care provider who is more aware of the natural methods of biological medicine, because after all, it is your health!

## Dr. John R. Christophers "Anti-Plague Formula"

---

Dr. John R. Christopher received the following formula while prayerfully seeking to answer a question posed to him during a lecture in Snowflake, AZ. The topic was on the plagues prophesied in the last days and the question was whether there was an herbal formula that could counter the plagues. Inspired with this formula, Dr. Christopher said to prepare gallons of it to assist family and neighbors. Three months after the lecture, Dr. Christopher received a phone call reporting that the Snowflake area was hit by a very hard flu that took the life of some children, but that this formula restored the health of all who used it.

### Instructions for the Anti-Plague Formula:

Make a coarse blend of garlic in apple cider vinegar and store it in a dark, cool place for four days. Filter the blend in cotton, muslin cloth and squeeze out as much garlic juice as possible.

Ultimately you will use **8 parts of apple cider vinegar** and **2 parts fresh garlic juice**, so use enough garlic to obtain your proportion and record the amount of vinegar used as part of its proportion and to calculate the amount of garlic juice expressed (2 to 3 pounds of garlic is a good range to use for one gallon of Anti-Plague). It takes approximately 1 pound of garlic to extract 8 oz. of juice.

Make a seventh power, distilled water decoction of each of the following herbs. Each herb should be prepared *separately*.

- 2 parts Comfrey root decoction**
- 1 part Wormwood herb decoction**
- 1 part Lobelia herb or seed decoction**
- 1 part Marshmallow root decoction**
- 1 part White Oak bark decoction**
- 1 part Black Walnut bark or husk decoction**
- 1 part Mullein leaf decoction**
- 1 part Skullcap leaf decoction**
- 1 part Uva-Ursi leaf, hydrangea, or gravel root decoction**

If you consider one part of the formula to equal 4 ounces of solution you will produce approximately three and  $\frac{3}{4}$  quarts of finished product. For one part herbs, according to this ratio, soak 4 ounces of the herb for four hours or more in enough distilled water to cover it completely.

After soaking, add enough distilled water to bring the amount of solution to 16 ounces. Simmer the herbal solution over very low heat in a covered pan for thirty minutes. Strain the liquid into a

clean pan and reduce the amount of liquid to  $\frac{1}{4}$  (4 oz. for the one part herbs) by simmering uncovered over very low heat. Set each aside till all are prepared (refrigerate if not completed on the same day).

Warm to liquid state: **5 parts unfiltered, raw honey** and **5 parts U.S.P. grade vegetable glycerine** and the remainder of the vinegar and then add all your decoctions, mix well, let cool and store in dark bottles. Refrigerate for long term storage.

## Dr. John R. Christophers "Carrot, Citrus & Grape Cleanse"

---

### **Carrot Juice Therapy.**

Follow the same procedure as you would with the apple juice therapy.

### **Citrus Juice Therapy.**

This is best for those who live in a citrus belt region. Prepare the juice fresh in the following proportions; four to six grapefruit, two to three lemons, and enough oranges to complete a total mixture of two quarts. Dilute using two quarts of distilled water, making one gallon of citrus juice mixture. Proceed as in the apple juice therapy.

### **Grape Juice Therapy.**

Use only unsweetened grape juice containing no additives. Do not use frozen concentrate (it has been cooked). Use fresh grape juice, if possible. Proceed as in the apple juice therapy.

If nothing were done to replace something in volume equal to the quantity of matter eliminated in the body, then the body would naturally be dehydrated. Therefore, by drinking fruit juices, we replace the toxic or acrid material removed. This procedure should have an alkaline reaction on our system.

There are various types of juice therapies-apple, carrot, grape, citrus, tomato, etc.- but only use the one chosen juice for the three days, and swish each mouthful thoroughly, (called chewing), so the saliva will mix with it; therefore our bodies can get all the nutrition and healing value from it.

Do not eat anything during the three day cleanse, although if very hungry towards evening, you may take some celery. When using apple juice, an apple or two is acceptable. With carrot juice, use carrots, and so on and so forth.

Apples are one of the greatest herbs and blood purifiers known. This is why most prefer to use apple juice. Fresh apple juice is best, if obtainable, otherwise buy any bottled apple juice that has no preservatives or additives.

## Dr. John R. Christophers "Cold Sheet Treatment"

Excerpt taken from [The Cold Sheet Treatment](#) by Dr. John R. Christopher

---

To do this program properly, you should have at least two people. This treatment takes time, and is best to do in the evening so your patient can sleep through the night after the treatment. It is wise to make all your preparations before you proceed with the Cold Sheet Treatment.

### Cold Sheet Treatment Preparations:

#### Iced Sheet

Take a large double sheet and soak in ice water.

#### Diaphoretic Tea

Prepare a gallon of diaphoretic tea. This can be any good sweating herb, preferably yarrow. But it can also be blessed thistle, chamomile, pleurisy root, boneset, thyme, Hyssop, garden sage, catnip, spearmint, or any other good, diaphoretic herb.

For one gallon:

**1 cup of diaphoretic herb**

**1 gallon or 4 liters distilled water**

**Preparation:** Pour boiling water over herbs, cover, allow to steep (not boil) in a warm place 30 minutes. Strain and sweeten with honey if desired. Keep warm until used.

#### Garlic Paste

To prepare a garlic paste for an adult, use 1 part garlic and 1 part petroleum jelly. Reduce the amount of garlic for a child or small infant to 1 part garlic to 3 parts petroleum jelly. For an adult, you will want about 1 cup of paste.

Crush or finely grate peeled garlic cloves. Blend with an equal amount of petroleum jelly.

#### Hot Bath

Fill a hot tub of hot water. Add to the water, according to your tolerance, one or all of the following diaphoretic herbs, ginger being the most mild, then dry mustard, with cayenne as the most stimulant. Use 1 ounce of each herb.

#### Bed with Plastic

Prepare a bed by placing a rubber or plastic sheet over the mattress, with a cotton sheet over it. Have several natural blankets on hand, such as wool or cotton.

#### Enema

## Literature

[Juice Cleanse](#)

[Cold Sheet](#)

[Extended Cleanse](#)

[Colonic](#)

[Incurables](#)

[Mucusless Diet](#)

[3 Day Cleanse](#)

[3 Oil Massage](#)

**4 tablespoons catnip, sage, or red raspberry cut or powdered herb**

**1 quart distilled water**

**Preparation:** Bring distilled water to a boil and pour over cut herb. Steep for 30 minutes. Strain the herb and set in refrigerator until tea is cool. Pour tea into enema bucket or bag. Lubricate the end of the enema hose to be inserted into the rectum.

### **Garlic Injection**

**1 cup apple cider vinegar**

**1 cup distilled water**

**3 or more cloves of garlic**

**Preparation:** Combine vinegar and water. Grate, squeeze through garlic press, or puree in blender 3 cloves of garlic until finely crushed. Blend in water and vinegar mixture. Put mixture into syringe and check flow. If flow is loose, add additional crushed garlic. Continue adding as much garlic as you can, making sure the mixture flows from syringe without clogging.

## **Cold Sheet Treatment:**

### **Step One: Cleansing Enema**

Give the patient an enema using catnip, sage, red raspberry or some other herb, but preferably catnip. You will want to administer this enema cold.

**Important Note:** Do not use enemas except in the case of emergencies.

### **Step Two: Garlic Injection**

In herbology an injection is never a needle; it is a syringe type application into an already existing orifice of the body, i.e. the rectum, ears, or nose. Insert the prepared injection into the rectum with a syringe. Use the full pint for an adult and less for a child. Have your patient retain the injection for as long as possible before voiding.

### **Step Three: Hydrotherapy**

After the patient has voided the garlic injection, help him or her into a hot bath prepared with diaphoretic herbs. Have the water as hot as your patient can possibly tolerate. Cayenne, dry mustard, and ginger will increase the perspiring of the patient by opening the pores wide.

### **Step Four: Diaphoretic tea**

Do not give cold drinks. Instead, give them cups of hot diaphoretic tea, such as yarrow or another type. You will want to stay with only one type of tea. Have your patient drink as much as possible. This will keep the patient from a dry fever. You should give them a cup to drink about every 10 to 15 minutes.

Your patient may get lightheaded and feel like fainting. If so, place a cold towel or washcloth on their forehead. Leave the patient in the hot bath as long as possible, at least 45 minutes (may reduce for a small infant). You will know when to get a child out when perspiration starts to bead up on the face. At this point, give them 10 to 15 more minutes.

When your patient is ready to leave the tub, you will need to lift him or her out, as they will be unable to support themselves. Fainting can occur when you pull the patient out of the bath. Keep a cayenne tincture on hand in case your patient goes into shock.

### **Step Five: Cold Sheet Therapy**

After you have helped the patient out of the bath, wrap the large double cotton sheet, dripping wet from being soaked in ice-cold water, around the standing patient. With just the head and the feet protruding, pin the sheet down the side. Help your patient into the prepared bed that has been covered with plastic and with a cotton sheet. Then place dry cotton sheet covers over the patient while they are still wrapped in the cold sheet. Add additional natural fiber blankets over the top of the sheet for warmth and to continue the sweating routine.

### **Step Six: Garlic Paste**

With your patient lying down in bed, thoroughly massage their feet from the ankles down with olive oil. Allow as much of this oil to be absorbed into the skin as possible, covering the soles, sides, and entire foot area. After you have massaged each foot, prepare a strip of cotton that is wide enough to cover the bottom of the foot with ½ inch of the garlic paste. When this is done, place the strip of cotton with the paste on the sole of the foot, then take a roll of two-inch gauze and gently wrap the foot to secure the strip of garlic to the foot. With this in place, gently pull over the foot and gauze bandage a large white cotton wool sock to hold everything in place.

Do not allow the paste to get up on the sides or on top of the foot. Put it only on the sole.

Put the bandaged feet back under the cold, wet sheet and pin the bottom of the sheet together so that the patient will be in a wet sack. You will want to use a large double sheet instead of small because it will allow your patient to roll or turn around without being too closely confined.

### **Step Seven: Sound Sleep**

In most cases, your patient will sleep soundly all night in the cold sheet. You do not have to worry about them wanting to get up to urinate because of the large amount of tea they drank.

While the body is in the cold, wet sheet, the subconscious mind will build an artificial fever to warm the body. From this incubation process, the patient's body will use the fluid from the ingested teas and accumulated moisture from their bath to warm the outside of their wet body.

While this is being done the body breaks loose old toxins, drugs and medicines, mucus and poisons which have accumulated and carries them out of the body through the sweating process.

Your patient will lie all night in a deep sleep, sweating out the poisons of their body.

When your patient wakes in the morning, they will be refreshed and invigorated from having such a thorough cleanse. The large, white sheet, which was wrapped around your patient, will no longer be wet. In addition, it should no longer be white. It will often be stained with toxic residue secreted out of the body during the night.

### **Step Eight: Sponge Bath**

After your patient awakes out of the deep sleep, take them out of the bed and sponge them down thoroughly with a warm mixture of 1 part apple cider vinegar and 1 part distilled water. You will probably want 1 quart of solution, so use approximately 1 pint of each. This removes any remaining toxic residue from the outer layers of the skin. It is very important that you do not leave toxic residue on the skin.

Put fresh clothing on the patient and fresh bedding on the bed. Now you will want your patient to go back to bed and relax for a while to regain their strength.

### **Step Nine: Juice Therapy**

Your patient should by this time have a desire for something to drink or to eat. This is a critical moment for your patient; what they eat will either retain or cause them to lose their health. They may even have cravings from the past. They may desire a steak, a full meal, processed beverages, ice cream, or other junk food. Do not respond to these desires. Instead give your patient fresh fruit or vegetable juices (juices from Dr. N.W. Walker's Fresh Vegetable and Fruit Juices or Wheat Grass drink in School of Natural Healing, pp. 610-614), or bottled fresh grape juice, apple juice, etc, with no additives. Each mouthful of juice should be swished or chewed thoroughly to mix it with the saliva for good assimilation. In addition, chewing your juice will prevent an unpleasant sugar reaction if your patient is hypoglycemic or diabetic.

Do not mix the patients juices. If a different juice is desired, wait at least one half hour before

using a different one. After a few hours, if your patient is very hungry, let them have a little ripe fresh fruit, but it must be chewed to a liquid before swallowing. During the day it is good for your patient to have as much distilled water as desired and some good herb teas. It is best to keep your patient on juice therapy for one to two days to allow thorough cleansing of the digestive organs before going into the [Mucusless diet](#).

### **Step Ten: Teaching Your Patient**

After a bad siege of body malfunction, it is wise to instruct the patient why they were in this condition, and what to do from this point on to prevent a reoccurrence of the disease. Your patient may get immediate relief from the Cold Sheet Treatment, but if they do not change their health habits, they will not be able to retain their health.

## Dr. John R. Christophers "Extended Herbal Cleanse" Routine

---

When dealing with long-standing health problems we cannot expect to totally cleanse or cure the body with one or more three-day cleansing routines. Therefore, to rid the body of chronic conditions or to prevent their occurrence, an extended herbal cleanse is an excellent path to follow. This should be used in conjunction with the aforementioned mucusless diet.

Upon arising take one or two capsules (more if needed!) of the lower bowel formula [[Fen LB](#)]. This would then be repeated one hour before lunch, and prior to retiring for the night. Also, twenty minutes before eating, take two capsules of the liver-gall bladder formula [[Barberry LG](#)], which would be repeated prior to each meal. Next on the program take two of the kidney-bladder formula capsules [[Juni-Pars](#)] mid-morning and also mid-afternoon.

Follow this routine six days, resting on the seventh. Resume taking the three herbal formulas the second week, adding two capsules of the blood purifying formula [[Red Clover Combination](#)] one hour after each meal. The one-week delay in adding the blood purifying formula is absolutely essential because of the extreme effectiveness of this formula. In the first week you are opening the eliminative channels of the body, allowing a pathway of elimination for the ensuing toxins loosened by the blood cleansing formula.

This procedure would then continue every week for six weeks, followed by one week of rest. Repeat these intervals for six months, then rest for one entire month. At the end of this seven-month program assess your progress and determine if another seven-month program would be beneficial.

## Dr. John R. Christophers "Herbal Home Colonic Program"

---

A sluggish bowel can retain pounds of old, toxic and poisonous fecal matter. Many times the real cause behind sickness and disease is this retention and reabsorption of this toxic waste.

The first step in anyone's health program should be stimulating, cleaning and toning all the elimination organs.

The bowel is the best place to begin:

### **Day #1 (step1):**

Start with one capsule of Intestinal Corrective Formula #1 during or just after dinner. This formula works best when mixed with food.

### **Day #2:**

This morning you should notice an increase in your bowel action and in the amount of fecal matter that you eliminate. The consistency should also be softer. If you do not notice any difference in your bowel behavior or the difference wasn't dramatic, then tonight increase your dosage to two capsules. You can continue to increase your dosage every evening by one capsule until you notice a dramatic difference in the way your bowel works. It has taken most of us years to create a sluggish bowel so lets be patient and only increase by one capsule each day.

By the end of week #1 you should know what your dosage is. If not, then remain on this formula for an additional week to get regulated before you go on to the next step.

### **Week #2 (step 2):**

At the beginning of week #2 start on the Intestinal Corrective Formula #2. Take this formula three times each day. Beginning in the morning one hour after breakfast, mix 1 rounded teaspoon of Intestinal Corrective #2 powder with 4 to 6 ounces of juice. Do the same 1/2 hour before lunch and 1/2 hour before dinner so that you are consuming a total of 3 rounded teaspoons each day.

During or after dinner take your Intestinal Corrective Formula #1 as usual but increase the dosage you discovered the first week by 1 additional pill. If you feel a bit bound by the #2 formula you can increase your dosage of the #1 formula even more.

### **Helpful Hints:**

Drink plenty of distilled water, herb teas and diluted fruit and vegetable juices during this two-week cleanse. A good amount is between 64 and 128 ounces (8-16cups) of liquid each day. This makes the program more effective.

## Dr. John R. Christophers "Incurables Program"

Excerpt taken from the booklet "Curing the Incurables" by Dr. John R. Christopher

---

The following suggestions are for a persisting, chronic condition, not an acute one requiring emergency treatments.

### First Week:

#### Food:

For the first week, drink as much fresh carrot juice as possible. Some people are satisfied with a quart while others need a gallon or more. Drink by chewing an eight-ounce glass or more each hour during the day for six days the first week.

Drink one cup or more of slippery elm gruel each day. The liquid can be as thin or thick as desired. With this herb, you take the powder and carefully mix it with enough water (preferably distilled) to form a paste because it does not mix easily. Then thin it to desired consistency by adding more water. A little honey can be added if preferred. In addition, drink one cup or more of comfrey leaf or root tea each day. Twenty minutes before or after drinking the juice, tea or gruel, drink as much steam-distilled water as desired.

#### Herbal Formulas:

One cup or more of the cell-building tea should be used for the rebuilding of cells in flesh, cartilage, and bones. Also, take one cup three times a day of Blood Purifying Combination.

Take the following every day with some liquid:

- Two or more #0 capsules of Lower Bowel Tonic three times a day. This is for regularity, as solids are not now cleansing the bowels.
- Two or more #0 capsules of Nervine Tonic three times a day. This formula contains herbal nervines.
- Two or more #0 capsules of Pancreas Combination, three times a day. This assists the lower bowel tonic.
- Two or more #0 capsules of Calcium Combination three times a day. This formula is a good source of organic, assimilable calcium.

#### Breathing with Depth:

Learn to breathe deeply, as it taught in yoga, to get the breath of life into the upper lobes of the lungs.

#### Clothing:

We should use only natural fibers for the clothes we wear and also for our bed covers. Never use synthetic cloth for straining herbal drinks or for fomentation's and bandaging. Use only natural fibers such as cotton, wool, linen, or silk.

#### Releasing Static Electricity:

## Literature

[Anti-Plague](#)

[Juice Cleanse](#)

[Cold Sheet](#)

[Extended Cleanse](#)

[Colonic](#)

[Incurables](#)

[Mucusless Diet](#)

[3 Day Cleanse](#)

[3 Oil Massage](#)

Walk or jog barefoot on the lawn to get rid of the static electricity in the body and to allow new electrical vibration to come from the atmosphere.

### **Three Oil Massage:**

For the first two days, massage the patient with castor oil, using a clockwise circular motion from the top of the head to the bottom of the feet, always working towards the heart. The next two days use olive oil, and the last two days of the week massage with wheat germ oil.

On the seventh day, rest the patient, using no foods, herbs, or juice, only steam-distilled water as much as is desired.

### **Sunbathe:**

Immediately after the massage, have the patient take a sunbath each day in the nude, not through glass but in direct sun. Only allow two minutes on the front and two minutes on the back the first day. Add two minutes front and back each day but no more. In six days you will be up to twelve minutes front and twelve minutes back. Do not sunbathe between eleven in the morning and one o'clock in the afternoon, that is, not at high noon. If it is a cloudy or cold day, use a sun lamp, but do not allow a burn.

### **Baths:**

Each day the patient should have a hot bath followed by a cold shower or cold bath. No soap should be used for the bath unless it is a good biodegradable cleanser. Each day before the bath, give a dry skin brushing (always towards the heart), using a natural bristle brush (not nylon).

### **Herbal Fomentation's:**

We use an herbal fomentation each night of the six days of the week. It should cover the head area (hair line), down the spine, all the way down to the end of the tailbone. Make a cap fit down to the ears (or use a cotton or wool skull cap) and stitch a flannel strip four-to-five inches wide down the back over the spine area. After wetting the fomentation cloth with the B & B formula and lightly wringing it out, cover it with a plastic over the head (shower cap, etc.) and a strip down the spine.

To aid the motor nerve and spinal cord, use the B & B formula, inserting with an eye dropper four to six drops of oil of garlic and four to six drops of this herb tincture into each ear six nights a week. Plug the ears with cotton overnight, and on the seventh day flush out the ears with half and half warm apple cider vinegar and distilled water. Repeat this each week during the program.

### **Zonal Foot Massage (Reflexology):**

If possible, use zonal therapy on the feet three times a week, leaving one day in between. Zonal therapy will greatly speed up the program.

## **Second Week:**

The second week will be the same as the first except, instead of fresh carrot juice, substitute apple juice. During this second week use the [Three Oil Massage](#), sunbaths, zonal therapy, fomentations, etc. With the sunbaths add two minutes front and back onto the final total of the last week.

On the day of the fast there may be some physical reactions because you have reached a cleansing cycle. This same cyclical reaction can happen in any healing program in the third week, the seventh week, seventh month, and seventh year. If a cleansing crisis happens at this time, be happy with it, as it shows the program is working well.

## **Third Week:**

Repeat the full program, except instead of carrot or apple juice use grape juice.

## **Fourth Week and On:**

Continue to rotate the three juices each week as before. If the patient desires more solid food, just add one solid meal each day. See the Mucusless Diet for meal guidelines.

Use no salt, sugar, eggs, meats, bread, milk, or milk products.

---

### **Case Histories:**

In Mesa, Arizona, a young man in his middle twenties was brought into our lecture hall in a wheel chair. He was badly crippled with a combination of polio and arthritis. He was lifted out of his chair and placed on a pile of pillows. Looking at him, you could see the severe pain he was suffering.

During the lecture we discussed the program we have just outlined. After the lecture, he said he would like to try it. A practical nurse from another town offered to take him into her home and help him get well.

They followed the routine accurately and one year later we saw him again. Just before the lecture started, in the same hall as the year before, this young man walked down the aisle to the front of the hall and asked to speak. We granted him permission. In his short talk he advised the people to listen to the lectures and put them to use. He described how just one year before he had listened to this lecture in the hall as he sat on pillows. He had gained the desire to start on this natural program. Prior to that night he had been told he would never be out of the wheelchair unless it was to be in a hospital bed the rest of his days.

With the help of the kind nurse, he was now able to walk so well that he was traveling on foot, house to house selling, to pay off his large hospital and doctors bills. As he walked back to his seat, he had tears of gratitude in his eyes.

A young man came to us with advanced curvature of the spine. He had been told that the case was so bad his back would have to be broken in several places to fuse it, but with no guarantees as to results. He tried our program, and in shortly over six months, he had a back that was straight and perfect. He had regained the three inches he had lost with the curvature and is now 6'6" as before his curvature. He could now go back to yoga and the sports, which he enjoyed.

### **Conclusion:**

There are many outstanding cases, but these two can give you a picture of what can be done by following the Incurables program. Use it carefully and accurately for complete, long-lasting health.

## Dr. John R. Christophers "Mucusless Diet"

---

The second step to healing the body is for an individual to eliminate the mucus-forming foods from the diet. Using this procedure, not only are the sinuses, the bronchi, and the lungs cleared but also the constipating mucus (catarrh) in the tissues of the body from the top of the head to the bottom of the feet.

If this diet is followed as outlined, we guarantee that after a short time you will have much more satisfaction from the foods we recommend, for better health, than you ever had from the food of your former diet.

Now, what can you eat?

### **The Do's:**

Any whole, live, raw foods. Fruits, vegetables, whole grains, nuts, seeds, and a small amount of fresh fish or chemical free chicken.

### **The Dont's:**

Salt, eggs, all refined sugars, meat, all milk products, flours and flour products.

Do not be concerned because this diet omits meat and the commercial types of protein and don't worry about adding protein, as you will get all that you need in these foods. The gorilla is built on the same order as the human being, and he gets all the protein he needs from just fruits, nuts and seeds.

The best food to start the day is fresh fruit or a good low heated whole grain. This should be a cereal in its wholesome state (with life in it). It can be prepared in a thermos bottle: Take a thermos bottle, fill in the early afternoon or evening one-third full of grain, then finish filling the thermos bottle with boiling water. Turn the thermos over two or three times to mix the grain and water. The next morning the grain is ready for consumption.

Sprouted grains are another excellent and nutritious food source. Alternate the grains. Almost any live seed or grain can be sprouted, find the one you like and enjoy.

Fruit and vegetable juices along with dried fruits are another wonderful source for this diet.

There are also thousands of salad combinations available, with some investigation and experimentation, you will never run short of interesting combinations. This diet can be challenging as well as rewarding. The health and wellness that will result from following this diet is reward enough.

For additional information and recipes, see Dr. Christopher's book. [Regenerative Diet](#). "To your good health!"

## Dr. John R. Christophers "Three Day Cleansing Program"

Excerpt taken from the [Three Day Cleanse and Mucusless Diet](#) by Dr. John R. Christopher

Supreme cleanliness is the first step toward a healthy body. Any accumulation or retention of morbid matter or waste of any kind within us will retard our progress towards recovery. The natural eliminative channels are the lungs, the pores of the skin, the kidneys, and the bowels.

The retention of body waste has an insidious effect on our health than is generally suspected, and its elimination is one of the first steps toward perceptible progress.

To begin the three day cleansing program, the individual is required to undergo three days of detoxification therapy, then proceed with the mucusless diet as is outlined hereafter:

First thing in the morning upon arising, drink 16 ounces or more of prune juice (unsweetened, if possible). The prune juice is not primarily to empty the bowels, which it will do, but rather to draw into the intestines from every part of the body such toxic matter or body waste as may be there, and eliminate it through the bowels.

After beginning with the sixteen ounces of prune juice, within one half hour take an eight ounce glass of undiluted apple juice. Swish each mouthful thoroughly (called chewing). Then, 30 minutes later drink a glass of plain water (preferably distilled), followed 30 minutes later with more apple juice. The general procedure is: 16 oz. of prune juice first thing in the morning, then, 8 oz. of apple juice 30 minutes later, and 8 oz. of distilled water after that; repeating the juice and distilled water each 30 minutes throughout the day. One gallon of apple juice is consumed each day for an average size adult, or one ounce per pound of body weight. (This of course is an approximate and suggested dosage, as age, ability to hold liquids, etc., determine the capacity for each specific case.)

Breaking up the mucus during the juice cleanse generally causes constipation throughout the three days. Use more prune juice or take [Dr. Christopher's Lower Bowel \(Colon\) Formula](#).

Repeat this detoxification for 3 consecutive days. Thus, approximately three gallons of mucus and catarrh will have been eliminated and will have been replaced by three gallons of juice. This has resulted in speeding up the re-alkalinizing of the system.

During the three-day cleanse, take one or two tablespoons of olive oil three times a day, to aid in lubricating bile and liver ducts, etc.

On the fourth and subsequent days, we begin taking vegetable and fruit juices, along with raw fruits and vegetables. Then follow the mucusless diet as close as possible.

Do not be concerned if you feel weak during or after this detoxification. Our bodies are using the energies for internal housecleaning, soon an increase of energy will occur as a result of a cleaner healthier body.

## Dr. John R. Christophers "Three Oil Massage"

---

For the first two days, massage the patient with castor oil, using a clockwise circular motion from the top of the head to the bottom of the feet, always working towards the heart. The next two days use olive oil, and the last two days of the week massage with wheat germ oil.

By using the skin as a filtering agent, the castor oil cleans and flushes the skin. It also goes into the blood stream, aiding in the removal of mucous and toxins from the inner body. The olive oil is a complete food itself and will penetrate into the body to feed and rebuild muscles, flesh, and the entire system. Wheat germ oil is a healing oil, high in vitamin E, valuable in rejuvenating the body.

On the seventh day, rest the patient, using no foods, herbs, or juice, only drinking steam-distilled water, as much as is desired.

## Fluoridation of our Water Supply

Utah and other areas of the world are currently debating putting Fluoride into the public drinking water. HerbalLegacy.com is all about educating the public and helping people to live a healthy lifestyle. We **DO NOT** believe that fluoridation of the public drinking water is a good idea. We don't want you to just take our word that it is unhealthy, you should look into it for your self.

After looking through these pages feel free to use your favorite search engine and see what other information you can find on your own and you will see why we don't support fluoridation.

The following pages is just a little information that we have put together so you may learn for yourself.

### [Newspaper Articles](#)

This section includes a few Newspaper Articles on the topic of Fluoridation. One is from our own Master Herbalist, David Christopher.

### [Letters](#)

This section has a handful of letters from various organizations and people on Fluoridation.

### [Professional Contacts](#)

This page was prepared by the Citizens for Safe Drinking Water - Utah and provides the names and contact information for some knowledgeable professionals.

### [Silicofluorides and Lead](#)

Here, we have some information on what the affects are of Fluoride on people and our children.

### [Populations that are Unusually Susceptible](#)

The title says it all.

### [Rejection of Water Fluoridation](#)

A list of places that have retracted fluoridation since 1990.

### [Fluoridation in Europe](#)

What are other countries doing?

### [A Little USA Geography](#)

Take a look at which Cities and States Fluoridate their water.

### [Fluoridation Links and Quotes](#)

Don't take our word about fluoridation, check out what others have to say about it. There are both pro-fluoridation and anti-fluoridation sites listed. We also have a few quotes we feel you might like.

### Almonnaise

A Perfectly Mucusless blender Mayonnaise!

#### Ingredients:

**1/2 cup whole raw almonds soaked in distilled water for 24 hours**

**1/2 cup distilled water**

**1 tsp nutritional yeast**

**1/4 tsp garlic powder (optional)**

**1/2 tsp sea salt or salt-free seasoning, such as kelp or Vegit**

**1-1 1/4 cups 100% expeller pressed safflower oil**

**3 Tbs. fresh squeezed lemon juice**

**1/2 t apple cider vinegar**

#### Directions:

1. Peel almonds. After soaking for 24 hours, peels should be easy to remove.
2. Place almonds in blender with 1/2 of water, blend until smooth, adding more water as necessary.
3. Stop blender and add any remaining water, yeast, garlic powder and sea salt. Blend until smooth and creamy.
4. Remove insert from top of blender. With blender running on low, drizzle oil in a thin stream until it suddenly becomes thick, somewhere between 1 and 1 1/4 cups.
5. Add lemon juice and vinegar, blend 1 minute longer until it reaches desired consistency.
6. Refrigerate tightly sealed, up to 10 days.

#### Note:

Occasionally blender mayonnaise will not thicken as expected. I have been making it for 3 years and had about 5 batches fail. The many times it was successful, however, made it well worth it.

This recipe was adapted from Marilyn Diamond's "The American Vegetarian Cookbook"

This recipe was given to us by Traci from Thayne, Wy.

### Apple Crisp

#### Ingredients:

- 4 large or 6 small apples, sliced into small chunks (peeling optional)**
- 1/3 c honey + 2T, divided**
- 2 T cinnamon, divided**
- 1 c raw almonds, soaked 8-12 hours**
- 1/2 c almond powder (see note)**
- 3 T safflower oil, divided**
- Dash sea salt**

#### Directions:

1. Preheat oven to 350.
2. Combine apples, 1/3 c honey and 1 T cinnamon, stir well and place in 9x13 baking dish. Drizzle with 1 T oil.
3. Dry soaked almonds with a kitchen towel and grind in a food processor until very fine.
4. Add remaining cinnamon, almond powder, 2 T oil, 2 T honey and salt to processor, pulse to mix, forming coarse crumbs.
5. Top apples with mixture.
6. Bake at 350 until topping begins to brown, about 10-15 minutes. Serve with Cashew Whipped Cream.

#### Note:

When I make almond milk, I strain off the pulp and dehydrate it until it is a powder and save it for baking.

This recipe was given to us by Traci from Thayne, Wy.

### Asparagus Soup

#### Ingredients:

- 2 tablespoons unsalted butter**
- 1 Tablespoon canola oil**
- 3 cups chopped onions**
- 2 tablespoons finely minced garlic**
- 6 cups vegetable broth**
- 3 pounds fresh asparagus**
- 2 carrots, peeled and chopped**
- 1 cup chopped parsley**
- 1 tablespoon dries tarragon**
- Salt and pepper to taste**
- Pinch of cayenne pepper**
- ½ cup "Better Than Sour Cream" for garnish (optional)**
- 1 large tomato, seeded and cut into small dices, for garnish**

#### Directions:

1. Melt butter in the oil in a pot over medium heat. Add the onions and garlic; cook until tender, stirring occasionally, about 15 minutes. Add the broth; heat to boiling.
2. Trim woody ends off the asparagus. Reserve the tips, then cut the stalks into 1 inch pieces; add to broth. Add carrots, parsley, tarragon, salt and pepper and cayenne to broth. Simmer, partially covered, until the vegetables are tender, about 45 minutes.
3. Puree in batches in a blender or food processor, then put back in the pot.
4. Before serving, add the asparagus tips and simmer over medium low heat until tips are tender and soup is hot, about 10 minutes.
5. Serve with a dollop of sour cream, if desired, and a sprinkling of diced tomatoes.

Serves 6.

This recipe was placed on HerbalLegacy.com at the request of David Christopher, MH. This is one of David's favorite recipes, as asparagus is one of his favorite foods.

### Berry Banana Breakfast Juice

#### Ingredients:

- 3/4 c. distilled water**
- 1 banana**
- 1/4 c. frozen red raspberries**
- 1/4 c. frozen blueberries**
- 1/4 c. frozen strawberries**
- 1/4 c. frozen blackberries**
- 1/4 c. frozen cherries**

#### Directions:

Put the all these organic ingredients into a VitaMix or a Blender. Blend well. Pour into a large glass and enjoy!

More or less of each frozen fruit may be used, depending on the taste desired. This juice is really refreshing!

Serves 1.

This recipe was given to us by Pam from Webster, NY.

### Cashew Cheese

#### Ingredients:

- 1 cup Water**
- 1/3 cup plus 1 rounded TBSP of Emes unflavored gelatin (do not use Agar)**
- 1 1/4 cup boiling water**
- 2 cups raw cashews**
- 1/4 cup yeast flakes**
- 1 TBSP salt**
- 2 tsp onion powder**
- 1/4 tsp garlic powder**
- 1/4 cup fresh lemon juice**
- 1 pimento or 1 carrot grated or 2 tsp paprika**

#### Directions:

Soak gelatin in the 1 cup of water in blender while assembling the other ingredients. Pour the boiling water over soaked gelatin and whisk briefly to dissolve. Cool slightly. Add cashews and blend thoroughly while adding remaining ingredients. Blend until mixture is the consistency of a cream sauce, with no pimento or carrot seen. Pour into a quart mold, cool slightly. Cover before refrigerating. Refrigerate over night before serving. After this firming period, it can be frozen. This melts over hot dishes. Leave out the gelatin for a fondue type of cheese.

Makes one quart.

### Cashew Whipped Cream

#### Ingredients:

**1/2 c raw cashews or cashew pieces**

**1/2 c distilled water**

**1/2 to 3/4 c safflower oil**

**2 T 100% pure maple syrup**

**1/2 t pure vanilla**

**Pinch of sea salt (optional)**

#### Directions:

1. Blend cashews in water to form a thick cream. Slowly add the oil in a fine stream until cream thickens, blend in maple syrup, vanilla and salt. Chill and serve. (Cream will thicken substantially when chilled.)

#### Note:

This is very rich and very good. Recipe can be doubled.

### Cranks Nut Roast

#### Ingredients:

- 1 Medium Sized Onion**
- 2 TBSP Olive Oil**
- 1 ½ Cups Mixed Nuts**
- 4 Slices Whole Wheat Bread**
- 1 Cup Water**
- 2 TBSP Nutri-Soup**
- 1 tsp Mixed Herbs (Summer Savory)**
- Salt & Pepper to taste**

#### Directions:

Chop onions and saute in oil until transparent. Grind nuts and bread in a blender or food processor until quite fine. Heat water and add Nutri-Soup. Combine all of the ingredients together and mix well. Turn into a greased shallow baking dish, level the surface, sprinkle with a few breadcrumbs, and bake at 350° for 30 minutes, or until golden brown.

## Empanadas

### Filling Ingredients:

- 2 pounds of ground turkey (optional)**
- 1 medium white onion, chopped**
- 2 bunches of green onions, chopped**
- 1 red pepper, seeded and finely chopped**
- 1 green pepper, seeded and finely chopped**
- 4-5 cloves of garlic, peeled and mashed**
- 3 carrots, peeled and grated**
- 2 tablespoons finely chopped parsley**
- 1/4 cup cilantro**
- 1 cup cooked peas**
- 1 cup cooked corn**
- 1 1/2 cups brown rice**
- 1 teaspoon cumin seeds**
- freshly ground pepper**
- sea salt to taste**

### Directions:

Saute turkey in a skillet with a little olive oil until cooked through, allowing some of it to become well browned. Season with 1/2 teaspoon cumin seeds, freshly ground pepper and salt to taste. In a separate skillet, saute onions and peppers in olive oil. Add carrots, garlic, 1/2 teaspoon cumin and salt to taste and saute a bit more. In a large bowl, mix cooked turkey, vegetable mixture, peas, corn and rice. Check seasonings.

Roll out pastry dough and cut into rounds, approximately 6 to 7 inches in diameter. Place several spoonfuls of filling off center, fold pastry rounds and pinch edges. Bake at 350 degrees until lightly browned. May be individually wrapped in foil or frozen. Remove foil before reheating.

**Yoghurt Dough Ingredients:**

**1 cup plain yoghurt**

**2 sticks butter, softened**

**3 ½ cups freshly ground spelt or wheat flour**

**2 teaspoons sea salt**

This excellent all-purpose dough recipe makes enough for two 10 inch French style tart shells. This dough cooks rather slowly. For a pre-baked tart shell, allow 20 to 30 minutes at 350 degrees.

Cream yoghurt with butter. Blend in flour and salt. Let stand, covered, overnight. Roll on a pastry cloth using unbleached white flour to prevent sticking.

Makes about 2 dozen

### Festive Salad Dressing

#### Ingredients:

**1/3 c honey or 100% maple syrup**

**1/3 c raw apple cider vinegar**

**2 T fresh lemon juice**

**1/4 c chopped red onion**

**1/2 t sea salt**

**2/3 c extra virgin olive oil**

**2 T poppy seeds**

#### Directions:

1. In blender, combine first 5 ingredients and blend until smooth.
2. With blender running on low, drizzle in olive oil and then add poppy seeds.

Yields about 1 1/2 cups.

#### Note:

This is a blender dressing I make for special occasions, although the ingredients are great for everyday use. It is a big hit with kids because it is sweet and it comes out pink; how pink will depend on the red onion you select. The smaller and closer the rings of the onion are, the darker pink the dressing will be. I've had it come out hot pink!

This recipe was given to us by Traci from Thayne, Wy.

## Fruit Shaker

### Ingredients:

- 3-4 lg. bananas**
- 1/4 piece of cantalope**
- 1/4 piece of rock melon**
- 5 oranges, juiced**
- 2 lemons, juiced**
- 3 mandarines or tangerines, juiced**
- 1 or 2 grapefruits, juiced**
- 2 apples**
- 2 pears**
- 1 or 2 kiwis**
- 2. Tbs. flaxseed oil**
- 2. Tbs. Pure oleo europaea olive oil**
- Whatever other seasonal fruits that can be had**

### Directions:

In a blender, add the the bananas, the melons and citrus juice, blend on high speed for a few moments. Add the apples and pears blend on high for a few more seconds, then put the kiwis in and the oils and mix till blended, gently with the oils so as not to damage the properties.

### Note:

Serve with a side plate of L.S.A. (linseed sunflowers and Almonds). I've found this to be a wonderful drink and it tastes wildly wonderful!! Have fun and enjoy.

### Hummus

#### Ingredients:

- 1 can (15 oz) garbanzo beans**
- 1/4 cup tahini (sesame paste), or 1/4 cup toasted sesame seeds and 2 tablespoons olive oil**
- 3 tablespoons lemon juice**
- 1 clove garlic minced**
- 1/4 tsp cumin**
- Salt and pepper to taste**

#### Directions:

Drain garbanzo beans, reserving liquid. Put beans into a blender or food processor. Add tahini or sesame seed and oil mixture, lemon juice, garlic, cumin, and 1/4 cup of the garbanzo liquid. Blend together until mixture is the consistency of heavy batter (adding more garbanzo liquid if needed). Season to taste with salt and pepper. Garnish with olive oil or chopped parsley. Makes 12 servings, 2 tablespoons per serving.

### Milk (Almond 2)

#### Ingredients:

- 1/2 cup raw almonds**
- 1 Tbsp flaxseeds**
- 1 tsp lecithin granules**
- 2 Tbsp honey**
- 1/8 almond extract**
- 3 cups warm water**

#### Directions:

Heat water in a sauce pan. Just before the water boils, one cup of it in a blender and add the almonds, flax seeds, and lecithin granules. Blend until liquified. Add the rest of the water slowly. After the mixture is smooth, pour it back into the sauce pan simmer on low heat for 10 minutes stirring constantly. Take off the heat and strain the liquid out. Save the solid portion for breads and desert crusts. Add the honey and almond extract to the liquid. If the liquid (now almond milk) is too thick add more water.

Pour this almond milk on cereal, mix with more honey and cocoa to make a chocolate drink, or use it in any recipe that calls for milk. Almond milk has much more usable calcium and protein than dairy milk and it is not mucus forming.

### Milk (Rice)

#### Ingredients:

**4 cups hot/warm water**

**1 cup cooked rice (I've used white or brown)**

**1 tsp vanilla**

#### Directions:

Place all ingredients in a blender until smooth. Let the milk set for about 30 minutes, then without shaking, pour the milk into another container ( I use an old honey jar) leaving most of the sediment in the first container. This makes about 4 - 4 1/2 cups.

#### Notes:

When I used cold water and rice, taken straight out of the refrigerator, the milk didn't turn out very well. I don't know why, but it's best to use warm water and warm rice. You can heat it, if you are using leftovers, but freshly made is best. I have even let it set longer than 30 minutes (overnight) without it making a difference.

### Norwegian Prune Pudding

#### Ingredients:

- 1/2 lb. Prunes**
- 2 C. hot water**
- 1/3 C. honey**
- 1/8 Tsp. Salt**
- 1/2 Tsp. Cinnamon**
- 1/2 C. boiling water**
- 1/3 C. cornstarch or arrow root**
- 1/4 C. cold water**
- 1 Tbl. Lemon Juice**

#### Directions:

Place prunes in a saucepan, cover with hot water and let stand for 1 hour. Place over low heat and simmer until soft. Remove pits, then return prunes to cooking water. Add honey, salt, cinnamon, and boiling water. Simmer 10 minutes.

Mix cornstarch or arrow root with cold water to make a smooth paste. Add to prune mixture and cook for 5 minutes, stirring constantly. Add lemon juice.

Pour into a large serving dish and chill. Can be served with light cream on the side. (We use Vanilla Better Than Milk)

Yields 6 Servings

#### Note:

This is one of the top requested recipes we have. David and Fawn often mention this recipe on their radio program, A Healthier You, as a tasty way to deal with constipation. This recipe works especially well for children.

### Tahini Cookies (2 ways)

#### Ingredients:

**6 Tbls tahini (sesame butter)**

**1/2 cup honey or molasses**

**1/2 chopped nuts**

**1/2 tsp cinnamon**

**1 1/2 cups rolled oats**

**OR**

**1/2 cups wheat bran**

**1/2 cups flax seeds**

**1/2 cups coconut**

#### Directions:

Blend the tahini, honey, nuts and cinnamon together and then mix in either the rolled oats or the wheat bran, flax seeds and coconut. Drop by teaspoonful onto cookie sheet. Bake at 350% F for about 10 minutes until edges are brown. Be careful not to over bake!

If desired you can also add chopped dried fruits, raisins, dates, prunes etc.

### Twice Baked Potatoes

#### Ingredients:

- 4 large russet baking potatoes, baked and cooled slightly**
- 4 c cubed winter squash (ie. Butternut, Hubbard or Banana)**
- 1/2 c finely grated onion**
- 1 garlic clove, pressed (or more according to taste)**
- 1 T cumin**
- 2 T parsley**
- 1/3 c olive oil**
- 2 T Braggs Liquid Aminos or Tamari**
- Paprika**

#### Directions:

1. Steam squash cubes in steamer basket until very soft.
2. Cut potatoes in half lengthwise and gently scrape pulp from skin, being careful not to tear skin, reserve skins.
3. Combine squash, potato pulp, onion, garlic, cumin, parsley, olive oil and Liquid Aminos. Mash thoroughly and whip with electric mixer until no lumps are left.
4. Fill reserved skins with mixture. Brush tops with additional olive oil and dust with paprika. If potatoes have cooled significantly, reheat under broiler for 7-10 minutes, otherwise serve immediately.

Yield: 4 large stuffed potatoes

#### Note:

I like to scrape a fork over the tops of the potatoes to make them look pretty.

Crumbs**

[Zucchini Nut Bread](#)

## Whole Wheat Bread Crumbs

(the mucusless way!)

### Ingredients:

**1 Cup whole wheat**

**Distilled water to soak**

**2 T olive oil**

**1/4 c distilled water**

**1 t honey**

**Pinch sea salt**

### Directions:

1. Rinse wheat and soak overnight. Drain water and rinse daily until sprouted.
2. Combine sprouted wheat, and all other ingredients in blender. Blend until smooth, adding extra water if necessary.
3. Pour puree onto the flexible fruit leather sheet of a food dehydrator, dehydrate until crisp, crumble and store in an airtight container. OR Pour puree on a lightly oiled cookie sheet and place in oven on lowest setting for 5-6 hours, Turning it off and on to maintain lowest heat possible.

### Note:

A lot of recipes, (even in the Mucusless Diet) call for bread crumbs. I am gluten intolerant and cannot handle flours ground from dry grain in any amount, but properly sprouted grains I do fine with. This is my sneaky way of getting around using flour even occasionally.

This recipe was given to us by Traci from Thayne, Wy.

Cayenne Information from the 100 Herb Syllabus

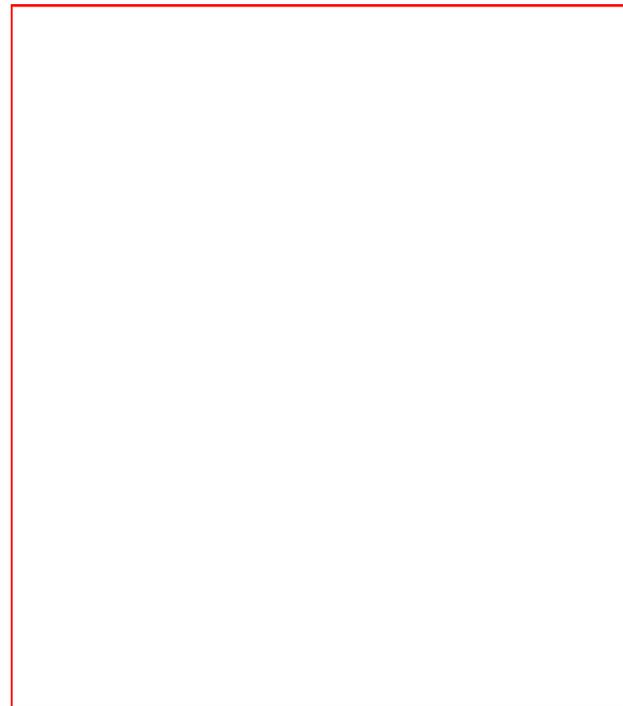

The following information is from

**The School of Natural Healing's**

## **100 Herb Syllabus**

---

### **CAYENNE:**

*Capsicum annuum*

**Solanaceae**

A farmer used to give Cayenne to his chickens and cows when they were ailing, but never to the

**Herbs**

**Cayenne**

[Comfrey](#)

children when they were sick. One of the sons said, "We were worth more to him than those animals! He should have given it to us, too." Dr. Christopher assured us that Cayenne is one of the greatest herbs of all time-though it is also one of the most misunderstood and ridiculed. He said that every home should have a good supply of Cayenne pepper.

When only a young man in his thirties, Dr. Christopher was told by the medical doctors that he could not live past his fortieth year because of arthritis, hardening of arteries, stomach ulcers, and some automobile accidents that had damaged him rather badly. He was so concerned that he started using Cayenne, working up to a teaspoon taken three times a day. By the time he was forty-five years old, he was working in a business wherein the group wanted him to have a \$100,000 insurance policy because of the importance of the business deal.

Because it was such a large policy, the company required the examination to be given by two medical doctors, each to examine twice. At the end of one of these physicals, one of the doctors said, "This is astounding! You have the venous structure of a teenage boy, at forty-five years of age!"

The other doctor kept pumping up his blood pressure equipment over and over again, repeating the blood pressure check. Dr. Christopher began to be perturbed, and asked him if the equipment was broken. "It always has worked up till now, but I keep looking at your chart, which says you are forty-five years old, and yet your systolic over your diastolic is absolutely perfect. I cannot comprehend it." Dr. Christopher assured him that it was indeed perfect, and he attributed this clean bill of health to Cayenne.

However, Dr. Christopher needed to be converted to the use of Cayenne. When he was attending the Herbal College in Canada, the teacher announced that they were going to study Cayenne. "Why Cayenne?" asked Dr. Christopher. "It will burn the lining out of the stomach."

"Where did you get your information," asked the teacher, Dr. Nowell. "Oh, my mother told me," answered Dr. Christopher.

Everybody in the class laughed-except the teacher and Dr. Christopher. Dr. Nowell took Dr. Christopher around Vancouver and introduced him to over a dozen people whose lives had been saved with Cayenne: people with heart troubles, ulcers, asthma, and many other ailments. Wherever they went, the people were full of gratitude for being taught about Cayenne, and from then on Dr. Christopher was sold on it.

While Dr. Christopher was working in the business world, he was taking Cayenne, and on one business trip, he was traveling with an athlete, a man who had a black belt in karate and who was, in Dr. Christopher's words, "a husky little guy." Yet he came from a family with a history of high blood pressure, and his uncle had died of varicosity. He was under the care of a doctor at the time. Every morning, Dr. Christopher would take a spoonful of Cayenne in a glassful of water, followed by a few tablespoons of wheat germ oil. The young man wanted to know what Dr. Christopher was taking and wanted to try some. "You're probably too chicken," Dr. Christopher told him! This reverse psychology worked; Dr. Christopher noticed that his Cayenne was disappearing gradually. When they returned from the trip, the man continued taking Cayenne, one teaspoonful three times a day. The doctor was astonished at the young man's next checkup - after a lifetime of high blood pressure, he now had a clean bill of health.

Once a child was shot in the abdomen; a bullet hit the spine, ricocheted, and made a second

wound leaving the body. One of Dr. Christopher's herbal students, living next door, heard the shot and raced over, as she knew that the parents were not home and that the children, ages eight and four, would not be shooting guns. There was the eight-year-old gushing blood out both sides. She ran to the cabinet and mixed a tablespoonful of cayenne in a glass of water; she poured it down the boy and immediately called the ambulance, which was eighteen miles away. The emergency room attendant said that the boy would probably bleed to death, being that the distance was so great. The ambulance arrived and rushed the child (who had been playing "Cops and Robbers" with his father's pistol, which he had found under the pillow of the bed, to the Primary Children's Hospital eighteen miles away. When he arrived, he was the center of attraction, not because his case was so dangerous, but because he was chatting a mile a minute - and there was not bleeding. The bleeding had stopped by the time they arrived at the hospital. The chief doctor said to the parents, "I have seen many accident victims in my life, but this is the first time in such an emergency operation that I have opened an abdomen to find no blood, except for a small amount that was there before the bleeding stopped so quickly. This has saved your boy's life."

In that same year, Dr. Christopher treated four other gunshot victims, and each case responded the same, although sometimes the blood coagulates and comes out in clumps before it stops completely. By the time you count to ten, however, the heavy bleeding should stop completely after administering Cayenne. The Doctor even used tincture of Cayenne on open wounds and, as he put it, "There may be a bit of muttering about it," referring to the burning feeling of the Cayenne, but the bleeding stops.

Dr. Christopher related the humorous story of a very fine student of his who had begun teaching herb classes on his own. This young man happened to precede Dr. Christopher's lecture one evening in Arizona. The young man said, "You know, ladies and gentlemen, that Dr. Christopher has always made me gasp. I've seen him drink two or three tablespoons of Cayenne in water - and I'd just shudder. But tonight I'm going to do something that he may have never done himself." With that, he reached down into a container of Cayenne and threw a pinch right into his eye. Dr. Christopher thought that the man must have gone crazy and he was concerned that one of his students would do such a thing in public, although he knew that Cayenne can never hurt the cell structure, no matter how delicate it is. The tears ran down the man's cheek as he continued talking, and when he was finished, he opened his eye and invited everyone to look. The eye just sparkled; it was by far the brighter of the two, although Dr. Christopher said that he never had seen this antic performed again - and that he never dared to try it himself.

A lady who had been attending Dr. Christopher's lectures over the years told the story of her husband who had a severe case of stomach ulcers. The doctor recommended that part of the stomach be removed, but the man preferred to suffer the pain rather than risk such an operation. But he also ridiculed his wife's recommendations to use Cayenne and other herbs. Whenever he would see Dr. Christopher in town, he'd bellow, "Hello, Doe! Killed anybody with Cayenne today?" Naturally, Dr. Christopher tried to avoid him, but one day he came directly to the Doctor—but this time without any sarcasm, instead being very apologetic, telling this story.

He had come home from work one night, so sick he wanted to die, with stomach ulcers. His wife was not home, but he was in such pain that he decided to commit suicide. When he looked into the medicine cabinet to find some kind of medicine poisonous enough to kill him, he discovered that his wife had discarded all the old bottles of pharmaceutical medicines. All he could find were some bottles of herbs and a large container of Cayenne pepper. He figured that a large dose of that would kill him, so he took a heaping tablespoon in a glass of hot water, gulped it down, rushed into the bedroom, and covered his head with a pillow so that the neighbors couldn't hear his dying screams.

The next thing he knew, his wife was shaking him awake the next morning. He had slept all night,

the first time in years, instead of waking every half hour or so for anti-acid tablets. To his amazement, all his pain was gone. He continued using the Cayenne faithfully, three times a day, and never had any more trouble with ulcers.

Once, when traveling with a business partner, Dr. Christopher recommended Cayenne to him, as the man had extremely high blood pressure and such bad hemorrhoids that he had to wear a belt. Dr. Christopher used the same reverse psychology on this man - "I don't think you are brave enough"—and pretty soon the man was taking the Cayenne and the wheat germ oil, too. In a few months, he did not have to wear a belt any longer, and his systolic and diastolic at his blood pressure examination were nearly perfect. He no longer had to go to the doctor—and he lived many long years, for he kept taking his Cayenne.

Early in Dr. Christopher's practice, he was called in the middle of the night by a woman whose husband had just passed out from a heart attack. The Doctor told the woman to heat some water, and he arrived at the house and mixed a teaspoon of Cayenne into the water, propped up the man, and gave him just a little. When he came to, he finished the cup, and within a few minutes felt much stronger. Soon he was well, and became converted to the use of herbs, even buying and running one of the health food stores in Salt Lake City for many years.

One young man had cut his hand deeply, fingers as well as the palm. The blood spurted out in streams. He poured a large amount of Cayenne into the wound, and within seconds the blood flow slowed down, congealed, and stopped. He wrapped with wound, covering it first with a goodly amount of Cayenne. He was so excited about these results that he could hardly wait to attend the next herb lecture to tell about it. But when he unwrapped the bandage to show the audience, instead of a deep, ugly scar, the area was healed and there was no scar at all!

Cayenne can be used on any part of the body and for anybody, Dr. Christopher claimed. He even saved the life of a six-week-old baby who was born with chronic asthma by giving Cayenne tea, from an eyedropper, until the baby was able to breathe again. He said that Cayenne could even be given by enema for chronic constipation (if you are brave!).

At the age of seventy, a few years before he died, Dr. Christopher was asked by a premed student if he could take his blood pressure. The lecture group saw the blood pressure reading of a healthy young man, not the average reading of a seventy-year-old. In addition to a healthy life-style and the mucusless diet, Dr. Christopher attributed this good reading to his thrice-daily dose of Cayenne.

To show what a miracle worker Cayenne really is, Dr. Christopher related the experiment performed by medical doctors in the eastern United States—and printed in the medical journals. They put some live heart tissue in a beaker filled with distilled water, and fed it nothing but Cayenne pepper, cleaning off sediments periodically and adding nothing else but distilled water to replace that which was lost from evaporation. During the experiment, they would have to trim the tissue every few days, because it would grow so rapidly! Having no control glands (pituitary and pineal), the tissue just continued to grow rapidly. They kept this tissue alive for fifteen years. After the doctor doing the experiment died, his associates kept it alive for two more years before destroying it for analysis. This shows the tremendous regenerative and healing power of Cayenne, especially upon the heart.

## Herbs

[Cayenne](#)[Comfrey](#)

### Comfrey

Dr. Christopher used Comfrey in many of his formulas. He recognized the benefits, and powerful healing agents of Comfrey. A good majority of his formulas contained Comfrey. However, recently the FDA and the FTC decided that Comfrey was a dangerous herb, because when it is a young plant it has a high Pyrrolizidine alkaloid content. This has led the FTC and the FDA to believe that Comfrey is dangerous. Dr. Christopher never had a problem with Comfrey, and we have yet to hear of someone who has been damaged by it. Nevertheless, the Dr. Christopher Company had to remove Comfrey from the internal formulas. Comfrey is still used in the external formulas.

During this time, we put the following information together to submit to the FTC, in support of Comfrey. This information does get very technical at times.

## History

---

### Dr. John R. Christopher, M.H., N.D.

Once in a great while the earth is blessed with an enlightened soul who is able to raise the consciousness of his fellow man by his love, wisdom and honor. Our founder, Dr. John R. Christopher, M.H., N.D., intended for everyone to have the knowledge to properly care for their own body.

In his youth, Dr. Christopher became interested in natural healing when he saw the results of naturopathic healing in his mother. His enthusiasm increased when he found he was able to cure himself of cancer using natural methods. Throughout extensive legal persecution, personal counseling and rigid lecture schedule, he began formulating what would become his world renowned herbal combinations in 1945. Hailed as America's foremost herbalists, Dr. Christopher developed a training program for herbalists and organized [The School of Natural Healing](#) in 1953.

### David Christopher, BA, MH, AHG

For the last 20 years David Christopher has been a popular world wide speaker. He has generated new ideas on the management of high blood pressure, diabetes and auto-immune diseases, and was one of the first to discourage the use of Prozac in favor of natural methods. Alarmed by the growing use of Ritalin, David developed an alternative program for ADD and ADHD.

In 1974 David Christopher, M.H., took his place by his father's side at [The School of Natural Healing](#). David's book entitled [An Herbal Legacy of Courage](#) is a loving tribute to his father. Today, thousands of individuals practice the art of natural healing thanks to David's continued directorship and teaching. Many more receive herbal instruction from David and his wife, Fawn, through their weekly radio program "[A Healthier You](#)". David lectures internationally and has offered educational counseling by phone for over 16 years. He continues formulating herbal combinations, such as the Herbal Traditions line, the Kid-e-Line, [Vitalerbs](#), and the INSTEAD line including [PreTrac](#) & [MindTrac](#); to assist the natural healing process.

David is a prominent herbalist in the United States and is a founding member of the American Herbalist Guild. He received his Bachelor of Arts from Brigham Young University, and his Master's degree from The School of Natural Healing. David's herbal studies began at the foot of America's foremost herbalist, his father, Dr. John R. Christopher, MH, ND. As the director of The School of Natural Healing he ensures that the School offers the best herbal education in the field. David is also a popular radio talk show host, and his program, [A Healthier You](#), and is

now in its twelfth year. An [\*Herbal Legacy of Courage\*](#), a biography on his father's life, is David's most recent publication.

David's characteristic teaching methods have reached thousands of students through residential classes and home study programs. He has helped countless people through his unique nationwide, toll-free herbal education service. David's 23 years of experience in the field of Natural Healing and his personal approach pervades all lectures and classes, and gives those in attendance the knowledge and confidence to continue in a journey toward wellness.

## Professional Contacts

This page was prepared by the Citizens for Safe Drinking Water - Utah and provides the names and contact information for some knowledgeable professionals.

**J. William Hirzy, Ph.D.** is Senior Vice-President of the National Treasury Employees Union. Chapter 280. This union is comprised of and represents the approximately 1500 scientists, lawyers, engineers and Other professional employees at the Environmental Protection Agency Headquarters in Washington D.C. He holds the official position with EPA as senior scientist chemist in the Risk Ph.D. (1962) degrees in chemistry from the University of Missouri. He is currently Professor of Chemistry at the American University in Washington. D.C.

**Office:** 202-260-4683

**David Kennedy, DDS** for over 20 years has been a member of the American Dental Association (ADA), the California Dental Association (CDA) and the San Diego County Dental Society (SDCDS). For three years he was elected to the SDCDS Board of Directors, participating in numerous committees - including Senior Care, Speakers Bureau, Political Action Committee, and the Council on Dental Care. In 1974, Dr. Kennedy planned and built the Chicano Children's Dental Health Clinic in San Diego. He is a Past President of International Academy of Oral Medicine and Toxicology, the author of a book on preventive dental health entitled *How to Save Your Teeth*, and a nationally and internationally recognized lecturer on toxicology and restorative dentistry.

**Office:** 619-231-1624 (Monday -Wednesday)

**Home:** 619-222-8177

**Joseph Lynn Lyon, MD** has been a professor of Family and Preventive Medicine at the University of Utah since 1971. Dr. Lyon received his B.S. and M.S. Degrees from the University of Utah and in 1969 graduated from Harvard University.

**Office:** 801-581-7234

**Hardy Limeback, B. Sc., Ph.D.** in Biochemistry, DDS started his career as a basic scientist (MRC Scholar) studying tooth development and pig enamel protein biochemistry. His clinical interests in practice and research have been in geriatric dentistry (Chief of Dental Services for the Metropolitan Homes for the Aged) and preventive dentistry (University clinic and private practice). He currently holds an MRC grant to study the effects of fluoride on tooth and bone development. Dr. Limeback has only recently started to publish in the area of dental and skeletal fluorosis. He is the fluoride-biochemistry expert serving as a member of the Canadian Dental Association's Consumer Products Recognition Committee. Dr. Limeback is currently the head of the Preventive Dentistry department and own his own dental office.

## Hundreds of Children Poisoned by Tap Water

By Saidou Arji

14/01/2001

Inter Press Service

NIAMEY, Jan 14 (IPS) - The Societe Nigerienne des Eaux (SNE), Niger's water company, is being sued because hundreds of children in Tibiri, 720 kilometres from Niger's capital, Niamey, were poisoned by grossly elevated rates of fluoride in the town's water.

The children, ranging in age from 15 months to 14 years, contracted skeletal fluorosis, a disease which causes deformities of the bones, according to medical sources.

The children suffer symptoms ranging from stiffness of the joints, arthritic-like symptoms and chronic joint pain, to calcification of the vertebral column, crippling spine and joint deformities, muscle wasting, and neurological defects. Mottling of the teeth is a less serious form of the disease that comes from ingesting lower levels of fluoride (dental fluorosis).

According to Dr. Moussa Koini, who has written a medical dissertation on the topic, the disease is caused by drinking water containing too much fluoride.

Water samples taken in Tibiri from SNE facilities show that the water contains 4.77 to 6.6 milligrams per litre, instead of the maximum 1.5 milligrams recommended by the World Health Organisation (WHO).

Out of the 425 recorded cases of children with fluorosis in Tibiri, there are 262 boys and 162 girls, a proportion of 61.79 to 38.21 percent. The age bracket most affected is the three to

seven-year-old group. There are 62 three-year-olds and 55 six year olds affected. Sixty-eight percent of the victims are five-year-olds.

According to Dr. Koini, crippling skeletal fluorosis affects mostly children. There have been no reported cases of adults in Tibiri contracting the disease. This is due, he said, to the fact that growing children absorb more fluoride than do adults. Adults can become ill with the disease, but they would need to have drunk heavily fluoridated water for more than 20 years.

Skeletal fluorosis is a very disabling disease. Hadjia Kande, a mother whose two youngest children are paralysed, says life is a daily burden.

"Look at my children. Neither one of them can even go to the toilet by himself. I need to provide them with constant attention, so I can't regularly get to my job at the cotton mill."

One of the children, 13-year-old Salissou, expressed how sad he is. "I'm afraid to drink water from any source, even well water. Look at the state I'm in, it's really a shame," he said. Although it disables both boys and girls, the disease is even worse for girls as it can have grave consequences for childbearing.

Dr. Koini explained that "if there are outgrowths around the pelvic area, girls can have difficulty giving birth and may have to have Caesarian sections because of an inability to deliver vaginally," he stated.

The origins of the Tibiri tragedy date back to 1983, when the first waterworks was built. The first cases of the illness appeared 10 years later, when many children fell ill.

The Tibiri children's tragedy has produced a hue and cry from the public, especially human rights groups who specialise in these types of issues.

The Nigerien Association for Human Rights (ANDDH) has recruited a panel of lawyers to defend the victim's interests. During a recent press conference, the ANDDH chairperson, Khalid Ikhiri, who is also a chemist at the University of Niamey, emphasised the importance of pursuing this matter through the courts so that the children can receive monetary compensation for the damages they have suffered.

"Fluoride poisoning is fatal. Those children will be disabled for the rest of their lives. Every movement they make is painful, and as a result, they cannot engage in the normal play and other activities of children their age," he added.

Ikhiri's intention in filing suit against the SNE is also to end the impunity that the company has always enjoyed. "The SNE needs to answer for this tragedy since it's their mission to provide the public with pure drinking water," he said.

Confronted by the indignation the Tibiri affair has aroused and by press condemnations, the director of the SNE, Seyni Salou, declared that the elevated fluoride rate uncovered in Tibiri's water cannot be pinned on his operation. He said that the standard tests for water purity are regularly performed on all samples.

However, Salou did acknowledge that fluoride is not normally tested for in the standard tests generally performed on drinking water. "There is rarely a high rate of fluoride in naturally occurring sources. The case of Tibiri is an exception."

Salou recalls that drilling for water in Tibiri's substratum took place in 1983 by the Water Office. The SNE did not yet exist at that time.

"At the time this operation was turned over to us, nowhere was it ever mentioned in the technical documents that there was fluoride in the water."

"Naturally, we continued to distribute water until the health services advised us in 1988 that there was an outbreak of bony lesions among Tibiri's children. We did every possible analysis of the water, even the most farfetched, and finally figured out that the tap water contained a great deal of naturally occurring fluoride," Salou stated.

The SNE director believes that more studies still need to be done to be sure that the only cause of the problem is the fluoride. He thinks that the evidence is not yet conclusive. Nevertheless, he acknowledged that the ANDDH is in its rights to pursue a suit since the laws of Niger allow for it.

More than compensation for the victims, the provision of healthy water for Tibiri's citizens is today's priority. The SNE has confirmed that they have taken steps to bring down the fluoride level to 1.6 milligrams per litre.

Salou indicated that there are permanent changes to be made. Among them is a new water project in the neighbouring town of Maradi. The technical studies have already taken place with help from the Chinese, and work on the new supply project is expected to begin in February 2001.

"Bringing in water from Maradi is the only possible solution because there is fluoride even in Tibiri's groundwater," Salou added.

The government has asked Niger's development partners, most notably UNICEF, to provide assistance to the victims. UNICEF says that a Finnish organisation is ready to finance a community assistance project for Tibiri's children.

The goal of this project, which should begin in the first quarter of 2001, is to provide therapeutic assistance to the sick children, which will be based on nutritional remedies, physical rehabilitation, and orthopaedic correction.

Salmeye Bebert, the director of child welfare, added that the project will help research the exact scope of the disease and will determine the source of pollution of Tibiri's water.

Niger's infant mortality rate of 274 per 1,000 in 1998 was one of the highest in the world.

## Fluoridation Gets Flushed on Election Day

NEW YORK

Nov. 12, 2001

PRNewswire

*The following press release was issued today by the New York State Coalition Opposed to Fluoridation:*

Voters on November 6, 2001, rejected fluoridation in several U.S. cities despite hundreds of thousands of dollars spent by fluoridation proponents in public relations campaigns. This adds to a growing list of cities that rallied against adding the claimed cavity-fighting fluoride to their water supplies.

According to newspaper accounts:

\* On election day, Worcester, Massachusetts, residents renounced fluoridation for the fifth time since the 1950's. Fluoridation proponents refused to debate but spent \$400,000 trying to win this

referendum. The victorious opposition spent only \$5,196.

\* Modesto, California, citizens rejected fluoridation for the second time, shunning a \$1 million grant offered by Fluoridation 2000, a statewide group, to cover the cost of fluoridation equipment. Fluoridation proponents outspent opponents by over 10 to 1.

\* Flagstaff's, Arizona, electorate decisively turned down fluoridation for the third time via mail-in ballots.

\* Sixty two percent of Sutherlin, Oregon, voted against fluoridation on election day.

\* In Gilbert, Arizona, opponents of fluoridation, inspired by these victories, plan to attack fluoridation again, which is slated to start in Gilbert at the end of the month.

"People who study the issue, themselves, find out fluoridation's health risks far exceed any possible benefits and deprives individuals of their choice to be medicated," says Paul Connert, Ph.D., Coordinator, Fluoride Action Network and Professor of Chemistry, St. Lawrence University, N.Y. "If your community fluoridates and you want it stopped, call us. We can help you."

Some other places defeating fluoridation this year:

\* January 2001 -- Willamina, Oregon, City Council says "no" to fluoride.

\* March 2001 -- Norridgewock, Maine, votes down fluoridation.

\* April 2001 -- City residents of McPherson, Kansas, rejected a fluoridation proposal by a nearly 5-to-1 ratio. It was their third vote against fluoridation.

\* May 2001 -- Brewster, Massachusetts, said no thanks to fluoride in the town's water systems.

\* May 2001 -- Harper, Kansas, citizens successfully petitioned against fluoridation.

\* June 2001 -- Eureka Springs, Arkansas, city officials followed water customers' advice and rejected fluoridation.

\* August 2001 -- Woods Cross, Utah, City Council said no thanks to fluoridation after a citizens' group presented them with a petition to opt out of a countywide fluoridation plan.

\* September 2001 -- Goldendale, Washington, council members unanimously rejected any proposal to add fluoride to the city's water supply.

\* October 2001 -- Centerville, Utah, City Council decided against fluoridation.

\* October 2001 -- White Salmon, Washington, City Council rejected fluoridation.

In other countries:

\* March 2001 -- Japan's Assembly of Kanra-machi, Gunma Prefecture, rejected a fluoridation proposal.

\* April 2001, Onehunga, New Zealand, voted two to one against fluoridation.

\* October 2001 -- Voters in Kamloops, British Columbia, Canada, ended 40 years of fluoridation.

On election day, 2000, 14 communities voted down fluoridation.

## Dentists to sue over continued flouridation of drinking water

By Fionnuala Quinlan

October 22, 2001

[\*The Irish Examiner\*](#)

A GROUP of Irish dentists are to sue the Minister for Health, Micheál Martin, for continuing to fluoridate drinking water.

The dentists, who are breaking ranks with the Irish Dental Association, plan to lodge papers with the High Court after handing a letter of protest into the Dáil on Friday.

The move comes as the Forum on Fluoridation — set up by the minister to examine both sides of the fluoride argument — completes its report, due to be published by the end of the month. The forum was branded a “rubber-stamping exercise” by the dentists planning to sue the Government.

The group of 20 — Irish Dentists Opposing Fluoridation — maintain that health authorities have not fulfilled their obligation under the 1960 Health Act to carry out regular surveys into the health effects of fluoridation.

Spokesman Dr Don MacCauley said the department had never carried out a comprehensive survey, although international research has linked fluoridation to cancer, irritable bowel syndrome, hip fractures and thyroid disorders. A study published in American medical journal *NeuroToxicity* found that fluoride exposure could produce lower IQ levels in children.

Up to 50% of Dr MacCauley’s teenage patients have dental fluorosis — which has been linked to fluoridation — which creates white spots or lines on teeth and causes tooth enamel to chip, he said.

The agent used, hydrofluosilic acid, is a waste component of the fertiliser industry and contains traces of chromium, mercury, arsenic and lead, according to Dr MacCauley.

Ireland is now the only country in Europe to insist that drinking water be fluoridated, although nine county councils, two corporations and seven urban district councils have voted to end fluoridation.

Dr MacCauley said the group opposed fluoridation because medication is being administered

without consent, the public has not been fully informed of the risks and side effects and fluoridation causes dental fluorosis.

Kildare-based GP Andrew Rynne is taking a separate case against the Government and the Irish Medicines Board (IMB) on the grounds that, although fluoride is a medicine, it is not licensed by the IMB.

A Health Department spokeswoman said all the issues raised by Dr MacCauley had been covered by the Forum on Water Fluoridation. However, she declined to comment on the contents of the report in advance of its publication.

## Utah a national leader by not fluoridating

Written by **David W. Christopher M.H.**

*[The Daily Herald](#), Provo, Ut.*

**Sunday, June 4, 2000**

Utahns consistently reject fluoride because we cut through the enormous endorsements and weigh the facts. We are not behind the times, but ahead of the 60 cities that bucked the system and rejected fluoride in the 1990's. We're unique because we vote. Most cities are fluoridated by executive order.

The task of unmasking this fluoride farce is monumental. Utah being the least fluoridated state is pivotal. If we can withstand the onslaught of federal, state, industrial, and of course medical pressure, Utah can send a clear message to Washington that like Europe and the majority of the world we will not be a part of the biggest hoax perpetrated on America since its inception. One lemming bucking the crowd will be noticed by other States who then might finally call for congressional hearings ferreting out the perpetrators of this insidious practice of dumping toxic waste into our drinking water under an EPA loophole.

Is fluoride toxic? Science shows fluoride is more toxic than lead (Clinical Toxicology of Commercial Products-1984) The majority of fluoride is captured into ponds from EPA required smokestack scrubbers and sold untreated to municipalities. The technical name is fluorosilicic acid, and yes it is a toxic waste that can totally dissolve any cement barriers.

Is fluoride a cumulative toxin? Of course it is; that's how it's supposed to work. It attaches to the calcium in bones. That is why dentists apply it to your teeth. However, when you drink it in water it enters the blood stream and attaches to the first bones it comes in contact with. Does fluoride cause hip fractures? Yes. Hip fractures were caused inadvertently in a study designed to prove fluoride prevented osteoporosis. In the trials elderly women were given 75 mg. per day of

sodium fluoride and compared to a control group. The study ended abruptly with the horrifying discovery that fluoride caused these fractures. In light of this study another study looked at low levels of fluoride in drinking water at the optimal level of 1 ppm. Hip fractures were 27% higher in women and 41% higher in men living in Brigham City, the largest fluoridated community in Utah, compared to non-fluoridated Logan and Cedar City. These studies were verified in five additional studies including the French study (JAMA 1995; 273:775) that showed an 86% increase in hip fractures in fluoridated communities. Additionally, Toronto which has been fluoridated for 35 years has twice the hip fractures as Quebec which has never been fluoridated.

Is fluoride absolutely safe? Of course not! There are more than 500 peer reviewed studies documenting adverse effects of fluoride ranging from cancer to brain damage. Tragically all of these studies will be dismissed as non conclusive by a medical system which has a predetermined mind set that fluoride is safe and effective.

Should we vote on it? By the initiative process, yes. If they can't get enough signatures? Then no, and quit wasting our time. How many times? I guess until they join our side!

"Why'd you do it, Doe? Why'd you toss the fluoride folks overboard?"

I had just tracked down Dr. Hardy Limeback B.SC., Ph.D. m Biochemistry, D.D.S., head of the Department of **Preventive Dentistry** for the University of Toronto, and president of the **Canadian Association for Dental Research**. (Whew.)

**Dr. Limeback is Canada's** leading fluoride authority and, until recently, the country's primary **promoter** of the controversial additive. In a surprising newsmaker interview this past April; Dr. Limeback announced a dramatic change of heart. "Children **under three** should **never use fluoridated toothpaste**," he counseled. "Or drink fluoridated water. And baby formula must never be made up using Toronto tap water. Never."

Why, I wondered? What could have caused such a powerful paradigm shift?

"It's been building up for a couple of years," Limeback told me during a recent telephone interview. "But certainly the crowning blow was the realization that we have been dumping contaminated fluoride into water reservoirs for half a century. The vast majority of all fluoride additives come from Tampa Bay, Florida smokestack scrubbers. The additives are a toxic byproduct of the super-phosphate fertilizer industry."

"Tragically," he continued, "that means we're **not just dumping toxic fluoride into our drinking water. We're also exposing innocent, unsuspecting people to deadly elements of lead, arsenic and radium, all of them carcinogenic. Because of the cumulative properties of toxins, the detrimental effects on human health are catastrophic.**" A recent study at the University of Toronto confirmed Dr. Limeback's worst fears. "Residents of cities that fluoridate have double the fluoride in the hip bones vis-à-vis the balance of the Population. Worse, we discovered that fluoride is actually altering the basic architecture of human bones."

Skeletal flourish is a debilitating condition that occurs when fluoride accumulates in bones, making them extremely weak and brittle. The earliest symptoms?

"Mottled and brittle teeth," Dr. Limeback told me. "In Canada we are **now spending** more money treating dental fluorosis than we do treating cavities. That includes my own practice."

One of the most obvious living experiments today, Dr. Limeback believes, is a proof-positive comparison between any two Canadian cities. "Here in Toronto we've been fluoridating for 36 years. Yet Vancouver-which has never fluoridated-has a cavity rate lower than Toronto's." And, he pointed out, "cavity rates are low all across the industrialized world including Europe, which is 98% fluoride free. Low because of improved standards of living, less refined sugar, regular dental checkups, flossing and frequent brushing. Now less than 2 cavities per child Canada-wide," he said.

"I don't get it, Doc. Last month, the Centers for Disease Control (CDC) ran a puff piece all across America saying the stuff was better than sliced bread. What's the story?"

"Unfortunately," he replied, "the CDC is basing its position on data **that is 50 years old, and questionable at best. Absolutely no one has done research on fluorosilicates, which is the junk they're dumping into the drinking water.**"

"On the other hand," he added, "the evidence against systemic fluoride intake continues to pour in."

"But Doc, the dentists"

"... have absolutely no training in toxicity," he stated firmly. "Your well-intentioned dentist is simply following **50 years of misinformation from public health and the dental association. Me, too. Unfortunately, we were wrong.**"

Last week, Dr. Hardy Limeback addressed his faculty and students at the University of Toronto, Department of Dentistry. In a poignant, memorable meeting, he apologized to those gathered before him.

"Speaking as the head of preventive dentistry, I told them that I had unintentionally mislead my colleagues and my students. For the past 15 years, I had refused **to study the toxicology information that is readily available to anyone. Poisoning our children was the furthest thing from my mind.**"

"The truth," he confessed to me, "was a bitter pill to swallow. But swallow it I did."

South of the border, the paradigm shift has yet to dawn. After half a century of delusion, the CDC, American Dental Association and Public Health stubbornly and skillfully continue to manipulate public opinion in favor of fluoridation.

Meantime, study after study is delivering **the death knell of the deadly toxin.** Sure, fluoridation will be around for a long time yet, but ultimately its supporters need to ready the life rafts. The poisonous waters of doubt and confusion are bound to get choppy.

"Are lawsuits inevitable?" I asked the good doctor. "Remember tobacco," was his short, succinct reply.

Welcome, Dr. Hardy Limeback to the far side of the fluoride equation.

It's lonely over here, but in our society loneliness and truth frequently travel hand in hand.

Thank you for the undeniable courage of your convictions.

## Hundreds of Children Poisoned by Tap Water

By Saidou Arji

14/01/2001

Inter Press Service

NIAMEY, Jan 14 (IPS) - The Societe Nigerienne des Eaux (SNE), Niger's water company, is being sued because hundreds of children in Tibiri, 720 kilometres from Niger's capital, Niamey, were poisoned by grossly elevated rates of fluoride in the town's water.

The children, ranging in age from 15 months to 14 years, contracted skeletal fluorosis, a disease which causes deformities of the bones, according to medical sources.

The children suffer symptoms ranging from stiffness of the joints, arthritic-like symptoms and chronic joint pain, to calcification of the vertebral column, crippling spine and joint deformities, muscle wasting, and neurological defects. Mottling of the teeth is a less serious form of the disease that comes from ingesting lower levels of fluoride (dental fluorosis).

According to Dr. Moussa Koini, who has written a medical dissertation on the topic, the disease is caused by drinking water containing too much fluoride.

Water samples taken in Tibiri from SNE facilities show that the water contains 4.77 to 6.6 milligrams per litre, instead of the maximum 1.5 milligrams recommended by the World Health Organisation (WHO).

Out of the 425 recorded cases of children with fluorosis in Tibiri, there are 262 boys and 162 girls, a proportion of 61.79 to 38.21 percent. The age bracket most affected is the three to

seven-year-old group. There are 62 three-year-olds and 55 six year olds affected. Sixty-eight percent of the victims are five-year-olds.

According to Dr. Koini, crippling skeletal fluorosis affects mostly children. There have been no reported cases of adults in Tibiri contracting the disease. This is due, he said, to the fact that growing children absorb more fluoride than do adults. Adults can become ill with the disease, but they would need to have drunk heavily fluoridated water for more than 20 years.

Skeletal fluorosis is a very disabling disease. Hadjia Kande, a mother whose two youngest children are paralysed, says life is a daily burden.

"Look at my children. Neither one of them can even go to the toilet by himself. I need to provide them with constant attention, so I can't regularly get to my job at the cotton mill."

One of the children, 13-year-old Salissou, expressed how sad he is. "I'm afraid to drink water from any source, even well water. Look at the state I'm in, it's really a shame," he said. Although it disables both boys and girls, the disease is even worse for girls as it can have grave consequences for childbearing.

Dr. Koini explained that "if there are outgrowths around the pelvic area, girls can have difficulty giving birth and may have to have Caesarian sections because of an inability to deliver vaginally," he stated.

The origins of the Tibiri tragedy date back to 1983, when the first waterworks was built. The first cases of the illness appeared 10 years later, when many children fell ill.

The Tibiri children's tragedy has produced a hue and cry from the public, especially human rights groups who specialise in these types of issues.

The Nigerien Association for Human Rights (ANDDH) has recruited a panel of lawyers to defend the victim's interests. During a recent press conference, the ANDDH chairperson, Khalid Ikhiri, who is also a chemist at the University of Niamey, emphasised the importance of pursuing this matter through the courts so that the children can receive monetary compensation for the damages they have suffered.

"Fluoride poisoning is fatal. Those children will be disabled for the rest of their lives. Every movement they make is painful, and as a result, they cannot engage in the normal play and other activities of children their age," he added.

Ikhiri's intention in filing suit against the SNE is also to end the impunity that the company has always enjoyed. "The SNE needs to answer for this tragedy since it's their mission to provide the public with pure drinking water," he said.

Confronted by the indignation the Tibiri affair has aroused and by press condemnations, the director of the SNE, Seyni Salou, declared that the elevated fluoride rate uncovered in Tibiri's water cannot be pinned on his operation. He said that the standard tests for water purity are regularly performed on all samples.

However, Salou did acknowledge that fluoride is not normally tested for in the standard tests generally performed on drinking water. "There is rarely a high rate of fluoride in naturally occurring sources. The case of Tibiri is an exception."

Salou recalls that drilling for water in Tibiri's substratum took place in 1983 by the Water Office. The SNE did not yet exist at that time.

"At the time this operation was turned over to us, nowhere was it ever mentioned in the technical documents that there was fluoride in the water."

"Naturally, we continued to distribute water until the health services advised us in 1988 that there was an outbreak of bony lesions among Tibiri's children. We did every possible analysis of the water, even the most farfetched, and finally figured out that the tap water contained a great deal of naturally occurring fluoride," Salou stated.

The SNE director believes that more studies still need to be done to be sure that the only cause of the problem is the fluoride. He thinks that the evidence is not yet conclusive. Nevertheless, he acknowledged that the ANDDH is in its rights to pursue a suit since the laws of Niger allow for it.

More than compensation for the victims, the provision of healthy water for Tibiri's citizens is today's priority. The SNE has confirmed that they have taken steps to bring down the fluoride level to 1.6 milligrams per litre.

Salou indicated that there are permanent changes to be made. Among them is a new water project in the neighbouring town of Maradi. The technical studies have already taken place with help from the Chinese, and work on the new supply project is expected to begin in February 2001.

"Bringing in water from Maradi is the only possible solution because there is fluoride even in Tibiri's groundwater," Salou added.

The government has asked Niger's development partners, most notably UNICEF, to provide assistance to the victims. UNICEF says that a Finnish organisation is ready to finance a community assistance project for Tibiri's children.

The goal of this project, which should begin in the first quarter of 2001, is to provide therapeutic assistance to the sick children, which will be based on nutritional remedies, physical rehabilitation, and orthopaedic correction.

Salmeye Bebert, the director of child welfare, added that the project will help research the exact scope of the disease and will determine the source of pollution of Tibiri's water.

Niger's infant mortality rate of 274 per 1,000 in 1998 was one of the highest in the world.

## Fluoridation Gets Flushed on Election Day

NEW YORK

Nov. 12, 2001

PRNewswire

*The following press release was issued today by the New York State Coalition Opposed to Fluoridation:*

Voters on November 6, 2001, rejected fluoridation in several U.S. cities despite hundreds of thousands of dollars spent by fluoridation proponents in public relations campaigns. This adds to a growing list of cities that rallied against adding the claimed cavity-fighting fluoride to their water supplies.

According to newspaper accounts:

\* On election day, Worcester, Massachusetts, residents renounced fluoridation for the fifth time since the 1950's. Fluoridation proponents refused to debate but spent \$400,000 trying to win this

referendum. The victorious opposition spent only \$5,196.

\* Modesto, California, citizens rejected fluoridation for the second time, shunning a \$1 million grant offered by Fluoridation 2000, a statewide group, to cover the cost of fluoridation equipment. Fluoridation proponents outspent opponents by over 10 to 1.

\* Flagstaff's, Arizona, electorate decisively turned down fluoridation for the third time via mail-in ballots.

\* Sixty two percent of Sutherlin, Oregon, voted against fluoridation on election day.

\* In Gilbert, Arizona, opponents of fluoridation, inspired by these victories, plan to attack fluoridation again, which is slated to start in Gilbert at the end of the month.

"People who study the issue, themselves, find out fluoridation's health risks far exceed any possible benefits and deprives individuals of their choice to be medicated," says Paul Connett, Ph.D., Coordinator, Fluoride Action Network and Professor of Chemistry, St. Lawrence University, N.Y. "If your community fluoridates and you want it stopped, call us. We can help you."

Some other places defeating fluoridation this year:

\* January 2001 -- Willamina, Oregon, City Council says "no" to fluoride.

\* March 2001 -- Norridgewock, Maine, votes down fluoridation.

\* April 2001 -- City residents of McPherson, Kansas, rejected a fluoridation proposal by a nearly 5-to-1 ratio. It was their third vote against fluoridation.

\* May 2001 -- Brewster, Massachusetts, said no thanks to fluoride in the town's water systems.

\* May 2001 -- Harper, Kansas, citizens successfully petitioned against fluoridation.

\* June 2001 -- Eureka Springs, Arkansas, city officials followed water customers' advice and rejected fluoridation.

\* August 2001 -- Woods Cross, Utah, City Council said no thanks to fluoridation after a citizens' group presented them with a petition to opt out of a countywide fluoridation plan.

\* September 2001 -- Goldendale, Washington, council members unanimously rejected any proposal to add fluoride to the city's water supply.

\* October 2001 -- Centerville, Utah, City Council decided against fluoridation.

\* October 2001 -- White Salmon, Washington, City Council rejected fluoridation.

In other countries:

\* March 2001 -- Japan's Assembly of Kanra-machi, Gunma Prefecture, rejected a fluoridation proposal.

\* April 2001, Onehunga, New Zealand, voted two to one against fluoridation.

\* October 2001 -- Voters in Kamloops, British Columbia, Canada, ended 40 years of fluoridation.

On election day, 2000, 14 communities voted down fluoridation.

## Dentists to sue over continued flouridation of drinking water

By Fionnuala Quinlan

October 22, 2001

[\*The Irish Examiner\*](#)

A GROUP of Irish dentists are to sue the Minister for Health, Micheál Martin, for continuing to fluoridate drinking water.

The dentists, who are breaking ranks with the Irish Dental Association, plan to lodge papers with the High Court after handing a letter of protest into the Dáil on Friday.

The move comes as the Forum on Fluoridation — set up by the minister to examine both sides of the fluoride argument — completes its report, due to be published by the end of the month. The forum was branded a “rubber-stamping exercise” by the dentists planning to sue the Government.

The group of 20 — Irish Dentists Opposing Fluoridation — maintain that health authorities have not fulfilled their obligation under the 1960 Health Act to carry out regular surveys into the health effects of fluoridation.

Spokesman Dr Don MacCauley said the department had never carried out a comprehensive survey, although international research has linked fluoridation to cancer, irritable bowel syndrome, hip fractures and thyroid disorders. A study published in American medical journal *NeuroToxicity* found that fluoride exposure could produce lower IQ levels in children.

Up to 50% of Dr MacCauley’s teenage patients have dental fluorosis — which has been linked to fluoridation — which creates white spots or lines on teeth and causes tooth enamel to chip, he said.

The agent used, hydrofluosilic acid, is a waste component of the fertiliser industry and contains traces of chromium, mercury, arsenic and lead, according to Dr MacCauley.

Ireland is now the only country in Europe to insist that drinking water be fluoridated, although nine county councils, two corporations and seven urban district councils have voted to end fluoridation.

Dr MacCauley said the group opposed fluoridation because medication is being administered

without consent, the public has not been fully informed of the risks and side effects and fluoridation causes dental fluorosis.

Kildare-based GP Andrew Rynne is taking a separate case against the Government and the Irish Medicines Board (IMB) on the grounds that, although fluoride is a medicine, it is not licensed by the IMB.

A Health Department spokeswoman said all the issues raised by Dr MacCauley had been covered by the Forum on Water Fluoridation. However, she declined to comment on the contents of the report in advance of its publication.

## Utah a national leader by not fluoridating

Written by **David W. Christopher M.H.**

*[The Daily Herald](#), Provo, Ut.*

**Sunday, June 4, 2000**

Utahns consistently reject fluoride because we cut through the enormous endorsements and weigh the facts. We are not behind the times, but ahead of the 60 cities that bucked the system and rejected fluoride in the 1990's. We're unique because we vote. Most cities are fluoridated by executive order.

The task of unmasking this fluoride farce is monumental. Utah being the least fluoridated state is pivotal. If we can withstand the onslaught of federal, state, industrial, and of course medical pressure, Utah can send a clear message to Washington that like Europe and the majority of the world we will not be a part of the biggest hoax perpetrated on America since its inception. One lemming bucking the crowd will be noticed by other States who then might finally call for congressional hearings ferreting out the perpetrators of this insidious practice of dumping toxic waste into our drinking water under an EPA loophole.

Is fluoride toxic? Science shows fluoride is more toxic than lead (Clinical Toxicology of Commercial Products-1984) The majority of fluoride is captured into ponds from EPA required smokestack scrubbers and sold untreated to municipalities. The technical name is fluorosilicic acid, and yes it is a toxic waste that can totally dissolve any cement barriers.

Is fluoride a cumulative toxin? Of course it is; that's how it's supposed to work. It attaches to the calcium in bones. That is why dentists apply it to your teeth. However, when you drink it in water it enters the blood stream and attaches to the first bones it comes in contact with. Does fluoride cause hip fractures? Yes. Hip fractures were caused inadvertently in a study designed to prove fluoride prevented osteoporosis. In the trials elderly women were given 75 mg. per day of

sodium fluoride and compared to a control group. The study ended abruptly with the horrifying discovery that fluoride caused these fractures. In light of this study another study looked at low levels of fluoride in drinking water at the optimal level of 1 ppm. Hip fractures were 27% higher in women and 41% higher in men living in Brigham City, the largest fluoridated community in Utah, compared to non-fluoridated Logan and Cedar City. These studies were verified in five additional studies including the French study (JAMA 1995; 273:775) that showed an 86% increase in hip fractures in fluoridated communities. Additionally, Toronto which has been fluoridated for 35 years has twice the hip fractures as Quebec which has never been fluoridated.

Is fluoride absolutely safe? Of course not! There are more than 500 peer reviewed studies documenting adverse effects of fluoride ranging from cancer to brain damage. Tragically all of these studies will be dismissed as non conclusive by a medical system which has a predetermined mind set that fluoride is safe and effective.

Should we vote on it? By the initiative process, yes. If they can't get enough signatures? Then no, and quit wasting our time. How many times? I guess until they join our side!

NIAMEY, Jan 14 (IPS) - The Societe Nigerienne des Eaux (SNE), Niger's water company, is being sued because hundreds of children in Tibiri, 720 kilometres from Niger's capital, Niamey, were poisoned by grossly elevated rates of fluoride in the town's water.

The children, ranging in age from 15 months to 14 years, contracted skeletal fluorosis, a disease which causes deformities of the bones, according to medical sources.

The children suffer symptoms ranging from stiffness of the joints, arthritic-like symptoms and chronic joint pain, to calcification of the vertebral column, crippling spine and joint deformities, muscle wasting, and neurological defects. Mottling of the teeth is a less serious form of the disease that comes from ingesting lower levels of fluoride (dental fluorosis).

According to Dr. Moussa Koini, who has written a medical dissertation on the topic, the disease is caused by drinking water containing too much fluoride.

Water samples taken in Tibiri from SNE facilities show that the water contains 4.77 to 6.6 milligrams per litre, instead of the maximum 1.5 milligrams recommended by the World Health Organisation (WHO).

Out of the 425 recorded cases of children with fluorosis in Tibiri, there are 262 boys and 162 girls, a proportion of 61.79 to 38.21 percent. The age bracket most affected is the three to

seven-year-old group. There are 62 three-year-olds and 55 six year olds affected. Sixty-eight percent of the victims are five-year-olds.

According to Dr. Koini, crippling skeletal fluorosis affects mostly children. There have been no reported cases of adults in Tibiri contracting the disease. This is due, he said, to the fact that growing children absorb more fluoride than do adults. Adults can become ill with the disease, but they would need to have drunk heavily fluoridated water for more than 20 years.

Skeletal fluorosis is a very disabling disease. Hadjia Kande, a mother whose two youngest children are paralysed, says life is a daily burden.

"Look at my children. Neither one of them can even go to the toilet by himself. I need to provide them with constant attention, so I can't regularly get to my job at the cotton mill."

One of the children, 13-year-old Salissou, expressed how sad he is. "I'm afraid to drink water from any source, even well water. Look at the state I'm in, it's really a shame," he said. Although it disables both boys and girls, the disease is even worse for girls as it can have grave consequences for childbearing.

Dr. Koini explained that "if there are outgrowths around the pelvic area, girls can have difficulty giving birth and may have to have Caesarian sections because of an inability to deliver vaginally," he stated.

The origins of the Tibiri tragedy date back to 1983, when the first waterworks was built. The first cases of the illness appeared 10 years later, when many children fell ill.

The Tibiri children's tragedy has produced a hue and cry from the public, especially human rights groups who specialise in these types of issues.

The Nigerien Association for Human Rights (ANDDH) has recruited a panel of lawyers to defend the victim's interests. During a recent press conference, the ANDDH chairperson, Khalid Ikhiri, who is also a chemist at the University of Niamey, emphasised the importance of pursuing this matter through the courts so that the children can receive monetary compensation for the damages they have suffered.

"Fluoride poisoning is fatal. Those children will be disabled for the rest of their lives. Every movement they make is painful, and as a result, they cannot engage in the normal play and other activities of children their age," he added.

Ikhiri's intention in filing suit against the SNE is also to end the impunity that the company has always enjoyed. "The SNE needs to answer for this tragedy since it's their mission to provide the public with pure drinking water," he said.

Confronted by the indignation the Tibiri affair has aroused and by press condemnations, the director of the SNE, Seyni Salou, declared that the elevated fluoride rate uncovered in Tibiri's water cannot be pinned on his operation. He said that the standard tests for water purity are regularly performed on all samples.

However, Salou did acknowledge that fluoride is not normally tested for in the standard tests generally performed on drinking water. "There is rarely a high rate of fluoride in naturally occurring sources. The case of Tibiri is an exception."

Salou recalls that drilling for water in Tibiri's substratum took place in 1983 by the Water Office. The SNE did not yet exist at that time.

"At the time this operation was turned over to us, nowhere was it ever mentioned in the technical documents that there was fluoride in the water."

"Naturally, we continued to distribute water until the health services advised us in 1988 that there was an outbreak of bony lesions among Tibiri's children. We did every possible analysis of the water, even the most farfetched, and finally figured out that the tap water contained a great deal of naturally occurring fluoride," Salou stated.

The SNE director believes that more studies still need to be done to be sure that the only cause of the problem is the fluoride. He thinks that the evidence is not yet conclusive. Nevertheless, he acknowledged that the ANDDH is in its rights to pursue a suit since the laws of Niger allow for it.

More than compensation for the victims, the provision of healthy water for Tibiri's citizens is today's priority. The SNE has confirmed that they have taken steps to bring down the fluoride level to 1.6 milligrams per litre.

Salou indicated that there are permanent changes to be made. Among them is a new water project in the neighbouring town of Maradi. The technical studies have already taken place with help from the Chinese, and work on the new supply project is expected to begin in February 2001.

"Bringing in water from Maradi is the only possible solution because there is fluoride even in Tibiri's groundwater," Salou added.

The government has asked Niger's development partners, most notably UNICEF, to provide assistance to the victims. UNICEF says that a Finnish organisation is ready to finance a community assistance project for Tibiri's children.

The goal of this project, which should begin in the first quarter of 2001, is to provide therapeutic assistance to the sick children, which will be based on nutritional remedies, physical rehabilitation, and orthopaedic correction.

Salmeye Bebert, the director of child welfare, added that the project will help research the exact scope of the disease and will determine the source of pollution of Tibiri's water.

Niger's infant mortality rate of 274 per 1,000 in 1998 was one of the highest in the world.

## Fluoridation Gets Flushed on Election Day

NEW YORK

Nov. 12, 2001

PRNewswire

*The following press release was issued today by the New York State Coalition Opposed to Fluoridation:*

Voters on November 6, 2001, rejected fluoridation in several U.S. cities despite hundreds of thousands of dollars spent by fluoridation proponents in public relations campaigns. This adds to a growing list of cities that rallied against adding the claimed cavity-fighting fluoride to their water supplies.

According to newspaper accounts:

\* On election day, Worcester, Massachusetts, residents renounced fluoridation for the fifth time since the 1950's. Fluoridation proponents refused to debate but spent \$400,000 trying to win this

referendum. The victorious opposition spent only \$5,196.

\* Modesto, California, citizens rejected fluoridation for the second time, shunning a \$1 million grant offered by Fluoridation 2000, a statewide group, to cover the cost of fluoridation equipment. Fluoridation proponents outspent opponents by over 10 to 1.

\* Flagstaff's, Arizona, electorate decisively turned down fluoridation for the third time via mail-in ballots.

\* Sixty two percent of Sutherlin, Oregon, voted against fluoridation on election day.

\* In Gilbert, Arizona, opponents of fluoridation, inspired by these victories, plan to attack fluoridation again, which is slated to start in Gilbert at the end of the month.

"People who study the issue, themselves, find out fluoridation's health risks far exceed any possible benefits and deprives individuals of their choice to be medicated," says Paul Connert, Ph.D., Coordinator, Fluoride Action Network and Professor of Chemistry, St. Lawrence University, N.Y. "If your community fluoridates and you want it stopped, call us. We can help you."

Some other places defeating fluoridation this year:

\* January 2001 -- Willamina, Oregon, City Council says "no" to fluoride.

\* March 2001 -- Norridgewock, Maine, votes down fluoridation.

\* April 2001 -- City residents of McPherson, Kansas, rejected a fluoridation proposal by a nearly 5-to-1 ratio. It was their third vote against fluoridation.

\* May 2001 -- Brewster, Massachusetts, said no thanks to fluoride in the town's water systems.

\* May 2001 -- Harper, Kansas, citizens successfully petitioned against fluoridation.

\* June 2001 -- Eureka Springs, Arkansas, city officials followed water customers' advice and rejected fluoridation.

\* August 2001 -- Woods Cross, Utah, City Council said no thanks to fluoridation after a citizens' group presented them with a petition to opt out of a countywide fluoridation plan.

\* September 2001 -- Goldendale, Washington, council members unanimously rejected any proposal to add fluoride to the city's water supply.

\* October 2001 -- Centerville, Utah, City Council decided against fluoridation.

\* October 2001 -- White Salmon, Washington, City Council rejected fluoridation.

In other countries:

\* March 2001 -- Japan's Assembly of Kanra-machi, Gunma Prefecture, rejected a fluoridation proposal.

\* April 2001, Onehunga, New Zealand, voted two to one against fluoridation.

\* October 2001 -- Voters in Kamloops, British Columbia, Canada, ended 40 years of fluoridation.

On election day, 2000, 14 communities voted down fluoridation.

## Dentists to sue over continued flouridation of drinking water

By Fionnuala Quinlan

October 22, 2001

[\*The Irish Examiner\*](#)

A GROUP of Irish dentists are to sue the Minister for Health, Micheál Martin, for continuing to fluoridate drinking water.

The dentists, who are breaking ranks with the Irish Dental Association, plan to lodge papers with the High Court after handing a letter of protest into the Dáil on Friday.

The move comes as the Forum on Fluoridation — set up by the minister to examine both sides of the fluoride argument — completes its report, due to be published by the end of the month. The forum was branded a “rubber-stamping exercise” by the dentists planning to sue the Government.

The group of 20 — Irish Dentists Opposing Fluoridation — maintain that health authorities have not fulfilled their obligation under the 1960 Health Act to carry out regular surveys into the health effects of fluoridation.

Spokesman Dr Don MacCauley said the department had never carried out a comprehensive survey, although international research has linked fluoridation to cancer, irritable bowel syndrome, hip fractures and thyroid disorders. A study published in American medical journal *NeuroToxicity* found that fluoride exposure could produce lower IQ levels in children.

Up to 50% of Dr MacCauley’s teenage patients have dental fluorosis — which has been linked to fluoridation — which creates white spots or lines on teeth and causes tooth enamel to chip, he said.

The agent used, hydrofluosilic acid, is a waste component of the fertiliser industry and contains traces of chromium, mercury, arsenic and lead, according to Dr MacCauley.

Ireland is now the only country in Europe to insist that drinking water be fluoridated, although nine county councils, two corporations and seven urban district councils have voted to end fluoridation.

Dr MacCauley said the group opposed fluoridation because medication is being administered

without consent, the public has not been fully informed of the risks and side effects and fluoridation causes dental fluorosis.

Kildare-based GP Andrew Rynne is taking a separate case against the Government and the Irish Medicines Board (IMB) on the grounds that, although fluoride is a medicine, it is not licensed by the IMB.

A Health Department spokeswoman said all the issues raised by Dr MacCauley had been covered by the Forum on Water Fluoridation. However, she declined to comment on the contents of the report in advance of its publication.

## Utah a national leader by not fluoridating

Written by **David W. Christopher M.H.**

*[The Daily Herald](#), Provo, Ut.*

**Sunday, June 4, 2000**

Utahns consistently reject fluoride because we cut through the enormous endorsements and weigh the facts. We are not behind the times, but ahead of the 60 cities that bucked the system and rejected fluoride in the 1990's. We're unique because we vote. Most cities are fluoridated by executive order.

The task of unmasking this fluoride farce is monumental. Utah being the least fluoridated state is pivotal. If we can withstand the onslaught of federal, state, industrial, and of course medical pressure, Utah can send a clear message to Washington that like Europe and the majority of the world we will not be a part of the biggest hoax perpetrated on America since its inception. One lemming bucking the crowd will be noticed by other States who then might finally call for congressional hearings ferreting out the perpetrators of this insidious practice of dumping toxic waste into our drinking water under an EPA loophole.

Is fluoride toxic? Science shows fluoride is more toxic than lead (Clinical Toxicology of Commercial Products-1984) The majority of fluoride is captured into ponds from EPA required smokestack scrubbers and sold untreated to municipalities. The technical name is fluorosilicic acid, and yes it is a toxic waste that can totally dissolve any cement barriers.

Is fluoride a cumulative toxin? Of course it is; that's how it's supposed to work. It attaches to the calcium in bones. That is why dentists apply it to your teeth. However, when you drink it in water it enters the blood stream and attaches to the first bones it comes in contact with. Does fluoride cause hip fractures? Yes. Hip fractures were caused inadvertently in a study designed to prove fluoride prevented osteoporosis. In the trials elderly women were given 75 mg. per day of

sodium fluoride and compared to a control group. The study ended abruptly with the horrifying discovery that fluoride caused these fractures. In light of this study another study looked at low levels of fluoride in drinking water at the optimal level of 1 ppm. Hip fractures were 27% higher in women and 41% higher in men living in Brigham City, the largest fluoridated community in Utah, compared to non-fluoridated Logan and Cedar City. These studies were verified in five additional studies including the French study (JAMA 1995; 273:775) that showed an 86% increase in hip fractures in fluoridated communities. Additionally, Toronto which has been fluoridated for 35 years has twice the hip fractures as Quebec which has never been fluoridated.

Is fluoride absolutely safe? Of course not! There are more than 500 peer reviewed studies documenting adverse effects of fluoride ranging from cancer to brain damage. Tragically all of these studies will be dismissed as non conclusive by a medical system which has a predetermined mind set that fluoride is safe and effective.

Should we vote on it? By the initiative process, yes. If they can't get enough signatures? Then no, and quit wasting our time. How many times? I guess until they join our side!

David Christopher

## Prominent researcher apologizes for pushing fluoride

By Barry Forbes,

*The Tribune*, Mesa, AZ

Sunday, December 5, 1999

Reproduced with permission

"Why'd you do it, Doe? Why'd you toss the fluoride folks overboard?"

I had just tracked down Dr. Hardy Limeback B.SC., Ph.D. m Biochemistry, D.D.S., head of the Department of **Preventive Dentistry** for the University of Toronto, and president of the **Canadian Association for Dental Research.** (Whew.)

**Dr. Limeback is Canada's** leading fluoride authority and, until recently, the country's primary **promoter** of the controversial additive. In a surprising newsmaker interview this past April; Dr. Limeback announced a dramatic change of heart. "Children **under three** should **never use fluoridated toothpaste,**" he counseled. "Or drink fluoridated water. And baby formula must never be made up using Toronto tap water. Never."

Why, I wondered? What could have caused such a powerful paradigm shift?

"It's been building up for a couple of years," Limeback told me during a recent telephone interview. "But certainly the crowning blow was the realization that we have been dumping contaminated fluoride into water reservoirs for haft a century. The vast majority of all fluoride additives come from Tampa Bay, Florida smokestack scrubbers. The additives are a toxic byproduct of the super-phosphate fertilizer industry."

"Tragically," he continued, "that means we're **not just dumping toxic fluoride into our drinking water. We're also exposing innocent, unsuspecting people to deadly elements of lead, arsenic and radium, all of them carcinogenic. Because of the cumulative properties of toxins**, the detrimental effects **on human health are catastrophic.**" A recent study at the University of Toronto confirmed Dr. Limeback's worst fears. "Residents of cities that fluoridate have double the fluoride in the hip bones vis-à-vis the balance of the Population. Worse, we discovered that fluoride is actually altering the basic architecture of human bones."

Skeletal flourish is a debilitating condition that occurs when fluoride accumulates in bones, making them extremely weak and brittle. The earliest symptoms?

"Mottled and brittle teeth," Dr. Limeback told me. "In Canada we are **now spending** more money treating dental fluorosis than we do treating cavities. That includes my own practice."

One of the most obvious living experiments today, Dr. Limeback believes, is a proof-positive comparison between any two Canadian cities. "Here in Toronto we've been fluoridating for 36 years. Yet Vancouver-which has never fluoridated-has a cavity rate lower than Toronto's." And, he pointed out, "cavity rates are low all across the industrialized world including Europe, which is 98% fluoride free. Low because of improved standards of living, less refined sugar, regular dental checkups, flossing and frequent brushing. Now less than 2 cavities per child Canada-wide,' he said.

"I don't get it, Doc. Last month, theca Centers for Disease Control (CDC) ran a puff piece all across America saying the stuff was better than sliced bread. What's the story?"

"Unfortunately," he replied, "the CDC is basing its position on data **that is 50 years old, and** questionable at best. Absolutely no one **has done research on fluorosilicates, which is the junk they're dumping into the drinking water.**"

"On the other hand," he added, "the evidence against systemic fluoride intake continues to pour in."

"But Doc, the dentists"

"... have absolutely no training in toxicity," he stated firmly. "Your well-intentioned dentist is simply following **50 years of misinformation from public health and the dental association. Me, too. Unfortunately, we were wrong.**"

Last week, Dr. Hardy Limeback addressed his faculty and students at the University of Toronto, Department of Dentistry. In a poignant, memorable meeting, he apologized to those gathered before him.

"Speaking as the head of preventive dentistry, I told them that I had unintentionally mislead my colleagues and my students. For-the past 15 years, I had refused **to study the toxicology information that is readily available to anyone. Poisoning our children was the furthest thing from my mind.**"

"The truth," he confessed to me, "was a bitter pill to swallow. But swallow it I did."

South of the border, the paradigm shift has yet to dawn. After half a century of delusion, the CDC, American Dental Association and Public Health stubbornly and skillfully continue to manipulate public opinion in favor of fluoridation.

Meantime, study after study is delivering **the death knell of the** deadly toxin. Sure, fluoridation will be around for a long time yet, but ultimately its supporters need to ready the life rafts. The poisonous waters of doubt and confusion are bound to get chopper.

"Are lawsuits inevitable?" I asked the good doctor. "Remember tobacco," was his short, succinct reply.

Welcome, Dr. Hardy Limeback to the far side of the fluoride equation.

It's lonely over here, but in our society loneliness and truth frequently travel hand in hand.

Thank you for the undeniable courage of your convictions.

## Garlic: Man's Best Friend in a Toxic World

Garlic has been known for centuries to function as a natural antibiotic. It destroys the unnecessary and harmful bacteria throughout the human system. It emulsifies cholesterol and loosens it from arterial walls. It is effective in arresting intestinal putrefaction; it is used against contagious diseases, high blood pressure, fevers, parasites, worms, nicotine poisoning, colic, and yeast infections. (Concern, April 1977, p. 7)

The brilliant Dr. Edward Shook, herbalist, pharmacist and one of our illustrious teachers, began his lectures on garlic with the phrase of the Gentle Shepherd, "Consider the Lilies. . ." Garlic is a member of the Liliaceae family which also includes the onion. This is Dr. Shook's botanical description of garlic:

Allium Sativum. Natural order. Liliaceae.

Common Names Garlic, poor man's treacle.

Part used. Bulb.

Description. The leaves are long, narrow, and much like grass.

The bulb (the only part used) is compound, consisting of numerous bulblets, commonly called "cloves," grouped together between the membrane scales, and enclosed within a whitish skin which holds them as in a sac. The whitish flowers are located at the end of stalks growing directly out of the bulb. They are grouped together in globular umbels with spathes surrounding them.

It will pay us handsomely to consider this lily because it is one of nature's great masterpieces as a safe and certain remedy for many of man's serious and devastating diseases.

This wonderful herb has been used from very ancient times both as food and medicine.

Theophrastus, the Greek philosopher (born 372 BC) relates that garlic was placed by the ancient Greeks on piles of stone at the crossroads as a feast for Hecate (literally a feast for the gods.)

Virgil, the Roman poet (70 BC) in his eclogues states that garlic was part of the entertainment served by Nestor to his guest Machaon. He also tells us that it was owing to the virtues of garlic that Ulysses owed his escape from being changed by Circe into a pig like each of his companions.

Galen speaks very highly of it, eulogizing it as the "theriac" or "heal all."

Chaucer calls it "theriac" as do several old English botanists and herbalists.

Pliny gives an exceedingly long list of complaints in which it was considered beneficial.

The name garlic is of very ancient Anglo-Saxon origin being derived from gar (a spear) and lac (a plant) in reference to the shape of its leaves. It is one of the oldest medicinal remedies known to man, which has been cultivated and used from time immemorial in the treatment of many diseases. Both its romantic history and its very remarkable curative virtues are vastly interesting and educational to all earnest and honest physicians, and it is notable that it stands out today as one of our greatest and most important therapeutic agents.

It is alterative, diaphoretic, diuretic, expectorant, antispasmodic, antiasthmatic, stimulant, antiseptic, disinfectant, tonic, nervine, antiphthisic, germicide, and vermicide. Chemical Constituents: Volatile oil (25 percent), mucilage (35 percent), albumen, sugar, starch, fibrin, and 50 percent water. The oil is a rather complex substance, of a strong, intensely penetrating odor and consists of allyl compounds of sulfur. It will be seen that this remarkable herb is heavily laden with organic sulfur, but no oxygen is found in the oil. Yet, it is the action of oxygen when the skin is taken off the cloves that releases the sulfur by combining with an allyl group to form allyloxide, which is also a pungent liquid having a sulfur odor.

Many marvelous effects and healing powers have been claimed for garlic. It is probable that none

## Newsletters

Garlic: Man's Best Friend in a Toxic  
World

of them were exaggerated. I, myself, have seen it cure tuberculosis, asthma, bronchitis, several skin diseases, stomach ulcers, leg ulcers, athlete's foot, furunculosis, abscesses, epilepsy, and special affinity for the respiratory tract, lungs, bronchi, and so forth, though it diffuses itself through the whole system and wherever there is pus, it is a certain and safe remedy. The use of garlic in the World War as an antiseptic was most sensational. In 1916, the British government asked for tons of the bulbs offering one shilling a pound for as much as could be produced. A great quantity of it was used for the control of suppuration in wounds. The raw juice was expressed, diluted with water, and put on swabs of sterilized sphagnum moss which was applied to the wounds. Where this treatment was given, it has been proved that there has never been one single case of sepsis or septic results. Consequently, the lives of tens of thousands have been saved by this one miraculous herb. That was nearly many years ago, and still we do not find garlic as an official remedy in the United States Pharmacopeia. This is one of the most disgraceful facts connected with the so-called regular practice of medicine, and proves beyond all doubt that their practice is neither ethical, moral, or even humane; otherwise, such a miracle of healing power would never have been discarded as it was.

In olden days, garlic was employed as a specific for leprosy, psoriasis and several forms of exanthematous skin diseases. It was also believed to have most beneficial results in smallpox applied to the soles of the feet in a linen cloth renewed daily.

Those unacquainted with garlic might think this was merely superstition; but, as a matter of fact, it is quite true. If chopped or minced fresh garlic is placed on the soles of the feet and allowed to remain there for some time, it will not be long before the odor of garlic can be detected on the breath; and cases of purulent disease in different parts of the body have been reported completely cured by simply keeping an application of garlic to the soles of the feet, and renewing it once or twice a day.

We positively know that organic sulfur is a universal antiseptic, whether taken internally or applied outwardly to any part of the body. It has been authoritatively reported that tuberculosis has been successfully treated by inhalation of the freshly expressed juice of garlic, diluted with equal quantities of water.

Garlic was the principal ingredient in the famous Four Thieves Vinegar which was adapted so successfully at Marseilles for protection against the plague when it prevailed there in 1772. This originated, it is said, with four thieves who confessed that, while protected by the liberal use of aromatic garlic vinegar during the plague, they plundered the dead bodies of the victims with complete safety. It is stated that during an outbreak of infectious fever in certain poor quarters of London early in the last century, the French priests who constantly used garlic in all their dishes visited the very worst cases with impunity, while the English clergy caught the infection, and in many instances, fell victims to the disease. Another instance of the remarkable penetrating power of garlic is the fact that the expressed juice of fresh garlic mixed with olive oil and rubbed on the chest, throat, and between the shoulder blades gives great relief in whooping cough, asthma, bronchitis and dyspnea, according to an English physician who has used it with success for many years. It also has a reputation for safely reducing high blood pressure, and in this relation we have an exceedingly valuable formula.

Boiling garlic reduces its active virtues considerably. Vinegar and water both extract its curative principles, though vinegar alone seems to be more effective for that purpose. Expressed fresh juice of garlic contains all of its many virtues. The following priceless formulas will cover its therapeutic applications completely for asthma, bronchitis, catarrhal conditions of the mucous membranes, phthisis, tuberculosis, coughs, dyspnea, heart weakness, internal ulcerations, and so forth.

## Garlic Syrup

Peel 1 pound of fresh garlic, then chop or mince. Put into a wide mouthed jar and add equal parts of vinegar and distilled water to just cover the garlic. Close tightly, shake well, then let stand in a cool place for four days, thoroughly shaking once or twice a day. Now, add one pint of glycerine, shake well, and let stand another day. Strain with pressure, then filter liquid through a muslin or linen cloth. Add three pounds of pure honey, and stir till thoroughly blended. Put into jars, seal tightly, and store in a cool place.

In order to cover the pungent odor of the garlic, in case it is objectionable, do the following:

In place of macerating the garlic in equal parts of vinegar and distilled water, as directed above, use 1 quart of vinegar in which 3 ounces of powdered caraway seed and 3 ounces of sweet fennel seed have been slowly boiled for 15 minutes, while closely covered. Strain and when cold, add 1 pint of glycerine. Use this in the above formula instead of the vinegar and distilled water mixture.

This is much more acceptable to those who have an antipathy to the smell and taste of garlic. Of course, the 3 pounds of honey are also added after the filtering process. The deviation in no way affects the curative properties of the garlic, while it helps materially to disperse gas and flatus. We use aromatic vinegar in our own preparation of this formula, which is one of the most meritorious and useful remedies to have on hand. It is harmless, and very effective in the above mentioned cases, and will please and astonish both you and the patient.

Dose: For asthma and coughs: 1 teaspoonful with or without water every 15 minutes until spasm is controlled; then 1 teaspoonful every 2 or 3 hours for the rest of the day. After that, 1 teaspoonful 3 or 4 times a day is usually sufficient.

For tuberculosis, cardiac asthma and dyspnea: 1 dessertspoonful to a tablespoonful 3 or 4 times a day between meals.

Children: (8 to 15 years) one half of the above dose; (5 to 8 years) one quarter dose; (1 to 4 years) one eighth in a little water or honey

Garlic has also been used successfully in dropsy. The above formula may be used with benefit, but the following will be found to be much more prompt and effective, especially where the heart is much involved.

### **Dropsy with Heart Involvement.**

Boil 8 ounces lily of the valley root (cut) (*Convallaria majalis*) in 3 pints of distilled water for 20 minutes. Strain then boil slowly till reduced to 1 pint. Set aside to cool, and while still warm, add 8 ounces of expressed garlic juice, 8 ounces of brown cane sugar, and 1 pint of glycerine. When cold, bottle and keep in a cool place.

This is one of the most potent remedies for dropsy and heart disease ever devised.

Dose: 1 teaspoonful to a dessertspoonful in water, as required. The dose should be regulated and given every 3 hours to bring about diuresis. Also, a slowing of the heart action, and an increase in the tone of its contraction. After this effect has been produced, administer 1 teaspoonful in water 3 or 4 times a day.

Garlic for outward application: For eczema, pityriasis, psoriasis, ulcers, cancers, swollen glands, tubercular joints, necrosis and all purulent conditions that are accessible, we recommend the following formula:

These garlic formulas we have given you are priceless. It will pay you to study them, and utilize them with confidence whenever occasion arises."

--(Shook, 1978; reprint. pp. 69-73)

Dioscorides, a second century physician and herbalist who traveled with the army of Alexander the Great, has the following to say on the subject of garlic. Dioscorides was translated into middle English by a scholar of the middle ages:

SKORODON *Allium Sativum*

LEUKOSKORODON *Allium Ampeloprasum*

OPHIOSKORODON *Allium Scorodoprasum*

ELAPHOSKORODON *Allium subhirsutum*

### **Garlic**

Garluk (some call it Gebosome againe Elaphoboscum, the Latins *Allium*) some of it is *Sativum* & growes in gardens & this in Egypt, being only but of one head as the teeke, sweet, inclining to a purple colour. But elsewhere, it is compacted of many white cloues, the cloues that therein (the Greeks) call *Aglithai*. But there is another wilde kinde, called *Ophioscorodon*. (that is Serpent's

Garlick). It hath a sharp, warning biting quantie, expelling of flatulencies, and disturbing of the belly, and drying of the stomach causing of thirst & puffing vp, breeding of boyies in ye outsyde of the body, dulling the sight of the eyes. And the same thinges don also, (as we should say, Hart's garlick). Being eaten, it driues out the broade wormes, and drawes away the vrine. It is good, as none other thing, for such as are bitten of vipers, or of the Haemorrhous, who being taken presently after, or else that being beaten small in wine & soe dranek. It is applyed also by ye way of Cataplasme both for the same purposes profitably, as also layd on upon such as are bitten of mad dogge. Being eaten, it is good against the change of waters (fauces expediende, easdeings asperas leniendo.) It doth cleare the arteries & being eaten either raw or sod, it doth assuage old coughes. Being dranck with decoction of Origanum, it cloth kill lice and nitts. But being burnt, and tempered with bony it cloth cure the sugillationes oculorum, and Alopeciae being anointed on, but for the Alopeciae (it must be applyed) with vnguentum Nardinum. And with salt & oyle it cloth heale ye eruptiones papularum. It doth take away also the Vitilignes, & the Lichenes, & the Lentigenes, and the running ulcers of the head, and the Furfures & ye Lepras, with hony. Being sod with Taeda and Franckincense, & kept in the mouth it doth assuage the paine of ye teeth. And with figge leaues & Cummin it is a Cataplasme for such as are bitten of the Mygale. But the leafes decoction is an insession that brings downe the Menstrua & the Secundas. It is also taken by way of suffumigation for ye same purpose. But the stamping that is made of it and ye black olive together, called Myrton, cloth moue the vrine & open ye mouths of ye veins & it is good also for the Hydropicall."

(Dioscorides, Book 11, pp. 188-91, under the heading of "Sharp Herbs.")

Let's go into some interesting historical facts on garlic, a most revered patriarchal herb:

"Garlic, a cousin of the lily originated in Central Asia or India, where the early peoples enjoyed eating raw garlic as an enhancement to their meals. They also enjoyed longevity, and the lowest incidence of cancer on the planet." (Messegue, 1979, p. 132)

The builders of the pyramids of Egypt were paid in the coin of the realm; onions and garlic, a valuable commodity.

These builders of the pyramids of Cheops, a Fourth Dynasty Pharaoh, consumed great quantities of garlic. It was during these times that garlic was elevated to the rank of a deity.

The Ebers Papyrus, 1500 BC, one of the earliest herbal pharmacological documents we know, mentions garlic used in external applications for wounds.

Here is a quotation from the Bible:

*"We remember the fish which we did eat in Egypt for Nought, the cucumbers, and the melons, and the leeks, and the onions, and the garlic." (Numbers 11:5)*

According to Helen Noyes Webster, who interpreted the above quotation in her book, *Herbs, How to Grow Them and How to Use Them*, the Israelites traveling with Moses obviously missed the garlic when they went toward the Promised Land. If Moses had carried garlic, the Israelites may have been able to avoid intestinal putrefaction from eating the desert's available lizards and snakes.

Homer mentions garlic in his famous *Odyssey*. The deity Mercury, or Hermes, gave garlic to Odysseus as a protection against the goddess Circe's evil sorcery in which she turned men to swine. The athletes of the original Olympic games in ancient Greece traditionally chewed a clove of garlic before participating in the games. Galen, an early Greek doctor, spoke of garlic as the panacea of the common man. Hippocrates prescribed the eating of garlic for uterine tumors. The Vikings and the Phoenicians always carried garlic on their ocean voyages.

The crusaders brought garlic back to France. (In those days, it was a common law that two men's lives could be sacrificed in order to save a 100 lb. sack of peppercorns.)

A French herbalist, Messegue, born in Gascony, France, states that all the children born in that province are baptized with a clove of garlic on the lips. The emperor Charlemagne recommended that his subjects cultivate garlic. King Henry IV of France was baptized with a clove of garlic on his lips, and although he was said to have chewed a clove of raw garlic every morning upon arising, he was still very popular with the ladies.

The National Cancer Institute central files show that the incidence of cancer is extremely low in France where garlic consumption is the greatest and that garlic eaters in Bulgaria do not have cancer. It is reported in a textbook on pharmacognosy that a physician in British Columbia has successfully treated malignant situations by prescribing the eating of garlic.

The prophet Mohammed recommend that garlic be applied externally on the sting of the scorpion or the bite of the viper in the 7th century.

"The herb becomes the teacher. Men stray after false goals while the herb he treads (or in these days, stomps upon) knows much much more."

The above quote was written by Henry Vaughn, the early 17th century poet and mystic, as well as Hermetic philosopher during the days when the Doctrine of Signatures was popular. The Doctrine of Signatures was the method by which the ancients recognized the usage of a plant. According to Nicholas Culpeper, the 17th century English Physician and Herbalist, "and by the icon or image of every herb, man first found out their virtues. Modern writers laugh at them for it, but I wonder in my heart how the virtues of herbs first came to be known, if not by their signatures. The moderns have then from the writings of the ancients--the ancients had no writings to have them from."

The 17th century "moderns" felt that garlic, with its hollow stalk, helps afflictions of the windpipe. We know this to be a truth; that garlic is an antihistamine, and has been successfully used in bronchial and pulmonary disorders. As we examine some of the virtues of garlic, we find that the claims of the old Doctrine of Signatures will be far surpassed.

The National Dispensatory of 1887 gives us a fine description of the constituents of garlic at a period in our medical history when Syrupus Alli was an official U.S. preparation.

Constituents.--Besides the cellular tissue, garlic contains between 50 and 60 percent of water, 35 percent of mucilage some albumen, sugar, starch, and about 1 percent of volatile oil, to which its odor and taste are due. In its crude state, oil of garlic is of a dark brown-yellow color, heavier than water, of a very interesting taste, and consists of oxide and sulphides of allyl. The rectified oil consists mainly of the sulphide, (C<sub>3</sub>H<sub>5</sub>)<sub>2</sub>S, is colorless, lighter than water and may be obtained artificially by treating an alcoholic solution of potassium sulphide with allyl iodide. It dissolves easily in alcohol and ether, and sparingly in water ... Garlic, macerated in water or vinegar, yields its virtues to these liquids.--(p. 154)

They also describe its physiological action and medicinal uses:

Physiological action and Medical Uses--Garlic as well as leek and onion, is a stimulant to the part to which it is directly applied and to be the whole system. Its odorous element may be perceived on the breath and its taste in the mouth when the bruised bulb has been applied to the skin. When eaten raw, its odor "hales from many parts of the body, and, given to nursing women, it taints their milk, so that their infants refuse the breast. It reddens the skin, and may even vesicate it. Internally, it stimulates the digestive organs, and is everywhere used, but principally in southern countries, as a condiment for various kinds of food. The odor of garlic is popularly employed to revive persons from a swoon or from hysterical insensibility. It is a vermifuge not to be neglected in the treatment of lumbricoid worms when given by the mouth, and for destroying ascarides when administered by the rectum. Many cases of dropsy, particularly of anasarca produced by cold, have been cured by a diet of bread and raw onions. This regimen will sometimes produce copious diuresis. Onions boiled in milk have been used successfully for a like purpose. Bruised cloves of garlic and poultices of boiled onion are admirable remedies for [chronic bronchitis](#) in children. They should be applied over the whole front of the chest. Internally, garlic is a very useful agent in the same affection. It is also a domestic remedy for [whooping cough](#). Onion poultices are particularly applicable to abscesses; the core of a roasted onion relieves [earache](#) when introduced into the auditory canal. Onion and garlic cataplasms applied to the perineum relieve strangury. The dose of bruised or chopped garlic or of the expressed juice is about 30 grains (Gm 2). (p.154-155)

Frances Ward published this summary of garlic in her post-World War II book, *British Herbs*:

"GARLIC *Allium Sativum*, Amaryllidaceae

Anyone who travels in Italian buses might be forgiven for deciding never to grow this unpleasant smelling plant, and one can quite appreciate the decision of the old Greeks that people who ate Garlic should not be allowed in the temples of Cybele.

But from early times it has been considered a very useful medicine, and in the Middle Ages in Britain it was believed to be, either by itself by itself, as a 'simple', or mixed with other herbs, one of the cures for leprosy. Lepers were often called 'pilgarlics', as they were made to peel their own garlic, certainly a mark of identity and a means of segregation!

Throughout the ages it was held to have antiseptic properties, and during the 1914-18 War, sterilized Sphagnum Moss soaked in Garlic juice was used for suppurating wounds, a reminder of the old method of treating leprosy sores. From time to time, even in modern days, Garlic has been claimed to have marvelous properties; now, in addition to its stimulating powers, it is held to be beneficial in digestive complaints and for [coughs](#), [colds](#) and [asthma](#).

Cultivation of Garlic is a fairly easy matter, though it needs a finely sifted soil similar to that of an onion-bed. The cloves should be set about 2 in. in the ground about February or March, and lightly covered with soil. The bulbs may usually be lifted during August. There is generally a demand for Garlic from druggists, and good prices have been paid for it." (Ward, 1949, p. 159).

It in the medical literature we find several references to garlic as a therapeutic agent.

Phytocides of garlic suppress the proteinases (cathepsin) in malignant tumors of humans (postoperative material) and of experimental animals. These phytocides also inhibit cathepsin in the liver of cancerous animals, the activity of which increases during malignant growth. This action was detected by adding garlic extract to inoculated Ehrlich carcinoma. The results may be useful in further studies on garlic in the diet of cancer patients." (p. 140)

Joseph A. Di Paolo and Christopher Carruthers of the Roswell Park Memorial Institute of Buffalo, New York, wrote an article in Cancer Research, 1960. The title is, "The effect of Allicin From Garlic on Tumor Growth." By the way, Allicin is responsible for the odor in garlic, so the new odorless garlic isn't quite as effective as regular garlic. For those fortunate souls who can ingest raw garlic; the garlic breath can be obliterated by chewing on a raw clove (not a garlic clove, but the spice clove), or putting a drop of peppermint or spearmint oil on the tongue.

Chester J. Cavallito and John Hays Bailey writing in the Journal of the Chemical Society, Volume 66, November, 1944, discuss the antibacterial principle of garlic, allicin. They isolated allicin, a colorless oil, from garlic cloves and found it to be effective against the following bacteria strains both gram positive and gram negative:

#### **Organism**

- STAPHYLOCOCCUS AUREUS
- STREPTOCOCCUS HEMOLYTICUS
- STREPTOCOCCUS VIRIDANS
- B. SUBTILIS
- B. TYPHOSUS
- B. PARATHYPHOSUS A
- B. PARATHYPHOSUS B
- B. PARATYPHOSUS KUNZENDORF
- B. MORGANI
- B. ENTERIDITIS
- B. TYPHI-MURIUM
- B. DYSENTERIAE SHIGA
- B. DYSENTERIAE FLEXNER
- B. DYSENTERIAE SONNE
- V. CHOLERAE

(P. 1951)

H. Dold and A. Knapp, German Researchers writing in Chemotherapy section of Biological Abstracts in the 1950's discovered that garlic was effective against Streptococci, Escherichia coli, Bacillus prodigiosus, B. proteus, B. Subtilis, Shigella paradysenteriae Flexner, Eberthelia typhosa, Salmonella enteritidis and Vibrio cholerae. It was more effective when crushed than sliced. In addition, garlic exhibited some bacterial action even through the air. Bacteria could not be made resistant to the garlic either. The antibacterial action of garlic juice became somewhat weaker after having been stored in the ice box for 8 days and after boiling for 10 minutes. Remember, too, that when garlic is cooked above 130 degrees F., the enzymes in it are destroyed, and the organic sulphur in the garlic now becomes a harmful form of inorganic sulphur.

A most unique article appeared in the Chinese Medical Journal in May of 1977;

"GARLIC SLICE IT IN REPAIRING EAR DRUM PERFORATION"

by Hsu Wei-cheng

Teaching Research Group of Ear, Nose and Throat Department, Inner Mongolia Medical College, Huhehot

"Clinical use of fresh garlic was satisfactory in repairing eardrum perforations in 18 cases (1 having perforation in both ears) except 1 with irreversible chronic otitis media. The time required for healing by this method was 16 days in 12 cases with perforations smaller than half of the eardrum pars tensa and 28 days in 6 cases with perforations larger than half of it. 10-19 db hearing was gained after treatment.

Of the 18 cases, 6 had increased exudate in the middle ear during the latter part of the garlic treatment. Exudation stopped quickly after treatment was discontinued and anti-inflammatory measures were taken. It in 4 of these, healing took place soon after exudation was checked and in 2 it was necessary to repeat garlic application before the wound healed completely...

This method is indicated in adult's traumatic eardrum perforations within 3 weeks of injury provided there is no infection, perforation is not larger than half of the pars tensa and there is sufficient eardrum left around the perforation edges. It in cases where the duration of perforation is over one month and its edges have already become cicatrized, repairing with fresh garlic slice can only be started after 50% trichloro-acetic-acid has been used to cauterize the edge (repeat the cauterization every few days, if necessary), until the formation of whitish ring (0.1-0.2 mm width) and reddish granulation.

Prepare a fresh clove of garlic carefully, peel it but leave the transparent epithelium-layer tightly attached. The external auditory canal is sterilized routinely. Slice off a very thin piece of the garlic clove (about 0.2 mm thick) shaping it just large enough to cover the perforation. Keep the epithelium-layer attached to the garlic slice and insert it into the ear canal and carefully push it against the eardrum so that its cut surface hugs the perforation while the epithelial layer covered surface faces the external auditory meatus. Pack the external auditory meatus with an alcohol moistened cotton ball. Forceful blowing of the nose is prohibited and water should not be allowed into the ear canal in order to prevent infection. Usually the garlic slice should be replaced once or twice a week until healing is complete. Stop treatment when the middle ear becomes inflamed with excessive exudate and start anti-inflammatory treatment.

Garlic is a strong stimulant which hastens growth of new granulation, contains allin (C<sub>6</sub>H<sub>11</sub>O<sub>3</sub>NS) which rapidly breaks down to yield the antibiotic allicin (C<sub>6</sub>H<sub>10</sub>O<sub>2</sub>S<sub>2</sub>) in the presence of enzyme allinase and water." (Chinese Med. Journal, 3 (3); pp. 204-205).

"With garlic, the patient himself is doctor, pharmacologist, nurse, and pharmaceutical manufacturer all in one."

--Yoshio Kato

Yoshio Kato of the Oyama Garlic Laboratory in Japan has written a very comprehensive booklet entitled, *Garlic, The Unknown Miracle Worker*. In it he describes a unique process of garlic juice therapy known as FLOW-LEBEN. in his own words:

"FLOW-LEBEN is a total therapy system of medical application, particularly the external application of garlic. Application for the patents has been made in ten countries. Already the patents have been granted in four countries. (The Republic of China, Italy, France, Germany and the United Kingdom.)

It is very well known that garlic contains all the elements except Vitamin D. It is also known that garlic essence warms the body and promotes better circulation of the blood .... Aillin, an oily substance contained in garlic, diluted as much as 200 times can kill typhoid germs.

Another study reported that garlic juice diluted 30-40 times stops the growth of certain types of bacteria in a nutrient media--garlic has strong germicidal properties which are not found in other plants. When aneurinase bacteria grow in the body, the majority of the internally produced vitamin B1 is spoiled by this bacteria--garlic shows antipyretic effects when it, diluted with water, is applied externally to a person's body at times of high fever.

FLOW-LEBEN is the only system in the world by which we can obtain the maximum effects from garlic. The first unit was completed in 1970. It in this clinic, various concentrations of garlic-water solution are sprayed on the bodies of patients by means of atmospheric pressure compressed air (2 to 7 lbs.) shot through atomizing nozzles. Hydraulic pressure is employed in the newer models. This process stimulates the body's metabolism and removes cholesterol from the blood. Various functional disorders are eliminated and skin diseases are also cured by the germicidal effect of garlic."(Kato, 1973, pp. 173-175)

The unique and very deluxe treatment has been effective in treatment of ringworm, skin cancer,

frostbite, and other skin disorders using a 100% solution of garlic juice.

Richard Lucas in *Nature's Medicines*, published in 1966, presents the history of the Four Thieves Vinegar:

"It in Marseilles, a garlic-vinegar preparation known as the Four Thieves was credited with protecting many of the people when a plague struck that city (1722). Some say that the preparation originated with four thieves who confessed that they used it with complete protection against the plague while they robbed the bodies of the dead. Others claim that a man named Richard Forthave developed and sold the preparation, and that the "medicine" was originally referred to as Forthave's. However, with the passing of time, his surname became corrupted to Four Thieves." (Lucas, 1966, p. 38)

We now have the modern version of the formula. It is known as the anti-plague formula. It consists of fresh garlic, apple cider vinegar, pure vegetable glycerine, U.S.P., honey, garlic juice, fresh comfrey root, wormwood, lobelia, marshmallow root, oak bark, black walnut bark, mullein, skullcap, and uva-ursi. We recommend that you have several gallons of the preparation on hand in storage and hope that you will not need it. But, at the time of writing this article, a radio broadcast informed us of a case of Bubonic Plague with ensuing death in Lake Tahoe, U.S.A. The medical authorities were trying to locate all of the persons with whom the late subject came in contact in hopes of isolating the infection so the general public would not become exposed to this disease. The plague, related to the Black Plague in Europe during the 1300's, left people dead in their tracks and hanging out of windows waving goodbye to their friends. According to Herman Hesse, a German Writer, Goldmund was a young man who left a 14th century monastery and became a vagabond. He enjoyed the merriment of the wanderer as he traveled through Europe tasting the pleasures of love and life. All this was to change as Hesse describes the character's feeling of powerlessness and horror as he wanders throughout plague-stricken towns, cities, and rural areas observing the Hand of Death had reached everywhere; striking people regardless of their social standing or age. He describes a grotesque scene in a farm cottage where an entire family lay frozen after the throes of death.

### [Anti-Plague Formula](#)

The best insurance in the world against the "predicted coming plagues" and "killing diseases" is to have the body in a good healthy condition. Disease germs are merely scavengers and can only live on toxins, mucus and residue from junk foods. They cannot and will not be damage healthy cell structure. Therein lies the key! Have a healthy, clean body and disease germs will by-pass you--wanting nothing to do with your body, because it would be "obnoxiously clean" (in their language) and no filth for them to live on.

If the plague, or some other epidemic hits before you are in a good healthy condition, it is good to have an aid for a fast cleaning.

While lecturing in Snowflake, Arizona one night, one of the group asked if we had an anti-plague formula, and I was prompted to give them a "certain combination" of herbs to use.

The people there were very impressed to go right to work and prepare this liquid, having it read for use. We had told them that plagues come at unexpected times and it could be tomorrow or maybe even years away, but expect the unexpected and be ready now. If the formula was still unused, from "no need" years later, we could all be happy but "TIS BETTER SAFE THAN SORRY".

These good people made it up in gallon lots and had it on hand. Months later while speaking in Tucson, Arizona, someone asked for the "anti-plague remedy." I was surprised and asked where they had heard of it, as we had only given it out once. We were informed that a plague-like condition or [flu](#) had hit the Snowflake area and when other aids failed, this combination of herbs in liquid form performed its job with amazing speed.

At our next series of lectures in Snowflake, some time later, we heard one testimony after another about the many different types of ailments that were given quick relief by using this formula. The formula has now spread in many areas from coast to coast and is being used with good results. A man picked us up at an airport on the west coast a short time ago, and on the floor of his car was a bottle with liquid in it. When asked what it was he said, "oh, that's your anti-plague remedy, we never travel without it as it works good on about any sickness that comes up while we are

traveling. We are also never without a bottle of it at home."

[Anti-Plague Formula](#) is available in [The Cold Sheet Treatment](#) book.

Because of the wonders we have told you about in this article of the greatness of garlic, it is easy to see how it fits in this formula. Drop a culture of almost any known disease germ into "apple juice" or "apple cider vinegar" and it will die immediately. The ingredients found in "black walnut" are one of the few-known herbal-destroyers of fungus. Marshmallow is the enemy of gangrene and peritonitis. It is a "softening emollient" that will aid in removal of the inorganic deposits broken up by the "solvent" gravel root. Wormwood relieves pain and kills pin-worms and other unwanted parasites, etc. Oak bark tones and firms up the cells in the muscles, cartilage, and flesh. It is also an aid in rebuilding the circulatory system and feeding it. Scullcap is one of the finest nerve repairing and rebuilding aids. It works especially well on the spinal cord--the trunkline for health to the entire body. Comfrey is the cell-proliferant that causes the good cells to multiply rapidly and push out the waste and dead-cell structure, being supplied with the wonderful allantoin. Lobelia is the Lord's great catalyst to combine the herbal entities to a "smoothly-operating whole."

Garlic is a handy herb that will grow right in your own yard, taking very little space, but which should be in everybody's yard. Any time of the year it is needed, one can go out and dig up the bulb. This can be done in spring, summer, or fall, in an emergency, but the best harvest time is autumn, when the leaves have died down. After shaking off the dirt, the bulbs can be put into a mesh bag and hung in the shade where the cool air can circulate through the bulbs.

The single buttons or cloves, that make up the bulb, can be planted in the fall and by going through the winter will come up the following year in the form of a bulb, with a number of cloves or buttons. When planted in the spring, they will generally be just a larger button by fall and not become a bulb. Some people will put the garlic buttons into the refrigerator (not freezer) and keep cold for a few weeks, bring them out into room temperature for several weeks, and repeat this process several times. Thus, the garlic now believes it has gone through several winters and it mature enough to develop from a clove into a bulb. Rather sneaky we would say, but if it works, fine!

Garlic can be planted around rose bushes and other aphid infested plants and the aphids will disappear. Gardeners have reported to us that they plant garlic between the rows of cauliflower, tomatoes, etc., and the garlic will discourage plant-destroying bugs, cut worms, etc. Here "you can have your cake and eat it too" for you can get the value of garden-assistance from this herb during the growing season, and then thin them out in the fall to use as a food and a healing herb during the winter.

The reason for garlic's miraculous type of healing is in its creation, and this will be explained in more detail further along in this article. Briefly now, this is what happens: The garlic clove contains a very high amount of sulphur; sulphur is one of the best minerals to be used as an oxygen carrier. Oxygen is the breath of life and sulphur will carry the oxygen in the body directly to the infected area. Germs cannot live in a good supply of oxygen, therefore, the infection is cleared quickly. This is an organic wonder, so garlic may be termed 'a wonder herb'.

Medical science discovered that sulphur caused this rapid healing, so in World War II, flowers of sulphur (an inorganic mined-mineral) was substituted for the garlic. The army used sulfa for practically every ailment from "falling hair to fallen arches." Wonderful results were reported to us and we were told to use it in ever increasing amounts.

The difference in the healings of the garlic and the inorganic, manmade remedies is that garlic does its job and the excess of the organic materials not being used in healing the infection is easily passed as harmless vegetable fiber from the body. No harm and certainly nothing but good could result from using this powerful, yet harmless, herb. But, with the man-made sulfa drug we used, (this 'wonder drug' healing or the infection), the inorganic flowers of sulphur remained in the body. This inorganic mineral eventually combined with the urine and formed a substance that cut up the urinary tract, causing bed wetters. Many soldiers and other servicemen were given medical discharges, because of "[bed wetting](#)". This habit was acquired while in the service after the use of sulfa drugs. It is a well-known fact that too much sulfa drug has also caused other problems. The sulphur in the garlic will assist in healing the urinary tract after its infection-clearing job, instead of damaging it.

Following are various other uses of garlic. Many people have been helped in ridding the body of [worms](#) by inserting a peeled button of garlic as high as possible into the rectum. Do this just before retiring at night and it will come out with the first bowel movement in the morning. (This is also a

fine aid in adjusting [high blood pressure and low blood pressure](#)). Many mothers find it easier to insert the peeled button of garlic (into the child's rectum) after the child is asleep at night.

Here is a very successful routine for removal of these unwanted growths called [moles, or warts](#). Take a button of garlic, slice or cut in two, and placed the cup area over a wart of mole. Tape it on, and as it dries out put a fresh piece. Many users have reported good results.

Massage painful joints and areas with Oil of Garlic, massage it thoroughly. Massage in thoroughly oil of garlic a number of times a day for rough hands.

To make oil of garlic place chopped or grated garlic in a bottle, glass servicing dish or baking dish, (an inch or more of the garlic), and cover with olive oil so that the oil is a half inch or so above the garlic. Keep in a warm place or in the sun two to three days. Strain with muslin or any good cotton material (no synthetics) and bottle the oil. Keep in a cool place.

I remember one time we were called out to a house in the wee hours of the morning. This call was to see a little boy, under the age of two years, that had double [pneumonia](#). The physician on the case had informed the parents that nothing more could be done and he would come back in the morning to sign the child's death certificate. Seeing as it was well under forty degrees below zero and nearly fifty miles from ambulance service, the parents were told that the boy, if taken by car to a hospital, would surely die. These parents tried to get other doctors, but at that time of night, and in such a remote area, no one would offer help. A friend told them about us, then living in Evanston, Wyoming, and to try to call us. Having been told of the boy's condition we went expecting to give him the [cold-sheet treatment](#). Upon arriving there we found that the plumbing was frozen and there was not running water in the house. We found enough in the toilet tank above the bowl to give the little chap an enema. We were not able to give the cold sheet treatment (no water) so only the garlic paste was made up and applied. This was done after a complete massage of the body and the feet. After oiling the feet up to the ankles, thoroughly, and massaging the olive oil in well, a half-inch thickness of the garlic paste was applied to the soles of his feet. (This is put on only the soles and not up onto the sides). Then gauze was placed over to cover the paste, bandages to hold it into place, and a loose white cotton sock was pulled over the bandages to hold them securely.

Garlic paste is made by taking freshly peeled buttons of garlic and garlic about half and half with Vaseline. This amount can vary, according to the toughness of the feet, more Vaseline for tender feet, less for thicker skin. Many of the health minded readers will be shocked by our using a low-vibration ointment like Vaseline instead of using anhydrous lanolin or some lighter more organic type. The reasoning for this is that the lighter type ointments will penetrate more quickly into the skin, but the Vaseline will hold the garlic on the ointment form. This will also keep the garlic from blistering as easily. (A garlic blister looks bad, but does not hurt and heals back quickly.) The little boy was running an extremely high fever and was delirious when he was covered and put back into bed. (This was well after 2:00 a.m.). We assured the parents the child would be all right and would get well. A few days later we were called again by these parents.

They told us that the doctor came back to sign the death certificate that next morning, but the little boy was sitting in his high chair, drinking some juice and breathing normally as if nothing had happened the night before. The doctor became so angry and demanded to know the name of the other doctor who had taken over the case before it had been released by him. He wanted a hearing by "the board" to have the other doctor thrown out of practice for going "against procedure" by taking over a case without written release. The parents asked if his "release" was the death of their child? He probably changed his mind because we were not brought before a hearing.

I had forgotten this case until nearly twenty years had passed. One evening, after a lecture in another state, a fine-looking young fellow in his early twenties came up to the podium and shook my hand vigorously, saying he had always wanted to meet me. His mother had told him of our long trip in sub-zero weather at night to their house, of using the natural methods on, and saving his life. He stated that he enjoyed living so much he had been looking forward to meeting me.

That paid off for a cold night out on a house call by far more than the small fee that was charged.

## Immucalm

Relaxing formula

---

### Usages:

Immucalm is designed to calm yet strengthen the body's immune responses. Many times we believe that we are allergic to certain foods, plants or animals, but in reality our immune system may just be overacting. This simple combination of marshmallow root and astragalus has made life easier for those who suffer from allergies, hayfever, asthma, rheumatoid arthritis or any hyperactive immune response.

### Dosages:

Capsules or tea may be taken daily: either two or three capsules three times daily or three cups of the tea.

### Ingredients:

**Marshmallow root**

**Astragalus**

### Useful in treating:

## El Programa de los Tres Días de Limpieza y la Dieta sin Mucosidad

**del Dr. Christopher**

[I. Los Tres Días De Limpieza](#) | [Rápida Referencia Para los Tres Días de Limpieza](#) | [II. Dieta Sin Mucosidad](#) | [Algunas Recetas](#) | [III. Ayuda Correctiva](#) | [IV. El Circuito Vital](#) | [V. Extension De La Limpieza](#) | [VI. Unas Cuantas Combinaciones De Planta](#)

Introducion:

El programa de limpieza interior se hace con el propósito de purificar el cuerpo preparándolo para su curación. Si está subido de peso, este programa le hará bajar a su peso normal; y si está bajo de peso, le hará subir hasta su peso óptimo. El propósito del programa es eliminar la mucosidad del cuerpo, con lo cual se obtiene una cura natural en una forma muy simplificada, con las menores molestias para el paciente.

Recuerde, no hay enfermedades incurables, solamente personas incurables. Este programa de limpieza interior lo bendecirá in cinco formas:

1. Eliminará el exceso de mucosidad del cuerpo, que es lo que origina el desarrollo de pólipos, tumores, quistes, etc; los cuales hacen que el cuerpo envejezca rápidamente. (Vease "Procedimiento de Purificación-Detoxificación del Cuerpo").
2. Le dará alimentos que son de las más alta calidad vibratoria (que son vivos, nutritivos y saludables), los cuales vigorizarán las partes vitales del cuerpo de tal forma que ellos no pierdan la salud sin aviso. La mucosidad es la causa de alergias, enfermedades, dolores y muerte, y por esta razón le estamos dando esta dieta anti-mucosa que mantendrá el cuerpo limpio de esas sustancias que causan el pronto envejecimiento de la persona.
3. Le proveerá de la ayuda correctiva para facilitar la cura y la regeneración del cuerpo humano. (Véase Ayudas Correctivas).
4. Disipará la electricidad estática del cuerpo, y de esta manera eliminará su resultado, que es la confusión y la frustración.
5. Le proveerá de fórmulas de plantas que le ayudarán a encontrar mejor salud y felicidad.

## I. LOS TRES DIAS DE LIMPIEZA

Para empezar este programa de limpieza se requiere que el paciente este bajo una terapia de 3 días de detoxificación (purificación de cuerpo), para entonces proceder con la dieta como se indicará después. El procedimiento de la eliminación de la mucosidad y el catarro y la detoxificación que recomendamos es tomado en parte del libro del Dr. N. W. Walker, "Raw Vegetables Juices": To Detoxicate,,: Phoenix, Arizona: Norwalk Press, Publisher, pp 58-71.

La limpieza suprema es el primer paso para la obtención de la salud. Cualquier acumulación o retención de materia residual de cualquier clase dentro de nuestro cuerpo retardará el proceso de recuperación. Los canales naturales de eliminación son los pulmones, los poros de la piel, los riñones y los intestinos.

La transpiración es la acción de las glándulas sudoríparas de eliminar del cuerpo las toxinas, las cuales podrían ser perjudiciales para nosotros si son retenidas en él. Los riñones excretan los productos finales de la comida y del metabolismo que vienen del hígado. Los intestinos eliminan no sólo los residuos de la comida, sino también materia residual en forma de células y tejidos muertos, que son resultado de nuestras actividades físicas y mentales; las cuales si no son eliminadas, causan putrefacción de las proteínas resultando en toxemia o acidosis.

La retención de estas materias residuales tiene un efecto mucho más perjudicial en nuestro cuerpo que lo que es generalmente sospechado, y su eliminación es uno de los primeros pasos hacia la obtención de progresos notorios.

Un método eficiente para efectuar dicha eliminación rápidamente, particularmente en el caso de adultos, ha sido encontrado a través del siguiente procedimiento: Lo primero que hay que hacer por la mañana, al levantarse, es tomar 16 onzas (1/2 litro) o más de jugo de ciruela seca. El propósito del jugo de ciruela seca no es sólo el de vaciar los intestinos (el cual se realizará de todas maneras), sino también el de atraer los despojos de todo el cuerpo, donde sea que éstos se encuentren, hacia los intestinos y eliminarlos a través de ellos.

Durante los tres días de limpieza, tome 1 o 2 cucharadas de aceite de olivo tres veces al día, para ayudar a lubricar los conductos del hígado y la bilis, etc.

Si la cantidad de volumen de materia eliminada no fuese reemplazada, en igual volumen por algo, entonces el cuerpo se deshidrataría en ese volumen. Por eso, tomando jugo de frutas reemplazamos las materias tóxicas o ácidas removidas o eliminadas. Este procedimiento traerá como resultado una reacción alcalina en nuestro sistema. Hay varios tipos de terapia por jugos - manzana, zanahoria, uvas, cítricos, tomate, etc., pero escoja sólo uno para los tres días, y "chupe" completamente cada bocanada que tome. La elección del líquido para el cuerpo debe ser hecha por experimentación individual y por preferencia.

No se debe comer nada sólido durante los tres días de limpieza, sin embargo, si llega a la noche con mucho hambre, puede comer apio.

**Terapia del Jugo de Manzana.** Como una de las más grandes plantas purificadoras de la sangre conocidas, tenemos la más común de las frutas: la manzana (orden natural: Pomaceae) con más de 2,000 variedades. El Dr. Edward E. Shook dice:

"No hay otro agente curativo o planta en el rango total de agentes terapéuticos conocidos, que puede compararse con el árbol de la manzana, y aunque sería difícil decir cual de sus muchas virtudes es la mejor, suponemos que su abundancia en compuestos de oxígeno naciente es probablemente la razón principal por la cual es una fruta tan apreciada, purificadora de la sangre e infalible remedio para muchas enfermedades." (Traducción)

El análisis químico de la manzana muestra el porqué de su gran valor curativo. Jugo de manzana fresca es lo mejor, si se puede conseguir; sino, se puede comprar cualquier jugo de

manzana embotellada que no tenga preservantes ni aditivos.

Empezar tomando 1/2 litro (16oz) de jugo de ciruela seca (prune juice), como la primera cosa en la mañana, y después de media hora 1/4 de litro (8 oz) de jugo de manzana sin diluir.

Revuelva cada bocanada en la boca completamente (llamado "chupar") de tal forma que la saliva se mezcle con ella; de esta manera podemos obtener todo el valor nutritivo y curativo.

(Nota: Esta es la razón por la cual todos los alimentos deben ser comidos sin tomar líquidos, así la comida es masticada y "chupada" lo suficiente para ser convertida en líquido al ser mezclada totalmente con la saliva. Esta es la llave que abre la puerta de la digestión. El jugo no debe ser tragado. De esta manera todo su valor nutritivo será obtenido, y no habrá peligro de regurgitación o de que actúe como un emético para un estómago débil. Este procedimiento ayudará también al páncreas en casos de alto o bajo nivel de azúcar. Usando la saliva es esta forma, el programa curativo de limpieza interior es grandemente acelerado, ya que el resto de los jugos gástricos funcionarán apropiadamente en lugar de fortuitamente).

Entonces, media hora después, tomar un vaso de agua de preferencia destilada, seguido en otra media hora más tarde con más jugo de manzana. Aproximadamente 1 galón (4 litros) de jugo será consumido en un día, por un adulto de tamaño promedio, o una onza (una cucharada) por cada kg de peso de alguien si éste es más pequeño o más grande que el promedio. (Esto, por supuesto, es la dosis sugerida; la edad, la habilidad para asimilar líquidos, etc. determinará la capacidad para cada caso específico). Este procedimiento se recomienda como una "regla de dedo" y no como una ley específica; sin embargo, el procedimiento que estamos explicando ha demostrado ser el mejor.

El disolver la mucosidad durante la terapia de jugo, generalmente causa estreñimiento. Use nuestra fórmula para el intestino grueso (**Fen LB**, que se encuentra en la última sección de este libro), 2 o más cápsulas 3 ó más veces al día.

Repita este método de detoxificación por tres días consecutivos. De este modo aproximadamente 3 galones (12 litros) de toxinas linfáticas serán eliminadas del cuerpo y serán reemplazadas por tres galones de jugo. Esto traerá como resultado una acelerada realcalinización del sistema. Si aparece alguna condición de ictericia (resultado de la alteración del funcionamiento del hígado, que causa color amarillo en los ojos y en la piel) o dolor en la zona hígado-vesícula biliar usar la fórmula No. 3 (**Barberry LG**).

En el cuarto y siguiente días, empiece a tomar jugo de vegetales, y a comer verduras y frutas, preferiblemente crudas (ensaladas). Para el desayuno por ejemplo se podría comer frutas de la estación en rodajas, rayado o cortado, algo de miel para endulzar, y una o dos cucharadas de almendras finamente rayadas y sin echarle sal. Se podría tomar también uno o dos vasos de jugo de fruta fresca o de verduras 30 minutos antes o después de comer las frutas.

Para el almuerzo se podría comer más frutas y 1/2 litro de jugo de verduras frescas y alguna clase de ensalada de verduras.

No debemos alarmarnos si nos sentimos de alguna manera débiles durante o después de este programa de detoxificación. La naturaleza usa nuestras energías para efectuar la limpieza general de nuestro organismo. Pronto obtendremos mayor energía y vitalidad como resultado de este programa, además de obtener un cuerpo mas limpio y saludable. Es bueno hacer los tres días de limpieza mensualmente o varias veces al año.

(NOTA: Si existe la más ligera tendencia hacia apendicitis, podemos hacer uso de enemas con infusión de nebeda (catnip) o de una infusión hecha de tres partes de las hojas de la frambuesa roja (red raspberry) y una parte de las hojas de lobelia, 2, 3 ó más enemas al día por una semana o más, si es necesario. Creemos en el uso de enemas en casos de emergencia solamente, y no como apoyo para unos intestinos inactivos o "flojos").

**Terapia del Jugo de Zanahoria.** El mismo procedimiento que se usa con el jugo de manzana se usa con el jugo de zanahoria. Este puede ser usado directamente sin diluir, tomando un vaso de 1/4 de litro (8 oz) cada media hora, si desea, como con el jugo de manzana.

**Terapia del Jugo de Cítricos.** La mejor terapia de jugos usando cítricos es una combinación. Estos son preparados frescos y en las siguientes proporciones: 4 a 6 toronjas o pomelos (de acuerdo con el tamaño), 2 o 3 limones y suficiente naranja para completar una mezcla total de 2 litros. Diluir con dos litros de agua para hacer un galón de este surtido. Luego proceda como en la terapia del jugo de manzana.

**Terapia del Jugo de Uva.** Aún si se vive en una zona de cítricos, es permisible substituir este surtido por el jugo de uva sin azúcar y sin aditivos. (Es mejor usar el tipo de frutas que crece naturalmente en la zona que vive de cada persona). Jugo de uva congelada no es recomendable porque son combinados con muchos aditivos inaceptables, en casi la mayoría de los casos. Las marcas de jugos vendidas en las tiendas naturistas que son obtenidas en suelos orgánicos y sin pesticidas son definitivamente superiores que los otros que son vendidos en tiendas regulares.

Diluir 2 litros de jugo de uva con dos litros de agua (de preferencia agua destilada). Se toma un vaso de 1/4 de litro (8 oz) empezando media hora después de haber tomado el jugo de ciruela seca en la mañana. Se sigue con 1/2 litro de jugo de uva diluido cada 20 ó 30 minutos de allí en adelante hasta que todos los 4 litros de jugo se termine. Entonces siga el procedimiento como en la terapia del jugo de manzana.

**Continuación del Ayuno.** Después de los tres días de limpieza, si la persona tiene el deseo y la habilidad de hacerlo, es siempre provechoso ayunar de 1 a 3 días, usando sólo agua destilada, y entonces un día de jugos antes de retornar a las ensaladas y otras comidas regulares. No coma ninguna comida pesada inmediatamente después del período de limpieza o después de un ayuno, sino que adicione éstos a su dieta gradualmente. Este es el mejor camino para retornar a las comidas sólidas.

**Síntomas de la Limpieza.** El inicio del proceso de la limpieza interior de nuestro cuerpo puede venir acompañado por dolores periódicos en las áreas donde la acción de limpieza es más aguda y los desperdicios están saturando el sistema de eliminación de nuestro cuerpo. Habrá momentos en que Usted se sentirá muy indispuerto. No se asuste. De hecho, la acción de limpieza puede producir todos los síntomas y efectos de una enfermedad severa, pero la persona deberá actuar aquí con conocimiento y no quejarse del problema temporal creado por la limpieza que se está realizando; se requerirá mucha paciencia, y gran alivio resultará por el hecho de que el proceso de curación esta bien encaminado; y es mejor cuanto más pronto esas molestias vengán y se sientan.

Recomendamos el inicio de baños en tina con aceite de ricino (como se explicará después en este programa) durante los tres días de limpieza con jugos.

Esta eliminación y limpieza no será realizada instantáneamente, y uno no debería esperar que esas acumulaciones, que han sido "empaquetadas" en nuestro sistema durante toda nuestra vida, sean milagrosamente forzadas a salir fuera de los tejidos y órganos de un día para otro. Todo esto tomará tiempo: Llamado Tiempo Cíclico (trabajando con el funcionamiento cíclico normal del cuerpo). Por lo tanto, en el programa del Dr. Christopher usted tendrá días buenos y malos, y esto ocurrirá en ciclos. Estas "enfermedades por la limpieza" vienen en ciclos de 7 días, 7 semanas, 7 meses, y 7 años en la mayoría de los casos (puede variar dependiendo de la persona) y en cada uno de estos períodos cíclicos habrá lo que llamamos la Crisis de Limpieza y Curamiento.

Cuando las toxinas venenosas se desprenden y descargan dentro de la corriente sanguínea para ser eliminadas, usted puede sentirse muy indispuerto, y frecuentemente durante una crisis usted puede sentirse peor de lo que pude haberse sentido antes de empezar el programa. Pero, nuevamente, no se asuste. Estas crisis son solamente toxinas venenosas tratando de salir del cuerpo (cargando pesadamente los intestinos) y le estan haciendo el favor de abandonarlo lo más rápido posible (causando dolor y molestia en el proceso de eliminación). Pero los malos días irán disminuyendo mientras que los buenos irán aumentando cada vez más, si usted tiene fé y sigue cuidadosamente el program.

## Rápida Referencia Para los Tres Días de Limpieza

### **Cosas ha necesitar:**

54 onzas o 2 cuartos de jugo de Ciruela Seca (Prune Juice)

9 onzas de aceite de olivo

3 galones de el jugo seleccionado (manzana, zanahoria, cítrico o uva)

3 galones de agua (de preferncia destilada)

### **Pasos para la Limpieza:**

Paso 1: Jugo de Ciruela Seca

16 oz o más al levantarse en la mañana

Paso 2: Aceite de Olivo

Una o dos cucharadas tres veces al día

Paso 3: Jugo y Agua

8 onzas de fluído cada 30 minutos, alternando 8 onzas de jugo elegido con 8 onzas de agua destilada.

### **Tiempo Sugerido:**

7:00 a.m. .... 16 oz de jugo de ciruela seca y 1-2 cucharadas de aceite de olivo.

8:00 a.m. .... 8 oz o más de jugo elegido

8:30 a.m. .... 8 oz o más de agua destilada

9:00 a.m. .... 8 oz o más de jugo

9:30 a.m. .... 8 oz o más de agua destilada

Continúe alternando agua y jugo cada media hora hasta el mediodía.

12:00 p.m. .... 8 oz o más de jugo elegido y 1-2 cucharadas de aceite de olivo.

Continúe alternando agua y jugo cada media hora hasta las 5:00 p.m.

5:00 p.m. .... 8 oz o más de jugo elegido y 1-2 cucharadas de aceite de olivo.

Continúe alternando agua y jugo cada media hora hasta las 8:00 p.m.

8:00 p.m. .... 8 oz de agua cada hora hasta acostarse.

### **Recuerde:**

**Un tipo de jugo por tres días.** Seleccione cualquier jugo (manzana, zanahoria, cítrico, tomate, uva, etc.) Y úselo por los tres días completos.

**Solamente jugo.** No coma nada durante los tres días de limpieza, con excepción de la fruta o

vegetal que se está usando con la limpieza.

**Chupe el jugo.** Asegúrese “chupar” totalmente cada bocanada.

**Estreñimiento.** Use más jugo de ciruela seca o tomar Fen LB si se desarrolla estreñimiento durante la limpieza.

**3 días de limpieza.** Repita esta detoxificación por tres días consecutivos.

**Cuarto día en adelante.** Después de 3 días de limpieza empieza a tomar jugo de vegetales y frutas, preferible crudas.

**Sintiéndose débil.** Usted probablemente se va a sentir un poco débil durante o después de la detoxificación ya que su cuerpo usará muchas energías para limpiarse.

**Enema.** Si existe la más mínima tendencia hacia apendicitis, use enema alta, pero sólo úselo en casos de emergencia y no como una “muleta” para unos intestinos flojos.

**Continúe el ayuno.** Una vez que a completa varios programas de limpieza, Usted puede ayunar 3 días más usando solamente agua destilada.

**Síntomas de la Limpieza.** Mientras su cuerpo se empieza a limpiar, Usted probablemente experimentará dolores periódicos en todo su cuerpo debido a la eliminación de toxinas, pero ésto brinda una limpieza y un curamiento más rápido.

[Regresar al Empieza](#)

## II. DIETA SIN MUCOSIDAD

El segundo paso para el curamiento del cuerpo es eliminar de la dieta las comidas que forman mucosa (dieta es definida como la comida diaria de cada persona). No debemos ingerir mucosa en nuestro cuerpo más rápido que lo que éste toma para eliminarlo.

Con este procedimiento preventivo no sólo los sinusoides, los bronquios y los pulmones son despejados sinó también la mucosa que produce el estreñimiento. El programa de comidas que dará este maravilloso resultado es conocido como la "dieta sin mucosidad".

**Comidas Peligrosas que Forman Mucosa.** Sustancias artificiales o inorgánicas en la comida deben ser eliminadas de la dieta del paciente:

1. **Sal.** Para aquellas personas que están acostumbradas a usar mucha sal, ésto podría sonar difícil pero, si usted lo sustituye con pimienta molida y condimentos de hierbas, adicionando kelp en polvo, encontrará que el deseo por la sal irá desapareciendo rápidamente. La pimienta es una planta muy nutritiva que ayuda a regenerar el cuerpo cuando es usado en su estado natural. Pero cuando la pimienta es cocinada, su estructura molecular cambia, y se convierte en un irritante inorgánico, y es éste el único momento en que tiene resultados dañinos. El uso de sales que están hechos a base de potasio o de vegetales son buenos, teniendo cuidado de no exagerar.

2. **Huevos.** No deben ser comidos en ninguna forma.

3. **Azúcar y todos los productos derivados.** Usted puede usar miel de abeja, melaza de zahina, pero no azúcar, ni sus aplicaciones.

4. **Carne.** Eliminar todas las carnes rojas de la dieta. Un poco de pescado de carne blanca una vez por semana, o un poco de pollo (que no ha sido alimentado con fines comerciales o inoculados con formaldehído o suero para evitar la descomposición) podría estar

bien (ya que éstas son las mejores formas de carne comestible) pero no los use muy seguido.

5. **Leche.** Eliminar la leche y todos sus derivados, los cuales incluye mantequilla, queso, queso cortado, yogurt, etc. Todas éstas son sustancias que forman mucosidad y en la gran mayoría son de alto contenido de colesterol (especialmente la mantequilla). Como un sustituto para la mantequilla o la margarina usted puede entrenar su gusto y gozar de un buen, fresco y suave aceite de olivo en las ensaladas y verduras, y descubrirá que éste es uno de los mejores alimentos que existen.

6. **Harinas.** La razón para eliminar la harina es que cuando es calentada y horneada a altas temperatura cambia a ser una sustancia formadora de mucosidad. Ya no es una comida, lo que significa que no hay "vida" en élla. Toda comida saludable es orgánica, mientras que la comida que no es saludable, o "comida muerta" es inorgánica. Esta es la clave de todo nuestro programa de eliminación de mucosa.

**Suplementos: Rehabilitación y Ayudas Curativas.** Nuestras recomendaciones suplementarias aumentarán la fortaleza de nuestro cuerpo, empezarán a eliminar la mucosidad de los tejidos y removerán el catarro fuera del sistema.

1. **Cayenne.** Tome una cucharadita de cayenne 3 veces al día. Empieze gradualmente con 1/4 de cucharita en un poco de agua fría (agua destilada preferible). Aumente 1/4 de cucharadita más a la dosis cada 3 días (1er día 1/4 de cucharita. 4to día 1/2 cucharita, etc.) hasta lograr una cucharadita 3 veces al día (el aumento gradual de la dosis acostumbrará a su sistema a lo picante de la planta).

2. **Miel y Vinagre de Cidra de Manzana.** Ponga una cucharada de miel y una cucharada de vinagre en agua tibia, tal que la miel se derrita. Tome esta cantidad 3 veces al día. Este debe ser Vinagre de Cidra de Manzana. No use malta u otro tipo de vinagre ya que éstos son dañinos para el cuerpo. El Vinagre de Cidra de Manzana es medicinal y muy beneficioso.

3. **Kelp (Alga Marina).** Cada paciente debería tomar entre 10 a 15 cápsulas diarias, si es que hay alguna indicación de problemas con la tiroides; de otra forma, 2 ó más mantendrán al cuerpo en buena condición como nutrición preventiva. Este se puede tomar en lugar de la sal y ayudar a reconstruir una nueva glándula tiroides. Kelp en polvo puede ser usado en ensaladas o en otras formas.

4. **Miel de caña (Melaza).** Tome una cucharada de melaza de zahina 3 veces al día.

5. **Aceite de germen de trigo.** Tome una cucharada de este aceite 3 veces al día.

**Sugerencias para la Dieta: Alimentos Regenerativos.** Si la dieta es seguida al pie de la letra, le aseguramos que después de un tiempo muy corto usted tendrá una mayor satisfacción de las

comidas que recomendamos (debido a la mejor salud que usted alcanzará) que con su dieta anterior. Usted inclusive llegará a su peso normal. Si está con kilos de más, los perderá con esta dieta, y si esta bajo de peso, usted ganará peso después de haber pasado por su "nuevo bajo peso", debido a la mucosidad expelida fuera del cuerpo, antes que "carne buena" sea restaurada.

No se preocupe de que esta dieta omita carnes y los tipos de proteínas comerciales, y no se preocupe de adicionarlas a su dieta, ya que usted obtendrá todo lo que su cuerpo necesita de estas comidas. El cuerpo del gorila esta formado en el mismo orden biológico que el cuerpo humano, y él consigue todas las proteínas que necesita de las frutas, nueces y semillas (y para el hombre, las verduras y hortalizas reúnen todo lo que el cuerpo requiere.) Usted puede probar la efectividad de este programa por si mismo.

### **En las mañanas**

Es mejor no "romper el ayuno" (desayuno) hasta por lo menos al mediodía, excepto en casos de personas jóvenes o muy activas. Usted encontrará que esto no será difícil hacerlo si usted usa las plantas que le recomendamos (como el cayenne, aceite de trigo, etc.). Estos le disminuirán el apetito, y le proveerá de la nutrición necesitada, tal que usted se sentirá satisfecho y habrá tomado estas plantas por la segunda vez durante la mañana antes del tiempo de la comida del mediodía.

Pero si después de tomar los tónicos para el intestino grueso (aceite de germen de trigo, cayenne, vinagre de cidra de manzana, miel de abeja, melaza, te de hierbas, etc.) usted está aún con hambre y quiere comer, la mejor comida para empezar el día es un buen y saludable cereal calentado a baja temperatura. Este debe ser cereal en su estado saludable (con "vida"). O se puede comer frutas frescas.

El cereal es preparado primero remojando en agua el grano sin partir de 8 a 20 horas, y entonces calentando al baño maría (en doble olla de acero inoxidable) a muy baja temperatura de 130 grados F o menos (55 grados C o menos) el que puede ser hecho echando agua caliente sobre el grano y entonces aplicando baja temperatura. Como un sustituto, esto puede también ser preparado en botellas termos para una o dos personas, como sigue: Tome un thermo (una pinta, un cuarto o el tamaño que necesite para su familia o sólo para usted), llene 1/3 de ella en la tarde o en la noche, con trigo rojo turco, que es de alta calidad proteínica, entonces termine llenando el thermo con agua hirviendo, (ponga la botella boca abajo una o dos veces, tal que durante la noche el agua circule completamente por la base y no deje nada del trigo sin tratar). Cuando usted abra el thermo en la mañana, después del calentamiento a baja temperatura durante toda la noche, el trigo estará listo para su consumo. El trigo se ha reventado, esta suave y delicioso (ya que nada de su sabor se ha perdido al cocinarse); este proceso se puede mejorar si se remoja el trigo anteriormente. Con un poco de mantequilla fresca y miel de abeja añadida, ésta es una comida deliciosa. Algunas personas les gusta agregar canela, pimienta de jamaica (allspice), etc.

El Trigo contiene todo el potencial de los valores nutritivos que necesita el cuerpo humano. La planta del trigo o hierba del trigo, especialmente, es una comida completa ya que le provee de proteínas, calcio, y todas las enzimas necesarias, vitaminas, minerales, etc., para reconstruir y regenerar la estructura celular de su cuerpo. El grano permanece "vivo" hasta que es "matado" en algún procedimiento de almacenaje químico o por la aplicación de altas temperaturas. La prueba para saber si el germen de trigo tiene "vida" es plantarlo y ver si todavía crece. Este procedimiento es válido inclusive para trigo cocinado y cuando es calentado a baja temperatura en olla de acero inoxidable; retendrá su poder vital y crecerá. Las comidas preparadas en esta manera son orgánicas; por lo tanto, ésta es la manera en que los granos deben ser preparados para su uso. Se nos ha dicho en las Santas Escrituras que "todos los granos 'saludables' y plantas son para el hombre, y el grano es la vara de vida", pero esto no quiere decir que es permitido molerlos a una apariencia de polvo sin finesa, o calentarlos a temperaturas mayores de 100 grados C y cambiar su estructura molecular de orgánico a inorgánico y por lo tanto hacerlo un formativo de mucosidad. El resultado de las invenciones del hombre indica lo contrario. Haga germinar los granos si usted desea, de preferencia remójelos, y reviéntelos con calor húmedo (baño maría).

Los granos de trigo germinados son excelentes y nutritivos, pero si usted le dá un plato de éstos a un niño en crecimiento para el desayuno, el estará con hambre al poco tiempo; por lo tanto, un buen plato de granos de trigo, enjuagado y calentado a baja temperatura "le llenará el estómago" por horas. Alternar el trigo con cebada, mijo, trigo macho, centeno, avena de sémola

(entero).

Usted puede preparar deliciosas casseroles con cebada, centeno, mijo trigo remojado, como se explicó anteriormente y mientras se está calentando a baja temperatura se puede agregar frutas o legumbres, plantas de buen sabor, etc. Todas las lentejas, frijoles, soya, preparados de esta manera son "vivos" y buenas para comer. La soya y la mayoría de los frijoles pueden ser remojados por dos o tres días y entonces cocinados a baja temperatura por 12 a 20 horas, agregando cebolla, ajos, pimienta, etc. durante el calentamiento.

La mejor manera de ver si su comida esta viva y saludable, es hacer un pequeño surco en su jardín y sembrar algunos granos que sobraron del desayuno, alguna casserola del almuerzo y lentejas de alguna otra comida; y en una segunda fila sembrar alguna wheaties, granola (tipos de cereales comerciales) y un pedazo de pan. Cúbralos y eche agua a cada fila y vea en cual de ellas hay crecimiento.

### **Al mediodía**

Si usted prefiere sólo un almuerzo ligero, entonces prepare una buena ensalada mixta de legumbres en la cantidad que usted desee, usando salsa de aceite de olivo hecho en casa:

1 taza de aceite de olivo

2 cucharadas de vinagre de cidra de manzana

1 pizca de hierbas, pimienta, etc.

(Haga esta salsa o aderezo a su gusto, ya que hay muchas variedades que usted puede hacer: de palta, cebolla, ajos, etc. pero no use las salsas procesadas de las tiendas comerciales.

Jugos pueden ser tomados durante la tarde: de zanahoria, de uvas, de manzana, etc. Frutas secas y un poco de nueces son muy nutritivos y beneficiosos, y los últimos son mejores como proteínas saludables cuando es usado en combinación con las verduras. Si una persona tiene cáncer o inclinación al cáncer no se debe exceder en comer proteínas como las nueces, almendras, etc. Esto es algo que daña el páncreas si se come en exceso, y en estos casos, coma las nueces sólo en las mañanas. Pero permanezca alejado del maní o cacahuete y concéntrese en las almendras. Una persona con cáncer deberá comer entre 8 a 10 almendras en la mañana y la misma cantidad en el mediodía. Pero no debe tomar ninguna proteína desde la tarde hasta la mañana del siguiente día, permitiendo 16 a 18 horas al páncreas para limpiarse y empezar a trabajar en las enzimas otra vez. Toda proteína debe ser tomada temprano en la mañana, y por supuesto, en casos de cáncer, ninguna clase de proteína secundaria como la carne.

Proteínas son una moda y son altamente sobre-publicados. Todas las frutas, vegetales (verduras), granos nueces y semillas tienen proteínas en ellas. Si usted esta comiendo una buena dieta sin mucosidad y se pregunta por comidas con proteínas, entonces "Pregunte a cualquier gorila". Los órganos de su cuerpo son semejantes a los del hombre, y ellos viven mas años que el hombre. Ellos son unos de los animales más fuertes, por su peso, en la faz de la tierra. Ellos se alimentan de frutas, y comen todo lo que crece sobre la tierra: frutas, granos, nueces semillas. Nosotros podemos gozar de las raíces y tuberculos que crecen debajo de la tierra, pero ellos no cavan como nosotros lo hacemos; por lo tanto, con zanahorias, papas, betarragas, etc. agregados a las plantas "arriba de la tierra", nosotros deberíamos ser más fuertes que los gorilas.

Nosotros matamos la vaca para comer la carne por las proteínas que ella consigue por comer pasto. Consigamos nuestras proteínas frescas y naturales y no de "segunda mano" a través de la carne del animal. No usemos algo preparado y mezclado por el hombre en su estado muerto. Las proteínas "comerciales" trabajarán en el efecto y darán rápido alivio para ciertas dolencias, pero el uso exagerado de estos tipos harán trabajar mucho al páncreas y otras glándulas, causando la hipoglucemia (bajo nivel de azúcar en la sangre) o diabetes (alto nivel de azúcar en la sangre).

Las proteínas naturales vivas de la comida en el programa de la dieta sin mucosidad, serán usados así como se necesiten y el exceso sera descargado fuera del cuerpo en una forma natural cuando sea necesario. Las proteínas de tipo comercial son de baja vibración y las sedimentaciones permanecerán en las glándulas del cuerpo causando problemas posteriores.

La comida natural es muy importante. El trigo es un grano específicamente para el uso del hombre y si es usado regularmente, éste reconstruirá dentro del cuerpo todos los básicos e importantes elementos requeridos para su salud, además de todas las variedades de vitamina B.

Las comidas regulares pueden empezar con una buena taza o tazón de caldo de verduras. Las verduras deshidratadas en la forma de potasio en polvo (broth), puede ser preparado por usted mismo.

Hay miles de combinaciones para hacer ensaladas, con la cual puede empezar las comidas regulares, y con cierta investigación y experimentación, a usted nunca le faltará algunas ensaladas interesantes. Después de eso, sirva los vegetales cocinados a baja temperatura (muchos tipos pueden ser preparados con varias hierbas sazonadoras, sacados del calor bajo justamente antes de servir). Estos siempre seran deliciosos y beneficiosos siempre y cuando se mantengan a baja temperatura y en su estado saludable. (Por lo menos, 5 a 6 verduras se debería comer por día, de los cuales 2 deberían ser las hojas de las verduras). Una pequeña cantidad de aceite blando (como el aceite de olivo) adicionado a las papas al horno, zapallo al horno, etc. es muy bueno. Con un poco de intrepidez e imaginación, usando alimentos saludables, usted puede preparar algunos platos muy interesantes y deliciosos. No necesita preocuparse por comer bastante para sentirse satisfecho y tendrá toda la nutrición necesaria para obtener suficiente fortaleza física; haga casseroles con granos enteros, etc. No tome líquidos durante las comidas, mezcle la comida completamente con la saliva. Espere 1/2 hora después de la comida para tomar líquidos.

### **En las noches**

Esta es generalmente la comida principal del día, pero usted puede cambiarlo como lo desee; la comida principal puede ser al mediodía, y la comida ligera con una ensalada, en las noches. Si usted prefiere una comida caliente, empiece con una taza de caldo de verduras. El caldo deberá ser seguido con una ensalada de verduras cocidas que han sido preparadas a fuego lento (baja temperatura). Asegúrese siempre de cocinar en acero inoxidable, pyrex o algún recipiente apropiado, pero nunca en aluminio, NUNCA!

Jugos o nueces, frutas secas o frescas son todas excelentes. Cada vez que use fruta fresca, úsela sola (monodieta). Cuando usted quiere comer otro tipo de fruta, espere 1/2 hora o más, por lo menos, antes de hacerlo (y ésta será asimilada mucho más fácil por su sistema digestivo). La monodieta es para personas en una rutina de curamiento. Si usted se siente bien y saludable, una ensalada mixta de frutas de vez en cuando es permitido.

### **Algunas Recetas The Granos Cocinados a Baja Temperatura**

2 ½ tasas avena o trigo integral remojados en agua destilada suficiente para cubrirlos hasta una pulgada encima de ellos..

3 1/4 tasas agua destilada para cocinar.

1/4 cucharita sal marina.

Preparación:

**Remojarlo:** Lavar la avena dos veces. Cubra los granos lavados con agua hasta una pulgada por encima de ellos. Remojarlo por aproximadamente 5 a 6 horas en un lugar frío (la refrigeradora) para prevenir la fermentación.

**Método del FOOD WARMER:** Calentar el agua para cocinar en la cocina hasta casi hervir (160a 180 grados F). Bote el agua que estaba remojando los granos y eche los granos en el FOOD WARMER. Agregue el agua para cocinar calentada y sal marina a los granos. Esto debería bajar la temperatura de la olla a 120-130 grados F. Cocinarlo toda la noche (de 8 a 10 horas) a bajo calor de tal forma que la temperatura no suba más de 130 grados F. Si desea más o menos jugo en los granos, simplemente ajuste la cantidad de agua usado durante el cocinado.

**Método del Horno:** Siga las instrucciones de arriba y ponga los granos toda la noche en el horno con la luz del piloto prendido, o calentando el horno de 150 a 180 grados F de tal forma que la temperatura de la olla se mantenga cerca de 120 a 130 grados F. Este método es más difícil para regular la temperatura que el método del FOOD WARMER.

**Método del Thermo:** Llene la tercera parte del thermo con grano entero. Agregue una pizca de sal marina. Llene lo que sobra con agua hirviendo. Selle el thermo y déjele asentarse toda la noche. Los granos estarán listos para consumirlos la mañana siguiente. Este método tampoco es tan seguro como el método del FOOD WARMER.

**Secretos:** Los tiempos para remojar y cocinar variarán dependiendo en que lugar y altura se encuentra viviendo.

**Para servir:** En la mañana, todo lo que tiene que hacer es servir los granos directamente en los platos, o puede colarlo ligeramente hasta que obtenga una consistencia de harina de avena. Los granos son fáciles de digerir una vez que son licuados y tienen mejor sabor. Trigo licuado tiene un sabor rico en germen de trigo. Para comer en la mañana agregue manzana cortada, pasas, grocellas o bayas, y miel o jarabe de arce (Maple Syrup) para endulzar. Si usa una licuadora, usted puede encontrar los granos más sabrosos sin fruta, sólo con miel y un poquito de canela.

**Trigo:** El procedimiento para el trigo es el mismo que cuando preparamos la avena excepto por el tiempo de remojado y cocinado. Para el tener el trigo listo a las 7:00 a.m. hay que empezar a remojarlo el día anterior como a las 8:00 de la mañana y empezar el cocinado lento a partir de las 7:00 de la noche. Puede también substituir el trigo por centeno o cebada.

**Food Warmer cooker:** Este es un tipo de calentador de comida que usan los restaurantes que puede mantener la temperatura a valores de hasta 120 a 130 grados Fahrenheit. Puede comprarlo en tiendas que venden equipos para restaurantes. Asegúrese en comprar uno que la temperatura de calentamiento no exceda los 120 a 130 grados Fahrenheit.

### Caserola de grano vivo

2 tazas	cebada	½	green pepper
	remojar en agua (una pulgada	2 dientes	ajo
	sobre el nivel del grano)	2 cucharadas	aceite de ajo
2 ½ tazas	agua cocida	1 onza	salsa de tamari
1/4 cucharita	sal marina	½ cucharita	savory (ajedrea)
6	zanahorias medianas	¾ cucharita	marjoran (mejorana)
¾ to 1 tasa	arverjas	½ cucharita	Vege-Sal
½	Cebolla	1/8 cucharita	cayenne

Para caserola de cebada con zanahoria y tallito de brocoli, reemplace las arevrjas con: 1 tasa de tallitos de brocoli y reemplaze el savory and majoram por 2 hojas de bay (laurel) y ¾ de cucharita de sweet basil (albahaca dulce) y ¾ de cucharita de thyme (tomillo).

### Preparación

Enjuague la cebada dos veces en agua y dejelo remojar por 3 a 5 horas. Mientras la cebada se está remojando, manténgalo en un lugar frío, preferiblemente en el refrigerador para prevenir fermentación. Lave y prepare los vegetales. Pele y rebane las zanahorias, corte apio en rebanadas de 1/4 a 1/2 pulgada. Adalgace los tallitos de brocoli. Corte pimienta verde (green pepper) y desmenuze el ajo. Antes de empezar a cocinar los granos, algunos de los vegetales duros (como zanahorias, cebollas, los tallitos de brocoli y el apio) necesitan ser cocinados. Si usa hojas de laurel (bay leaves) pongalo en la cocina con los vegetales cocidos. Arverjas, green pepper, ajo y otros sasonadores van en la caserola sin pre cocinarlos. Aproximadamente 12 horas antes de servir, caliente el agua para cocinar hasta casi hervir (160 a 180 grados). Vaciar el agua de enjuage del grano y coloque el grano en un warmer-cooker. Agregue el agua caliente y sal al grano. La temperatura del grano debe ser aproximadamente de 110 a 126 grados. Agregue todos los vegetales y los sasonadores. Cúbralo y cocínelo a fuego lento. Antes de servir la caserola, pruebe la sazón a grege cayenne, Vege-Sal, u otros sasonadores. Usted puede substituir el trigo.

Los granos requieren muy poca atención mientras se cocinan, pero la preparación empieza el día anterior para dar el tiempo necesario para el enjuage y el calentamiento a fuego lento. Por ejemplo, empezar a enjuagar la cebada a las 3:00 p.m., empezar a cocinarlo y agregar los vegetales y los sasonadores entre las 6 a 8 p.m. La proporción de grano con vegetales es aproximadamente 50/50. Esta listo para la mañana siguiente.

### Caserola de grano vivo

2 tasas	centeno	2 dientes	ajo
	remojar en agua (una pulgada	2 cucharadas	aceite de ajo
	sobre el nivel del grano)	1 onza	salsa de tamari
2 tasas	agua (destilada)	2 cucharitas	perejil cortado (fresh parsley)
1/4 cucharita	sal marina	1/2 cucharita	salvia (sage)
5 a 6	zanahorias	3/4 cucharita	tomillo (thyme)
1 tasa	arverjas	1/2 cucharita	Vege-Sal
1/2	Cebolla	1/8 cucharita	cayenne
1/2	pimienta verde (green pepper)		

### Preparación

Use el mismo procedimiento usado para preparar la caserola de cebada con la diferencia que el centeno necesita más tiempo de enjuage y un poquito más de tiempo de cocinado.

## III. AYUDA CORRECTIVAS

**Fomentación con aceite de ricino.** Para deshacernos de la mucosidad endurecida en nuestro cuerpo, la que puede generar quistes, tumores o pólipos, la siguiente fomentación es

recomendada:

Remoje un pedazo de franela o pañal de bebe en aceite de ricino, exprímalo un poco de tal manera que no gotee mucho y aplíquelo sobre el dorso frontal del cuerpo (desde el cuello hasta la ingle, y de lado a lado). Coloque una bolsa de agua caliente sobre la aplicación del aceite de ricino en el área del hígado (el hígado se encuentra en el lado derecho, bajo la cintura). Nótese que parches calientes no son altamente recomendados aquí, a no ser que una toalla mojada sea colocada entre éste y la franela con el aceite de ricino; aún así, calor húmedo como el que provee la bolsa de agua caliente es lo mejor. Mantenga esta fomentación en las zonas por 1/2 o 1 hora. La bolsa de agua caliente debe ser llenada varias veces ya que el agua en ella se enfría rápidamente.

Los siguientes tres días y sobre la misma zona cubierta por fomentación, masajee con aceite de olivo, en forma circular y dirigido hacia el corazón, durante 5 a 10 minutos.

El séptimo día es de descanso, no sólo para la aplicación de la fomentación, sino para cada parte del programa, tomando sólo agua durante todo el día (cada séptimo día de allí en adelante se realizará lo mismo). En el octavo día, empezar nuevamente con el aceite de ricino por tres días y repetir nuevamente el proceso, juntamente con la dieta sin mucosidad, las hierbas, etc. hasta que el curamiento sea obtenido.

En el uso de la fomentación, el aceite de ricino va a través de la piel hasta el área del hígado y las glándulas linfáticas y empieza a captar las sustancias venenosas y las elimina a través de los poros; mientras que el aceite de olivo penetra en la piel y cura reconstruyendo nuevos tejidos.

Este procedimiento puede durar entre 6 a 8 semanas para limpiar propiamente el sistema, dependiendo, por supuesto, de cada caso.

**Ejercicios.** Es necesario que todos los pacientes hagan algo de trote lento ("jogging"). Esto ayudará a mejorar la circulación, entonar los órganos, y eliminar con mayor rapidez la acumulación de células muertas. Cada persona debería hacer 1 1/2 Km de jogging diario, pero debería empezar con 400 metros o menos. Nunca corra hasta el punto de quedar exhausto porque lo bueno que ha hecho en un día será inútil como resultado del sobre-ejercicio. Si por alguna razón el jogging no puede ser hecho afuera, hágalo en casa frente a una ventana abierta o en su jardín interior. Esto, especialmente, hará vibrar los músculos peristálticos del colon dándole tono, regenerando el útero en un estado prolapsado en las mujeres, y ayudando a curar la próstata en los hombres.

**Respiración profunda.** Para no ser complicados, no le daremos aquí el procedimiento científico de respiramiento yoga o algo semejante. La idea principal es el inhalamiento profundo de aire fresco por la nariz y el exhalamiento a través de la boca. Inhalar lo suficientemente profundo que realmente duela cuando se lo hace. Hágalo cada mañana y cada noche, no menos de 5 o 10 minutos, y usted empezará y terminará el día con vigor y energía; y hacerlo antes de acostarse le ayudará a dormir como nunca antes lo ha hecho. La respiración profunda es el "soplo de vida", y la única forma que usted puede conseguir suficiente elemento de este "dador de vida" es a través de la inhalación del oxígeno del aire por la nariz. Este principio es muy importante pero aún muy subestimado. Una persona puede vivir 110 días sin comida y 16 días sin agua, pero sólo unos cuantos minutos sin respirar. Esto es algo al que prestamos muy poca atención y la respiración superficial, poco profunda es de lo más normal en estos días, y ésto es porque ignoramos completamente que la respiración profunda es el "soplo de vida".

[Regresar al Empieza](#)

## IV. EL CIRCUITO VITAL

Otro punto importante para vigorizar la salud de cada paciente en el programa del Dr. Christopher es el descargo de la electricidad estática del cuerpo mediante el caminar sin zapatos y

medias en el jardín o césped durante 10 o 15 minutos cada día. Concerniente a la creación de esta electricidad estática en nuestro cuerpo, lo que sucede es lo siguiente: en el proceso de dar vida al cuerpo físico, los cabellos actúan como antena y absorben energía eléctrica de la atmósfera. Esta fuerza eléctrica penetra a través de la parte superior de la cabeza y distribuye muchos amperios y/o ohmios a cada célula, órgano, glándula, etc., y entonces el resto de la electricidad se supone que pasa y sale fuera del cuerpo hacia la tierra a través de los pies; pero cuando usamos zapatos con planta de jébe o sintética y usamos medias, esa electricidad no puede "hacer tierra" apropiadamente, entonces ésta se acumula como electricidad estática en el cuerpo y como resultado nos convertimos en personas mentalmente confusas y frustradas.

Lo mas importante, piense positivamente, piense en SALUD! Sepa que usted tiene un grado de salud en este momento; agradezca a Dios por esta salud, y agradézcale en este momento con una oración positiva, agradézcale por la perfecta salud que usted tiene ahora. Recuerde que Jesus dijo: "El campo es blanco, listo para la cosecha." La buena salud es suya ahora si usted piensa positivamente en esta forma.

[Regresar al Empieza](#)

## V. EXTENSION DE LA LIMPIEZA

Cuando trabajamos con problemas crónicos de salud no podemos esperar limpiar o curar el cuerpo completamente con una o dos rutinas de limpieza. Por lo tanto para eliminar las condiciones crónicas del cuerpo o prevenir que ocurran, se recomienda una extensión en la limpieza como un buen camino a seguir. Esto se debe realizar siguiendo la ya mencionada dieta sin mucosidad.

Al levantarse se toma 1 ó 2 cápsulas (o más si es necesario) de nuestra fórmula para los intestinos (Fen LB). Esto será repetido 1 hora antes del almuerzo, y antes de retirarse a dormir en las noches.

Entonces, 20 minutos antes del desayuno tomar 2 cápsulas de nuestra fórmula para el hígado y la vesícula (Barberry LG), lo cual se repetirá antes de cada comida.

Lo siguiente que se toma es 2 cápsulas de la fórmula para los riñones y la vejiga (Juni Pars) a la mitad de la mañana y a la mitad de la tarde.

Se seguirá esta rutina por 6 días, descansando en el séptimo. Volveremos a tomar estas fórmulas en la segunda semana, agregando 2 cápsulas de nuestra fórmula para purificar la sangre (Red Clover Combination) 1 hora antes de cada comida. Seguiremos nuevamente esta rutina por 6 días descansando en el séptimo. Este procedimiento continuará cada semana por el lapso de 6 semanas, después del cual se descansará una semana. Se repetirá estos intervalos por 6 meses descansando el séptimo mes. Al final de este programa de 7 meses, evaluaremos nuestro progreso y determinaremos si sería beneficioso repetir otro programa de siete meses.

La demora de una semana para agregar la fórmula purificadora de la sangre a este programa es absolutamente esencial por la eficiencia extrema de esta fórmula. En la primera semana estamos abriendo los canales de eliminación del cuerpo, permitiendo así un camino para eliminar las toxinas que serán desprendidas de la sangre por la fórmula purificadora.

## VI. UNAS CUANTAS COMBINACIONES DE PLANTAS

En todas las formulas básicas de limpieza y rehabilitamiento provistas aquí (a menos que exista una condición particular de enfermedad y se necesite una específica combinación de plantas), el programa y procedimiento que sigue son para el promedio de personas y reúne casi todos los requerimientos para resolver problemas generales; esto es a menos, como decimos, que haya una necesidad de prescribir ayuda específica con fórmulas para un tipo de problema específico.

**1. Fórmula para tonificar el intestino grueso.** Tome la cantidad de cápsulas que usted necesite.

Como no hay dos personas iguales en año, talla o estructura física ( y los intestinos mismos difieren en personas así como las huellas digitales lo hacen), en la mayoría de los casos se empezará con 2 cápsulas 3 veces al día y regular la dosis desde allí; pero si es difícil conseguir movimiento en los intestinos y el excremento es duro y toma mucho tiempo para eliminar, entonces incremente la dosis hasta que la deposición se vuelva suave y bien formada (y aquí, en algunos casos difíciles, usted podría tomar hasta 40 cápsulas por día, ya que las plantas que forman estas cápsulas son solamente comida que no pueden hacerle daño). Entonces, después que el material duro se ha aflojado y eliminado, disminuya la dosis gradualmente (éstas son duras incrustaciones de materia fecal que han sido acumuladas en los intestinos por mucho años que se estan aflojando y refregando con los liquidos intestinales), pero no disminuya la dosis de este tónico intestinal demasiado hasta el punto de perder la ventaja de "momentum" y continuidad en la eliminación. En muchos casos, la inapropiada alimentación ha causado que los músculos peristálticos de la mayoría de las personas dejen de trabajar, y tomará de 6 a 9 meses, con la ayuda de este tónico (**Fen LB**), para que una persona promedio, pueda eliminar la materia fecal incrustada y reconstituir la estructura intestinal lo suficiente para tener a los músculos peristálticos trabajando por si mismos. Esta combinacion es hecha con berberis, cascara sagrada, jenjibre, cayenne, etc.

La mayoría de las personas tiene kilos de vieja materia fecal almacenada en el colon, el cual toxifica el sistema y no permite que la comida sea asimilada correctamente, y es por la causa de esta condición de putrefacción, que muchas personas comen mucho más de lo que su cuerpo requiere. En este proceso, ellos fatigan sus cuerpos tratando de nutrirse suficiente y aún así están siempre con hambre y comiendo; mientras que, después que el intestino es limpiado, la comida es fácilmente asimilada y una persona puede sostenerse con aproximadamente una tercera parte de la cantidad de comida que actualmente consume con 4 o 5 veces más fortaleza, vitalidad y vida.

En este momento, el cuerpo limpio esta apto para asimilar normalmente los simples valores nutritivos a través de la estructura celular del colon en lugar de ser atrapado en una masa de desperdicio e inhibido por la dura capa fecal formada en las paredes del intestino, donde la mayor parte de las sustancias nutritivas son empujadas y eliminadas antes que pueda absorvida. Cuando el cuerpo está absolutamente limpio, estas ayudas no serán necesarias, entonces "su comida será su medicina y su medicina será su comida". Nombre: **Fen LB**

**2. Formula purificadora de la sangre.** La corriente sanguínea es la "vida misma", y es nuestra misión mantenerla limpia y pura de tal forma que podamos tener un buen sistema circulatorio que lleve la comida (los nutrientes) a todo el cuerpo y que transporte las materias residuales para su futura eliminación.

Una buena purificación de la sangre junto con la limpieza del colon, forman una maravillosa combinación. Estos dos, con una buena dieta sin mucosidad, puede revitalizar el cuerpo y agregar muchos años de vida saludable.

Este reconstituyente de la sangre es hecho a base de trebol rojo, gobernadora, regaliz, la corteza de durazno, etc., algunas son hierbas que limpian y dan astringencia, otras que remueven el colesterol, matan infecciones, o edifican elasticidad en las venas y fortalecen las paredes de las venas y las arterias. Use dos cápsulas 3 veces al día, 6 días a la semana, semana tras semana hasta que la corriente sanguínea fluya como debe, brindando salud y energía. Nombre: **Red Clover Combination**.

**3. Fórmula para el mal funcionamiento del hígado y la vesícula.** Para acelerar el proceso de

purificación de la sangre, es bueno tener el hígado y el área de la vesícula bien limpios. Cuando el hígado no funciona apropiadamente, la bilis no es escretada libremente en la región intestinal, y ésta circula dentro del torrente sanguíneo y a través del resto del sistema, causando una condición tóxica llamada "Colemia", que causa indigestión, inactividad, fatiga, estreñimiento, escalofríos, vómitos y fiebre. Por qué esperar hasta estar en esta condición? Esta combinación es a base de berberis, camote silvestre, jengibre, menta, etc. Dosis sugerida: 1-2 cápsulas 15 a 20 minutos antes de las comidas. Nombre: **Barberry LG**

**4. Fórmula para el mal funcionamiento de los riñones.** Aproximadamente 80% de nuestro cuerpo es líquido, y mucho de este fluido debe ser bombeado, filtrado, etc. a través del sistema urinario de la persona. Generalmente no tomamos el mejor cuidado de esta delicada parte de nuestro cuerpo. A través de este sistema circula materias irritantes y del tipo de materias que obstruyen la circulación como el té, el café, las bebidas gaseosas, el agua dura, el alcohol, etc.

Por años hemos usado esta fórmula de plantas con personas que tenían miedo estar en público, por causa de la falta de control del sistema urinario y que les hacia orinar sin su conocimiento.

Después de usar esta fórmula, muchas personas han encontrado alivio y están viviendo vidas normales nuevamente. Esta compuesta por perejil, nebrina, malvavisco, entre otros. Dosis sugerida: 2 cápsulas en la mañana y en la noche con una taza de té de perejil (preferiblemente). Nombre: **Juni-Pars**

**5. Para más severos casos de incontinencia.** Esta fórmula es específicamente para la incontinencia y para fortalecer el entero canal de la uretra, los riñones, la vejiga, etc. Dosis sugerida: 2 cápsulas en la mañana y en la noche con una taza de té de perejil (Preferiblemente).

Al retirarse a dormir ajuste una bola de 6 a 8 pulgadas de pita o tela en su ropa de dormir en el medio de la espalda. Esto es con el propósito de evitar que la persona duerma recostado en la espalda (boca arriba), ya que es así cuando se abren las válvulas que permiten el orinar. Nombre: **DRI, Kid-e-Dry.**

**6. Fórmula para el corazón.** El corazón es el motor que nos dá la vida, que cuando no está propiamente alimentado (con alimentos naturales) sufre de mal funcionamiento (debilidad y ataques cardíacos) causando fallas en el corazón, que es uno de los mas grandes "asesinos" en el mundo. La dieta sin mucosidad usado por un buen período de tiempo rehabilitará el corazón recuperando su fortaleza, pero si éste, sus válvulas y otras partes se encuentran en una condición débil y necesita una ayuda rápida, use el fantástico "tónico para el corazón" para ayudar a su restablecimiento. Esta comida es la fruta del espinillo blanco (*Crataegus oxycantha*, linn.).

Tomando como referencia el libro "Potter's Cyclopaedia of Botanical Drugs and Preparations," una de las antiguas impresiones hechas en Inglaterra (publicado por Potter and Clarke, Ltd., 60 Artillery Lane, London), encontramos que ésta lista a la fruta del espinillo blanco como un tónico "cardíaco". Esta planta es aclamada como un remedio muy curativo para los desórdenes orgánicos y funcionales del corazón, como la arritmia, el rápido o débil trabajo del corazón, la hipertrofia (insuficiencia valvular) y opresión en el corazón.

El jarabe de la fruta del espinillo blanco es hecho con esta fruta concentrada usando brandy de uva y glicerina como ayuda y preservante. La dosis recomendada es 1/2 cucharita 3 veces al día. Si sufre repentinamente de todos los síntomas del inicio de un ataque cardíaco o, durante éste, una cucharita de cayenne en una tasa de agua caliente y tomado rápidamente, ha salvado muchas vidas. Nombre: **Hawthorne Berry Syrup.**

**7. Ayuda para el páncreas.** Esta fórmula ayuda al páncreas y otras glándulas afiliadas que a través de su mal funcionamiento causa el alto o bajo nivel de azúcar en la sangre (diabetes o hipoglucemia). Esta combinación ha ayudado a muchos que han tenido hipoglucemia, después de 6 ó más meses de tomar 2 ó 3 cápsulas 3 veces al día, 6 días a la semana. (Todas las plantas medicinales dan resultados más rápidos en 6 días a la semana en lugar de siete, usando el mismo

día de la semana para descansar). Aquellos que han usado esta fórmula han tenido un test de tolerancia de la glucosa obteniendo un claro reporte de salud del páncreas.

Hay reportes de personas que usaban alta dosis de insulina, que aunque continúan usándola, la dosis ha decrecido considerablemente, y muchos, después de usar la fórmula por un año, siguiendo la dosis sugerida anteriormente, han conseguido una cura completa. Por supuesto, cuanto más cerca se permanezca de la dieta sin mucosidad y se elimine de las comidas el azúcar refinado, bebidas gaseosas, caramelos, pasteles, etc., los resultados se notarán más rápidamente.

Name: **Panc Tea**.

#### 8. **Fórmula de Calcio.** Maravillosa cápsula de calcio natural a base de horsetail (cola de caballo).

Como se explica en el libro "Transmutación Biológica", la sílica en la cola de caballo se convierte en calcio y las otras plantas de la fórmula trabajan en combinación con ésta que es "master" en calcio. Necesitamos calcio para la capa que cubre los nervios, para las paredes de las venas y las arterias, huesos, dientes, etc. esta combinación es de puras plantas naturales. Niños con dientes torcidos y apiñados que más tarde tienen que sacarle la muela del juicio por tener la mandíbula muy angosta, están necesitando calcio en el cuerpo. La mujer embarazada aumenta su capacidad de captar la cantidad de calcio necesaria, ahora para dos personas, así como para edificar en el bebe una buena mandíbula y un buen material para los dientes. Azúcar, pasteles, gaseosas y bebidas alcohólicas, caramelos, etc. roban el calcio del cuerpo, causando varices, calambres, dientes flojos, nerviosismo, etc. Nombre: **Calc Tea, Kid-e-Calc**.

9. **Fórmula para la alergia, sinusitis, alergias al polen y fiebre del heno.** Esta fórmula es una gran ayuda para el aclaramiento de estas enfermedades, una "natural ayuda herbolaria" que trabaja como un descogestionante y antihistamínico que limpia la zona sinusoidal, eliminando de la cabeza, los tubos y pasajes broncopulmonares los molestos obstáculos y mucosa. Esta fórmula consiste de té mormón, malvavisco, gobernadora, perejil, etc.

Para acelerar el proceso de limpieza, use la siguiente combinación en adición a la anterior,: corte la raíz de un rabano picante fresco en pequeños pedazos y licúelo con vinagre de cidra de manzana formando una pulpa espesa, y "chúpelo" completamente antes de pasarlo. Tome 1/3 de cucharita 3 veces al día. Cada 3 días aumente esta cantidad desde 1/3 hasta 1 cucharita, incrementando la cantidad 1/3 de cucharita cada 3 días. Nombre: **SHA Tea**

10. **Fórmula para la circulación de la sangre.** Esta fórmula es dada para ayudar a los purificadores de la sangre a trabajar más eficientemente y también para ayudar a curar alergias, etc. Este grupo de plantas alimentan el sistema circulatorio con cayenne y jengibre (estimulantes) donde el cayenne trabaja en el torrente sanguíneo desde el corazón y las arterias saliendo hacia las venas. Las otras plantas de la fórmula ayudan a estas dos a trabajar juntas para normalizar la presión de la sangre (si es alta o baja) y para obtener una buena lectura del sístole sobre el diástole. La corriente sanguínea es vida misma. Nombre: **BPE**.

11. **Fórmula contra la obesidad.** Combine esta fórmula con la dieta sin mucosidad y usted será un triunfador seguro. Este no es un programa espectacular de rápida pérdida de peso, sino, que sus resultados serán graduales y precisos, sin robar al cuerpo las sustancias nutritivas que necesita, como muchas de otras dietas de moda en estos días lo hacen. Esta fórmula actúa como un purificador de la sangre que ayuda a los riñones a aliviar el exceso de líquido, alimenta al cuerpo para el alivio de las tensiones nerviosas generalmente causadas por las dietas, apacigua el excesivo apetito, alimenta la tiroides y otras glándulas que no están funcionando bien y, además, logra una condición más saludable del cuerpo por el hecho de mantener un buen control del peso. Tome 2 a 3 cápsulas en las mañanas y en las noches con una tasa de té de morgalina (chickweed). Esta fórmula esta compuesta de morgalina, bardana, regaliz, perejil, kelp, etc. Nombre: **CSK**.

12. **Fórmula para el mal funcionamiento de los ganglios.** Debido a la acumulación de residuos

tóxicos en el cuerpo por la impropia alimentación, al pobre torrente sanguíneo y a la lenta circulación de la sangre, los ganglios se congestionan y llegan a inflamarse e infectarse causando mucho dolor. (Hay ganglios en el cuello, pecho, ingle, axilas, etc. que pueden llegar a inflamarse). Esta fórmula puede ser usada para curar mastitis, mal funcionamiento de la tiroides, etc. Dosis sugerida: 2 cápsulas con una tasa de agua destilada. Nombre: **Mullein and Lobelia**.

**13. Fórmula para los nervios.** Esta es una fórmula que hemos usado con mucho éxito por cerca de 30 años y es recomendada para curar la tensión nerviosa e insomnio. Es un estimulante suave que reduce la irritabilidad y el excitamiento del sistema nervioso, y también reduce o elimina dolores. Esta fórmula contiene plantas que alimenta y revitalizan el nervio motor en la base del cerebro (área medular y cervicales superiores) y también contiene plantas que ayudan a reedificar y alimentar la espina dorsal. Esta fórmula reedificará también las capas protectoras de los nervios que se encuentran desgastadas, el nervio mismo y sus capilares. Hecha en base de valeriana, lupulo, etc. Dosis sugerida: 2-3 cápsulas 3 veces al día en una tasa de jugo de apio o de agua destilada. Nombre: **Relax-Eze**.

**14. Fórmula para el dolor y la pérdida del oído.** Cuando esta fórmula es usada como se explica aquí, puede ser una gran ayuda para curar la falta de equilibrio, problemas para oír, para ayudar al nervio motor, etc. Usando un gotero, por las noches, echarse de 4 a 6 gotas de aceite de ajo y 4 a 6 gotas de B&B a cada oído y taparlos con algodón. Hacer esto 6 días a la semana, de 4 a 6 meses o cuanto se necesite. En el séptimo día lavar los oídos con una pequeña jeringa usando vinagre de manzana tibia y agua en proporciones iguales. Esta fórmula es hecha a base de lobelia y escutellaria entre otras plantas. Nombre: **B&B extracto y Oil of Garlic**.

**15. Fórmula para los pulmones y el sistema respiratorio.** Esta combinación es usada como una ayuda para curar la irritación en el sistema respiratorio, pulmones y bronquios. Es una ayuda para curar enfisemas, así como para otras congestiones de los bronquios y pulmones como bronquitis, asma, tuberculosis, etc. Esta fórmula es muy valiosa para el fortalecimiento y curación del sistema respiratorio completo. Ayuda a la descarga de las secreciones mucosas de los pasajes bronco-pulmonares. La dosis sugerida para adultos: 2 a 3 cápsulas 2 ó 3 veces al día con una tasa de consuelda (comfrey). Esta fórmula es a base de consuelda, verbasco, lobelia, etc. Nombre: **Resp-Free**.

**16. Fórmula para los resfríos e infecciones.** Esta fórmula es una combinación de ajo, perejil, berro, etc. que actúa como una ayuda para los tiempos de resfrío o para cada vez el ajo sea necesitado para detener cualquier infección. La dosis para un adulto varía de 2 ó más cápsulas 6 ó más veces por día tomado con una tasa de agua destilada. Nombre: **Garlic, Rosehips & Parsley**.

**17. Fórmula para ayudar a la eliminación los parásitos intestinales.** Esta combinación es a base de ajeno, hinojo, y papaya entre otras plantas. Actúa como un vermífugo (combinación que causará la expulsión de gusanos y parásitos del cuerpo) y/o como vermífugo (agente que destruye los gusanos y parásitos dentro del cuerpo). La dosis sugerida es tomar una cucharadita cada mañana y cada noche por 3 días. En el cuarto día tomar una tasa de té de sena y menta. Descansar dos días y repetir el proceso dos veces más. Nombre: **VF syrup**.

**18. Fórmula para ayudar a las encías.** Esta combinación consiste de encina blanca, consuelda, cola de caballo, lobelia, etc., y es usada para fortalecer las encías (encías sangrantes y el tipo de infecciones causadas por piorrea), y ayuda al fortalecimiento de dientes flojos. Este tipo de polvo dará más brillo a los dientes promoviendo una boca más saludable. Para casos severos coloque esta combinación en polvo entre los labios y las encías (superior e inferior) en el área de los dientes y déjelo allí cada noche durante 6 días a la semana (así como el cepillado regular de los dientes) hasta que el mejoramiento sea evidente. Entonces continúe con el cepillado regular de

los dientes usando esta combinación. Nombre: **Herbal Tooth Powder**.

**19. Composición de plantas en polvo.** Consiste de arrayán, clavo de olor, pino blanco, etc. Como es mencionado por el Dr. Nowell, nuestro instructor en Dominion Herbal College, Ltd of Vancouver, British Columbia, en nuestro libro de texto:

"Nosotros hemos hecho y usado esta composición de plantas en polvo por más de 40 años.

Cuando decimos que regularmente mezclabamos estas plantas en lotes de 60 libras (aprox. 28 kilos) los alumnos rápidamente verán que, al menos hemos tenido cierta experiencia en ésto. Es un remedio para resfríos, principios de fiebre, gripe, ronquera, circulación lenta, cólicos, retorcijones, etc. Creemos que esta fórmula ha hecho más bien al género humano que cualquier otra preparación conocida de plantas individuales.

"Si esta combinación se tuviera en cada hogar, y se usara cada vez que la ocasión se presentara, habrían mucho menos personas enfermas en este mundo. Ofrezca esta composición libremente y sus pacientes le bendecirán. Observe los ingredientes y considere como éstos limpiarán las llagas ulcerosas y grangenosas, relajará los retorcijones y calambres y dolores de estomago e intestinos, subirá el calor del cuerpo equalizando la circulación, y removiendo congestiones. Esto es seguro.

Este es efectivo. Nosotros, en innumerables ocasiones, hemos dado una tasa de esta composición cada hora, tan caliente como el paciente puede tomar, hasta que ha empezado a transpirar libremente, y después de 4 a 5 dosis hemos visto a nuestros pacientes con una libre transpiración y, de este modo, removiendo gripes, resfríos y problemas de fiebre." (Traducción). Nombre: **Herbal Composition**.

**20. Combinación para el enjuague de los ojos.** Esta fórmula es excelente para mejorar el brillo y curar los ojos, y es conocida porque remueve las cataratas y gruesas capas de carnosidad. Está compuesto por arrayán, cayenne, eufrasia, etc. Haga esto en forma de té y póngalo en una pequeña tasa de vidrio para enjuagar los ojos. Habrá una ligera sensación de ardor al principio, debido al cayenne, pero no hay nada porque temer. Tire su cabeza hacia atrás y aplíquelo en el ojo. Abra el ojo cuando haga ésto, como si estuviera bajo el agua. Hágalo 3 a 6 veces al día. Tome 1/2 tasa de este té en la mañana y en la noche. Puede tomar también 2 cápsulas 3 veces al día para un resultado más rápido. Nombre: **Herbal Eyebright**.

**21. Combinación para ayudar al órgano reproductivo femenino.** Esta es una asombrosa combinación que ayudará a reconstituir a un sistema reproductivo que no esté trabajando apropiadamente (útero, ovario, trompas del falopio, etc.). A través de los años de herbalistas y los pacientes han sido testigos de dolorosas menstruaciones, pesado fluido, retorcijones, espasmos, irregularidad, etc. que han sido curados. El paciente tiene ahora una menstruación sin dolor, regular y una nueva perspectiva de la vida, gracias a la ayuda de esta combinación que reajusta las áreas que no funcionan debidamente. Esta ayuda correctiva para las mujeres es hecha a base de sello dorado, cardo bendito, jengibre, unicornio falso, etc. El uso sugerido es: 2 cápsulas en las mañanas y en las noches ó 3 veces al día si se desea, 6 días a la semana, por el tiempo necesario para obtener el resultado requerido. Nosotros hemos visto muchos casos severos con muchos años de sufrimiento, aliviarse en 90 a 120 días. Algunos se curan mas rápido, otros mas lento. Nunca se encontraran dos casos iguales. Nombre: **Nu-Fem**.

**22. Combinación para ayudar a la próstata.** En casos de mal funcionamiento, sugerimos esta combinación de cayenne, jengibre, ginseng, nebrina, entre, otros. Esta ayudará a disolver las piedras en los riñones, así como limpiará otras sedimentaciones e infecciones en la próstata.

Tome dos o más cápsulas en las mañanas y las noches, con té de perejil si es posible. Nombre: **Prospallate**.

**23. Combinación para ayudar a las hormonas masculinas y femeninas.** Estas son comidas de hierbas naturales que son necesitadas por hombres y mujeres de todas las edades. Siendo hierbas

"naturales" el cuerpo puede aceptar, asimilar y usar estos materiales que son necesitados para producir estrógenos y otras hormonas en una forma natural. Esta fórmula ayudará a reconstruir las áreas débiles de mal funcionamiento y ayudará a mantener los órganos saludables de tal forma que puedan abastecer la apropiada cantidad de hormonas y estrógenos por ellos mismos. Los tiempos críticos cuando esta fórmula es necesaria son en los tiempos del inicio de la pubertad, durante el embarazo, durante las semanas y a veces meses después de dar a luz, y durante la menopausia. Las plantas son alimentos naturales, por lo tanto ellos no crean "efectos secundarios" ni "efectos retardados" como evidentemente sucede en los casos de las drogas sintéticas hechas por el hombre. Esta fórmula contiene entre otros el cohosh negro, ginseng, sarsaparilla, unicornio falso, etc.

Cada vez que un mal funcionamiento se presenta tanto en la mujer como el hombre, es bueno usar las siguientes fórmulas juntas, No.21 y No.23 para las mujeres y No.22 y No.23 para los hombres. Nombre: **Changease**.

**24. El bolo vaginal o rectal.** Esta es otra excelente ayuda para la mujer (o bolo rectal para el hombre) que tienen problemas en las áreas reproductivas. Los bolos son hechos con plantas curativas que (1) eliminan las toxinas y venenos del cuerpo, (2) ayudan a convertir las áreas de mal funcionamiento en áreas saludables, de tal manera que quistes, tumores y condiciones cancerosas no tendrán despojos o materia decadente en los cuales puedan vivir, ya que todos ellos son "animales de carroña." Herbalistas que usan esta fórmula han encontrado que estas "rapiñas" serán descargados dentro del sistema sanguíneo para ser luego eliminados, si el programa es seguido con fé. (3) Los bolos extienden la influencia de estas plantas ampliamente desde la vagina o intestinos a través de todo el sistema urinario y órganos genitales. La fórmula consiste entre otros de consuelda, squawvine, barbana amarilla, malvavisco, etc. Todas estas plantas son en forma de polvo. Mantequilla de cocoa deberá ser derretida de tal forma que sea mezclada con nuestra combinación en polvo. Mezcle una pequeña cantidad de este polvo con la mantequilla de cocoa derretida hasta darle consistencia. Entonces amase la masa entre sus manos hasta darle la forma de un lápiz de un grosor aproximado del de un dedo medio y de 2.5 cm. largo. Endúrelo en el refrigerador. Entonces esto debe ser introducido en la vagina o en el recto en la misma forma que los supositorios. Será necesario usar una toalla o papel sanitario para mantener el bolo en la vagina o el recto. Inserte el bolo al retirarse a dormir y déjelo allí toda la noche, 6 noches a la semana. La mantequilla de cocoa se derretirá a la temperatura del cuerpo, dejando las plantas solas, la cual será fácil de lavarse. La siguiente mañana use la rutina de la fórmula No. 25. Nombre: **VB**.

**25. Combinación de la tabla inclinada.** Para dar alivio en casos de úteros prolapsados, intestinos y otros órganos, haga un té concentrado (caliente la combinación hasta que se obtenga la mitad de la cantidad inicial) de esta fórmula a base de pino blanco, consuelda, malvavisco, lobelia entre otros. Inyéctelo con una jeringa (mientras se está con la cabeza hacia abajo en una tabla inclinada) dentro de la vagina, 1/4 ó 1/2 de tasa o más; o una tasa o más en el recto, para problemas de prolapso o hemorroides, manteniéndolo dentro todo el tiempo que sea posible antes de evacuarlo. La dosis sugerida es 1/4 a 1 tasa una o más veces al día, y tome 1/4 de tasa de la combinación en tres cuartos de agua destilada 3 veces al día. Cuando el té es inyectado dentro del área abdominal y mientras se encuentre en la tabla inclinada, sobar y masajear la pelvis y el abdomen para ejercitar los músculos, de tal forma que el té sea asimilado por los órganos. Nombre: **Yellow Dock Combination**.

**26. Combinación para evitar la pérdida en el embarazo.** Esta consiste de dos hierbas (Unicornio falso y lobelia). A menos que se indique de otra forma, el té son siempre preparados con una cucharadita de hierba en una tasa de agua destilada. Si se presenta hemorragia durante el embarazo entonces use 1/2 tasa de este té cada media hora hasta que la hemorragia desaparezca, entonces use 1/2 tasa cada hora de vigilia durante todo el día, tratando de permanecer en cama lo máximo posible; y luego 3 veces al día durante tres semanas. Si la hemorragia continúa en lugar de decrecer, vea a un doctor. Nombre: **False Unicorn & Lobelia**.

**27. Fórmula pre-natal.** El uso de 2 ó 3 cápsulas en las mañanas y en las noches ayudará a dar elasticidad a la pelvis y el area vaginal, y fortalecerá los órganos reproductivos para un más fácil alumbramiento. Esta fórmula debe ser usada solamente en las últimas 6 semanas del embarazo. Las plantas usadas son entre otras, squawvine, cardo santo, unicornio falso, lobelia, etc. Nombre: **Pre-Natal Tea.**

**28. Combinación para los huesos, piel y los cartílagos.** Esta es una ayuda para el mal funcionamiento de los huesos, la carne y los cartílagos, y es excelente para venas varicosas, torceduras, curvatura de la espina dorsal, erupciones en la piel, coágulos de sangre, protuberancias producidas por calcio, etc. Haga un té de esta combinación hecha de pino blanco, malvavisco, consuelda, ajeno, etc. Ponga la combinación en una olla con agua destilada (a la proporción de 1 oz de la combinación por cada 16 oz de agua destilada) y déjelo remojar por 4 a 6 horas, caliéntelo a fuego lento por 30 minutos, cuélelo y entonces caliéntelo nuevamente, también a fuego lento, hasta que obtenga la mitad de la cantidad inicial del líquido y agregue 1/4 de glicerina vegetal (si desea).

Remoje una tela de algodón o franela en la mezcla (nunca use material sintético) y aplique la fomentación alrededor de la zona en problema y cúbralo con plástico para evitar que se seque rápidamente. Déjelo allí cada noche 6 veces a la semana, semana tras semana, hasta que se obtenga el alivio deseado.

Para casos severos: Tome 1/4 de tasa de este té concentrado con 3/4 de tasa de agua destilada tres veces al día. También puede tomar 2 cápsulas tres veces al día o usar en forma de unguento. Nombre: **BF&C.**

**29. Fórmula para el acondicionamiento del cabello.** Cada día como una ayuda para reestimar el crecimiento del cabello y durante 2 días, masajee el cuero cabelludo profundamente con aceite de ricino tibio, aplicando sobre la cabeza una toalla mojada con agua caliente por el espacio de 30 ó más minutos. Permanezca con el aceite durante toda la noche. Al día siguiente lávese la cabeza con un buen jabon bio-degradable y enjuégese. Repita el lavado y enjuégese nuevamente con esta combinación (que contiene entre otros gobernadora, salvia, etc.). No se enjuague esta vez, sino déjelo en el cabello y el cuero cabelludo (y masajee bien). Las siguientes dos noches use aceite de germen de trigo. Descanse una noche y repita el proceso por 6 días a la semana cuantas veces necesite. Tome 1 ó 2 cucharadas de aceite de germen de trigo en las mananas y en las noches, y ademas tome 1/4 de tasa de té de esta combinación hecha con agua destilada, 2 veces al día. Nombre: **Desert Herb Combination.**

**30. Combinación para artritis y reumatismo.** Esta fórmula consiste de hortencia, té mormón, yuca, gobernadora, entre otras plantas, y es una combinación que desintoxica; actúa como un solvente para los aceptados, pero no asimilados depósitos de calcio, plantas que alivian el dolor, ricas en nuevo y aceptable calcio orgánico que puede ser asimilado y usado útilmente; plantas que matan los hongos y la infección y que tiene la habilidad de dar un maravilloso alivio. Este alivio no es inmediato porque aquí se requiere un largo trabajo de reconstitución; el alivio vendrá gradualmente hasta lograr una total curación, pero sólo si usted sigue el programa con fé: 2 cápsulas con una tasa de té mormón 2 o 3 veces al día. Use como una fomentación caliente sobre las zonas tullidas y de extremo dolor (además de esta fórmula) la fórmula No. 28 llamada BF&C. O usarla en forma de unguento. También tome 2 o 4 tasas de la cascara del frejo, diariamente. Además, para un alivio del dolor mas rápido, recomendamos la aplicación externa de la fórmula #44 (Profeso Cayenne). Sin embargo, si Usted continúa con una dieta inapropiada, estas ayudas no darán efecto en la misma forma que si usted sigue las recomendaciones dadas en este libro. Recuerde que las enseñanzas que hemos recibido por años han sido "No hay cura para este caso..." Nosotros estamos dándole esperanzas, pero sólo si Usted sigue con la dieta sin mucosidad y usa estas combinaciones de plantas. Nombre: **AR-1.**

**31. Fórmula para las infecciones.** Esta fórmula es hecha con llantén, malvavisco, lobelia, nogal

negro, etc. Esta maravillosa fórmula mata la infección, elimina las toxinas del sistema linfático, y es un agente natural contra las infecciones. Nombre: **INF**.

**32. Combinación de kelp (alga marina).** Este es una ayuda para las tiroides y los ganglios. Este grupo de plantas ayuda a controlar el metabolismo y alimenta a la glándula tiroides para hacer su trabajo más eficiente. Es una ayuda glandular muy fina y eficiente. Está compuesta entre otros por perejil, berro, kelp o alga marina, etc. Uselo con la fórmula No. 11. Nombre: **Kelp-T Comb.**

**33. Extracto Antiespasmódico.** Consiste de escutelaria, lobelia, cayenne, valeriana, mirra, entre otros. Es para ser usado en casos de convulsiones, desvanecimientos, calambres y retortijones, temblores por delirio, histerias, etc. Es también bueno para diarrea, llagas en la boca, infecciones a la garganta, amigdalitis, etc. La dosis es 1/2 a 1 cucharita en un vaso de agua destilada para hacer gárgaras hasta que el dolor en la garganta desaparezca, también tome una cucharita en agua destilada hervida en las mañanas y en las noches. Nombre: **ANTSP.**

**34. Extract hecho de escutelaria, verbena azul, cohosh negro, entre otros.** Esto es usado en condiciones de nervios alterados, dolor de garganta, hipo y es una gran ayuda para restaurar el mal funcionamiento del nervio motor y asistir en el arreglo de pobre equilibrio y capacidad de oír, y además es una gran bendición para los epilépticos. Masajee este extracto en la médula (la base del cráneo) y en las cervicales superiores, siga las instrucciones en la formula 14, y tome de 6 a 10 gotas en un poco de agua o jugo 2 a 3 veces al día. Nombre: **B&B.**

**35. Fórmula para el alivio de dolores menores.** Esta es una fórmula que consiste de lechuga silvestre y valeriana. Es para ser tomado oralmente o masajeadó externamente para aliviar el dolor. Este es un sedante natural, suave y calmo para los nervios. Nombre: **Wild lettuce & Valerian.**

**36. Fórmula para el asma.** Puede ser usado para dolores de garganta y mucosidad. Excelente para luchar contra las toxinas. Es hecha de verbasco y ajo en base de glicerina vegetal. El uso recomendado es una cucharita o más, tantas veces como se necesite. Nombre: **CMG Syrup.**

**37. Antigua combinación para la tos.** Hecho con cebolla fresca, miel y glicerina vegetal. Uso sugerido: una cucharita o más, tantas veces como se necesite. Nombre: **Cough Syrup.**

**38. Unguento "Negro".** Un excelente unguento que saca el problema hacia la superficie. Para el uso externo en llagas antiguas, tumores, erupciones, verrugas, cáncer a la piel, hemorroides, excelente para quemaduras y como agente curativo. Es hecho con gobernadora, consuelda, trébol rojo, raíz del carmín, etc. Nombre: **Black Ointment.**

**39. Unguento curativo.** Hecho de consuelda, malavisco y aceites, es antiséptico que se usa en lesiones, eczema, hiedra venenosa, para aliviar superficies inflamadas, raspaduras, quemaduras, hemorroides, torceduras e inflamaciones. Bueno para tenerlo a la mano todo el tiempo. Nombre: **CMM Ointment.**

**40. Unguento de morgelina.** Esta hecho a base de morgelina y aceites. Excelente para eczema y/u otras infecciones en la piel, llagas, quemaduras, picazón en la piel o en los genitales, testículos inflamados, acné, urticaria, y también para ulceraciones en la boca y la garganta. Este es un maravilloso y curativo unguento. Nombre: **Chickweed Ointment.**

41. **Unguento para la nariz.** Hecho con yerba buena, menta y baselina, es un antihistamínico natural. Aplicar en la parte interna de la nariz cuando ésta esté congestionada, seca, sensitiva o rajada. Nombre: **Nose Ointment**.

42. **Extracto de nebeda e hinojo.** Una bendición para los niños. Una fina combinación para cólicos, biliosidad, flatulencia, espasmos, etc. Use unas cuantas gotas, o cuanto se necesite, cuando lo desee. Nombre: **Catnip & Fennel Extract, Kid-e-Col**.

43. **Extracto de nogal negro.** Este es uno de los mejores remedios para hongos. Use externamente y frecuentemente. Nombre: **Black Walnut Extract**.

44. **Unguento del Profesor Cayenne.** Este penetrante unguento contiene aceite de olivio, cayenne, aceites, menthol, etc. Es excelente para torticolis, músculos doloridos, dolores de cabeza, dolor en las coyunturas, artritis, etc. Nombre: **Deep Heating Balm**.

45. **Extracto antiséptico.** Este extracto es bueno para infecciones externas e internas. Es a base de roble blanco, mirra, sello dorado, consuelda entre otros en base de alcohol. Nombre: **X-ceptic**.

46. **Combinación para eliminar minerales pesados.** Contiene lobelia y bardana amarilla. Esta es una fórmula para combatir contaminación, externas e internas. Esto ayuda a eliminar minerales pesados, drogas, y otros contaminantes atrapados en nuestro sistema. La dosis es tomar 2 cápsulas diarias juntamente con cápsulas de gobernadora, 3 veces al día. Nombres: **Bugleweed Combination, Bugle Dock**.

47. **Fórmula para las suprarrenales.** Contiene verbasco, lobelia, ginseng, jengibre, etc. Esta fórmula corrige cualquier desbalance en las glándulas suprarrenales y también compensa cualquier presión ubicada en el corazón. Nombre: **Adrenetone**.

48. **Fórmula para la colitis.** Contiene malvavisco, consuelda, lobelia, jengibre, etc. Esta fórmula es para elivio de la colitis, y puede ser usado juntamente con la fórmula para el intestino grueso (Fen LB) y la dieta sin mucosidad. Nombre: **CC**.

49. **Fórmula para las úlceras.** Contiene arrayán, morgelina o pamplina, verbasco, etc. Esta fórmula es usada para aliviar las disconformidades causadas por las úlceras en el estómago y debería ser tomada con té de lúpulo o manzanilla. Tome nota de lo siguiente: para curar las úlceras, tome 3 cucharitas de cayenne al día. Este cayenne puede ser mezclado con agua o jugo de tomate. Es recomendado empezar con 1/8 de cucharita 3 veces al día, y entonces aumentar hasta lograr una cucharita 3 veces al día. Nombre: **ULC**.

50. **Fórmula para los gases.** Contiene hinojo, camote silvestre, jengibre, menta, etc. Esta fórmula es designada para aliviar la flatulencia. Nombre: **AT-GS**.

51. **Unguento de BF&C.** Esta es la fórmula No.28 en forma de unguento. Es hecho usando aceite de olivio en una base de cera de abeja. Nombre: **BF&C Ointment**.

52. **Anti-Plaga.** El mejor remedio para resfríos, gripe o cualquier enfermedad contagiosa. Esta fórmula fortalece y estimula el sistema inmunológico y puede ser usado como tónico preventivo usando 1 cucharita de este jarabe por día. Si existe infección cambiar la dosis a una cucharada cada hora. Este jarabe contiene ajo fresco, raíz de consueta fresca, berro, malavisco, escutelarias, entre otros. Nombre: **Anti-Plague.**

53. **Fórmula para aliviar llagas en la boca.** Esta fórmula en extracto es tomado oralmente en la cantidad de 2 goteros llenos 3 veces al día, aplicado localmente. Contiene ajo, escutelaria y sello dorado en base de alcohol. Nombre: **CSR.**

54. **Formula para estimular el sistema inmunológico.** Esta fórmula está diseñada para incrementar la habilidad del cuerpo de prevenir la propagación de bacterias y virus. Consiste de Echinacea, calendula y la flor del trebol rojo (obtenible en base de alcohol o glicerina para niños). Nombres: **Imunacea extract, Kid-e-Mune.**

55. **Formula para calmar el sistema inmunológico.** Está diseñada para calmar y fortalecer las respuestas inmunológicas del cuerpo. Muchas veces creemos que somos alérgicos a ciertos alimentos, plantas o animales, pero en realidad, es nuestro sistema inmunológico que está sobreactuando. Esta simple combinación de la raíces del malvavisco y el astrágalo ha ayudado a muchos que sufren de alergias, fiebre del heno, asma, artritis reumática o cualquier enfermedad que muestre una hiperactividad en la respuesta del sistema inmunológico. Nombres: **Immucalm, Kid-e-Soothe.**

56. **Fórmula para la Memoria.** Una gran combinación de yerbas muy reconocidas, usadas para limpiar, edificar e incrementar la circulación en el cerebro. Consiste de: Vervena azul, Gotu kola, Te Mormón, el cardo bendito, la cayena, el jengibre y la lobelia. Nombre: **Mem.**

57. **Fórmula fuente de vitaminas y minerales.** Balanceado por la naturaleza, suplemento alimenticio integral y altamente nutritivo. Esta combinación de diente de león, kelpo, purple dulce, espirulina, irish moss, bulbo de la rosa, remolacha, cayena, entre otros, está suplementada con el jugo deshidratado y pulverizado de la alfalfa, la cebada y kamut (trigo no híbrido) bajo el proceso llamado "Quick Dried" para concentrar las vitaminas y minerales de estos tres super alimentos. Al final tenemos una fuente de vitaminas y minerales fácilmente asimilable, ya que esta compuesto de elementos orgánicos científicamente balanceados por nuestra madre naturaleza. Nombre: **Vitalerbs, Kid-e-Mins.**

58. **Fórmula para sinusoides congestionados.** Esta poderosa fórmula consiste de Te Mormón, rábano picante y cayena. Para un alivio inmediato de presión senovial debido a resfríos o alergias, usar 20 gotas (1/4 de cucharita) en 1/4 de tasa con agua caliente. Debe tomarse cada media hora. Nombre: **Ephedratean.**

59. **Unguento rubefaciente.** Como lo indica su nombre, este unguento produce circulación en la superficie de la piel causando un color rojo en éste. Usado para aliviar tensión y presión. Excelente para dolor de cabeza por tensión o presión senovial. Uselo poco a poco ya que esta fórmula es muy potente. Contiene: Aceite de Olivo y aceites naturales de canela, eucalipto, cajeput y cristales de mentol puro y alcanfor y otros aceites de fragancias naturales. Nombre: **Sen Sei Balm.**

60. **Combinación verde:** Una mezcla de Alfalfa, paja de cebada y de Kamut (trigo no híbrido) que

han crecido orgánicamente en un terreno virgen separados de los agentes contaminantes urbanos y agrícolas por las mismas montañas que proveen su fuente de agua. Estas yerbas reducen acidez, proveen de la necesitada clorofila, así como de los nutrientes integrales que el cuerpo necesita.

Nombre: **Jurassic Green**.

61. **Combinación para Energía.** En lugar de ser una fórmula que provoca un súbito y no natural golpe de energía, esta combinación de Ginsén Siberiano, pólen de abeja, la raíz del regaliz, gotu kola, yerba mate y la raíz del jengibre, provee energía y vitalidad a través de nutrición integral. La energía adquirida será más constante y duradera. Nombre: **Bee Power**.

62. **Fórmula para Claridad Emocional.** Esta combinación de escutelaria, extracto de valeriana, Uva de Oregon, Jurassic Green (Alfalfa, Cebada y Kamut), extracto de Hiperico (St. John's Wort), Verbasco, Lobelia, Gotu Kola, Sarsaparilla y Diente de León, provee de los nutrientes necesarios para ayudar al cuerpo y a la mente a reaccionar equilibrada y saludablemente en momentos de tensión emocional como depresión, ansiedad y trauma. Nombre: **MindTrac, Kid-e-Trac**.

63. **Fórmula para la Glándula Pituitaria.** Esta fórmula es para el mal funcionamiento de la glándula pituitaria. Consiste de las hojas de la zanahoria para la estimulación de la glándula, gotu kola para nutrir, ginkgo para incrementar la circulación, el verbasco para purificar, oregon grape para influenciar tanto en la pituitaria como en el hígado, y lobelia como un catalítico general. Nombre: **Master GL**.

64. **Fórmula para la circulación en el ojo.** Esta fórmula promueve circulación de sangre en el ojo ayudando a reparar vasos capilares dañados, mejorando la visión nocturna, limpiando los tejidos y brindando antioxidantes a los ojos. Contiene: Bilberry, Eufrasia, Ginkgo y cayenne. Nombre: **Bilbrite**.

65. **Ayuda para la próstata.** Esta combinación asiste al cuerpo en reducir la inflamación de la próstata. Ayuda también a fortalecer y tonificar la próstata mientras lo limpia con antioxidantes nutritivos. Esta fórmula contiene: Saw Palmetto, Mullein y Ginkgo. Nombre: **Prospalmetto**.

66. **Fórmula para fortalecer el Sistema Inmunológico.** Estas plantas han sido usadas por miles de años como tónicos y como elementos preventivos para la salud. Usando este tónico diariamente ayudará a fortalecer el sistema inmunológico y proteger contra los agentes invasores. Los tónicos trabajan mejor en cantidades pequeñas por largos períodos de tiempo. La echinacea en esta fórmula también actúa como un tónico. Contiene: Astragalus, Ginseng Siberiano, Echinacea purpurea (planta y raíz) y el hongo Reishi. Nombre: **Immutone**.

A Legacy of Courage

## Introduction

Snow drifted high along the drive, the icy spindles of bare branches seemed to scrape against the winter sky on the stark morning of February 11, 1983, when we gathered to memorialize my father. Five days earlier we had stood around his bedside-my mother, who had come to tuck the hand-stitched quilts around his shoulders, his children, who stroked his magnificent mane of white hair with gentle care, and his grandchildren, who scampered at our feet.

We held him in our arms, warm against the chill of winter, as he slipped peacefully through death into the presence of the One who had guided him through life.

My father, John Raymond Christopher, did not die before the age of thirty-five, as the squadrons of physicians had predicted. His gentle practice of natural healing helped him overcome the chronic conditions he was born with, as well as the life-threatening injuries he sustained as a young adult. He succumbed instead at the age of seventy-three due to complications of a severe head injury. He had slipped on the treacherous ice outside his beloved Covered Bridge Canyon home, nestled in the mountains outside Spanish Fork, Utah.

Hundreds of mourners packed the church where we held his funeral, the same building where, a year earlier, he had stood for the last time to conduct his choir. The performance had been electrifying. There had not been a dry eye in the house that Sunday afternoon. There was not a dry eye now among those who crowded into the chapel for a chance to bid him farewell. Family members spoke to the congregation that gathered there. Friends shared their fondest memories. A profusion of little ones named Ray, John, and Christopher abounded, whose parents let us know that they were named after my father, without whose herbs they would never have been conceived. A church leader remembered my father's uncommon dignity, painting for us the reflection of dad mowing the lawn in his pinstriped suit. He shared the podium with the then vice-president of the prestigious National Health Federation.

How had such acclaim been earned by a man who had started out his life abandoned in an orphanage, a man who had been ridiculed in the courts and had been jailed? The acclaim was just. My father was considered the nation's number-one authority on herbal medicine, and tens of thousands of people owed their health and even their lives to his work.

If I were pressed to remember anything in particular about my father, it would be his extraordinary happiness. He hid his physical suffering with good cheer, making countless journeys into the blackness of night on his famed "house calls" I often wondered where he found such happiness. I know now it was from the people whose lives he touched. It was from the six-month-old blind baby whose sight was restored, and from the elderly asthmatic who was able to sleep in a bed for the first time in four decades.

My father's abiding happiness seems even more exceptional when I reflect on all the reasons he had to be unhappy. His life's work was dedicated to helping others, yet he was slandered by the judicial system that should have protected him. He was incarcerated on a number of occasions, left to grovel in the meanest of circumstances while those of us who loved him waited patiently for his release. Once, in what I am convinced was an effort to harass, a judge levied \$50,000 bail for a licensing infraction yet I cannot erase from my mind's eye the gentle kindness of my father's perpetual smile.

He never retaliated against those who did him harm. He was counseled early in his life to love his enemies, and to pray for those who cursed him and persecuted him. That counsel became his clarion cry, and I have never seen greater love emanate from any man. We as his children were fiercely loyal to him, but he never coaxed any of us to follow in his footsteps as herbalists. He loved us deeply, and he knew only too well of the abuses and persecutions we might endure. I quietly came into the practice on my own, partly, I guess, out of my love for him, and because I watched first-hand the way his teachings changed people's lives.

He is gone from among us, but he leaves behind a legacy that will never be forgotten. He created more than fifty herbal formulas that have exacted almost miraculous healings. He spearheaded the School of Natural Healing, which found its way overseas to the highly touted Cambridge

University. He authored many works on herbs, some of which are considered to be classics in their field.

I struggle daily to live a life that would make him proud. I cherish my memories of him, and I hold dear the hundreds of letters that still pour in, almost a decade after his death, thanking him for life itself. They come from every state in the union, and some from remote areas of the world, a poignant reminder of his powerful influence. Yes, he is gone...but he will never be far away.

As his son, I share his love and concern with all of those he so cared for-people he had never seen, but whose lives he prayed fervently for. I hope that this brief biography will stand as a fitting tribute to him.

*David Christopher*

## Chapter 1

### I'm Going to Be a Doctor

The fiery golds and scarlet of autumn had reluctantly given way to winter, which had crept almost unnoticed that year into the serene Salt Lake Valley, pocketed among the rugged peaks of the Rocky Mountains. It was fitting that John Raymond Christopher, a pioneer in the art of natural healing, should be born in this valley, which had been settled first by a courageous band of humble pioneers more than half a century earlier.

He was born November 25, 1909, in Salt Lake City, Utah, to Jean Ramone and Lorena Roth Raymond, whose homes were listed on the birth certificate as Loraine, Switzerland, and Paris, France, respectively. For reasons that only these European travelers could have known, they left their infant son and his older sister at the Salt Lake City Orphanage. Shortly after his birth, they left the shelter of the magnificent Rockies and moved on.

It was the custom at the orphanage when prospective parents called, to arrange available children in a line. From that line of hopeful faces, the couple could make their choice. One early summer afternoon, Leander and Melissa Ann Craig Christopher assumed their anxious station in front of such a line. Their fervent hope was to adopt a child, and they prayed they could find a son.

Suddenly, and without invitation, a baby clad only in a diaper and a thin undershirt toddled out of line, crawled onto Melissa's lap, and settled comfortably into her shoulder with a hug. Melissa's misty eyes met those of her husband as she exclaimed, "This is our son!"

The Christophers left the orphanage that day with not only the son they had prayed for, but with his sister Ruby, too, as the blood parents had stipulated.

The little family settled into the home Leander had built in Salt Lake City's historic avenues district, a house still listed with the Utah Historical Society. Later the family moved to a comfortable home on Highland Drive, now a teeming metropolitan area, but then a "country" neighborhood characterized by fields of hollyhocks in the summer and lanes of deep snowdrifts in the winter.

The first glimpse the Christophers had of Raymond's extraordinary future came one wintry night in that house on Highland Drive. Young Ray lay critically ill with croup. His anxious parents paced the floor, cradling his fevered body in their arms and praying with all their might that he would have the strength to catch another breath. Suddenly, a knock came at the door. Leander, startled because of the late hour, answered.

Standing on the porch was a bearded man in shirtsleeves, with no coat to protect himself against the bitter cold. He announced to Leander that a young child was ill, but was not to die, that he had an important mission to perform. With a sense of awe, Leander listened as the stranger gave explicit instructions on how to cut the phlegm and stop the croup.

Anxious to save the life of his choking child, Leander turned to do the stranger's bidding. When he turned back to thank the man and invite him in to warm himself against the winter cold, the man was gone without a trace. There were no footprints in the deep snow to mark his passing.

With the instructions left by the bearded stranger, and the loving faith of his parents, Ray recovered. It was an experience the Christophers would not soon forget, and Ray always remembered that his life somehow held great purpose.

It is ironic that Ray's "mission" involved healing, as the wintry croup crisis and his ensuing brush with death were far from the only health problems he suffered. Born with advanced rheumatoid arthritis, he endured excruciating pain. Even as a child, he sometimes walked with a cane or was confined to a wheelchair. That's not all. He also developed hardening of the arteries. Doctors of his day proclaimed that he would never reach the age of thirty.

[A Legacy of Courage](#)

Most children suffering this kind of pain would become depressed or gloomy, but not John Raymond Christopher. He radiated good cheer. Early in life, he developed a great love for the music that lifted his spirits throughout years of trying adversity.

His love for music grew as he traveled every Tuesday night on an old streetcar with his beloved mother to her practices with the famed Mormon Tabernacle Choir. Each Tuesday night, he sat with rapt attention on the step next to his mother's seat in the alto section. His presence became such a trademark that at the age of fourteen he became the youngest person ever invited to become a member of the choir. He sang with the choir for another eleven years.

Ray's "mission" of healing was all the more appropriate in light of his mother's condition. Melissa Craig Christopher, the woman upon whose lap he had snuggled that afternoon in the orphanage, endured the quiet desperation of diabetes and dropsy. Her's was a chronic and debilitating condition. At first it confused the little boy, who suffered himself with crippled feet and the wheelchair that had become his prison. Later, it tore at his heart as he sat, helpless against the diseases that ravaged her and unable to ease her agony.

Once as he was playing among the fragrant blooms of the garden on Highland Drive, his mother watched him with unusual interest. At last she knelt beside the spot where he worked the imaginations of youth and asked, "Raymond, what are you going to be when you grow up?" "I'm going to be a doctor!" he announced, without hesitation.

"Oh, Raymond!" she laughed. "How can you be a doctor? You can't stand the sight of blood. You've never been able to slay the rabbits you raise for food, and you run from the kitchen whenever I raise the old butcher knife to a chicken. What kind of a doctor would that be?"

There was a moment's pause before he answered this time, and a look of intent unusual in a child his age. "Mother, I will be able to heal people without cutting them up," Raymond replied. "There will be natural ways of doing it" His musings in the garden that day became a prophetic statement that would describe his life's passion.

With the hope of becoming a doctor, young Raymond watched with interest as various practitioners treated his mother. One visit from a health practitioner proved to be especially noteworthy to the sixteen-year-old. One day his mother drew him aside with quiet determination and told him, "Son, a doctor's coming to visit me today, but he's a new type of doctor, different from any of the others who have treated me. I thought you might like to see him."

At the appointed hour, Ray eagerly answered the door, and the young man noticed that the doctor glanced nervously up and down the peaceful neighborhood street before stepping across the threshold. As he introduced himself to Melissa, she offered, "Let me tell you what is wrong with me."

"No," the doctor urged emphatically. "I will tell you what is wrong with you." Fascinated, Ray watched as the man looked into his mother's eyes and recited with pinpoint accuracy the conditions for which she had sought medical help over the span of many years, and the conditions for which she had taken countless prescriptions of orthodox medications.

Ray listened to every pronouncement the doctor made, absorbed with curiosity about his gentle efficiency. He took mental notes as the doctor prescribed wholesome changes in diet and as he pressed a collection of herbal remedies into Melissa's hand. As they bid the doctor goodbye and watched him travel down Highland Drive, Ray told his mother, "That's the kind of doctor I'm going to be when I grow up."

Several months later when Ray tried to locate the man, he had his first glimpse of what would prove to be a foreshadowing of his own future-the doctor had been arrested for practicing medicine without a license, and had been jailed. Ray tucked his ambition away temporarily and worked to finish his high school studies.

After graduation, news accounts and magazine articles about a Canadian practitioner caught Ray's eye. This man, the accounts said, massaged people's feet and effected remarkable healings. His treatments were in such demand, in fact, that people stood in long lines, even pitching tents for weeks at a time, in order to see him. Ray knew that this man could ease his rheumatoid arthritis, but, even more important, he yearned to study under him, to learn his natural way of healing. Cautiously, he approached his parents with his plan.

They could feel his excitement for his plan, but did their best to discourage him: The Depression had tightened its grip on most of the families living along Highland Drive, and there was no extra money to finance a trip to Canada. Ray pleaded, "I'll find a way," he promised. "I'll thumb rides. I'll do whatever I have to. Somehow, I'll make the trip." Just as he was completing his

preparations, his enthusiasm was crushed-news filtered from Canada to Utah that the practitioner had been arrested. It was a devastating blow, and Ray temporarily abandoned his ambition to study medicine.

Following graduation, Ray worked during the days at his father's lumber mill, and at night, he played with a dance band so he could tuck away enough extra to pay his way through college. With the dogged determination necessary to overcome his health problems, he graduated as an A student from Henager Business College in Salt Lake City. He decided to put his photographic memory and his famed "gift of gab" to work as a career; he enrolled and was accepted at the University of Utah School of Law.

The day before law school classes began in the fall, Ray underwent a twist of fate that would change the course of his life forever. As a passenger in a fatal automobile accident, Ray was pronounced dead at the scene. Police officers took his body to the morgue, and his parents were summoned to identify his remains.

Seized with grief, his parents were led into the room where he lay. As his mother looked upon her sweet son for what she believed to be the last time, she suddenly screamed! She had seen the faintest flicker of an eyelash.

The mortician bent over Ray and studied him intently. "My word, I think there was the slightest motion of life in him!" he exclaimed. Medics rushed Ray to the hospital, where he began weeks of painful recovery.

He remained in a coma for several days, when he at last drifted into consciousness. He was completely paralyzed, a condition that persisted for more than six weeks. He could speak, but could do nothing more for himself. Nurses had to feed him, shave him, and carry him to the bathroom.

One afternoon a driver from the lumber company came to Ray's room and pulled a chair up next to his bed. "You know, Ray, it's a waste of time, you sitting around like this," he scolded. "We need you back at work. C'mon, let's get goin'."

Ray laughed at his friend. "I can't even move my hand," he cried, "let alone go down to the office to work. Let's face it. I'm helpless." "Then," replied Jim, "you'd better go see a chiropractor."

When the four renowned physicians who were treating him made their rounds that day, Ray mentioned the possibility of a chiropractor. Their responses were immediate and choked with derision, and Ray was embarrassed that he had made such a foolish suggestion. Behind the scenes, Jim had left the hospital and made a stop on Highland Drive, convincing Leander and Melissa to take Ray to the chiropractor's home that night.

As the three entered Ray's hospital room and began to lift him from the bed, he protested with all the strength he had left. "Put me down!" he screamed. "Don't touch me! The doctors told me I'm paralyzed for life! Don't try to take me to a chiropractor. ..I will not go to a chiropractor!" As his loved ones carried him to the car, his protests were loud, but he was helpless to resist.

Several days after his chiropractic treatment, Ray was working again at his office. His head was still swathed in bandages as a potent reminder of his injuries, but he moved freely and was able to resume all his duties at the lumber mill.

As he recovered, Ray yearned to start his study of law, but he couldn't. His photographic memory had been obliterated in the accident. The injuries he sustained caused intermittent but lingering amnesia. As a precaution, he had his name and address sewn inside his coat. On one blustery afternoon he took the company funds to the bank, made the deposit, and stepped back outside, and his mind went completely blank. He approached a police officer and opened his coat. By the time two officers drove him to the office in a truck and located his car, his memory had returned.

It was a period of almost unremitting pain, both physical and emotional, for Ray. Periodic pain from the head and back injuries he sustained in the accident caused his rheumatoid arthritis to flare up.

At times the pain was so severe that he couldn't sleep. He was also filled with a pain that he described as "helpless rage" as he watched his mother die from complications of diabetes and Bright's Disease.

For a young man who had a firm conviction regarding natural healing, it was almost unbearable to witness her suffering. The complications of diabetes stopped responding to even the highest doses of insulin, and her arms were purple from repeated needle stabbing. Bloating from the effects of edema, she was swollen to several times her normal size. At last, she succumbed slowly and

painfully to gangrene poisoning. Kneeling at her bedside, Ray petitioned the Lord for help, help that someday he would be able to save someone else from the agony his mother had endured.

During the sleepless nights that peppered his convalescence, Ray resorted to reading. He chose good books that authenticated the values he cherished. He also studied the scriptures, gaining strength and optimism from the messages scattered across their pages.

One morning, confined to a chair with the pain of arthritis, he picked up *The Doctrine and Covenants*, a volume of scripture published by The Church of Jesus Christ of Latter-day Saints. It fell open to the eighty-ninth section. More commonly known as the faith's "Word of Wisdom," it spells out the church's health code in a few brief paragraphs.

Ray had read the passage many times before, but this time several words jumped out at him as if lighted with neon. The words sparingly (in regard to meats) and wholesome (in regard to grains and vegetables) struck him so hard they seemed to have power enough to knock him out of the chair. He vowed to follow the health code strictly, and developed for himself a diet of fruits, vegetables, grains, nuts, and seeds.

The improvement in his health was staggering! Within a few months, he gained weight, began sleeping soundly at night, and started enjoying enough energy to allow for a full day's work. In 1939, he authored "Just What Is the Word of Wisdom?", a thought provoking booklet that described his experience and articulated his thoughts about diet and health.

Ray may have left it at that, tucking the booklets away on a darkened library shelf, but a simple phone call dictated otherwise. It came from Dr. John A. Widtsoe, a leading authority in the Mormon Church, a renowned educator, and an author who had written extensively about the Word of Wisdom. He had seen Ray's booklet, and he praised it as a treatise well "ahead of its time" He urged Ray to distribute it to as many people as he could, and Ray gained the confidence he needed to determine that he was on the right track.

He began doing as he had been instructed—talking to as many people as he could about the relationship between diet and health. He was a man well ahead of his time, all right, and as a result was also the subject of derision and ridicule. Years later, he still remembered a few good-natured jokes directed at his wholesome eating habits.

One in particular happened at the lumber mill. It was almost lunchtime, and one of the workers told him to report back after his delivery. As he walked into his office, a sumptuous spread lay before him. The truck drivers, the yard foreman, and the bookkeeper had smoothed a tablecloth over his desk. In the center was a spirited arrangement of edible greens dotted with bright splashes of wild flowers. A fine china dish was heaped with fresh green alfalfa, "common cow hay" as he later described it, and others were filled with dried wheat and rolled oats. An elegant decanter held apple juice.

With a wave of the arm, the yard foreman surveyed the scene and said, "We wanted to honor you today, Ray, so we fixed you a special lunch" The others stood next to him, fairly quivering with anticipation.

With his characteristic good grace, Ray pulled out his office chair and plucked up the fancy cloth napkin. "How nice of you!" he smiled. "This is really wonderful! Thank you" He draped the napkin carefully over his lap, brushing the sawdust shavings from his trousers, and picked up the fine silver fork. The men stood watching, astounded, as Ray ate every bite. They never kidded him about his diet again, but he continued to feel like a loner among his contemporaries. Ray had married Irene Short in 1935, and even she had great difficulty accepting his eating habits.

They had two daughters, Sandra Joy and Carol Ann, and tried diligently to work out their differences, but finally divorced in 1943. Ray felt alone and discouraged, but was more determined than ever to share his beliefs with others. He began giving lectures to small groups of people who were interested in making the dietary changes that could improve their health.

A year after his divorce, he was lecturing one evening when a beautiful young woman came into the room with a mutual friend. She captured his attention immediately, and, as he told his children and grandchildren many years later, "all of a sudden the bells rang. I knew that this was the one!"

John Raymond Christopher and Wendella Walker were married on August 19, 1944, in the Salt Lake Temple of The Church of Jesus Christ of Latter-day Saints. An avid supporter of his ideas about health and a loyal companion throughout their marriage, she became the mother of their five children: John Rulon, Ruth Ellen, David Wendell, Janet Lorene, and Steven Craig.

## Chapter 2

### "I Don't Care If He Puts Horse Manure on My Head" A Prescription For the Mess Sergeant

It was the middle of a tumultuous decade, and the world was at war. In the most far-flung regions of the globe American soldiers waged a defense of democracy on the land, in the air, and on the seas. And at home in Salt Lake City, Ray settled into the happy routine of getting acquainted with his bride.

One afternoon a few months after he was married, the war invaded Salt Lake City. It came in the form of a draft notice on the Christophers' doorstep, and it reflected wartime's dire circumstances—they had drafted a nearly thirty-five-year-old man who had divorced and remarried, and who had two families to support.

When he reported for service, Ray requested the status of conscientious objector. With a life's ambition of preserving life instead of taking it, he had included a section about the taking of life in his Word of Wisdom booklet. He carried it with him to the examiners, presenting it as evidence of his unwavering beliefs.

"I'll serve my country with pride on the front lines," Ray told the examining officer. "I'll carry stretchers that can save people, but I will not carry a gun. I cannot kill another human being." Reluctantly, the examining officer assigned him the status of conscientious objector, along with a permanent rank. As long as he served in the army as an objector, he could never achieve a rank higher than that of private. Ray's commitment to principles proved to be one of the trademarks of his military service. Once during his brief stint in basic training an officer ordered that he carry a gun on night watch. "I do not carry guns," Ray replied, "As you can see from my papers. I'm a conscientious objector. I will not handle guns that kill." The commanding officer shrugged his shoulders and thrust a nightstick at the young private.

Ray slowly shook his head, "I refuse to carry a night stick, too, because you could kill a man with a night stick"

The commanding officer reacted with anger and ridicule, confining Ray in quarters under guard until the next morning, when he was tried for his stubborn rebellion. The officer hearing the case slapped his palm sharply on the table and shouted, "This is one of the most ridiculous things I've ever heard! A conscientious objector who won't carry a night stick? What if everybody in the world felt as you do?"

"Then," replied Ray, with words that flooded suddenly into his mind, "there would be no war"

The examiner quietly sized up the young father and husband who sat before him. "That's the answer I needed," he said, scratching his signature across a small card. "You are a conscientious objector, and this card shows that you have my approval. Carry it with you always, and no one will challenge you again"

From Fort Douglas, Utah, Ray traveled to North Fort at Washington's Fort Lewis, where he was assigned to supervise a medical dispensary. It seemed to be a comedy of errors. John Raymond Christopher, a lowly buck private, issued orders to master sergeants who were pharmacists and staff sergeants who were therapists. Even the cleaning boy outranked him—he was a corporal! Under Major Shumate's direction, they all took commands from the private at the dispensary.

At first, Ray felt frustrated and angry. He had been plucked from a situation in which he taught hundreds of people the benefits of a wholesome diet and natural healing methods, yet here he was allowed to use only orthodox medicines for people he knew he could help much better in other ways. His knowledge of holistic healing had become extensive by the time he was drafted, and he desperately wanted to use that knowledge to help the soldiers he served with. Each time he tried to approach Major Shumate about herbal healing, however, he was firmly denied.

As frustrated as Ray was, he began to see some purpose behind his time at the dispensary.

First, he was able to see first-hand the effects of orthodox medications, and the futility of treating symptoms instead of causes. But most important, he had the chance to treat a soldier for a supposedly incurable condition, and it was a treatment that literally changed the course of Ray's life.

It happened one Monday morning, when the supervisors of the eight dispensaries were holding their regular meeting. They gathered that morning at Ray's dispensary, and settled down with note pads to discuss the various cases they were faced with.
